Importation and Exportation of Goods confined to Free Ports. — No goods shall be imported into, nor shall any goods, except the produce of the fisheries in British ships, be exported from, any of the British possessions in America by sea, from or to any place other than the United Kingdom, or some other of such possessions, except into or from the several ports in such possessions, called "Free Ports," enumerated or described in the table following; (that is to say.)

Table of free Ports. — Kingston, Savannah Le Mar, Montego Bay, Santa Lucia, Antonio, Saint Ann, Falmouth, Maria, Morant Bay, Annotto Bay, Black River, Rio Bueno, Port Morant, Jamaica; Saint George, Grenada; Roseau, Dominica; Saint John's, Antigua; San José, Trinidad; Scarborough, Tobago; Road Harbour, Tortola; Nassau, New Providence; Pitt's Town, Crooked Island; Kingston, Saint Vincent; Port Saint George and Port Hamilton, Bermuda; any port where there is a Custom-house, Bahamas; Bridgetown, Barbadoes; Saint John's, Saint Andrew's, New Brunswick; Halifax, Pictou, Nova Scotia; Quebec, Canada; Saint John's, Newfoundland; George Town, Demerara; New Amsterdam, Berbice; Castries, Saint Lucia; Basseterre, Saint Kitt's; Charles Town, Nevis; Plymouth, Montserrat; Sydney, Cape Breton; Charlotte Town, Prince Edward's Island; Anguilla, Anguilla; and if any goods shall be imported into any port or place in any of the said possessions contrary hereto, such goods shall be forfeited. — § 2.

His Majesty may appoint other Ports to be free Ports. — Provided always, that if his Majesty shall deem it expedient to extend the provisions of this act to any port or ports not enumerated in the said table, it shall be lawful for his Majesty, by order in council, to do so; and from the day mentioned in such order in council, all the privileges and advantages of this act, and all the provisions, penalties, and forfeitures therein contained, shall extend, and be deemed and construed to extend, to any such port or ports, as fully as if the same had been inserted and enumerated in the above table: provided also, that nothing hereinbefore contained shall extend to prohibit the importation or exportation of goods into or from any ports or places in Newfoundland or Labrador in British ships. — § 3.

His Majesty may appoint Ports for limited Purposes. — And whereas there are in the said possessions many places situated in rivers and in bays at which it may be necessary to establish ports for particular and limited purposes only; be it therefore enacted, that it shall be lawful for his Majesty, in any order in council made for the appointment of any free port, to limit and confine such appointments respectively to any and such purposes only as shall be expressed in such order. — § 4.

Privileges granted to Foreign Ships limited to the Ships of those Countries granting the like Privileges to British Ships, &c. — And whereas by the law of navigation foreign ships are permitted to import into

The real or declared value of British and Irish goods exported was not obtained until after the passing of the Act 53 Geo. 3. c. 98, anno 1812.

The fire at the late Custom-house destroyed the records for the year 1806.

any of the British possessions abroad, from the countries to which they belong, goods the produce of those countries, and to export goods from such possessions to be carried to any foreign country whatever; be it therefore enacted, that the privileges thereby granted to foreign ships shall be limited to the ships of those countries which, having colonial possessions, shall grant the like privileges of trading with those possessions to British ships, or which, not having colonial possessions, shall place the commerce and navigation of this country, and of its possessions abroad, upon the footing of the most favoured nation, unless his Majesty by order in council shall in any case deem it expedient to grant the whole or any of such privileges to the ships of any foreign country, although these conditions be not in all respects fulfilled by such foreign country: provided, that no foreign country shall be deemed to have fulfilled the before-mentioned conditions, or to be entitled to these privileges, unless his Majesty shall, by his order or orders, have declared that such foreign country hath so fulfilled the said conditions, and is entitled to the said privileges: provided also, that every order in council in force at the time of the commencement of this act, whereby declaration is made of the countries entitled in whole or in part to the privileges of the law of navigation, shall continue in force as effectually as if the same had been made under the authority of this act. — § 5.

This Act not to affect certain Acts.— Nothing contained in this act, or any other act passed in the present session of parliament, shall extend to repeal or in any way alter or affect an act (4 Geo. 4. c. 77.), intitled “An Act to authorize his Majesty, under certain Circumstances, to regulate the Duties and Drawbacks on Goods imported or exported in foreign Vessels, and to exempt certain foreign Vessels from Pilotage,” nor to repeal or in any way alter or affect an act (5 Geo. 4. c. 30.) to amend the last-mentioned act; and that all trade and intercourse between the British possessions and all foreign countries shall be subject to the powers granted to his Majesty by those acts. — § 6.

Goods prohibited or restricted to be imported into Colonies.—The several sorts of goods enumerated or described in the table following, deominated “A Table of Prohibitions and Restrictions,” are hereby prohibited to be imported or brought, either by sea or by inland carriage or navigation, into the British possessions in America, or shall be so imported or brought only under the restrictions mentioned in such table, according as the several sorts of such goods are set forth therein; (that is to say,)

A Table of Prohibitions and Restrictions.

Gunpowder, arms, ammunitions or utensils of war, prohibited to be imported, except from the United Kingdom, or from some other British possession.

Tea, prohibited to be imported, except from the United Kingdom, or from some other British possession in America, unless by the East India Company, or with their licence during the continuance of their exclusive right of trade.

Fish, dried or salted, oil, halibut, fins, or skins, the produce of creatures living in the sea, prohibited to be imported, except from the United Kingdom, or from some other British possession, or unless taken by British ships fitted out from the United Kingdom or from some British possession, and brought in from the fishery, and except herrings from the Isle of Man, taken and cured by the inhabitants thereof.

Coffee, sugar, molasses, and rum, being of foreign production, or the production of any place within the limits of the East India Company's charter, prohibited to be imported into any of the British possessions on the continent of South America or in the West Indies (the Bahama and Bermuda islands not included), except to be warehoused for exportation only; and may also be prohibited to be imported into the Bahama or the Bermuda islands by his Majesty's order in council.

Base or counterfeit coin, and books, such as are prohibited to be imported into the United Kingdom, prohibited to be imported.

And if any goods shall be imported or brought into any of the British possessions in America contrary to any of the prohibitions or restrictions mentioned in such table in respect of such goods, the same shall be forfeited; and if the ship or vessel in which such goods shall be imported be of less burden than 70 tons, such ship or vessel shall also be forfeited. — § 7.

Coffee, &c. though British, deemed Foreign in certain Cases.— All coffee, sugar, molasses, and rum (although the same may be of the British plantations), exported from any of the British possessions in America, into which the like goods of foreign production can be legally imported, shall, upon subsequent importation from thence into any of the British possessions in America, into which such goods, being of foreign production, cannot be legally imported, or into the United Kingdom, be deemed to be of foreign production, and shall be liable, on such importation respectively, to the same duties or the same forfeitures as articles of the like description, being of foreign production, would be liable to, unless the same shall have been warehoused under the provisions of this act, and exported from the warehouse direct to such other British possession, or to the United Kingdom, as the case may be. — § 8.

Duties of Importation in America.— There shall be raised, levied, collected, and paid unto his Majesty the several duties of customs, as the same are respectively set forth in figures in the table of duties herein-after contained, upon goods, wares, and merchandise imported or brought into any of his Majesty's possessions in America; (that is to say,)

Table of Duties.

Duties payable upon spirits, being of the growth, production, or manufacture of the United Kingdom, or of any of the British possessions in America, or the West Indies, imported into Newfoundland or Canada.

Spirits imported into Newfoundland; viz.
the produce of any of the British possessions in South America or the West Indies; viz.
imported from any British possession in America, or from the United Kingdom, the gallon 0 0 6
Imported from any other place, to be deemed foreign, and to be charged with duty as such.

the produce of any British possession in North America, or of the United Kingdom, and imported from the United Kingdom, or from any British possession in America, the gallon 0 1 6
Imported from any other place, to be deemed foreign, and to be charged with duty as such.

Spirits imported into Canada; viz.
the produce of any British possession in South America or the West Indies, and imported from any British possession in America, or from the United Kingdom, the gallon 0 0 6
Imported from any other place, to be deemed foreign, and to be charged with duty as such.

Note.— When imported from the United Kingdom, this duty is not to be abated upon the ground of any duty under any colonial law.

Duties payable upon goods, wares, and merchandise, not being of the growth, production, or manufacture of the United Kingdom, or of any of the British possessions in America, imported or brought into any of the British possessions in America, by sea or by inland carriage or navigation.

Imported into the British possessions in the West Indies or on the continent of South America, or into the Bahama or Bermuda islands; viz.

and further, for every 100 <i>l.</i> of the value	7 10 0		
and on the bottle the dozen	0 1 0		
bottled in and imported from the United Kingdom, for every 100 <i>l.</i> of the value	7 10 0		
the bottles	Free.		
Wine not in bottles, for every 100 <i>l.</i> of the value imported into the British possessions in North America from Gibraltar or Malta, subject to no higher duty than if imported from the United Kingdom; viz. 1-10th of the duty remitted.	7 10 0		
Coffee, the cwt.	0 5 0		
Cocoa, the cwt.	0 5 0		
Sugar, the cwt.	0 5 0		
Melasses, the cwt.	0 3 0		
and further, the amount of any duty payable for the time being on coffee, cocoa, sugar, and melasses respectively, being the produce of the British possessions in South America or the West Indies.			
Clocks and watches, leather manufactures, linen, musical instruments, wires of all sorts, books and papers, silk manufactures, for every 100 <i>l.</i> of the value	50 0 0		
Glass manufactures, soap, refined sugar, sugar candy, tobacco manufactured, cotton manufactures, for every 100 <i>l.</i> of the value	20 0 0		

And if any of the goods herein-before mentioned shall be imported through the United Kingdom (having been warehoused therein, and exported from the warehouse, or the duties thereon, if there paid, having been drawn back), one tenth part of the duties herein imposed shall be remitted in respect of such goods.

—*Act not repealed.*—Nothing in this act or in any other passed in the present session of parliament shall extend to repeal or abrogate, or in any way to alter or affect an act (18 Geo. 3. c. 12), intituled "An Act for removing all Doubts and Apprehensions concerning Taxation by the Parliament of Great Britain in any of the Colonies, Provinces, and Plantations of North America and the West Indies, and for repealing so much of an Act made in the 7th Year of the Reign of his present Majesty as imposes a Duty on Tea imported from Great Britain into any Colony or Plantation in America, as relates thereto;" nor to repeal or in any way alter or affect any act now in force which was passed prior to the last-mentioned act, and by which any duties in any of the British possessions in America were granted and still continue payable to the Crown; nor to repeal or in any way alter or affect an act (31 Geo. 3. c. 31), intituled "An Act to repeal certain Parts of an Act passed in the 14th Year of his Majesty's Reign, intituled 'An Act for making more effectual Provisions for the Government of the Province of Quebec in North America, and to make further Provisions for the Government of the said Province.'" — § 10.

Duties imposed by prior Acts to be applied to Purposes of those Acts.—The duties imposed by any of the acts herein-before mentioned or referred to, passed prior to the said act (18 Geo. 3. c. 12) shall be received, accounted for, and applied for the purposes of those acts; provided always, that no greater proportion of the duties imposed by this act, except as herein-before excepted, shall be charged upon any article which is subject also to duty under any of the said acts, or subject also to duty under any colonial law, than the amount, if any, by which the duty charged by this act shall exceed such other duty or duties; provided, that the full amount of the duties mentioned in this act, whether on account of such former acts, or on account of such colonial law, or on account of this act, shall be levied and received under the regulations and powers of this act. — § 11.

Currency, Weights, and Measures.—All sums of money granted or imposed by this act, either as duties, penalties, or forfeitures, in the British possessions in America, are hereby declared to be sterling money of Great Britain, and shall be collected, and paid to the amount of the value which such nominal sums bear in Great Britain; and that such monies may be received and taken at the rate of 5*s.* 6*d.* the ounce in silver; and all duties shall be paid and received in every part of the British possessions in America according to British weights and measures in use on the 6th day of July, 1825; and in all cases where such duties are imposed according to any specific quantity or any specific value, the same shall be deemed to apply in the same proportion to any greater or less quantity or value; and all such duties shall be under the management of the commissioners of the customs. — § 12.

Duties paid by Collector to Treasury of Colony in which levied.—The produce of the duties so received under this act (except such duties as are payable under any act passed prior to the 18 Geo. 3. as aforesaid, shall be paid by the collector of the customs into the hands of the treasurer or receiver-general of the colony, or other proper officer authorised to receive the same, to be applied to such uses as shall be directed by the local legislatures of such colonies; and that the produce of such duties so received in colonies which have no local legislature may be applied in such manner as shall be directed by the commissioners of his Majesty's treasury. — § 13.

All British Vessels shall be subject to equal Duties, except coasting Vessels.—Whereas in some of his Majesty's possessions abroad, certain duties of tonnage are, by acts of the local legislatures of such possessions, levied upon British vessels, to which duties the like vessels built within such possessions, or owned by persons resident there, are not subject; be it further enacted, that there shall be levied and paid at the several British possessions abroad, upon all vessels built in any such possessions, or owned by any person or persons there resident, other than coasting or drogueing vessels employed in coasting or drogueing, all such and the like duties of tonnage and shipping dues as are or shall be payable in any such possessions upon the like British vessels built in other parts of his Majesty's dominions, or owned by persons not resident in such possessions.—§ 14.

Drawback on Rum, &c.—There shall be allowed upon the exportation from Newfoundland to Canada of rum or other spirits, the produce of the British possessions in South America or the West Indies, a drawback of the full duties of customs paid upon the importation thereof from any of the said places into Newfoundland, provided proof on oath be made to the satisfaction of the collector and comptroller of the customs at the port whence such rum or other spirits is exported, that the full duties on the importation of such rum or other spirits at the said port had been paid, and that a certificate be produced under the hands and seals of the collector and comptroller of the customs at Quebec, that such rum or other spirits had been duly landed in Canada; provided that no drawback shall be allowed upon any such rum or other spirits unless the same shall be shipped within 1 year from the day of the importation of the same, nor unless such drawback shall be duly claimed within 1 year from the day of such shipment.—§ 15.

Ship and Cargo to be reported on Arrival.—The master of every ship arriving in any of the British possessions in America, or the islands of Guernsey, Jersey, Alderney, or Sark, whether laden or in ballast, shall come directly, and before bulk be broken, to the Custom-house for the port or district where he arrives, and there make a report in writing to the collector or comptroller, or other proper officer, of the arrival and voyage of such ship, stating her name, country, and tonnage, and if British the port of registry, the name and country of the master, the country of the owners, the number of the crew, and how many are of the country of such ship, and whether she be laden or in ballast, and if laden the marks, numbers, and contents of every package and parcel of goods on board, and where the same was laden, and where and to whom consigned, and where any and what goods, if any, had been unladen during the voyage, as far as any of such particulars can be known to him; and the master shall further answer all such questions concerning the ship, and the cargo, and the crew, and the voyage, as shall be demanded of him by such officer; and if any goods be unladen from any ship before such report be made, or if the master fail to make such report, or make an untrue report, or do not truly answer the questions demanded of him, he shall forfeit the sum of 100*l.*; and if any goods be not reported, they shall be forfeited.—§ 16.

Entry outwards of Ship for Cargo.—The master of every ship bound from any British possession in America, or the islands of Guernsey, Jersey, Alderney, or Sark, shall, before any goods be laden therein, deliver to the collector or comptroller, or other proper officer, an entry outwards under his hand of the destination of such ship, stating her name, country, and tonnage, and if British the port of registry, the name and country of the master, the country of the owners, the number of the crew, and how many are of the country of such ship; and if any goods be laden on board any ship before such entry be made, the master of such ship shall forfeit the sum of 50*l.*; and before such ship depart the master shall bring and deliver to the collector or comptroller, or other officer, a content in writing under his hand of the goods laden, and the names of the respective shippers and consignees of the goods, with the marks and numbers of the packages or parcels of the same, and shall make and subscribe a declaration to the truth of such content as far as any of such particulars can be known to him; and the master of every ship bound from any British possession in America, or from the islands of Guernsey, Jersey, Alderney, or Sark, whether in ballast or laden, shall before departure come before the collector or comptroller, or other proper officer, and answer upon oath all such questions concerning the ship, and the cargo, if any, and the crew and the voyage, as shall be demanded of him by such officer; and thereupon the collector and comptroller, or other proper officer, if such ship be laden, shall make out and give to the master a certificate of the clearance of such ship for her intended voyage, containing an account of the total quantities of the several sorts of goods laden therein, or a certificate of her clearance in ballast, as the case may be; and if the ship depart without such clearance, or if the master deliver a false content, or shall not truly answer the questions demanded of him, he shall forfeit the sum of 100*l.*—§ 17.

Goods not stated in Certificate to be Produce of British Possessions to be deemed of Foreign Production.—No goods shall be stated in such certificate of clearance to be the produce of British possessions in America, unless such goods have been expressly stated so to be in the entry outwards of the same; and all goods not expressly stated in such certificate of clearance to be the produce of the British possessions in America shall, at the place of importation in any other such possessions, or in the United Kingdom, be deemed to be of foreign production.—§ 18.

Newfoundland Fishing Certificates in lieu of Clearance.—Whenever any ship shall be cleared out from Newfoundland, or any other part of his Majesty's dominions, for the fisheries on the banks or coasts of Newfoundland or Labrador, or their dependencies, without having on board any article of traffic, (except only the provisions, nets, tackle, and other things usually employed in and about the said fishery,) the master of such ship shall be entitled to demand from the collector or other principal officer of the customs at such port a certificate under his hand that such ship hath been specially cleared out for the Newfoundland fishery; and such certificate shall be in force for the fishing season for the year in which the same may be granted, and no longer; and upon the first arrival in any port in Newfoundland, &c. of any ship having on board such certificate, a report thereof shall be made by the master of such ship to the principal officer of the customs; and all ships having such certificate so reported, and being actually engaged in the said fishery, or in carrying coastwise to be landed or put on board any other ships engaged in the said fishery any fish, oil, salt, provisions, or other necessaries for the use and purposes thereof, shall be exempt from all obligation to make an entry at or obtain any clearance from any Custom-house at Newfoundland upon arrival at or departure from any of the ports or harbours of the said colony, &c. during the fishing season for which such certificate may be granted; and previously to obtaining a clearance at the end of such season for any other voyage at any of such ports, the master of such ship shall deliver up the before-mentioned certificate to the officer of the customs: provided always, that in case any such ship shall have on board, during the time the same may be engaged in the said fishery, any goods or merchandises whatsoever other than fish, seals, oil made of fish or seals, salt, provisions, and other things, being the produce of or usually employed in the said fishery, such ship shall forfeit the said fishing certificate, and shall thenceforth be subject and liable to the same rules, regulations, &c. as ships in general are subject or liable to.—§ 19.

Entry of Goods to be laden or unladen.—No goods shall be laden, or water-borne to be laden, on board any ship, or unladen from any ship, in any of the British possessions in America, or the islands of Guernsey, Jersey, Alderney, or Sark, until due entry be made of such goods, and warrant granted for the lading or unlading of the same; and no goods shall be so laden or water-borne, or so unladen, except at some place at which an officer of the customs is appointed to attend the lading and unlading of goods, or at some place for which a surlicence shall be granted by the collector and comptroller; and no goods shall be so laden or unladen except in the presence or with the permission in writing of the proper officer: provided always, that it shall be lawful for the commissioners of customs to make and appoint such other regulations for the carrying coastwise, or for the removing of any goods for shipment, as shall appear expedient; and that all goods laden, water-borne, or unladen contrary to the regulations of this act, or contrary to any regulations so made, be forfeited.—§ 20.

Particulars of Entry of Goods inwards and outwards.—The person entering any such goods shall deliver to the collector or comptroller, or other proper officer, a bill of the entry thereof, fairly written in words at length, containing the name of the exporter or importer, and of the ship, and of the master, and of the place to or from which bound, and of the place within the port where the goods are to be laden or unladed, and the particulars of the quality and quantity of the goods, and the packages containing the same, and the marks and numbers on the packages, and setting forth whether such goods be the produce of the British possessions in America or not; and such person shall at the same time pay down all duties due upon the goods; and the collector and comptroller, or other proper officer, shall thereupon grant their warrant for the lading or unlading of such goods.—§ 21.

Entry inwards by Bill of Sight.—If the importer of any goods make and subscribe a declaration before the collector or comptroller, or other proper officer, that he cannot, for want of full information, make perfect entry thereof, it shall be lawful for the collector and comptroller to receive an entry by bill of sight for the packages or parcels of such goods by the best description which can be given, and to grant a warrant thereupon, in order that the same may be landed and secured to the satisfaction of the officer of the customs, and at the expense of the importer, and may be seen and examined by such importer in the presence of the proper officers; and within 3 days after the goods shall have been so landed, the importer shall make a perfect entry thereof, and pay down all duties due thereon; and in default of such entry such goods shall be taken to the King's warehouse, and if the importer shall not, within 1 month after such landing, make perfect entry of such goods, and pay the duties due thereon, together with charges of removal and warehouse rent, such goods shall be sold for the payment thereof, and the overplus, if any, shall be paid to the proprietor of the goods.—§ 22.

Goods subject to ad Valorem Duty.—In all cases where the duties imposed by this act upon the importation of articles into his Majesty's possessions in America are charged, not according to the weight, tale, gauge, or measure, but according to the value thereof, such value shall be ascertained by the declaration of the importer of such articles, or his known agent, in manner and form following; (that is to say,)

‘I A. B. do hereby declare, that the articles mentioned in the entry, and contained in the packages
[here specifying the several packages, and describing the several marks and numbers, as the case may
be,] are of the value of Witness my hand the day of A. B.
‘The above declaration, signed the day of in the presence of C. D. collector [or
‘other principal officer].’

Which declaration shall be written on the bill of entry of such articles, and shall be subscribed by the importer thereof, or his known agent, in the presence of the collector or other principal officer of the customs at the port of importation: provided, that if upon view and examination of such articles by the proper officer of the customs it shall appear to him that the said articles are not valued according to the true price or value thereof, and according to the true intent and meaning of this act, in such case the importer or his known agent shall be required to declare on oath before the collector or comptroller what is the invoice price of such articles, and that he verily believes such invoice price is the current value of the articles at the place from whence the said articles were imported; and such invoice price, with the addition of 10*l.* per centum thereon, shall be deemed to be the value of the articles in lieu of the value so declared by the importer or his known agent, and upon which the duties imposed by this act shall be charged and paid: provided also, that if it shall appear to the collector and comptroller, or other proper officer, that such articles have been invoiced below the real and true value thereof, at the place from whence the same were imported, or if the invoice price is not known, the articles shall in such case be examined by two competent persons, to be nominated and appointed by the governor or commander-in-chief of the colony, plantation, or island into which the said articles are imported, and such persons shall declare on oath before the collector or comptroller, or other proper officer, what is the true and real value of such articles in such colony, plantation, or island; and the value so declared on the oaths of such persons shall be deemed to be the true and real value of such articles, and upon which the duties imposed by this act shall be charged and paid.—§ 23.

If Importer refuse to pay such Duty, the Goods may be sold.—If the importer of such articles shall refuse to pay the duties hereby imposed thereon, it shall be lawful for the collector or other chief officer of the customs where such articles shall be imported, to take and secure the same, with the casks or other package thereof, and to cause the same to be publicly sold within the space of 20 days at the most after such refusal made, and at such time and place as such officer shall, by 4 or more days' public notice, appoint for that purpose; which articles shall be sold to the best bidder; and the money arising from the sale thereof shall be applied in the first place in payment of the said duties, together with the charges that shall have been occasioned by the said sale, and the overplus, if any, shall be paid to such importer or proprietor, or any other person authorised to receive the same.—§ 24.

If Goods be not entered in 20 Days, the Officer may land and secure them.—Every importer of any goods shall, within 20 days after the arrival of the importing ship, make due entry inwards of such goods, and land the same; and in default of such entry and landing it shall be lawful for the officers of the customs to convey such goods to the king's warehouse; and if the duties due upon such goods be not paid within 3 months after such 20 days shall have expired, together with all charges of removal and warehouse rent, the same shall be sold, and the produce thereof applied first to the payment of freight and charges, next of duties, and the overplus, if any, shall be paid to the proprietor of the goods.—§ 25.

Goods imported from United Kingdom or British Possessions must appear in Cocket, &c.—No goods shall be imported into any British possession as being imported from the United Kingdom, or from any other British possession (if any advantage attach to such distinction), unless such goods appear upon the cockets or other proper documents for the same to have been duly cleared outwards at the port of exportation in the United Kingdom, or in such other British possession, nor unless the ground upon which such advantage be claimed be stated in such cocket or document.—§ 26.

Goods imported from, to be deemed of the Growth of, United Kingdom.—No goods shall, upon importation into any of the British possessions in America, be deemed to be of the growth, production, or manufacture of the United Kingdom, or of any British possession in America, unless imported from the United Kingdom, or from some British possession in America.—§ 27.

Entry not to be valid, if Goods be not properly described in it.—No entry, nor any warrant for the landing of any goods, or for the taking of any goods out of any warehouse, shall be deemed valid, unless the particulars of the goods and packages in such entry correspond with the particulars of the goods and packages in the report of the ship, or in the certificate or other document, where any is required, by which the importation or entry of such goods is authorised, nor unless the goods shall have been properly described in such entry by the denominations and with the characters and circumstances according to which such goods are charged with duty or may be imported; and any goods taken or delivered out of any ship or out of any warehouse by virtue of any entry or warrant not corresponding or agreeing in all such respects, or not properly describing the same, shall be deemed to be goods landed or taken without due entry thereof, and shall be forfeited.—§ 28.

Certificate of Production for Sugar, Coffee, Cocoa, or Spirits.—Before any sugar, coffee, cocoa, or spirits shall be shipped for exportation in any British possession in America or in the island of Mauritius, as being the produce of such possession or of such island, the proprietor of the estate on which such goods were produced, or his known agent, shall make and sign an affidavit in writing before the collector or comptroller at the port of exportation, or before a justice of the peace, or other officer duly authorised

to administer such oath, declaring that such goods are the produce of such estate; and such affidavit shall set forth the name of the estate, and the description and quantity of the goods, and the packages containing the same, with the marks and numbers thereon, and the name of the person to whose charge at the place of shipment they are to be sent; and if any justice or other officer shall subscribe his name to any writing purporting to be such affidavit, unless the person making it shall actually appear before him and be sworn to the truth of the same, such justice of the peace or officer shall forfeit and pay for any such offence the sum of 50*l.*; and the person entering and shipping such goods shall deliver such affidavit to the collector or comptroller, or other proper officer, and shall make and subscribe a declaration before him that the goods which are to be shipped by virtue of such entry are those mentioned in such affidavit; and the master of the ship in which such goods shall be laden shall, before clearance, make and subscribe a declaration before the collector or comptroller that the goods shipped by virtue of such entry are the same as are mentioned and intended in such affidavit, to the best of his knowledge and belief; and thereupon the collector and comptroller, or other proper officer, shall sign and give to the master a certificate of production, stating that proof has been made, in manner required by law, that such goods (describing the same) are the produce of such British possession or of such island, and setting forth in such certificate the name of the exporter and of the exporting ship, and of the master thereof, and the destination of the goods; and if any sugar, coffee, cocoa, or spirits be imported into any British possession in America, as being the produce of some other such possession or of such island, without such certificate of production, the same shall be forfeited. — § 29.

Certificate of Production on Re-exportation from another Colony. — Before any sugar, coffee, cocoa, or spirits shall be shipped for exportation in any British possession in America, as being the produce of some other such possession, the person exporting the same shall in the entry outwards state the place of the production, and refer to the entry inwards and landing of such goods, and shall make and subscribe a declaration before the collector or comptroller to the identity of the same; and thereupon, if such goods shall have been duly imported with a certificate of production within 12 months prior to the shipping for exportation, the collector and comptroller shall sign and give to the master a certificate of production, referring to the certificate of production under which such goods had been so imported, and containing the like particulars, with the date of such importation. — § 30.

Goods brought over Land, or by Inland Navigation. — It shall be lawful to bring or import by land or by inland navigation into any of the British possessions in America from any adjoining foreign country any goods which might be lawfully imported by sea into such possession from such country, and so to bring or import such goods in the vessels, boats, or carriages of such country, as well as in British vessels, boats, or carriages. — § 31.

What Vessels shall be deemed British on the Lakes in America. — No vessel or boat shall be admitted to be a British vessel or boat on any of the inland waters or lakes in America, except such as have been built within the British dominions, and shall be wholly owned by British subjects, and shall not have been repaired at any foreign place to a greater extent than in the proportion of 10*l.* for every ton of such vessel or boat at any one time: provided always, that nothing herein-before contained shall extend to prevent the employment of any vessel or boat as a British vessel or boat on such inland waters or lakes, which shall have wholly belonged to British subjects before the 31st day of July, 1825, and which shall not have been since that day repaired as aforesaid in any foreign place. — § 32.

Goods must be brought to a Place where there is a Custom-house. — It shall not be lawful so to bring or import any goods except into some port or place of entry at which a Custom-house now is or hereafter may be lawfully established: provided also, that it shall be lawful for the governor, lieutenant-governor, or person administering the government of any of the said possessions respectively, by and with the advice of the executive council thereof, from time to time to diminish or increase, by proclamation, the number of ports or places of entry. — § 33.

Duties to be collected in same Manner as on Goods imported by Sea. — The duties imposed by this act shall be ascertained, levied, and recovered upon all goods so brought or imported in the same manner, and by the same means, rules, regulations, penalties, &c. as the duties on the like goods imported by sea; and if any goods shall be brought or imported contrary hereto, or if any goods so brought or imported shall be removed from the station or place appointed for the examination of such goods before all duties payable thereon shall have been paid or satisfied, such goods shall be forfeited, together with the vessel, boat, or carriage, and the horses or other cattle, in or by which such goods shall have been so imported, or brought, or so removed. — § 34.

Duties in Canada on American Boats, as in America on British Boats. — The same tonnage duties shall be paid upon all vessels or boats of the United States of America importing any goods into Canada as are or may be payable in the United States of America on British vessels or boats entering the harbours whence such goods have been imported. — § 35.

CONDITIONS WITH RESPECT TO WAREHOUSING IN THE COLONIES.

Ports herein mentioned to be free warehousing Ports. — The several ports herein-after mentioned, (that is to say,) Bridgetown in Barbadoes, Quebec in Canada, Sydney in Cape Breton, Roseau in Dominica, St. George in Grenada, Kingston and Montego Bay in Jamaica, Charleston in Nevis, Saint John's and Saint Andrew's in New Brunswick, Saint John's in Newfoundland, Nassau in New Providence, Halifax and Pictou in Nova Scotia, Basseterre in Saint Kitt's, Kingston in Saint Vincent, Road Harbour in Tortola, San Joseph in Trinidad, shall be *free warehousing ports* for all the purposes of this act; and Kingston and Montreal in the Canadas, and Liverpool and Yarmouth in Nova Scotia, shall be *warehousing ports* for the warehousing of goods brought by land or by inland navigation, or imported in British ships; and it shall be lawful for the several collectors and comptrollers of the said ports respectively, by notice in writing under their hands, to appoint from time to time such warehouses at such ports as shall be approved of by them for the free warehousing and securing of goods, and also in such notice to declare what sorts of goods may be so warehoused, and also by like notice to revoke or alter any such appointment or declaration: provided always, that every such notice shall be transmitted to the governor of the place, and shall be published in such manner as he shall direct. — § 36.

Goods may be warehoused without Payment of Duty. — It shall be lawful for the importer of any such goods into the said ports to warehouse them in the warehouses so appointed, without payment of any duty on the first entry thereof, subject nevertheless to the rules, regulations, &c. herein-after contained. — § 37.

Regulation as to warehousing of Goods on Arrival in Canada. — Upon the arrival of any goods at any frontier port in the Canadas, such goods may be entered with the proper officer of the customs at such port, to be warehoused at some warehousing port in the Canadas, and may be delivered by such officer to be passed on to such warehousing port, under bond, to the satisfaction of such officer, for the due arrival and warehousing of such goods at such port. — § 38.

Storage of Goods in Warehouse. — All goods so warehoused shall be stowed in such parts or divisions of the warehouse and in such manner as the collector and comptroller shall direct; and the warehouse shall be locked and secured in such manner, and shall be opened and visited only at such times, and in the presence of such officers, and under such rules and regulations, as the collector and comptroller shall direct; and all such goods shall, after being landed upon importation, be carried to the warehouse, or shall, after being taken out of the warehouse for exportation, be carried to be shipped, under such rules and regulations as the collector and comptroller shall direct. — § 39.

Bond upon Entry of Goods to be warehoused. — Upon the entry of any goods to be warehoused, the importer of such goods, instead of paying down the duties due thereon, shall give bond with two sufficient

sureties, to be approved of by the collector or comptroller, in treble the duties payable on such goods, with condition for the safe depositing of such goods in the warehouse mentioned in such entry, and for the payment of all duties due upon such goods, or for the exportation thereof, according to the first account taken of such goods upon the landing of the same; and with further condition, that no part thereof shall be taken out of such warehouse until cleared from thence upon due entry and payment of duty, or upon due entry for exportation; and with further condition, that the whole of such goods shall be so cleared from such warehouse, and the duties, upon any deficiency of the quantity according to such first account, shall be paid, within 2 years from the date of the first entry thereof; and if after such bond shall have been given, the goods or any part thereof shall be sold or disposed of, so that the original bondholder shall be no longer interested in or have any control over the same, it shall be lawful for the collector and comptroller to admit fresh security to be given by the bond of the new proprietor or other person having control over such goods, with his sufficient sureties, and to cancel the bond given by the original bondholder of such goods, or to exonerate him to the extent of the fresh security so given. — § 40.

Goods not duly warehoused, &c. to be forfeited. — If any goods which have been entered to be warehoused shall not be duly carried and deposited in the warehouse, or shall afterwards be taken out of it without due entry and clearance, or having been entered and cleared for exportation shall not be duly carried and shipped, or shall afterwards be re-landed except with permission of the customs, such goods shall be forfeited. — § 41.

Account of Goods to be taken on landing. — Upon the entry and landing of any goods to be warehoused, the proper officer shall take a particular account of the same, and shall mark the contents on each package, and shall enter the same in a book to be kept for that purpose; and no goods which have been so warehoused shall be taken or delivered from the warehouse except upon due entry, and under care of the proper officers for exportation, or upon due entry and payment of duty for home use; and whenever the whole of the goods warehoused under any entry shall be cleared from the warehouse, or whenever further time shall be granted for any such goods to remain warehoused, an account shall be made out of the quantity upon which the duties have been paid, and of the quantity exported, and of the quantity to be then ascertained of the goods still remaining in the warehouse, as the case may be, deducting from the whole the quantity contained in any whole packages (if any) which may have been abandoned for the duties; and if upon such account there shall in either case appear to be any deficiency of the original quantity, the duty payable upon the amount of such deficiency shall then be paid. — § 42.

Samples may be taken. — It shall be lawful for the collector and comptroller, under such regulations as they shall see fit, to permit moderate samples to be taken of any goods so warehoused, without entry, and without payment of duty, except as the same shall eventually become payable, as on a deficiency of the original quantity. — § 43.

Goods may be sorted and repacked. — It shall be lawful for the collector and comptroller, under such regulations as they shall see fit, to permit the proprietor or other person having control over any warehoused goods to sort, separate, and pack and repack any such goods, and to make such lawful alterations therein, or arrangements and assortments thereof, as may be necessary for the preservation of such goods, or in order to the sale, shipment, or legal disposal of the same; and also to permit any parts of such goods so separated to be destroyed, but without prejudice to the claim for duty upon the whole original quantity of such goods: provided always, that it shall be lawful for any person to abandon any whole packages to the officers of the customs for the duties, without being liable to any duty upon the same. — § 44.

Goods warehoused may be delivered for Removal without Payment of Duty. — Goods warehoused at any warehousing port in any of the British possessions in America, being first duly entered, may be delivered, under the authority of the proper officer of the customs, without payment of duty, except for any deficiency thereof, for the purpose of removal to another warehousing port in the same possession, under bond, to the satisfaction of such officer, for the due arrival and rewarehousing of such goods at such other port. — § 45.

All Goods to be cleared within 2 Years, or sold. — All goods which have been so warehoused or rewarehoused shall be duly cleared, either for exportation or for home consumption, within 2 years from the day of first entry for warehousing; and if any such goods be not so cleared, it shall be lawful for the collector and comptroller to cause the same to be sold, and the produce shall be applied, first to the payment of the duties, next of warehouse rent and other charges, and the overplus (if any) shall be paid to the proprietor: provided always, that it shall be lawful for the collector and comptroller to grant further time for any such goods to remain warehoused, if they shall see fit. — § 46.

Bond on Entry for Exportation. — Upon the entry outwards of any goods to be exported from the warehouse, the person entering the same shall give security by bond in treble the duties of importation on such goods, with two sufficient sureties, to be approved by the collector or comptroller, that the same shall be landed at the place for which they be entered outwards, or be otherwise accounted for. — § 47.

Power to appoint other Ports. — It shall be lawful for his Majesty, by order in council, from time to time to appoint any port in his Majesty's possessions in America to be a free warehousing port for all or any of the purposes of this act; and every such port so appointed by his Majesty shall be, for all the purposes expressed in such order, a free warehousing port under this act, as if appointed by the same. — § 48.

Goods from Mauritius liable to same Duties and Regulations as West India Goods. — § 49. — (See *PORR LOUIS*.)

Cape of Hope within Limits of the Company's Charter. — In all trade with the British possessions in America, the Cape of Good Hope, and the territories and dependencies thereof, shall be deemed to be within the limits of the East India Company's charter. — § 50.

DUTCH PROPRIETORS, &c.

Dutch Proprietors in Demerara, Essequibo, and Berbice, may supply their Estates from Holland. — It shall be lawful for any of the subjects of the King of the Netherlands, being Dutch proprietors in the colonies of Demerara, Essequibo, and Berbice, to import in Dutch ships from the Netherlands into the said colonies all the usual articles of supply for their estates therein, and also wine imported for the purposes of medicine only, and which shall be liable to a duty of 10s. per ton, and no more; and in case seizure be made of any articles so imported, upon the ground that they are not such supplies, or are for the purpose of trade, the proof to the contrary shall lie on the Dutch proprietor importing the same, and not on the seizing officer: provided always, that if sufficient security by bond be given in court to abide the decision of the commissioners of customs upon such seizure, the goods so seized shall be admitted to entry and released. — § 51.

Dutch Proprietors may not export to United Kingdom. — It shall not be lawful for such Dutch proprietors to export the produce of their estates to the United Kingdom, or to any of his Majesty's sugar colonies in America, except under the conditions herein-after provided. — § 52.

What Persons shall be deemed Dutch Proprietors. — All subjects of his Majesty the King of the Netherlands resident in his said Majesty's European dominions, who were at the date of the convention between his Majesty George III. and the King of the Netherlands, dated the 12th day of August, 1815, proprietors of estates in the said colonies, and all subjects of his said Majesty who may hereafter become possessed of estates then belonging to Dutch proprietors therein, and all such proprietors as being then resident in the said colonies, and being natives of his said Majesty's dominions in the Netherlands, may have declared, within 3 months after the publication of the aforesaid convention in the said colonies, that they wish to continue to be considered as such, and all subjects of his said Majesty the King of the Netherlands who may be the holders of mortgages of estates in the said colonies made prior to the date of the convention, and who may under their mortgage deeds have the right of exporting from the said colonies to the

Netherlands the produce of such estates, shall be deemed Dutch proprietors under the provisions of this act: provided, that where both Dutch and British subjects have mortgages upon the same property in the said colonies, the produce to be consigned to the different mortgagees shall be in proportion to the debts respectively due to them. — § 53.

Persons not wishing to be considered Dutch Proprietors to sign a Declaration to that Effect. — Whereas it is expedient to permit any of such persons, at their option, to relinquish such character of Dutch proprietor; be it therefore enacted, that if any such person shall make and sign a declaration in writing, attested by two credible witnesses, setting forth that he is desirous and has elected not to be deemed to be a Dutch proprietor within the meaning of the said act in respect of any such estate or mortgage to be mentioned and named in such declaration, and shall cause such declaration to be delivered to the commissioners of his Majesty's customs, such person shall thenceforth be no longer deemed a Dutch proprietor within the meaning of the said act in respect of the estate or mortgage so mentioned in such declaration as aforesaid, and such declaration shall have effect in respect of any goods the produce of any such estate of which such person so far as relates to those goods was a Dutch proprietor, although such goods may have been exported from the colony before the delivering of such declaration as aforesaid. — § 54.

No Ship to sail from Jamaica to St. Domingo, or from St. Domingo to Jamaica. — No British merchant ship or vessel shall sail from Jamaica to St. Domingo, nor from St. Domingo to Jamaica, under the penalty of forfeiture of such ship or vessel, together with her cargo; and no foreign ship or vessel which shall have come from, or shall in the course of her voyage have touched at St. Domingo, shall come into any port or harbour in the island of Jamaica; and if any such ship or vessel, having come into any such port or harbour, shall continue there for 48 hours after notice shall have been given by the officer of the customs to depart, such ship or vessel shall be forfeited; and if any person shall be landed in Jamaica from any ship or vessel which shall have come from or touched at St. Domingo, except in case of urgent necessity, or unless licence shall have been given by the governor of Jamaica to land such person, such ship shall be forfeited, together with her cargo. — § 55.

Colonial Laws repugnant to any Act of Parliament to be null and void. — All laws, by-laws, usages, or customs at this time or which hereafter shall be in practice, or pretended to be in practice, in any of the British possessions in America, in anywise repugnant to this act, or to any other act of parliament, so far as such act relates to the said possessions, shall be null and void to all intents and purposes. — § 56.

Exemption from Duties to extend only to Duties by Act of Parliament. — Provided always, that no exemption from duty in any of the British possessions abroad, contained in any act of parliament, extends to any duty not imposed by act of parliament, unless and so far only as any duty not so imposed is expressly mentioned in such exemption. — § 57.

Officers may board Ships hovering on the Coasts. — It shall be lawful for the officers of customs to go on board any ship in any British possession in America, and to rummage and search all parts of such ship for prohibited and uncustomed goods, and also to go on board any ship hovering within 1 league of the coasts thereof, and in either case freely to stay on board such ship so long as she shall remain in such port or within such distance; and if any such ship be bound elsewhere, and shall continue so hovering for the space of 24 hours after the master shall have been required to depart, it shall be lawful for the officer of the customs to bring such ship into port, and to examine her cargo, and to examine the master upon oath touching the cargo and voyage; and if there be any goods on board prohibited to be imported, such ship and cargo shall be forfeited; and if the master shall not truly answer the questions demanded of him, he shall forfeit 100*l.* — § 58.

Forfeiture of Vessels, Carriages, &c. removing Goods liable to Forfeiture. — All vessels, boats, carriages, and cattle made use of in the removal of any goods liable to forfeiture under this act shall be forfeited, and every person who shall assist or be otherwise concerned in the unshipping, landing, or removal, harbouring, &c. of such goods, or into whose possession the same shall knowingly come, shall forfeit the treble value thereof, or the penalty of 100*l.*, at the election of the officers of the customs. — § 59.

Goods, Vessels, &c. liable to Forfeiture may be seized by Officers. — All goods, ships, vessels, boats, carriages, and cattle, liable to forfeiture under this act, may be seized and secured by any officer of the customs or navy, or by any person employed for that purpose with the concurrence of the commissioners of his Majesty's customs; and every person who shall in any way hinder or obstruct such officers or persons employed as aforesaid, or any person aiding him, shall for every such offence forfeit the sum of 200*l.* — § 60.

Writ of Assistance to search for and seize Goods liable to Forfeiture. — Under authority of a writ of assistance granted by the supreme court of justice or court of vice admiralty having jurisdiction in the place, it shall be lawful for any officer of the customs, taking with him a peace officer, to enter any building or other place in the daytime, and to search for, seize, and secure any goods liable to forfeiture under this act, and, in case of necessity, to break open any doors and any chests or other packages for that purpose; and such writ of assistance, when issued, shall be deemed to be in force during the whole of the reign in which the same shall have been granted, and for 12 months from the conclusion of such reign. — § 61.

Obstruction of Officers by Force. — If any person shall by force or violence assault, molest, hinder, or obstruct any officer of the customs or navy, or other person employed as aforesaid, or any person acting in his aid, such person upon conviction shall be adjudged a felon, and punished at the discretion of the court. — § 62.

Goods seized to be secured at the next Custom-house, and sold by Auction. — All things seized as liable to forfeiture under this act, or under any act made for the prevention of smuggling, or relating to the customs, or to trade or navigation, shall be delivered to the collector and comptroller of the customs next to the place where the same were seized; and after condemnation they shall cause the same to be sold by public auction to the best bidder: provided always, that it shall be lawful for the commissioners of the customs to direct in what manner the produce of such sale shall be applied, or, in lieu of such sale, to direct what things shall be destroyed, or be reserved for the public service. — § 63.

The next 17 clauses relate to the mode of proceeding in actions as to seizures before the courts, the application and recovery of penalties, &c. It seems unnecessary to insert these in this place.

The King may regulate the Trade of certain Colonies. — It shall be lawful for his Majesty, by any order or orders in council to be issued from time to time, to give such directions and make such regulations touching the trade and commerce to and from any British possessions on or near the continent of Europe, or within the Mediterranean Sea, or in Africa, or within the limits of the East India Company's charter (excepting the possessions of the said Company), as to his Majesty in council shall appear expedient; and if any goods shall be imported or exported in any manner contrary to any such order, the same shall be forfeited, together with the ship importing or exporting the same. — § 81.

East India Company may carry Goods from India to Colonies. — It shall be lawful for the East India Company, during the continuance of their exclusive privileges of trade, to export from any place within the limits of their charter any goods for the purpose of being carried to some of his Majesty's possessions in America, and so to carry and to import the same into any of such possessions, and also to carry return cargoes from such possessions to any place within the limits of their charter, or to the United Kingdom; and it shall be lawful for any of his Majesty's subjects, with the licence or under the authority of the said Company, to lade in and export from any of the dominions of the Emperor of China any goods, and to lade in and export from any place within the limits of the said Company's charter any tea, for the purpose of being carried to some of his Majesty's possessions in America, and also so to carry and to import the same into any of such possessions. — § 82.

Certificate of Production of East India Sugar. — It shall be lawful for any shipper of sugar the produce of some British possession within the limits of the East India Company's charter, to be exported from such possession, to go before the collector, comptroller, &c. of the customs at such place, or, if there be none such, to go before the principal officer of such place, or the judge or commercial resident, and make an affidavit that such sugar was really and *bona fide* the produce of such British possession, to the best of his knowledge and belief; and such officer, &c. is to grant a certificate thereof, setting forth the name of the ship in which the sugar is to be exported, and her destination. — § 83.

Ships built prior to the 1st of January, 1816, deemed British Ships within certain Limits. — All ships built within the limits of the East India Company's charter prior to the 1st day of January, 1816, and which were then, and have continued since, to be solely the property of his Majesty's subjects, shall be deemed to be British ships for all the purposes of trade within the said limits, including the Cape of Good Hope. — § 84.

Certificate of Production of Cape Wine. — It shall be lawful for the shipper of wine the produce of the Cape of Good Hope, or of its dependencies, which is to be exported from thence, to go before the chief officer of the customs, and make an affidavit that such wine was really and *bona fide* the produce of the Cape or its dependencies; and such officer is required to administer such affidavit, and to grant a certificate thereof, stating the name of the ship in which the wine is exported, and her destination. — § 85.

Certificate of Production of Goods in Guernsey, &c. — It shall be lawful for any person who is about to export from Guernsey, Jersey, Alderney, or Sark, to the United Kingdom, or any British possession in America, any goods the growth or produce of any of those islands, or any goods manufactured from materials the growth or produce thereof, or of the United Kingdom, to go before a magistrate of the island from which the goods are to be exported, and sign a declaration that such goods are of such growth, produce, or manufacture, and such magistrate shall administer and sign such declaration; and thereupon the governor, lieutenant-governor, &c. of the island shall, upon the delivery to him of such declaration, grant a certificate under his hand of the proof contained in such declaration, stating the ship by, and the port in the United Kingdom, or in such possession, to, which the goods are to be exported; and such certificate shall be produced at such ports, in proof that the goods mentioned therein are of the growth, produce, &c. of such islands. — § 86.

The next section relates to the importation of tea into Guernsey, &c. during the exclusive trading privileges enjoyed by the East India Company.

Guernsey, &c. Tonnage of Ships and Size of Packages for Spirits. — No brandy, geneva, or other spirits (except rum of the British plantations), shall be imported into, or exported from, the islands of Jersey, Guernsey, Alderney, or Sark, or removed from any one to any other of the said islands, or coastwise from any one part to any other part of either of the said islands, or be shipped to be so removed or carried, or be waterborne for the purpose of being so shipped in any ship, vessel, or boat of less burden than 100 tons (except when imported from the United Kingdom in ships of the burden of 70 tons at least), nor in any cask or package of less size or content than 40 gallons, (except when in bottles, and carried in a square-rigged ship), nor any tobacco or snuff in any ship, vessel, or boat of less burden than 100 tons (except when imported from the United Kingdom in ships of the burden of 70 tons at least), nor in any cask or package containing less than 450 lbs. weight, (save and except any such ship, vessel, or boat, not exceeding 2 gallons of the former, and 5 lbs. weight of the latter, for each seaman, and also except such manufactured tobacco or snuff as shall have been duly exported as merchandise from Great Britain or Ireland), on pain of forfeiture of all such foreign brandy, geneva, or other spirits, tobacco or snuff respectively, together with the casks or packages containing the same, and also of every such ship, vessel, or boat, together with all her guns, furniture, &c. — § 88.

Not to extend to Vessels of 10 Tons supplying Island of Sark, having Licence so to do. — Nothing herein contained shall extend, or be construed to extend, to any boat not exceeding the burden of 10 tons, for having on board at any one time any foreign spirits of the quantity of 10 gallons or under, in casks or packages of less size or content than 40 gallons, or any tobacco, snuff, or tea, not exceeding 50 lbs. weight of each, for the supply of the said island of Sark, such boat having a licence from the officer of customs at either of the islands of Guernsey or Jersey, for the purpose of being employed in carrying commodities for the supply of the said island of Sark; provided that every such boat having on board at any one time any greater quantity of spirits than 10 gallons, or any greater quantity of tobacco or snuff than 50 lbs. weight of each of the said articles, unless such greater quantity of spirits, tobacco, or snuff shall be in casks or packages of the size, content, or weight herein-before required, or having on board at any one time any greater quantity of tea than 50 lbs. weight, shall be forfeited. — § 89.

Penalty on Persons found on board Vessels liable to Forfeiture within 1 League of Guernsey, &c. — Every person found or discovered to have been on board any vessel or boat liable to forfeiture, for being found within 1 league of the islands of Guernsey, Jersey, Alderney, or Sark, having on board or in any manner attached or affixed thereto, or conveying or having conveyed, in any manner, such goods or other things as subject such vessel or boat to forfeiture, or who shall be found or discovered to have been on board any vessel or boat from which any part of the cargo shall have been thrown overboard during chase, or staved or destroyed, shall forfeit the sum of 100*l.* — § 90.

British Coals not to be re-exported from British Possessions without Duty. — It shall not be lawful to re-export from any of his Majesty's possessions abroad to any foreign place any coals the produce of the United Kingdom, except upon payment of the duty to which such coals would be liable upon exportation from the United Kingdom to such foreign place; and no such coals shall be shipped at any of such possessions, to be exported to any British place, until the exporter or the master of the exporting vessel shall have given bond, with one sufficient surety, in double the value of the coals, that such coals shall not be landed at any foreign place. — § 91.

Penalty for using Documents counterfeited or falsified. — If any person shall, in any of his Majesty's possessions abroad, counterfeit or falsify, or wilfully use when counterfeited or falsified, any entry, warrant, cocket, &c. for the unlading, lading, entering, reporting, or clearing any ship or vessel, or for the lading, shipping, or removing of any goods, stores, baggage, or article whatever, or shall by any false statement procure any writing or document to be made for any such purposes, or shall falsely make any oath or affirmation required by any act for regulating the trade of the British possessions abroad, or shall forge or counterfeit a certificate of the said oath or affirmation, or shall knowingly publish such certificate, he shall for every such offence forfeit the sum of 200*l.* — § 92.

The American government having declined complying with those conditions of reciprocity under which the trade between the United States and the British colonies was to be opened by the act 6 Geo. 4. c. 114., it was directed by an order in council, dated the 27th of July, 1826, that a duty of 4*s.* 3*d.* per ton should be charged upon all American vessels entering his Majesty's possessions in the West Indies, as well as an addition of 10 per cent. upon the duties imposed by the above-mentioned act on all and each of the articles named in it, when imported into the West Indies in American ships.

In the course of 1830, however, the negotiations that had been entered into with the United States relative to this subject were happily terminated by the Americans agreeing to the conditions of reciprocity above mentioned; so that the discriminating duties

imposed upon the ships and goods under authority of the above-mentioned order in council are wholly repealed.

Subjoined is the circular letter of the American government, and an extract from the British order in council, dated the 5th of November, 1830, relative to this new arrangement.

Circular to the Collectors of Customs.

Treasury Department, Oct. 6. 1830.

SIR, — You will perceive by the proclamation of the president herewith transmitted, that from and after the date thereof, the act entitled “An Act concerning Navigation,” passed on the 13th of April, 1818; an act supplementary therein, passed the 15th of May, 1820; and an act entitled “An Act to regulate the commercial intercourse between the United States and certain British Ports,” passed on the 1st of March, 1823, are absolutely repealed; and the ports of the United States are open to British vessels and their cargoes, coming from the British colonial possessions in the West Indies, on the continent of South America, the Bahama Islands, the Caicos, and the Bermuda or Somer Islands; also from the islands, provinces, or colonies of Great Britain on or near the North American continent, and north or east of the United States. By virtue of the authority of this proclamation, and in conformity with the arrangement made between the United States and Great Britain, and under the sanction of the president, you are instructed to admit to entry such vessels being laden with the productions of Great Britain or her said colonies, subject to the same duties of tonnage and impost, and other charges, as are levied on the vessels of the United States, or their cargoes arriving from the said British colonies: you will also grant clearances to British vessels for the several ports of the aforesaid colonial possessions of Great Britain, such vessels being laden with such articles as may be exported from the United States in vessels of the United States; and British vessels coming from the said colonial possessions may also be cleared for foreign ports and places other than those in the said British colonial possessions, being laden with such articles as may be exported from the United States in vessels of the United States. I am, &c.

(Signed) S. D. INGHAM, Secretary to the Treasury.

Extract from the British Order in Council, dated the 5th of November, 1830, relative to the Trade between the United States and the British West Indies.

“Whereas it hath been made to appear to his Majesty in council, that the restrictions heretofore imposed by the laws of the United States upon British vessels navigated between the said States and his Majesty's possessions in the West Indies and America, have been repealed; and that the discriminating duties of tonnage and of customs heretofore imposed by the laws of the said United States upon British vessels and their cargoes entering the ports of the said States from his Majesty's said possessions, have also been repealed, and that the ports of the United States are now open to British vessels and their cargoes coming from his Majesty's possessions aforesaid. His Majesty doth, therefore, with the advice of his privy council, and in pursuance and exercise of the powers so vested in him by the act passed in the sixth year of the reign of his said late Majesty, or by any other act or acts of parliament, declare that the said recited orders in council of the 21st of July, 1823, and of the 27th of July, 1826, and the said order in council of the 10th of July, 1827 (so far as such last-mentioned order relates to the said United States), shall be, and the same are hereby respectively revoked.

“And his Majesty doth further, by the advice aforesaid, and in pursuance of the powers aforesaid, declare that the ships of and belonging to the said United States of America may import from the United States aforesaid into the British possessions abroad, goods the produce of those States, and may export goods from the British possessions abroad, to be carried to any country whatever.”

Connection of the Planter and Home Merchant. Mode of transacting Business in England. — The mode of transacting West India business is as follows: — A sugar planter forms a connection with a mercantile house in London, Bristol, Liverpool, or Glasgow; stipulates for an advance of money on their part; grants them a mortgage on his estate; and binds himself to send them annually his crop, allowing them the full rate of mercantile commissions. These commissions are $2\frac{1}{2}$ per cent. on the amount of sugar sold, and of plantation stores sent out; along with $\frac{1}{2}$ per cent. on all insurances effected. During the war, when prices were high, the amount of those commissions was large; but, like other high charges, the result has, in nine cases in ten, been to the injury of those who received them: they led the merchants to undertake too much, and to make too large advances to the planters, for the sake of obtaining their business. At that time it was usual to allow a permanent loan at the rate of 3,000*l.* for the assured consignment of 100 hogsheads of sugar; but that *ratio* was very often exceeded by the planter, the 3,000*l.* becoming 4,000*l.*, 5,000*l.*, 6,000*l.*, and, in very many cases, still more, in consequence of unforeseen wants and too sanguine calculations on his part.

Persons resident in the West Indies are almost always bare of capital, and for obvious reasons. A climate of such extreme heat, and a state of society possessing so few attractions to persons of education, offer no inducements to men of substance in Europe to go thither. Those who do go, must trust to their personal exertion and the support of others; and when, after a continued residence in the West Indies, they have made some progress in acquiring a competency, and have become accustomed to the climate, they hardly ever consider themselves as settled there for life; their wish and hope is to carry their acquisitions so far as to be enabled to pass the remainder of their days comfortably at home. The readiest means, in the view of the planter, of accomplishing this, is the extension of his undertakings; which he can do only by borrowing money. Hence a continued demand on his mercantile correspondents at home for fresh advances: the consuming effect of heavy commissions, and of the interest on borrowed money, is, or rather was, overlooked in his ardent speculations. But when prices unfortunately fall, he finds himself 10,000*l.* or 20,000*l.* in debt, with a reduced income. The merchants at home become equally embarrassed, because the case of one is the case of three fourths of their correspondents; and the capital of the merchants, large as it may be, is absorbed and placed beyond their control. The mortgages they hold

are of value only in an ultimate sense: to foreclose them, and to take possession of the estates, is, in general, a very hazardous course.

Such has been for a number of years the state of our West India trade. Perhaps it is impossible to point out any means of effectual relief: our planters must not build expectations on such doubtful, or rather improbable, events as the stoppage of distillation from malt, or an insurrection of the negroes in rival countries, such as Cuba or Brazil. Of a bounty on exportation it is idle to speak: so that their only rational and substantial ground of hope seems to be in a further reduction of the duties on sugar, coffee, and rum; and an abolition of the duties on imports, and of the restrictions laid on their trade with America and other countries.

The sale of West India articles takes place through the medium of produce brokers, who in London reside chiefly in Mining Lane and Tower Street. Samples of sugar and rum are on show in their respective sale rooms during four days of the week, viz. Tuesday, Wednesday, Thursday, and Friday, from 11 to 1 o'clock; during which time the sugar refiners, wholesale grocers, and other dealers in produce, call in, observe the state of the market, and buy what they require. The term of credit is short; only 1 month for coffee and rum, and 2 months for sugar. Coffee is generally sold by public auction, sugar and rum by private contract. The broker's commission is usually $\frac{1}{2}$ per cent. on the amount; but in the case of coffee, as they guarantee the buyers, their charge amounts to 1 per cent. The brokers have no correspondence or connection with the planters; they are employed by the merchants; and their sales, though for large amounts, being very simple, a brokerage house of consequence generally does the business of a number of merchants. Neither merchant nor broker see, or are in the least under the necessity of seeing, the bulky packages containing the different articles of produce of which they effect the sales: all is done by sample; the packages remaining in the bonded warehouse from the time of landing till they are sold; after which they pass to the premises of the refiner, wholesale grocer, or whoever may be the purchaser.

The allowances made to the buyer in respect of weight, consist, first of the tare, which is the exact weight of the cask; and, in the second place, of a fixed allowance of 5 lbs. per cask in the case of coffee, called trett, and of 2 lbs. per cask on sugar, under the name of draft. — (See *Account Sales* of both, in pp. 150, 151.)

The shipping of stores from England to the plantations is also a very simple transaction. West India merchants in London, Liverpool, or Bristol, receive from the planters, in the autumn of each year, a list of the articles required for the respective estates: these lists they divide, arrange, and distribute among different wholesale dealers in the course of September and October, with instructions to get them ready to ship in a few weeks. November and December are the chief months for the despatch of outward-bound West Indiamen, as the plantation stores ought, by rights, to arrive about the end of December, or in the course of January. That is a season of activity, and generally of health, in the West Indies; the comparatively cool months of November and December having cleared the air, and the produce of the fields having become ripe and ready to carry. Crop time lasts from January to the end of July, after which the heavy rains put a stop to field work in the islands. Demerara, being so near the line, experiences less difference in the seasons, and it is customary there to continue making sugar all the year round.

The arrivals of West Indiamen in England with homeward cargoes begin in April and continue till October; after which, with the exception of occasional vessels from Demerara and Berbice, they cease till the succeeding April. This corresponds with the time of carrying and loading the crops: for it would be quite inadvisable, on the score of health, as well as of the interruptions to work from the heavy rains, to attempt loading vessels in the sugar islands during the autumnal months.

The unloading of West Indiamen in London usually takes place at the West India docks; and did so uniformly from the autumn of 1802, when the docks were first opened, till August, 1823, when the dock monopoly expired. The delays in discharging, occasionally complained of during the war, arose from two causes; from the vessels arriving in fleets (in consequence of sailing with convoy), and from the imperfections inseparable from a new establishment. The latter have been long remedied; and as to the former, though at particular seasons, and after a change of wind, the vessels still come close on each other, the crowding in the docks is by no means to be compared to that arising from the arrival of a convoy. Cargoes are discharged very speedily, the time seldom exceeding 3 days. The dock dues have also been materially reduced since the peace: and the whole exhibits a striking example of the advantage attendant on transacting a mass of business on one spot; an advantage which can be enjoyed only in great sea-ports, such as London, Liverpool, or Amsterdam. — (See *Docks*.)

The rates of freight during the war were, on sugar from 7s. to 8s. per cwt., and on coffee from 10s. to 11s.; whereas they now amount, the former to 4s. and 4s. 6d., and

the latter to 6s. The ship owners complain that these freights leave them **very little** profit; but in consequence of the speed with which vessels may now be unloaded and cleared at London, it is probable that the practice of making *two voyages* in the season will become general.

Disposal of Land in the Colonies. — The chief cause of the rapid advancement of all colonies placed in rude and thinly peopled countries, has been the facility with which they have obtained supplies of fertile and unoccupied land. Were the inhabitants of a colony so situated, that instead of resorting to new land to obtain increased supplies of food, they were obliged to improve the land already in cultivation, their progress would be comparatively slow, and they would approach to the condition of an old country; and the greater the concentration of the inhabitants, the nearer, of course, would be their approach to that state. On the other hand, several inconveniences result from allowing the colonists to spread themselves at pleasure over unoccupied districts. The inhabitants become too much dispersed to be able to lend efficient assistance to each other; a large extent of roads is necessary, and their construction is a task too great for so thin a population. But the greatest injury that can be done to a colony is the making of gratuitous grants of large tracts of land to corporations or individuals, without laying upon them any obligation as to their occupation, or obliging them to contribute their share of the expenses necessary on account of public improvements. Wherever such an unwise policy has been pursued, as in Lower Canada for example, the consequences have been most injurious. The occurrence of the unoccupied districts obliges the settlers to establish themselves at inconvenient distances from each other; it prevents, by the want of roads, their easy communication; and retards, in a degree not easy to be imagined, the advancement of the district. The inconveniences resulting from these grants are, indeed, obvious. They have been loudly complained of by the colonists, and are now almost universally admitted.

It is not difficult to discover the *principle* of the measures that ought to be adopted with respect to the disposal of unoccupied colonial land. They should be so contrived as to prevent too great a diffusion of the colonists, without, however, occasioning their too great concentration. And it is plain, that these advantages may be realised by selling all lands at a moderate price, or by imposing upon them a moderate quit-rent. If the price or quit-rent were very high, it would, of course, occasion too great a concentration, and be an insuperable obstacle to the rapid progress of the colony; while, if it were too low, it would not obviate the inconvenience of too great dispersion. The fixing of the price at which land should be sold is, therefore, the only really difficult point to be decided upon. The Americans sell their public lands at 2 dollars an acre; and this is, perhaps, all things considered, as proper a sum as could be selected.

Until very recently we did not follow any fixed plan in the disposal of colonial lands, which have in many instances been bestowed in the most improvident manner. But a different system has been adopted, and lands in the colonies are no longer obtainable except by purchase. We, however, are not without apprehensions that considerable inconvenience will result from the proposed plan of selling land by *auction*. It is easy, no doubt, to fix a minimum upset price; but the market price must entirely depend on the *quantity put up for sale*, compared with the number and means of the buyers. And, as the regulation of this quantity must necessarily be left to the local authorities, they will, in fact, have the power of fixing the price. A system of this sort can hardly fail of leading to very great abuses; and will give rise to perpetual complaints, even when they are not deserved, of partiality and preference. The *best* way, as it appears to us, would be to order competent persons to fix certain prices upon all the lands to be located, according to the various circumstances for and against them; and to grant specified portions of such lands to all who claimed them, according to the amount of capital they proposed to employ in their cultivation. We do not, however, think that the maximum price ought in any case to exceed 12s. or 15s. an acre: a price of this magnitude would secure a sufficient degree of concentration, without carrying the principle so far as to make it injurious.*

Disposal of Land in Canada. — The following advertisement, dated at the office of the Commissioner of Crown Lands, York, Upper Canada, 27th of May, 1833, explains the terms on which lands are in future to be granted in that province: —

In conformity to instructions recently received from his Majesty's secretary of state for the colonies, the following arrangements for disposing of the waste lands of the crown in Upper Canada, are made known for the information of emigrants and others.

Except in the case of U. E. Loyalists, and other persons entitled by the existing regulations of the government to free grants, no person can obtain any of the waste lands of the crown otherwise than by purchasing at the public sales, made from time to time under the direction of the commissioner of crown lands.

* The injurious consequences resulting from the late system of granting lands in the colonies have been very forcibly pointed out by Mr. Gouger, Mr. Tennant, and others; but the *degree* of concentration they recommend would be ten times more injurious.

These sales will be made on the 1st and 3d Tuesday of each month, and will either be continued through the following day, or not, as circumstances may appear to the agent to require.

Besides these general periodical sales, there may be occasional sales by auction in other districts, of such town lots, or other lots of land, as may remain to be disposed of; and of these sales ample notice will be given.

The conditions of every sale by public auction will be as follows: — One fourth of the purchase money to be paid down; and the remainder in 3 equal annual instalments, with interest at 6 per cent. on each instalment, payable with the instalment.

The lands will be put up at an upset price, of which notice will be given at the time of sale, and in the previous advertisements which will be published of the lands intended to be put up at each sale; and in case no offer shall be made at the upset price, the land will be reserved for future sale, in a similar manner, by auction.

A patent for the lands will be issued free of charge, upon the payment in full of the purchase money and interest.

The commissioner for crown lands, acting also as agent for the sale of clergy reserves, requests it to be noticed, that such clergy reserves as have not been hitherto occupied by authority, or leased by the government, will be disposed of, by public auction only, either at the periodical sales of crown lands, or at occasional sales, to be duly advertised, and that the terms of payment for clergy reserves will continue to be as follows: — 10 per cent. to be paid at the time of sale, and the remainder in 9 annual instalments of 10 per cent. each, with interest on each instalment, to be paid with the instalment.

Such clergy reserves as have been leased, or occupied by the authority of the government, must be applied for by letter to the commissioner of crown lands, and when disposed of, will be sold by private sale on the same terms of payment as those disposed of by public auction.

Terms upon which the Crown Lands will be disposed of in New South Wales and Van Diemen's Land.

It has been determined by his Majesty's government that no land shall, in future, be disposed of in New South Wales or Van Diemen's Land otherwise than by public sale, and it has therefore been deemed expedient to prepare for the information of settlers the following summary of the rules which it has been thought fit to lay down for regulating the sales of land in those colonies: —

1. A division of the whole territory into counties, hundreds, and parishes, is in progress. When that division shall be completed, each parish will comprise an area of about 25 square miles.

2. All the lands in the colony, not hitherto granted, and not appropriated for public purposes, will be put up to sale. The price will of course depend upon the quality of the land, and its local situation; but no land will be sold below the rate of 5s. per acre.

3. All persons proposing to purchase lands not advertised for sale, must transmit a written application to the governor, in a certain prescribed form, which will be delivered at the Surveyor General's Office to all persons applying, on payment of the requisite fee of 2s. 6d.

4. Those persons who are desirous of purchasing, will be allowed to select, within certain defined limits, such portions of land as they may wish to acquire in that manner. These portions of land will be advertised for sale for 3 calendar months, and will then be sold to the highest bidder, provided that such bidding shall at least amount to the price fixed by Article 2.

5. A deposit of 10 per cent. upon the whole value of the purchase must be paid down at the time of sale, and the remainder must be paid within 1 calendar month from the day of sale, previous to which the purchaser will not be put in possession of the land; and in case of payment not being made within the prescribed period, the sale will be considered void, and the deposit forfeited.

6. On payment of the money, a grant will be made in fee-simple to the purchaser at the nominal quitrent of a pepper-corn. Previous to the delivery of such grant, a fee of 40s. will be payable to the colonial secretary, for preparing the grant, and another fee of 5s. to the registrar of the Supreme Court, for enrolling it.

7. The land will generally be put up to sale in lots of 1 square mile, or 640 acres; but smaller lots than 640 acres may, under particular circumstances, be purchased, on making application to the governor in writing, with full explanations of the reasons for which the parties wish to purchase a smaller quantity.

8. The crown reserves to itself the right of making and constructing such roads and bridges as may be necessary for public purposes in all land purchased as above; and also to such indigenous timber, stone, and other materials, the produce of the land, as may be required for making and keeping the said roads and bridges in repair, and for any other public works. The crown further reserves to itself all mines of precious metals.

Colonial Office, 20th of January, 1831.

Selection of Sites for Colonial Establishments. — Nothing can be more unwise than the plan, if so we may call it, hitherto followed in the selection of places at which to found colonies. The captain of a ship, without any knowledge whatever of the nature of soils, or the capacities of a country in an agricultural point of view, falls in after a long cruise with a river or bay, abounding with fish and fresh water, and surrounded with land that looks fertile, and is covered with herbage. He forthwith reports all these circumstances, duly embellished, to the Admiralty, strongly recommending the situation as an admirable one at which to found a colony; and in nine cases out of ten *this* is all the information that is required in taking a step of such infinite importance! No wonder, therefore, that many fine schemes of colonisation should have ended only in loss and disappointment; and that situations which the colonists were taught to look upon as a species of paradise, have proved to be any thing but what they were represented. Botany Bay, though described by Captain Cook as one of the finest places in the world, had to be abandoned by the colonists that were sent out to it; as the country round it, instead of being favourable for cultivation, is a mere sandy swamp. Is it possible to suppose, had the proper inquiries been entered into, that any attempt would have been made to establish a colony in so pestilential a climate as that of Sierra Leone? The colony in the district of Albany, in the Cape of Good Hope, was founded upon the representations of an individual, who, whatever might be his information in other respects, had not the slightest knowledge of agriculture; and the distresses the settlers have had to encounter, were the natural consequences of their relying on such authority. The late establishment at Swan River may be adduced as another instance of misplaced or premature confidence in the reports of those who were really without the means of forming a correct estimate of the various circumstances necessary to be attended to in forming a colony.

We do, therefore, hope that an end will be put to this system, — a system which is in no common degree injurious to the public interests, and is highly criminal towards those who embark as colonists. The founding of a colony ought to be looked upon in its true point of view — as a great national enterprise. It is not an adventure to be intrusted to presumptuous ignorance; but should be maturely weighed, and every circumstance connected with it carefully investigated. Above all, the situation in which it is proposed to found the colony should be minutely surveyed: and its climate, soil, and capacities of production, deliberately inquired into by competent persons employed for the purpose. Were this done, government and the public would have the best attainable grounds upon which to proceed; and neither party would have much reason to fear those disappointments, which have hitherto so often followed the exaggerated representations of those to whom the important and difficult task of selecting situations for colonies has been delegated.

V. FOREIGN COLONIES.

1. *Spanish Colonies.* — Spain, whose colonial possessions extended a few years ago from the frontiers of the United States to the Straits of Magellan, is not, at present, possessed of a foot of ground in the whole American continent. Still, however, her colonial possessions are of great value and importance. In the West Indies, she is mistress of Cuba and Porto Rico; — the former by far the largest and finest of the West India islands; and the latter also a very valuable possession. In the East, Spain is mistress of the Philippine Islands, which, were they in the hands of an enterprising people, would speedily become of very great commercial importance. — (See the articles HAVANNAH, MANILLA, PORTO RICO.)

2. *Dutch Colonies.* — Java forms the most important and valuable of the Dutch colonial possessions. — (See BATAVIA.) In the East they also possess the Moluccas, Bencoolen on the coast of Sumatra, Macassar, and the eastern coast of Celebes, Banda, &c. They have several forts on the Gold Coast in Africa; and in the West Indies, they possess the islands of Curaçoa and St. Eustatius, Saba, and part of St. Martin; and on the continent of South America, they are masters of Dutch Surinam. Curaçoa and St. Eustatius are naturally barren, but they have been both highly improved. From its being very conveniently situated for maintaining a contraband traffic with the Caraccas and other districts in South America, Curaçoa was formerly a place of great trade, particularly during war. But since the independence of South America, Curaçoa has ceased in a great measure to be an *entrepôt*; the goods destined for the Continent being now, for the most part, forwarded direct to the places of their destination.

That district of Surinam ceded to the British in 1814, comprising the settlements of Demerara, Berbice, and Essequibo (see *ante*, p. 343.), formed the most valuable portion of Surinam, or Dutch Guiana. The district which still belongs to the Dutch lies to the south of Berbice. It contains about 25,000 square miles, and a population of about 60,000. It is daily becoming of more value and importance.

3. *French Colonies.* — Previously to the negro insurrection that broke out in 1792, St. Domingo was by far the most valuable colony in the West Indies. But this disastrous event, having first devastated the island, terminated in the establishment of the independent black republic of Hayti. — (See PORT AU PRINCE.) Having also sold Louisiana to the Americans, and ceded the Mauritius to the English, without making any new acquisitions, the colonial dominions of France are, at this moment, of very limited extent. They consist of Guadeloupe and Martinique, and the small islands of Marie-Galante and Desadea, in the West Indies; Cayenne, in South America; Senegal and Goree, in Africa; the Isle de Bourbon, in the Eastern Ocean; St. Marie, in Madagascar; and Pondicherry and Chandernagor, with a very small surrounding territory, in the East Indies. The tabular statements in the opposite page show the population, trade, &c. of the French colonies.

4. *Danish Colonies.* — In the West Indies, these consist of the islands of St. Croix, St. Thomas, and St. John: of these, St. Croix only is valuable. It is about 81 square miles in extent, and contains about 37,000 inhabitants, of whom 3,000 are whites, 1,200 free blacks and mulattoes, and the remainder slaves. The soil is fertile, and it is well cultivated. The principal productions are sugar, rum, and coffee. In India, the Danes possess Tranquebar, near Madras; and Serampoor, near Calcutta. The former contained, in 1809, about 19,000 inhabitants; but it has greatly improved since the peace, both in commerce and population. Serampoor is a neat but not very considerable place. It serves as an asylum for the debtors of Calcutta, and is the capital station of the missionaries. The Danes have a few forts on the coast of Guinea.

5. *Swedish Colonies.* — The Swedes only possess one colony — the small island of St. Bartholomew, in the West Indies. It is only about 25 square miles in extent, but is very fertile. It has no springs, nor fresh water of any sort, except such as is supplied by the rain. Population between 8,000 and 9,000.

COLUMBO, the modern capital of Ceylon, situated on the south-west coast of the island; lat. $6^{\circ} 55' N.$, lon. $79^{\circ} 45' E.$ † It is defended by a very strong fort, nearly surrounded by the sea, in which is a light-house 97 feet high. In 1816, the population of the town and fort was 24,664; and in 1831, 26,357. — (*Columbo Journal*, 17th of October, 1832.) The houses are generally only one story high; they are of stone, clay, and lime; and the town has more of a European appearance than any other in India. The inhabitants are principally Cingalese. In 1821, there were only 32 Europeans in the place qualified to serve on juries. The temperature of the air is remarkable for its equality; and though very humid, the climate may, on the whole, be esteemed salubrious and temperate. There is no harbour at Columbo for large vessels, but only an open roadstead. A projecting rock, on which two batteries are erected, affords shelter to a small semicircular bay on the north side of the fort, having a wooden quay to facilitate the loading and unloading of boats. The depth of water is not sufficient to allow sloops or large dhonies to come alongside the quay; those exceeding 100 tons burden lying at about a cable's length from it. A bar of sand, on some parts of which the water is not more than 7 feet deep, extends from the projecting rock across this bay. The channel where it may be crossed by the larger class of ships is liable to shift; and it is only in the fine weather of the safe season that they venture to go within the bar. The outer road affords secure anchorage for half the year, from the beginning of October to the end of March, during the prevalence of the N. E. monsoon, when the wind blows off the land: during the other, or S. W. monsoon, when the wind blows from the sea on shore, the road is very far from safe; and the ships that frequent it are sometimes obliged to slip their cables and stand out to sea. — (*Millurn's Orient. Comm.*;

* Allowing for bounty on exports.

† This is the position as given by Hamilton. According to Mr. Stuart, master attendant of the port, it is in lat. $6^{\circ} 57' N.$, lon. $79^{\circ} 52' E.$

Hamilton's Gazette, &c.) As respects its harbour, Columbo is, therefore, very inferior to Trincomalee, the harbour of which is accessible at all times, and is one of the best in India; but the country in the vicinity of Columbo is more fertile; and it has the command of an internal navigation, stretching in a lateral direction along the coast, from Putlam, to the north of the city, to Caltura on the south, a distance of about 100 miles, partly obtained by rivers, and partly by canals. Many flat-bottomed boats are employed in this navigation, the families dependent on which reside mostly on board. Nearly all the foreign trade of Ceylon is carried on from Columbo; and it has also a large proportion of the coasting traffic.

Monies.—The rixdollar = 1s. 6d.; but accounts are kept in pounds, shillings, and pence, as in England. *Weights, Measures, &c.*—The weights are divided into ounces, pounds, &c., and are the same as in Great Britain. The candy or bahar = 500 lbs. avoirdupois, or 461 lbs. Dutch Troy weight. The principal dry measures are *seers* or *parrahs*. The former is a perfect cylinder, of the depth and diameter under-

Secr - - - - 4.35 inches. Diameter. 4.35 inches.

The parrah is a perfect cube, its internal dimensions being every way 11.57 inches. The liquid measure consists of gallons, and their multiples and sub-multiples. 150 gallons = 1 leaguer or legger.

The bale of cinnamon consists of 92½ lbs. very nearly.

Rates of Pilotage payable by all Square-rigged Vessels, Sloops, or Schooners, at the Port of Columbo, Trincomalee, and Galle.

	L.	s.	d.
Columbo - - - -	-	0	15 0
Trincomalee - - -			
Vessels of 600 tons and upwards	2	0	0
400 and under 600	1	10	0
200 - - - 400	1	1	0
100 - - - 200	0	10	6
under 100	-	0	6 0
Galle - - - -			
Vessels of 600 tons	-	-	3 0 0
400 and under 600	-	-	2 5 0
200 - - - 400	-	-	1 10 0
100 - - - 200	-	-	1 2 6
under 100	-	-	0 15 0

The above rates of pilotage will be charged to all vessels going into the inner harbour of Trincomalee and the harbour of Galle, whether they make a signal for pilot or not. In Columbo and Back Bay, at Trincomalee, the charge will only be made, if the vessel make signal, and a pilot actually repair on board.

Sailing Directions and Remarks on the Port of Columbo, by James Stuart, Esq. Master Attendant.

The land about Columbo is low near the sea, with some hills to the eastward at a distance in the country. The high mountain having on it a sharp cone, called Adam's Peak, bears from Columbo E. 7° S., distant 12½ leagues; its height above the level of the sea is estimated at about 7,000 feet, according to a rough trigonometrical measurement by Colonel Willermann. When the atmosphere is clear, it may be seen 30 leagues. During the prevalence of the N.E. monsoon, Adam's Peak is generally visible in the morning, and frequently the whole of the day; but it is rarely seen in the S.W. monsoon, dense vapours generally prevailing over the island at this season.

Ships approaching Columbo in the night have a brilliant light to direct them, which is exhibited every night from a light-house in the fort; the height of the light above the level of the sea is 97 feet, and may be seen in clear weather as far as the light appears above the horizon.

A steep bank of coral, about ¼ mile broad, with 15 fathoms water on it, lies 7 miles W. from Columbo, extending northward towards Negombo (where its surface is sand), and a few miles to the southward of Columbo; outside the bank the water deepens at once to 25 fathoms, and in 2 miles to 28 fathoms, greenish sand, which is not far from the edge of soundings. Within the bank there are 25 fathoms gradually shoaling towards the shore.

A bed of sunken rocks, called the Drunken Sailor, lies S.W. by W. ½ W. from Columbo Light-house, distant 1,000 yards. The length of the ledge may be estimated at 100 yards, and the breadth 20 yards; on its N. end a small spot, about the size of the hull of a 20 ton boat, is said to have only 3 feet water on it at low water; but during several recent visits, when some of the coral from its surface was brought up, there did not appear to be less than 7 feet 6 inches water on the shallowest part; on the other parts of the ledge there is 1, 5, and 6 fathoms. The sea breaks on the shallow part of these rocks almost constantly during the S.W. monsoon, but this is very seldom the case during the N.E. monsoon.

There appears to be no doubt, that the Drunken Sailor is granite, or stone of the same description as the rocks on the shore, with its surface incrustated with coral; if there ever was 3 feet water on it, it may be supposed to be sinking.

The Drunken Sailor should not be approached under 9 fathoms during the night, as there are 8 fathoms very near to it, and in its stream to the southward.

In the N.E. monsoon of 1826, the E.I. Company's brig of war Thetis touched on the Drunken Sailor, having stood too close to the land in beating up to the anchorage from the southward; but with common attention to the depth of water approaching the rock, it may be easily avoided.

The passage within the Drunken Sailor is clear, and some ships have sailed through; but no advantage can be gained by approaching the shore so very near at this point.

The Drunken Sailor lies so near the land, and so far to the

Fees on Port Clearances payable by Merchant Ships and Vessels, from the 1st Day of October, 1825.

southward of the anchorage in Columbo road, as scarcely to form any impediment to ships bound to or from Columbo.

The currents off Columbo are subject to considerable variation; but they are never so strong as to cause inconvenience to ships, which may have to communicate with the shore in either monsoon without coming to anchor.

Columbo road affords good anchorage, free from foul ground; and is frequented at all seasons of the year.

The best anchorage during the prevalence of S.W. winds from April to October, is in from 7 to 8 fathoms, with the light-house bearing S. by E. ½ E. and the Dutch church E. by S. In the N.E. monsoon from November to April, it is more convenient to anchor in 6½ fathoms, with the light-house bearing S. or S. ½ E., and the Dutch church E.S.E.

Ships requiring pilots to conduct them to the anchorage should make the usual signals; the charge for pilotage is 15s.

The bar is a bank of sand with 7 feet water on its shallowest part, the northern extremity being about 400 yards N.W. of the Custom-house Point; small vessels that draw less than 10 feet water, ride within the bar protected from the S.W. wind and swell.

When the sea is high, it breaks with great force on the bar, and renders the passage from the shipping in the outer road dangerous for small boats: the native boats generally pass out and in to the southward of the bar, close to the breakers on the rocky point of the Custom-house; but as the passage is narrow, it should not be attempted by strangers: when the sea breaks on the bar, it is better to proceed round to the northward of the bar, which may be easily distinguished by the breakers.

What is strictly understood by a gale of wind, is a rare occurrence at Columbo: this may be owing to the vicinity of the equator. The strong gales which blow on the Malabar coast are felt in small squalls, and a high sea, but there is scarcely wind to endanger vessels properly found in ground tacking; it is true, ships have sometimes required the aid of a second anchor, but in most cases the cause has been attributable to some defect in the first anchor or cable, a light anchor, an anchor breaking, a short chain, or the chain coming unshackled: an instance occurred in Columbo road, of two ships receiving cargo during the S.W. monsoon, whose chain cables came unshackled twice; twice did it occur to each ship.

On the 2d of June, 1831, the Hector drove in a squall; having about 80 fathoms of chain ahead, they let go the second anchor; but finding the ship did not immediately bring up, they made sail and shipped their cables: this ship stood out of the roads under double-reefed fore and main top-sails, and from its size, a single reefed main top-sail, foresail, fore and main trysails and driver, and returned to anchorage on the 4th. Instances of ships putting to sea are rare, and when it is considered that although the sea is high the wind is not violent; and as at these times the rain having fallen in the interior, strong freshes escape to the S.W., from the Kalany Ganga; it is by no means surprising that Columbo road proves a safe anchorage.

Trade and Navigation of Ceylon.—The quantity and estimated value of the principal articles exported from Ceylon in 1830, beginning with cinnamon, the most important of all, were as follow: viz. Cinnamon 380,000 lbs., value 142,500*l.*; arrack 729,472 gallons, value 21,600*l.*; coir, and coir ropes and cables, 1,489,455 lbs., value 5,453*l.*; cocoa nuts 2,812,495, value 2,528*l.*; cocoa nut oil 118,511 gallons, value 8,992*l.*; chanks and chank rings 822,833 pieces, value 3,089*l.*; plumbago 50,629 lbs., value 180*l.*; jaggery 292,283 lbs., value 3,600*l.*; coffee 1,669,190 lbs., value 12,522*l.*; areca nuts 3,348,972 lbs., value 12,004*l.*; tobacco and sheroots 1,025,673 lbs., value 4,896*l.* The destination and total value of the exports from Ceylon in 1830, were, to Great Britain, 168,576*l.*; to British colonies, including India, 80,675*l.*; to foreign states, 1,556*l.*; being, in all, 250,787*l.*; but to this has to be added, for the value of the pearl fishery in 1830, 24,023*l.*; making an aggregate sum of 274,810*l.*

Of the imports, the principal are rice and other grain, the estimated value of the quantity imported in 1830 being 141,761*l.*; the next article of importance is cotton cloth, mostly brought from India, estimated at 12,575*l.*

The imports from Great Britain are very trifling; their entire value in 1830 being only estimated at 49,777*l.* The total imports during that year amounted to 349,581*l.*; of which 274,576*l.* were from British colonies, including India and China.*

The number and tonnage of the ships entering Ceylon inwards in 1830 were as follow:—

From Great Britain.		From British Colonies and India.		From Foreign States.		Total.	
<i>Ships.</i>	<i>Tons.</i>	<i>Ships.</i>	<i>Tons.</i>	<i>Ships.</i>	<i>Tons.</i>	<i>Ships.</i>	<i>Tons.</i>
11	3,911	878	60,137	109	12,962	1,058	77,090†

Extent, Population, Revenue, &c. of Ceylon.—The area of Ceylon has been computed at 24,664 square miles. Its population has been much exaggerated; having frequently been estimated as high as 2,000,000, and even Mr. Bertolacci reckoned it at 1,500,000. —(*View of Ceylon*, p. 65.) But it was found by an actual enumeration taken in 1831, that the total population did not exceed 950,000, of which about 6,600 were whites. It appears from the official accounts laid before the Finance Committee in 1825, that during the 14 years ending with 1824, the excess of expenditure over revenue in the island amounted to 1,365,452*l.*, at the same time that various heavy items of expense are not included in this account. But according to a statement in the *Ceylon Almanac* for 1833, which seems to proceed from authority, there was, during the 3 years ending with 1831, an aggregate surplus of revenue over expenditure of 174,828*l.* We may, however, observe that the accounts laid before the Finance Committee differ very widely, for the period to which they apply, from those in the *Ceylon Almanac*; so much so, that while, according to the former, there was, in 1822, an excess of expenditure over revenue of 55,896*l.*, there was, according to the latter, an excess of revenue over expenditure of 15,323*l.*! Of course, we do not presume to say which of these accounts is most to be relied upon. Probably our readers will be inclined to think that neither is entitled to implicit credit.

A part, at least, of the former excess of expenditure may fairly be ascribed to the nature of the establishment kept up in the island; which, in point of magnitude and expensiveness, seems to have been a good deal beyond what was really required. We are, however, disposed to believe that the greater part of the excess is to be ascribed to the poverty and backward state of the colony, arising from the perpetual interference of government with every branch of industry. All the restrictive regulations enacted by the Dutch more than a century ago were kept up till 1832. The cultivation of cinnamon, the fishery of pearls and chanks, the digging for chaya root, the felling of timber, &c. — (see these articles) — have been all monopolised by government, and were carried on exclusively either by its servants or by those whom it had licensed. A country where most of the principal branches of industry were subjected to such restrictions, could not be otherwise than languishing. We believe, too, that most of these monopolies have not been worth the expense attending them. In fact, the whole revenue of the island, including land rent, customs, cinnamon monopoly, &c., very seldom exceeds 360,000*l.* a year; but looking at its extent, its fertility, its favourable situation for commerce, and the advantage it enjoys in the possession of cinnamon, can any one doubt that, were it rightly governed, its trade and revenue would be far greater than they are? Nothing is wanted but the adoption of measures calculated to give freedom and security to industry, and the imposition of moderate duties on imports and exports, to increase them both in a very high degree.

We are glad to have to state that government seems, in part at least, to have at length come round to this way of thinking; and that, under the auspices of the present governor (Sir R. W. Horton), the system of compulsory labour has been relinquished, and most monopolies, including that of cinnamon, been thrown up. This wise and liberal conduct will, no doubt, be productive of the most beneficial effects. These, however, will be materially lessened by the exorbitant duty of 3*s.* per lb. laid on the exportation of cinnamon! It is difficult, indeed, to imagine for what other purpose so oppressive a duty could be imposed, except it were to countervail the advantages that

* Dr. Colquhoun (2d ed. p. 412.) estimated the exports of Ceylon at 1,500,000*l.* a year, and the imports at 1,000,000*l.*! Perhaps a third of the Doctor's estimates are about equally near the mark.

† No accurate returns of the trade of Ceylon for 1831 have as yet (10th of October, 1833) been received in England. Those given in the papers printed by the Board of Trade for 1831, are really for 1830.

would otherwise have resulted from the abolition of the monopoly. It is not, however, possible that so mischievous an impost should be maintained. — (See CINNAMON.) Among other improvements recently introduced into the island, may be mentioned the establishment of a mail coach from Columbo to Candy.

COLUMBO ROOT (Du. *Columbo wortel*; Fr. *Racine de Colombo*; Ger. *Columbo-wurzel*; It. *Radice di Columbo*; Port. *Raiz de Columba*; Sp. *Raiz de Columbo*; Mosamb. *Kalumb*), the root of the plant of that name. It is a staple export of the Portuguese from Mosambique. It is not cultivated, but grows naturally in great abundance. It is imported in circular pieces, from $\frac{1}{2}$ an inch to 3 inches in diameter, generally from $\frac{1}{4}$ to $\frac{3}{4}$ of an inch thick; the bark is wrinkled and thick, of a brownish colour without, and a brightish yellow within; the pith is spongy, yellowish, and slightly striped: when fresh, its smell is rather aromatic; it is disagreeably bitter, and slightly pungent to the taste, somewhat resembling mustard that has been too long kept. Choose the largest pieces, fresh, and of a good colour, as free from worms as possible, rejecting that which is small and broken. The freight is calculated at 16 cwt. to a ton. — (*Milburn's Orient. Com.*)

COMBS (Ger. *Kamme*; Du. *Kammen*; Fr. *Peignes*; It. *Peltini*; Sp. *Peines*; Rus. *Grebni*; Lat. *Pectines*), instruments for combing the hair, sometimes made of horns of bullocks, or of elephants' and sea-horses' teeth; sometimes also of tortoiseshell, and sometimes of box or holly wood.

COMMERCE, from *commutatio mercium*, is simply, as its name imports, the exchange of commodities for commodities.

I. ORIGIN OF COMMERCE. — MERCANTILE CLASSES.

II. HOME TRADE.

III. FOREIGN TRADE.

IV. RESTRICTIONS ON COMMERCE.

I. ORIGIN OF COMMERCE. — MERCANTILE CLASSES.

(1.) *The Origin of Commerce* is coeval with the first dawn of civilisation. The moment that individuals ceased to supply themselves directly with the various articles and accommodations they made use of, that moment must a commercial intercourse have begun to grow up amongst them. For it is only by exchanging that portion of the produce raised by ourselves that exceeds our own consumption, for portions of the surplus produce raised by others, that the division of employments can be introduced, or that different individuals can apply themselves in preference to different pursuits.

Not only, however, does commerce enable the inhabitants of the same village or parish to combine their separate efforts to accomplish some common object, but it also enables those of different provinces and kingdoms to apply themselves in an especial manner to those callings, for the successful prosecution of which the district or country which they occupy gives them some peculiar advantage. This territorial division of labour has contributed more, perhaps, than anything else to increase the wealth and accelerate the civilisation of mankind. Were it not for it, we should be destitute of a vast number of the necessities, comforts, and enjoyments, which we now possess; while the price of the few that would remain would, in most instances, be very greatly increased. But whatever advantages may be derived, — and it is hardly possible to exaggerate either their magnitude or importance, — from availing ourselves of the peculiar capacities of production enjoyed by others, are wholly to be ascribed to commerce as their real source and origin.

We do not mean to say any thing in this article with respect to the practical details connected with the different departments of commerce. These will be found under the various titles to which they refer. Our object, at present, is merely to show the nature and influence of commerce in general, and of the restrictions that have sometimes been imposed upon it. We shall begin by endeavouring, first of all, to give some account of the nature of the services performed by those individuals by whom commercial undertakings are usually carried on. In the second place, we shall consider the influence of the home trade, or of the intercourse subsisting amongst individuals of the same country. In the third place, we shall consider the influence of foreign trade, or of that intercourse which subsists amongst individuals belonging to different countries. After these topics have been discussed, we shall offer a few remarks on what has been termed the restrictive system; or on the principles involved in the regulations enacted at different times, in this and other countries, for the government and direction of commerce.

(2.) *Mercantile Classes.* — While the exchange of different products is carried on by the producers themselves, they must unavoidably lose a great deal of time, and experience many inconveniences. Were there no merchants, a farmer wishing to sell his crop would be obliged, in the first place, to seek for customers, and to dispose of his

corn as nearly as possible in such quantities as might suit the demands of the various individuals inclined to buy it; and after getting its price, he would next be obliged to send to 10 or 20 different and, perhaps, remote places, for the commodities he wanted to get in its stead. So that besides being exposed to a world of trouble and inconvenience, his attention would be continually diverted from the labours of his farm. Under such a state of things, the work of production, in every different employment, would be meeting with perpetual interruptions, and many branches of industry that are successfully carried on in a commercial country would not be undertaken.

The establishment of a distinct mercantile class effectually obviates these inconveniences. When a set of dealers erect warehouses and shops for the purchase and sale of all descriptions of commodities, every producer, relieved from the necessity of seeking customers, and knowing beforehand where he may at all times be supplied with such products as he requires, devotes his whole time and energies to his proper business. The intervention of merchants gives a continuous and uninterrupted motion to the plough and the loom. Were the class of traders annihilated, all the springs of industry would be paralysed. The numberless difficulties that would then occur in effecting exchanges would lead each particular family to endeavour to produce all the articles they had occasion for: society would thus be thrown back into primeval barbarism and ignorance; the divisions of labour would be relinquished; and the desire to rise in the world and improve our condition would decline, according as it became more difficult to gratify it. What sort of agricultural management could be expected from farmers who had to manufacture their own wool, and make their own shoes? And what sort of manufacturers would those be, who were every now and then obliged to leave the shuttle for the plough, or the needle for the anvil? A society, without that distinction of employments and professions resulting from the division of labour, that is, *without commerce*, would be totally destitute of arts or sciences of any sort. It is by the assistance each individual renders to and receives from his neighbours, by every one applying himself in preference to some peculiar task, and combining, though probably without intending it, his efforts with those of others, that civilised man becomes equal to the most gigantic efforts, and appears endowed with almost omnipotent power.

The mercantile class has generally been divided into two subordinate classes—the wholesale dealers, and the retail dealers. The former purchase the various products of art and industry in the places where they are produced, or are least valuable, and carry them to those where they are more valuable, or where they are more in demand; and the latter, having purchased the commodities of the wholesale dealers, or the producers, collect them in shops, and sell them in such quantities and at such times as may best suit the public demand. These classes of dealers are alike useful; and the separation that has been effected between their employments is one of the most advantageous divisions of labour. The operations of the wholesale merchant are analogous to those of the miner. Neither the one nor the other makes any change on the bodies which he carries from place to place. All the difference between them consists in this,—that the miner carries them from below ground to the surface of the earth, while the merchant carries them from one point to another on its surface. Hence it follows that the value given to commodities by the operations of the wholesale merchant may frequently exceed that given to them by the producers. The labour or expense required to dig a quantity of coal from the mine, does not exceed what is required for its conveyance from Newcastle to London; and it is a far more difficult and costly affair to fetch a piece of timber from Canada to England, than to cut down the tree. In this respect there is no difference between commerce and agriculture and manufactures. The latter give utility to matter, by bestowing on it such a shape as may best fit it for ministering to our wants and comforts; and the former gives additional utility to the products of the agriculturist and manufacturer, by bringing them from where they are of comparatively little use, or are in excess, to where they are of comparatively great use, or are deficient.

If the wholesale merchant were himself to retail the goods he has brought from different places, he would require a proportional increase of capital; and it would be impossible for him to give that exclusive attention to any department of his business, which is indispensable to its being carried on in the best manner. It is for the interest of each dealer, as of each workman, to confine himself to some one business. By this means each trade is better understood, better cultivated, and carried on in the cheapest possible manner. But whether carried on by a separate class of individuals or not, it is obvious that the retailing of commodities is indispensable. It is not enough that a cargo of tea should be imported from China, or a cargo of sugar from Jamaica. Most individuals have some demand for these articles; but there is not, perhaps, a single private person, even in London, requiring so large a supply of them for his own consumption. It is clear, therefore, that they must be *retailed*; that is, they must be sold in such quantities and at such times as may be most suitable for all classes of consumers. And since

it is admitted on all hands, that this necessary business will be best conducted by a class of traders distinct from the wholesale dealers, it is impossible to doubt that their employment is equally conducive as that of the others to the public interest, or that it tends equally to augment national wealth and comfort.

II. HOME TRADE.

The observations already made serve to show the influence of the home trade in allowing individuals to confine their attention to some one employment, and to prosecute it without interruption. But it is not in this respect only that the establishment of the home trade is advantageous. It is so in a still greater degree, by its allowing the inhabitants of the different districts of the empire to turn their labour into those channels in which it will be most productive. The different soils, different minerals, and different climates of different districts, fit them for being appropriated, in preference, to certain species of industry. A district, like Lancashire, where coal is abundant, which has an easy access to the ocean, and a considerable command of internal navigation, is the natural seat of manufactures. Wheat and other species of grain are the natural products of rich arable soils; and cattle, after being reared in mountainous districts, are most advantageously fattened in meadows and low grounds. Hence it follows, that the inhabitants of different districts, by confining themselves to those branches of industry for the successful prosecution of which they have some peculiar capability, and exchanging their surplus produce for that of others, will obtain an incomparably larger supply of all sorts of useful and desirable products, than they could do, were they to apply themselves indiscriminately to every different business. The territorial division of labour is, if possible, even more advantageous than its division among individuals. A person may be what is commonly termed *Jack of all trades*; and though it is next to certain that he will not be well acquainted with any one of them, he may nevertheless make some sort of rude efforts in them all. But it is not possible to apply the same soil or the same minerals to every different purpose. Hence it is, that the inhabitants of the richest and most extensive country, provided it were divided into small districts without any intercourse with each other, or with foreigners, could not, how well soever labour might be divided among themselves, be otherwise than poor and miserable. Some of them might have a superabundance of corn, at the same time that they were wholly destitute of wine, coal, and iron; while others might have the largest supplies of the latter articles, with but very little grain. But in commercial countries no such anomalies can exist. Opulence and comfort are there universally diffused. The labours of the mercantile classes enable the inhabitants of each district to apply themselves principally to those employments that are naturally best suited to them. This superadding of the division of labour among different provinces to its division among different individuals, renders the productive powers of industry immeasurably greater; and augments the mass of necessities, conveniences, and enjoyments, in a degree that could not previously have been conceived possible, and which cannot be exceeded except by the introduction of foreign commerce.

"With the benefit of commerce," says an eloquent and philosophical writer, "or a ready exchange of commodities, every individual is enabled to avail himself, to the utmost, of the peculiar advantage of his place; to work on the peculiar materials with which nature has furnished him; to humour his genius or disposition, and betake himself to the task in which he is peculiarly qualified to succeed. The inhabitant of the mountain may betake himself to the culture of his woods and the manufacture of his timber; the owner of pasture lands may betake himself to the care of his herds; the owner of the clay-pit to the manufacture of his pottery; and the husbandman to the culture of his fields, or the rearing of his cattle. And any one commodity, however it may form but a small part in the accommodations of human life, may, under the facility of commerce, find a market in which it may be exchanged for what will procure any other part, or the whole: so that the owner of the clay-pit, or the industrious potter, without producing any one article immediately fit to supply his own necessities, may obtain possession of all that he wants. And commerce, in which it appears that commodities are merely exchanged, and nothing produced, is, nevertheless, in its effects, very productive, because it ministers a facility and an encouragement to every artist in multiplying the productions of his own art; thus adding greatly to the mass of wealth in the world, in being the occasion that much is produced." — (*Ferguson's Principles of Moral Science*, vol. ii. p. 424.)

The roads and canals that intersect a country, and open an easy communication between its remotest extremities, render the greatest service to internal commerce, and also to agriculture and manufactures. A diminution of the expense of carriage has, in fact, the same effect as a diminution of the direct cost of production. If the coals brought into a city sell at 20s. a ton, of which the carriage amounts to a half, or 10s., it is plain that in the event of an improved communication, such as a more level or direct road, a

railway, or a canal, being opened for the conveyance of the coals, and that they can, by its means, be imported for half the previous expense, their price will immediately fall to 15s. a ton; just as it would have done, had the expense of extracting them from the mine been reduced a half.

Every one acquainted with the merest elements of political science is aware that employments are more and more subdivided, that more powerful machinery is introduced, and the productive powers of labour increased, according as larger masses of the population congregate together. In a great town like London, Glasgow, or Manchester, the same number of hands will perform much more work than in a small village, where each individual has to perform several operations, and where the scale of employment is not sufficiently large to admit of the introduction of extensive and complicated machinery. But the great towns with which England is studded, could not exist without our improved means of communication. These, however, enable their inhabitants to supply themselves with the bulky products of the soil and of the mines almost as cheap as if they lived in country villages; securing to them all the advantages of concentration, with but few of its inconveniences. Roads and canals are thus productive of a double benefit; for while, by affording comparatively cheap raw materials to the manufacturers, they give them the means of perfecting the divisions of labour, and of supplying proportionally cheap manufactured goods; the latter are conveyed by their means, and at an extremely small expense, to the remotest parts of the country. The direct advantages which they confer on agriculture are not less important. Without them it would not be possible to carry to a distance sufficient supplies of lime, marl, shells, and other bulky and heavy articles necessary to give luxuriance to the crops of rich soils, and to render those that are poor productive. Good roads and canals, therefore, by furnishing the agriculturists with cheap and abundant supplies of manure, reduce, at one and the same time, the cost of producing the necessaries of life, and the cost of bringing them to market.

In other respects, the advantages resulting from improved communications are probably even more striking. They give the same common interest to every different part of the most widely extended empire; and put down, or rather prevent, any attempt at monopoly on the part of the dealers of particular districts, by bringing them into competition with those of all the others. Nothing in a state enjoying great facilities of communication is separate and unconnected. All is mutual, reciprocal, and dependent. Every man naturally gets into the precise situation that he is best fitted to fill; and each, co-operating with every one else, contributes to the utmost of his power to extend the limits of production and civilisation. — (See *ROADS*.)

Such being the nature and vast extent of the advantages derived from the home trade, it is obviously the duty of the legislature to give it every proper encouragement and protection. It will be found however, on a little consideration, that this duty is rather negative than positive — that it consists less in the framing of regulations, than in the removal of obstacles. The error of governments in matters of trade has not been that they have done too little, but that they have attempted too much. It will be afterwards shown that the encouragement which has been afforded to the producers of certain species of articles in preference to others, has uniformly been productive of disadvantage. In the mean time it is sufficient to observe that the encouragement which a prudent and enlightened government bestows on industry, will equally extend to all its branches; and will be especially directed to the removal of every thing that may in any respect fetter the freedom of commerce, and the power of individuals to engage in different employments. All regulations, whatever be their object, that operate either to prevent the circulation of commodities from one part of the empire to another, or the free circulation of labour, necessarily tend to check the division of employments and the spirit of competition and emulation, and must, in consequence, lessen the amount of produce. The same principle that prompts to open roads, to construct bridges and canals, ought to lead every people to erase from the statute book every regulation which either prevents or fetters the operations of the merchant, and the free disposal of capital and labour. Whether the freedom of internal commerce and industry be interrupted by impassable mountains and swamps, or by oppressive tolls or restrictive regulations, the effect is equally pernicious.

The common law and the ancient statute law of England are decidedly hostile to monopolies, or to the granting of powers to any particular class of individuals to furnish the market with commodities. Lord Coke distinctly states, "that all monopolies concerning trade and traffic are against the liberty and freedom granted by the great charter, and divers other acts of parliament which are good commentaries upon that charter." — (2 *Inst.* 63.) And he affirms, in another place, that "*Commercium jure gentium commune esse debet, et non in monopolium et privatum pauculorum questum convertendum. Iniquum est aliis permittere, aliis inhibere mercaturam.*"

But, notwithstanding this concurrence of the common and statute law of the country

in favour of the freedom of industry, during the arbitrary reigns of the princes of the house of Tudor, the notion that the crown was by its prerogative entitled to dispense with any law to the contrary, and to establish monopolies, became fashionable among the court lawyers, and was acted upon to a very great extent. Few things, indeed, occasioned so much dissatisfaction in the reign of Elizabeth as the multiplication of monopolies; and notwithstanding the opposition made by the crown, and the court party in parliament, the grievance became at length so intolerable as to give rise to the famous statute of 1624 (21 James 1. c. 3.), by which all monopolies, grants, letters patent, and licences, for the sole buying, selling, and making of goods and manufactures, not given by an act of the legislature, are declared to be "*altogether contrary to the laws of this realm, void, and of none effect.*" This statute has been productive of the greatest advantage; and has, perhaps, contributed more than any other to the development of industry, and the accumulation of wealth. With the exception of the monopoly of printing Bibles, and the restraints imposed by the charters of bodies legally incorporated, the freedom of internal industry has ever since been vigilantly protected; full scope has been given to the principle of competition; the whole kingdom has been subjected to the same equal law; no obstacles have been thrown in the way of the freest transfer of commodities from one county or place to another; the home trade has been perfectly unfettered; and though the public have not been supplied with commodities at so low a price as they might have obtained them for, had there been no restrictions on foreign commerce, they have obtained them at the lowest price that would suffice to pay the *home producers* the cost of producing and bringing them to market. It is to this freedom that the comparatively flourishing state of industry in Great Britain is mainly to be ascribed.

III. FOREIGN TRADE.

What the home trade is to the different provinces of the same country, foreign trade is to all the countries of the world. Particular countries produce only particular commodities, and, were it not for foreign commerce, would be entirely destitute of all but such as are indigenous to their own soil. It is difficult for those who have not reflected on the subject, to imagine what a vast deduction would be made, not only from the comforts, but even from the necessities, of every commercial people, were its intercourse with strangers put an end to. It is not, perhaps, too much to say that in Great Britain we owe to our intercourse with others a full half or more of all that we enjoy. We are not only indebted to it for the cotton and silk manufactures, and for supplies of wine, tea, coffee, sugar, the precious metals, &c.; but we are also indebted to it for most of the fruits and vegetables that we now cultivate. At the same time, too, that foreign commerce supplies us with an immense variety of most important articles, of which we must otherwise have been wholly ignorant, it enables us to employ our industry in the mode in which it is sure to be most productive, and reduces the price of almost every article. We do not misemploy our labour in raising sugar from the beet-root, in cultivating tobacco, or in forcing vines; but we employ ourselves in those departments of manufacturing industry in which our command of coal, of capital, and of improved machinery, give us an advantage; and obtain the articles produced more cheaply by foreigners, in exchange for the surplus produce of those branches in which we have a superiority over them. A commercial nation like England avails herself of all the peculiar facilities of production given by Providence to different countries. To produce claret here is perhaps impossible; and at all events it could not be accomplished, unless at more than 100 times the expense required for its production in France. We do not, however, deny ourselves the gratification derivable from its use; and to obtain it, we have only to send to France, or to some country indebted to France, some article in the production of which we have an advantage, and we get claret in exchange at the price which it takes to raise it under the most favourable circumstances. One country has peculiar capacities for raising corn, but is at the same time destitute of wine, silk, and tea; another, again, has peculiar facilities for raising the latter, but is destitute of the former; and it is impossible to point out a single country which is abundantly supplied with any considerable variety of commodities of domestic growth. *Non omnis fert omnia tellus.* Providence, by giving to each particular nation something which the others want, has evidently intended that they should be mutually dependent upon one another. And it is not difficult to see that, *ceteris paribus*, those must be the richest and most abundantly supplied with every sort of useful and desirable accommodation, who cultivate the arts of peace with the greatest success, and deal with all the world on fair and liberal principles.

"The commerce of one country with another is, in fact," to use the words of an able and profound writer, "merely an extension of that division of labour by which so many benefits are conferred upon the human race. As the same country is rendered the richer by the trade of one province with another; as its labour becomes thus infinitely more divided and more productive than it could otherwise have been; and as the mutual

supply to each other of all the accommodations which one province has, and another wants, multiplies the accommodations of the whole, and the country becomes thus in a wonderful degree more opulent and happy; the same beautiful train of consequences is observable in the world at large, — that great empire of which the different kingdoms and tribes of men may be regarded as the provinces. In this magnificent empire, too, one province is favourable to the production of one species of accommodation, and another province to another: by their mutual intercourse they are enabled to sort and distribute their labour as most peculiarly suits the genius of each particular spot. The labour of the human race thus becomes much more productive, and every species of accommodation is afforded in much greater abundance. The same number of labourers, whose efforts might have been expended in producing a very insignificant quantity of home-made luxuries, may thus, in Great Britain, produce a quantity of articles for exportation, accommodated to the wants of other places, and peculiarly suited to the genius of Britain to furnish, which will purchase for her an accumulation of the luxuries of every quarter of the globe. There is not a greater proportion of her population employed in administering to her luxuries, in consequence of her commerce; there is probably a good deal less; but their labour is infinitely more productive: the portion of commodities which the people of Great Britain acquire by means of the same labour, is vastly greater." — (*Mills Commerce defended*, p. 38.)

What has been already stated is sufficient to expose the utter fallacy of the opinion that has sometimes been maintained, that whatever one nation may gain by her foreign commerce, must be lost by some one else. It is singular, indeed, how such a notion should ever have originated. Commerce is *not directly productive*, nor is the good derived from it to be estimated by its immediate effects. What commercial nations give is uniformly the fair equivalent of what they get. In their dealings they do not prey upon each other, but are benefited alike. The advantage of commerce consists in its enabling labour to be divided, and giving each people the power of supplying themselves with the various articles for which they have a demand, at the lowest price required for their production in those countries and places where they are raised with the greatest facility. We import wine from Portugal, and cotton from America, sending in exchange cloth and other species of manufactured goods. By this means we obtain two very important articles, which it would be all but impossible to produce at home, and which we could not, certainly, produce, except at an infinitely greater cost. But our gain is no loss to the foreigners. They derive precisely the same sort of advantage from the transaction that we do. We have very superior facilities for manufacturing, and they get from us cloth, hardware, and other important articles, at the price at which they can be produced in this country, and consequently for far less than their direct production would have cost them. The benefits resulting from an intercourse of this sort are plainly mutual and reciprocal. Commerce gives no advantage to any one people over any other people; but it increases the wealth and enjoyments of *all* in a degree that could not previously have been conceived possible.

But the influence of foreign commerce in multiplying and cheapening conveniences and enjoyments, vast as it most certainly is, is perhaps inferior to its indirect influence — that is, to its influence on industry, by adding immeasurably to the mass of desirable articles, by inspiring new tastes, and stimulating enterprise and invention by bringing each people into competition with foreigners, and making them acquainted with their arts and institutions.

The apathy and languor that exist in a rude state of society have been universally remarked. But these uniformly give place to activity and enterprise, according as man is rendered familiar with new objects, and is inspired with a desire to obtain them. An individual might, with comparatively little exertion, furnish himself with an abundant supply of the commodities essential to his subsistence; and if he had no desire to obtain others, or if that desire, however strong, could not be gratified, it would be folly to suppose that he should be laborious, inventive, or enterprising. But, when once excited, the wants and desires of man become altogether illimitable; and to excite them, no more is necessary than to bring new products and new modes of enjoyment within his reach. Now, the sure way to do this is to give every facility to the most extensive intercourse with foreigners. The markets of a commercial nation being filled with the various commodities of every country and every climate, the motives and gratifications which stimulate and reward the efforts of the industrious are proportionally augmented. The husbandman and manufacturer exert themselves to increase their supplies of raw and manufactured produce, that they may exchange the surplus for the products imported from abroad. And the merchant, finding a ready demand for such products, is prompted to import a greater variety, to find out cheaper markets, and thus constantly to afford new incentives to the vanity and ambition, and consequently to the enterprise and industry, of his customers. The whole powers of the mind and the body are thus called into action; and the passion for foreign commodities — a passion which has some-

times been ignorantly censured — becomes one of the most efficient causes of wealth and civilisation.

Not only, however, does foreign commerce excite industry, distribute the gifts of nature, and enable them to be turned to the best account, but it also distributes the gifts of science and of art, and gives to each particular country the means of profiting by the inventions and discoveries of others as much as by those of her own citizens. The ingenious machine invented by Mr. Whitney, of the United States, for separating cotton wool from the pod, by reducing the cost of the raw material of one of our principal manufactures, has been quite as advantageous to us as to his own countrymen. And the discoveries and inventions of Watt, Arkwright, and Wedgwood, by reducing the cost of the articles we send abroad, have been as advantageous to our foreign customers as to ourselves. Commerce has caused the blessings of civilisation to be universally diffused, and the treasures of knowledge and science to be conveyed to the remotest corners. Its humanising influence is, in this respect, most important; while, by making each country depend for the means of supplying a considerable portion of its wants on the assistance of others, it has done more than any thing else to remove a host of the most baleful prejudices, and to make mankind regard each other as friends and brothers, and not as enemies. The dread, once so prevalent, of the progress of other nations in wealth and civilisation, is now universally admitted to be as absurd as it is illiberal. While every people ought always to be prepared to resist and avenge any attack upon their independence or their honour, it is not to be doubted that their real prosperity will be best secured by their endeavouring to live at peace. "A commercial war, whether crowned with victory or branded with defeat, can never prevent another nation from becoming more industrious than you are; and if they are more industrious they will sell cheaper; and consequently your customers will forsake your shop and go to theirs. This will happen, though you covered the ocean with fleets, and the land with armies. The soldier may lay waste; the privateer, whether successful or unsuccessful, will make poor; but it is the eternal law of Providence that *'the hand of the diligent can alone make rich.'*" — (*Tucker's Four Tracts*, p. 41. 3d ed.)

Mr. Hume has beautifully illustrated the powerful and salutary influence of that spirit of industry and enterprise resulting from the eager prosecution of commerce and the arts. "Men," says he, "are then kept in perpetual occupation, and enjoy, as their reward, the occupation itself, as well as those pleasures which are the fruits of their labour. The mind acquires new vigour; enlarges its powers and faculties; and, by an assiduity in honest industry, both satisfies its natural appetites, and prevents the growth of unnatural ones, which commonly spring up when nourished with ease and idleness. Banish those arts from society, you deprive men both of action and of pleasure; and, leaving nothing but indolence in their place, you even destroy the relish of indolence, which never is agreeable but when it succeeds to labour, and recruits the spirits, exhausted by too much application and fatigue.

"Another advantage of industry and of refinements in the mechanical arts is, that they commonly produce some refuements in the liberal; nor can the one be carried to perfection, without being accompanied in some degree with the other. The same age which produces great philosophers and politicians, renowned generals and poets, usually abounds with skilful weavers and ship-carpenters. We cannot reasonably expect that a piece of woollen cloth will be wrought to perfection in a nation which is ignorant of astronomy, or where ethics are neglected. The spirit of the age affects all the arts; and the minds of men, being once roused from their lethargy, and put into a fermentation, turn themselves on all sides, and carry improvements into every art and science. Profound ignorance is totally banished; and men enjoy the privilege of rational creatures, to think as well as to act, to cultivate the pleasures of the mind as well as those of the body.

"The more these refined arts advance, the more sociable do men become; nor is it possible that, when enriched with science, and possessed of a fund of conversation, they should be contented to remain in solitude, or live with their fellow citizens in that distant manner which is peculiar to ignorant and barbarous nations. They flock into cities; love to receive and communicate knowledge; to show their wit or their breeding; their taste in conversation or living, in clothes or furniture. Curiosity allures the wise, vanity the foolish, and pleasure both. Particular clubs and societies are every where formed; both sexes meet in an easy and sociable manner; and the tempers of men, as well as their behaviour, refine apace. So that beside the improvements they receive from knowledge and the liberal arts, it is impossible but they must feel an increase of humanity from the very habit of conversing together, and contributing to each other's pleasure and entertainment. Thus *industry, knowledge, and humanity* are linked together by an indissoluble chain; and are found, from experience as well as reason, to be peculiar to the more polished, and, what are commonly denominated, the more luxurious ages." — (*Essay of Refinement in the Arts.*)

Most commercial treatises, and most books on political economy, contain lengthened statements as to the comparative advantages derived from the home and foreign trade. But these statements are almost always bottomed on the most erroneous principles. The quantity and value of the commodities which the inhabitants of an extensive country exchange with each other, is far greater than the quantity and value of those they exchange with foreigners: but this is not, as is commonly supposed, enough to show that the home trade is proportionally more advantageous. Commerce, it must be borne in mind, is not a direct but an indirect source of wealth. The mere exchange of commodities adds nothing to the riches of society. The influence of commerce on wealth consists in its allowing employments to be separated and prosecuted without interruption. It gives the means of pushing the divisions of labour to the furthest extent; and supplies mankind with an infinitely greater quantity of necessaries and accommodations of all sorts, than could have been produced, had individuals and nations been forced to depend upon their own comparatively feeble efforts for the supply of their wants. And hence, in estimating the comparative advantageousness of the home and foreign trades, the real questions to be decided are, which of them contributes most to the division of labour? and which of them gives the greatest stimulus to invention and industry? These questions do not, perhaps, admit of any very satisfactory answer. The truth is, that both home trade and foreign trade are most prolific sources of wealth. Without the former, no division of labour could be established, and man would for ever remain in a barbarous state. Hence, perhaps, we may say that it is the most indispensable; but the length to which it could carry any particular country in the career of civilisation, would be limited indeed. Had Great Britain been cut off from all intercourse with strangers, there is no reason for thinking that we should have been at this day advanced beyond the point to which our ancestors had attained during the Heptarchy! It is to the products and the arts derived from others, and to the emulation inspired by their competition and example, that we are mainly indebted for the extraordinary progress we have already made, as well as for that we are yet destined to make.

Dr. Smith, though he has satisfactorily demonstrated the impolicy of all restrictions on the freedom of commerce, has, notwithstanding, endeavoured to show that it is more for the public advantage that capital should be employed in the home trade than in foreign trade, on the ground that the capitals employed in the former are more frequently returned, and that they set a greater quantity of labour in motion than those employed in the latter. But we have elsewhere endeavoured to show that the rate of profit which different businesses yield is the only test of their respective advantageousness. — (*Principles of Political Economy*, 2d ed. pp. 160—180.) Now, it is quite evident that capital will not be employed in foreign trade, unless it yield as much profit as could be made by employing it at home. No merchant sends a ship to China, if it be in his power to realise a larger profit by sending her to Dublin or Newcastle; nor would any one build a ship, unless he expected that the capital so laid out would be as productive as if it were employed in agriculture or manufactures. The more or less rapid return of capital is a matter of very little importance. If the average rate of profit be 10 per cent., an individual who turns over his capital 10 times a year, will make *one* per cent. of profit each time; whereas if he turns it only once a year, he will get the whole 10 per cent. at once. Competition reduces the rate of nett profit to about the same level in all businesses; and we may be quite certain that those who employ themselves in the departments in which capital is most rapidly returned, do not, at an average, gain more than those who employ themselves in the departments in which the returns are most distant. No one is a foreign merchant because he would rather deal with foreigners than with his own countrymen, but because he believes he will be able to employ his capital more advantageously in foreign trade than in any other business: and while he does this, he is following that employment which is most beneficial for the public as well as for himself.

IV. RESTRICTIONS ON COMMERCE.

The statements already made, by explaining the nature and principles of commercial transactions, are sufficient to evince the inexpediency of subjecting them to any species of restraint. It is obvious, indeed, that restrictions are founded on false principles. When individuals are left to pursue their own interest in their own way, they naturally resort to those branches of industry which they reckon most advantageous for themselves; and, as we have just seen, these are the very branches in which it is most for the public interest that they should be employed. Unless, therefore, it could be shown that a government can judge better as to what sort of transactions are profitable or otherwise than private individuals, its regulations cannot be of the smallest use, and may be exceedingly injurious. But any such pretension on the part of government would be universally scouted. It is undeniably certain that a regard to our own interest is, if not an unerring guide to direct us in such matters, at least incomparably better than any

other. If the trade with a particular country or in a particular commodity be a losing one, or merely a less profitable one than others, it is quite as unnecessary to pass an act to prevent it from being carried on, as it would be to interfere to prevent individuals from selling their labour or their commodities below the market price. It appears, therefore, that all regulations affecting the freedom of commerce, or of any branch of industry, are either useless or pernicious. They are useless, when they are intended to protect the interest of individuals by preventing them from engaging in disadvantageous businesses; and pernicious, when they prevent them from engaging in those that are advantageous. The self interest of the parties concerned is the only safe principle to go by in such matters. When the acts of the legislature are in unison with it, there is nothing to object to in them, save only that they might as well not exist; but whenever they are inconsistent with it — that is, whenever they tend to divert capital and industry into channels, into which individuals, if left to their own discretion, would not have carried them — they are decidedly injurious.

No one denies that it is possible to confer, by means of a restrictive regulation, an advantage on a greater or less number of individuals. This, however, is no proof that it is advantageous in a public point of view; and it is by its influence in this respect that we are to decide concerning it. If the exclusion of an article imported from abroad, in order to encourage its manufacture at home, raise its price in the home market, that circumstance will, for a while at least, be advantageous to those engaged in its production. But is it not clear that all that is thus gained by them, is *lost by those who purchase the article*? To suppose, indeed, that the exclusion of commodities that are comparatively cheap, to make room for those that are comparatively dear, can be a means of enriching a country, is equivalent to supposing that a people's wealth might be increased by destroying their most powerful machines, and throwing their best soils out of cultivation.

But it is contended, that though this might be the case in the instance of commodities produced at home, it is materially different when the commodity excluded came to us from abroad. It is said, that in this case the exclusion of foreign produce increases the demand for that produced at home, and consequently contributes to increase the demand for labour; so that the rise of price it occasions is, in this way, more than balanced by the other advantages which it brings along with it. But the fact is, that though the demand for one species of produce may be increased by a prohibition of importation, the demand for some other species is sure to be at the same time equally diminished. There is no jugglery in commerce. Whether it be carried on between individuals of the same country, or of different countries, it is in all cases bottomed on a fair principle of reciprocity. Those who will not buy need not expect to sell, and conversely. It is impossible to export without making a corresponding importation. We get nothing from the foreigner gratuitously: and hence, when we prevent the importation of produce from abroad, we prevent, by the very same act, the exportation of an equal amount of British produce. All that the exclusion of foreign commodities ever effects, is the substitution of one sort of demand for another. It has been said, that "when we drink beer and porter we consume the produce of English industry, whereas when we drink port or claret we consume the produce of the industry of the Portuguese and French, to the obvious advantage of the latter, and the prejudice of our countrymen!" But, how paradoxical soever the assertion may at first sight appear, there is not at bottom any real distinction between the two cases. What is it that induces foreigners to supply us with port and claret? The answer is obvious: — We either send directly to Portugal and France an *equivalent in British produce*, or we send such equivalent, in the first place to South America for bullion, and then send that bullion to the Continent to pay for the wine. And hence it is as clear as the sun at noon-day, that the Englishman who drinks only French wine, who eats only bread made of Polish wheat, and who wears only Saxon cloth, gives, by occasioning the exportation of a corresponding amount of British cotton, hardware, leather, or other produce, the same encouragement to the industry of his countrymen, that he would give were he to consume nothing not immediately produced at home. A quantity of port wine and a quantity of Birmingham goods are respectively of the same value; so that whether we directly consume the hardware, or, having exchanged it for the wine, consume the latter, must plainly, in so far as the employment of British labour is concerned, be altogether indifferent.

It is absolutely nugatory, therefore, to attempt to encourage industry at home by restraining importation from abroad. We might as well try to promote it by interdicting the exchange of shoes for hats. We only resort to foreign markets, that we may supply ourselves with articles that cannot be produced at home, or that require more labour to produce them here, than is required to produce the equivalent exported to pay for them. It is, if any thing can be, an obvious contradiction and absurdity to attempt to promote wealth or industry by prohibiting an intercourse of this sort. Such prohibition, even when least injurious, is sure to force capital and labour into less pro-

ductive channels; and cannot fail to diminish the foreign demand for one species of produce, quite as much as it extends the home demand for another.

It is but seldom, however, that a restriction on importation from abroad does no more than substitute one sort of employment for another. Its usual effect is both to alter the distribution of capital, and to increase the price of commodities. A country rarely imports any commodity from abroad that may be as cheaply produced at home. In the vast majority of instances, the articles bought of the foreigner could not be directly produced at home, without a much greater outlay of capital. Suppose that we import 1,000,000*l.* worth of any commodity, that its importation is prohibited, and that the same quantity of produce cannot be raised in this country for less than 1,200,000*l.* or 1,500,000*l.*: in a case of this sort, — and this is actually the case in 99 out of every 100 instances in which prohibitions are enacted, — the prohibition has the same effect on the consumers of the commodity, as if, supposing it not to have existed, they had been burdened with a peculiar tax of 200,000*l.* or 500,000*l.* a year. But, had such been the case, what the consumers lost would have gone into the coffers of the treasury, and would have afforded the means of repealing an equal amount of other taxes; whereas, under the prohibitory system, the high price, being occasioned by an increased difficulty of production, is of no advantage to any one. So that, instead of gaining anything by such a measure, the public incurs a dead loss of 200,000*l.* or 500,000*l.* a year.

We have said that a prohibition of importation may be productive of immediate advantage to the home producers of the prohibited article. It is essential, however, to remark that this advantage cannot continue for any considerable time, and that it *must* be followed by a period of distress. Were the importation of foreign silks put an end to, that circumstance, by narrowing the supply of silk goods, and raising their prices, would, no doubt, be, in the first instance, advantageous to the manufacturers, by elevating their profits above the common level. But the consequence would be, that those already engaged in the trade would immediately set about extending their concerns; at the same time that not a few of those engaged in other employments would enter a business which presented such a favourable prospect: nor would this transference of capital to the silk manufacture be stopped, till such an increased supply of silks had been brought to market as to occasion a glut. This reasoning is not founded upon hypothesis, but upon the widest experience. When a business is carried on under the protection of a restriction on importation, it is limited by the extent of the home market, and is incapable of further extension. It is, in consequence, particularly subject to that fluctuation which is the bane of industry. If, owing to a change of fashion, or any other cause, the demand be increased, then, as no supplies can be brought from abroad, prices suddenly rise, and the manufacture is rapidly extended, until a reaction takes place, and prices sink below their usual level: and if the demand decline, then, as there is no outlet abroad for the superfluous goods, their price is ruinously depressed, and the producers are involved in inextricable difficulties. The businesses deepest entrenched behind ramparts of prohibitions and restrictions, such as the silk trade previously to 1825, the West India trade, and agriculture since 1815, have undergone the most extraordinary vicissitudes; and have been at once more hazardous and less profitable than the businesses carried on under a system of fair and free competition.

A prohibition against buying in the cheapest markets is really, also, a prohibition against selling in the dearest markets. There is no test of high or low price, except the quantity of other produce for which an article exchanges. Suppose that, by sending a certain quantity of cottons or hardware to Brazil, we might get in exchange 150 hhd*s.* of sugar, and that the same quantity, if sent to Jamaica, would only fetch 100 hhd*s.*; is it not obvious, that by preventing the importation of the former, we force our goods to be sold for *two thirds* of the price they would otherwise have brought? To suppose that a system productive of such results can be a means of increasing wealth, is to suppose what is evidently absurd. It is certainly true that a restrictive regulation, which has been long acted upon, and under which a considerable quantity of capital is employed, ought not to be rashly or capriciously repealed. Every change in the public economy of a great nation ought to be gone about cautiously and gradually. Adequate time should be given to those who carry on businesses that have been protected, either to withdraw from them altogether, or to prepare to withstand the fair competition of foreigners. But this is *all* that such persons can justly claim. To persevere in an erroneous and oppressive system, merely because its abandonment might be productive of inconvenience to individuals, would be a proceeding inconsistent with every object for which society is formed, and subversive of all improvement.

It may, perhaps, be supposed that in the event of commodities being imported from abroad, after the abolition of a protecting regulation, that were previously produced at home, the workmen and those engaged in their production would be thrown upon the parish. Such, however, is not the case. We may, by giving freedom to commerce,

change the *species* of labour in demand, but it is not possible that we should thereby change its *quantity*. If, in consequence of the abolition of restrictions, our imports were increased to the amount of 4,000,000*l.* or 5,000,000*l.*, our exports, it is certain, must be augmented to the same extent: so that whatever diminution of the demand for labour might be experienced in certain departments would be balanced by a corresponding increase in others.

The pressure of taxation has often been alleged as an excuse for restrictions on commerce, but it is not more valid than the rest. Taxation may be heavy, and even oppressive; but so long as it is impartially and fairly assessed, it equally affects *all* branches of industry carried on at home, and consequently affords no ground whatever for the enactment of regulations intended to protect any particular business. And to propose to protect *all* branches of industry from foreign competition, is, in effect, to propose to put a total stop to commerce; for if nothing is to be imported, nothing can be exported. The imposition of moderate duties on foreign commodities, for the sake of revenue, is quite another thing. Many of these form among the very best subjects of taxation; and when the duties on them are confined within proper bounds, — that is, when they are not so high as to exert any injurious influence upon trade, or to occasion smuggling and fraud, — they cannot fairly be objected to.

It is sometimes contended, by those who assert, on general grounds, that restrictions are inexpedient, that it would be unwise, on the part of any country, to abolish them until she had obtained a security that those imposed by her neighbours would also be abolished. But the reasons that have been alleged in favour of this statement are not entitled to the least weight. It is our business to buy in the cheapest and sell in the dearest markets, without being, in any degree, influenced by the conduct of others. If they consent to repeal the restrictions they have laid on commerce, so much the better. But whatever others may do, the line of policy *we* ought to follow is clear and well defined. To refuse, for example, to buy claret, brandy, &c. from the French, because they lay absurd restrictions on the importation of British hardware, cottons, &c., would not be to retaliate upon them, but upon ourselves. The fact that we *do* import French wine and brandy shows that we do export to France, or to some other country to which France is indebted, an equivalent, in some sort, of British produce. The fear of being glutted with foreign products, unless we secure beforehand a certain outlet for our own, is the most unfounded that can be imagined. The foreigner who will take nothing of ours, can send us nothing of his. Though our ports were open to the merchants of all the countries of the world, the exports of British produce must always be equal to the imports of foreign produce; and none but those who receive our commodities, either at first or second hand, could continue to send any thing to us.

“ Les étrangers ne peuvent demander ni désirer rien mieux, que la liberté de vous acheter et de vous vendre chez vous et dans vos colonies. Il faut la leur accorder, non par faiblesse et par impuissance, mais parcequ'elle est juste en elle-même, et qu'elle vous est utile. Ils ont tort sans doute de la refuser chez eux: mais cette faute d'ignorance dont, sans le savoir, ils sont punis les premiers, n'est pas un raison qui doit vous porter à vous nuire à vous-même en suivant cet exemple, et à vous exposer aux suites et aux dépenses d'une guerre pour avoir la vaine satisfaction d'user des représailles, dont l'effet ne peut manquer de retomber sur vous, et de rendre votre commerce plus désavantageux.” — (*Le Trosne de l'Ordre Social*, p. 416.)

There are some, however, who contend, that though restrictions on importation from abroad be unfavourable to opulence, and the advancement of individuals and nations in arts and civilisation, they may, notwithstanding, be vindicated on other grounds, as contributing essentially to independence and security. The short and decisive answer to this is to be found in the reciprocity of commerce. It does not enrich one individual or nation at the expense of others, but confers its favours equally on all. We are under no obligations to the Portuguese, the Russians, or any other people with whom we carry on trade. It is not *our* advantage, but *their own*, that they have in view in dealing with us. We give them the full value of all that we import; and they would suffer quite as much inconvenience as we should do were this intercourse put an end to. The independence at which those aspire who would promote it by laying restrictions on commerce, is the independence of the solitary and unsocial savage; it is not an independence productive of strength, but of weakness. “ The most flourishing states, at the moment of their highest elevation, when they were closely connected with every part of the civilised world by the golden chains of successful commercial enterprise, were, according to this doctrine, in the most perfect state of absolute dependence. It was not till all these connections were dissolved, and they had sunk in the scale of nations, that their true independence commenced! Such statements carry with them their own refutation. There is a natural dependence of nations upon each other, as there is a natural dependence of individuals upon each other. Heaven has so ordered it. Some soils, some climates, some situations, are productive exclusively of some peculiar fruits, which cannot else-

where be profitably procured. Let nations follow this as their guide. In a rich and rising community, the opulent capitalists may be as dependent upon the poor labourers, as the poor labourers upon the opulent capitalists. So it is with nations. The mutual dependence of individuals upon each other knits and binds society together, and leads to the most rapid advancement in wealth, in intelligence, and in every kind of improvement. It is the same, but on a far larger scale, with the mutual dependence of nations. To this alone do we owe all the mighty efforts of commerce; and what lights, what generous feelings, and multiplied means of human happiness, has it not every where spread!" — (*North American Review*, No. 57.)

The principles of commercial freedom, and the injurious influence of restrictive regulations, were set in a very striking point of view by Dr. Smith, in his great work; and they have been since repeatedly explained and elucidated. Perhaps, however, the true doctrines upon this subject have no where been better stated than in the petition presented by the merchants of London to the House of Commons on the 8th of May, 1820. This document is one of the most gratifying proofs of the progress of liberal and enlarged views. It was subscribed by all the principal merchants of the metropolis, who have not scrupled to express their conviction, that the repeal of every *protective regulation* would be for the public advantage. Such an address, confirming, as it did, the conclusions of science, by the approval of the best informed and most extensive merchants of the world, had a powerful influence on the legislature. During the last 10 years several most important reforms have been made in our commercial system; so that, besides being the first to promulgate the true theory of commerce, we are now entitled to the praise of being the first to carry it into effect. No doubt our trade is still fettered by many vexatious restraints; but these will gradually disappear, according as experience serves to disclose the benefits resulting from the changes already made, and the pernicious operation of the restrictions that are still allowed to continue.

The petition now referred to, is too important to be omitted in a work of this sort. It is as follows:—

"To the Honourable the Commons, &c., the Petition of the Merchants of the City of London.

"Sheweth,

"That foreign commerce is eminently conducive to the wealth and prosperity of a country, by enabling it to import the commodities for the production of which the soil, climate, capital, and industry of other countries are best calculated, and to export, in payment, those articles for which its own situation is better adapted.

"That freedom from restraint is calculated to give the utmost extension to foreign trade, and the best direction to the capital and industry of the country.

"That the maxim of buying in the cheapest market, and selling in the dearest, which regulates every merchant in his individual dealings, is strictly applicable, as the best rule for the trade of the whole nation.

"That a policy founded on these principles would render the commerce of the world an interchange of mutual advantages, and diffuse an increase of wealth and enjoyments among the inhabitants of each state.

"That, unfortunately, a policy the very reverse of this has been and is more or less adopted and acted upon by the government of this and every other country; each trying to exclude the productions of other countries, with the specious and well-meant design of encouraging its own productions: thus inflicting on the bulk of its subjects, who are consumers, the necessity of submitting to privations in the quantity or quality of commodities; and thus rendering what ought to be the source of mutual benefit and of harmony among states, a constantly recurring occasion of jealousy and hostility.

"That the prevailing prejudices in favour of the protective or restrictive system may be traced to the erroneous supposition that every importation of foreign commodities occasions a diminution or discouragement of our own productions to the same extent: whereas it may be clearly shown, that although the particular description of production which could not stand against unrestrained foreign competition would be discouraged, yet, as no importation could be continued for any length of time without a corresponding exportation, direct or indirect, there would be an encouragement, for the purpose of that exportation, of some other production to which our situation might be better suited; thus affording at least an equal, and probably a greater, and certainly a more beneficial, employment to our own capital and labour.

"That of the numerous protective and prohibitory duties of our commercial code, it may be proved that, while all operate as a very heavy tax on the community at large, very few are of any ultimate benefit to the classes in whose favour they were originally instituted, and none to the extent of the loss occasioned by them to other classes.

"That among the other evils of the restrictive or protective system, not the least is, that the artificial protection of one branch of industry or source of production against foreign competition, is set up as a ground of claim by other branches for similar protection; so that if the reasoning upon which these restrictive or prohibitory regulations are founded were followed out consistently, it would not stop short of excluding us from all foreign commerce whatsoever. And the same train of argument, which, with corresponding prohibitions and protective duties, should exclude us from foreign trade, might be brought forward to justify the re-enactment of restrictions upon the interchange of productions (unconnected with public revenue) among the kingdoms composing the union, or among the counties of the same kingdom.

"That an investigation of the effects of the restrictive system at this time is peculiarly called for, as it may, in the opinion of your petitioners, lead to a strong presumption, that the distress, which now so generally prevails, is considerably aggravated by that system; and that some relief may be obtained by the earliest practicable removal of such of the restraints as may be shown to be most injurious to the capital and industry of the community, and to be attended with no compensating benefit to the public revenue.

"That a declaration against the anti-commercial principles of our restrictive system is of the more importance at the present juncture; inasmuch as, in several instances of recent occurrence, the merchants and manufacturers of foreign countries have assailed their respective governments with applications for further protective or prohibitory duties and regulations, urging the example and authority of this country, against which they are almost exclusively directed, as a sanction for the policy of such measures. And certainly, if the reasoning upon which our restrictions have been defended is worth any thing, it will

apply in behalf of the regulations of foreign states against us. They insist upon our superiority in capital and machinery, as we do upon their comparative exemption from taxation, and with equal foundation.

"That nothing would tend more to counteract the commercial hostility of foreign states, than the adoption of a more enlightened and more conciliatory policy on the part of this country.

"That although, as a matter of mere diplomacy, it may sometimes answer to hold the removal of particular prohibitions, or high duties, as depending upon corresponding concessions by other states in our favour, it does not follow that we should maintain our restrictions in cases where the desired concessions on their part cannot be obtained. Our restrictions would not be the less prejudicial to our own capital and industry, because other governments persisted in preserving impolitic regulations.

"That, upon the whole, the most liberal would prove to be the most politic course on such occasions.

"That independent of the direct benefit to be derived by this country, on every occasion of such concession or relaxation, a great incidental object would be gained, by the recognition of a sound principle or standard, to which all subsequent arrangements might be referred; and by the salutary influence which a promulgation of such just views, by the legislature and by the nation at large, could not fail to have on the policy of other states.

"That in thus declaring, as your petitioners do, their conviction of the *impolicy and injustice of the restrictive system*, and in desiring every practicable relaxation of it, they have in view only such parts of it as are not connected, or are only subordinately so, with the public revenue. As long as the necessity for the present amount of revenue subsists, your petitioners cannot expect so important a branch of it as the customs to be given up, nor to be materially diminished, unless some substitute less objectionable be suggested. But it is *against every restrictive regulation of trade, not essential to the revenue, against all duties merely protective from foreign competition, and against the excess of such duties as are partly for the purpose of revenue, and partly for that of protection*, that the prayer of the present petition is respectfully submitted to the wisdom of parliament.

"May it therefore," &c.

For examples of the practical working and injurious operation of restrictions, see the articles BORDEAUX, CADIZ, CAGLIARI, COLONY TRADE, CORN LAWS AND CORN TRADE, NAPLES, TIMBER, &c., in this Dictionary; the articles on the American Tariff and the French Commercial System in Nos. 96. and 99. of the *Edinburgh Review*; the Report of the Committee of Commerce and Navigation to the House of Representatives of the United States, 8th of February, 1830; and the *Petition and Memoire à l'Appui*, addressed, in 1828, by the landowners and merchants of the Gironde to the Chamber of Deputies.

For an account of the doctrines with respect to the *balance of trade*, and the importation and exportation of the precious metals, see the articles BALANCE OF TRADE, and EXCHANGE.

For an account of the articles exported from and imported into Great Britain, see IMPORTS AND EXPORTS.

COMPANIES. In commerce or the arts, a company is a number of persons associated together for the purpose of carrying on some commercial or industrious undertaking. When there are only a few individuals associated, it is most commonly called a *copartnery*; the term company being usually applied to large associations, like the East India Company, the Bank of England, &c., who conduct their operations by means of agents acting under the orders of a Board of directors.

Companies have generally been divided into two great classes — exclusive or joint stock companies, and open or regulated companies.

1. *Exclusive or Joint Stock Companies.* — By an institution of this sort is meant a company having a certain amount of capital, divided into a greater or smaller number of transferable shares, managed for the common advantage of the shareholders by a body of directors chosen by and responsible to them. After the stock of a company of this sort has been subscribed, no one can enter it without previously purchasing one or more shares belonging to some of the existing members. The partners do nothing individually; all their resolutions are taken in common, and are carried into effect by the directors and those whom they employ.

According to the common law of England, all the partners in a joint stock company are jointly and individually liable, to the whole extent of their fortunes, for the debts of the company. They may make arrangements amongst themselves, limiting their obligations with respect to each other; but unless established by an authority competent to set aside the general rule, they are all indefinitely responsible to the public. Parliament sometimes limits the responsibility of the shareholders in joint stock companies established by statute, to the amount of the shares they respectively hold. Charters of incorporation granted by the Crown were also, until lately, supposed necessarily to have this effect; but by the act 6 Geo. 4. c. 96. the Crown is empowered to grant charters of incorporation by which the members of corporate bodies may be made *individually liable, to such extent, and subject to such regulations and restrictions, as may be deemed expedient*. Hence charters are now frequently granted for the purpose merely of enabling companies to sue and be sued in courts of law, under the names of some of their office-bearers, without in any respect limiting the responsibility of the shareholders to the public. This limitation cannot be implied in a charter any more than in an act of parliament, and will be held not to exist unless it be distinctly set forth.

"In a private copartnery, no partner, without the consent of the company, can transfer his share to another person, or introduce a new member into the company. Each member, however, may, upon proper warning, withdraw from the copartnery, and demand payment from them of his share of the common stock. In a joint stock com-

pany, on the contrary, no member can demand payment of his share from the company; but each member may, without their consent, transfer his share to another person, and thereby introduce a new member. The value of a share in a joint stock is always the price which it will bring in the market; and this may be either greater or less, in any proportion, than the sum which its owner stands credited for in the stock of the company." — (*Wealth of Nations*, vol. iii. p. 238.)

2. *Utility of Joint Stock Companies.* — Whenever the capital required to carry on any undertaking exceeds what may be furnished by an individual, it is indispensable, in order to the prosecution of the undertaking, that an association should be formed. In all those cases, too, in which the chances of success are doubtful, or where a lengthened period must necessarily elapse before an undertaking can be completed, an individual, though ready enough to contribute a small sum in connection with others, would, generally speaking, be very little inclined, even if he had the means, to encounter the whole responsibility of such enterprises. Hence the necessity and advantage of companies or associations. It is to them that we are indebted for those canals by which every part of the country is intersected, for the formation of so many noble docks and warehouses, for the institution of our principal banks and insurance offices, and for many other establishments of great public utility carried on by the combined capital and energies of large bodies of individuals.

3. *Branches of Industry, for the Prosecution of which Joint Stock Companies may be advantageously established.* — In order to ensure a rational prospect of success to a company, the undertaking should admit of being carried on according to a regular systematic plan. The reason of this is sufficiently obvious. The business of a great association must be conducted by factors or agents; and unless it be of such a nature as to admit of their duties being clearly pointed out and defined, the association would cease to have any effectual control over them, and would be, in a great measure, at their mercy. An individual who manages his own affairs reaps all the advantage derivable from superior skill, industry, and economy; but the agents, and even directors, of joint stock companies labour, in most cases, entirely or principally for the advantage of others; and cannot therefore, however conscientious, have the same powerful motives to act with energy, prudence, and economy. "Like," says Dr. Smith, "the stewards of a rich man, they are apt to consider attention to small matters as not for their master's honour, and very easily give themselves a dispensation from having it. Negligence and profusion, therefore, must always prevail more or less in the management of the affairs of such a company." It also not unfrequently happens that they suffer from the bad faith, as well as the carelessness and extravagance of their servants; the latter having, in many instances, endeavoured to advance their own interests at the expense of their employers. Hence the different success of companies whose business may be conducted according to a nearly uniform system, — such as dock, canal, and insurance companies, rail-road companies, &c. — and those whose business does not admit of being reduced to any regular plan, and where much must always be left to the sagacity and enterprise of those employed. All purely commercial companies, trading upon a joint stock, belong to the latter class. Not one of them has ever been able to withstand the competition of private adventurers; they cannot subject the agents they employ to buy and sell commodities in distant countries to any effectual responsibility; and from this circumstance, and the abuses that usually insinuate themselves into every department of their management, no such company has ever succeeded, unless when it has obtained some exclusive privilege, or been protected from competition.

The circumstances now mentioned would seem to oppose the most formidable obstacles to the success of the companies established in this country for the prosecution of mining in America. This business does not admit of being reduced to a regular routine system. Much must always depend on the skill and probity of the agents employed at the mines; and it must plainly be very difficult, if not quite impossible, for directors resident in London to exercise any effectual *surveillance* over the proceedings of those who are at so great a distance. Hence it is not at all likely that these establishments will ever be so productive to the undertakers, as if they had been managed by the parties themselves.

The Abbé Morellet has given, in a tract published in 1769 (*Examen de la Réponse de M. N.*, pp. 35—38.), a list of 55 joint stock companies, for the prosecution of various branches of foreign trade, established in different parts of Europe since 1600, every one of which had failed, though most of them had exclusive privileges. Most of those that have been established since the publication of the Abbé Morellet's tract have had a similar fate.

But notwithstanding both principle and experience concur in showing how very ill fitted a large association is for the purpose of prosecuting commercial undertakings, there are cases in which they cannot be prosecuted except by associations of this sort, and when it may be expedient to grant them certain peculiar privileges. When, owing either to the disinclination or inability of government to afford protection to those engaged in any

particular department of trade, they are obliged to provide for their own defence and security, it is obviously necessary that they should have the power to exclude such individuals as may refuse to submit to the measures, or to bear their due share of the expense, required for the common protection of all. The Russian Company, the East India Company, the Levant or Turkey Company, and most of the other great trading companies which have existed in this country, seem principally to have grown out of a real or supposed necessity of this sort. It was not believed that any safe or advantageous intercourse could be carried on with barbarous countries without the aid of ships of war, factories, interpreters, &c. And as government was not always able or willing to afford this assistance, the traders were formed into companies or associations, and vested with such peculiar privileges as appeared to be necessary for enabling them to prosecute the trade without any extrinsic support. "When," says Dr. Smith, "a company of merchants undertake, at their own risk and expense, to establish a new trade with some remote and barbarous nation, it may not be unreasonable to incorporate them into a joint stock company, and to grant them, in case of success, a monopoly of the trade for a certain number of years. It is the easiest and most natural way in which the state can recompense them for hazarding a dangerous and expensive experiment, of which the public is afterwards to reap the benefit. A temporary monopoly of this kind may be vindicated upon the same principles upon which a like monopoly of a new machine is granted to its inventor, and that of a new book to its author. But upon the expiration of the term, the monopoly ought certainly to determine; the forts and garrisons, if it was found necessary to establish any, to be taken into the hands of government, their value to be paid to the company, and the trade to be laid open to all the subjects of the state." — (*Wealth of Nations*, vol. iii. p. 258.)

It may be doubted, however, whether it be really necessary, even in such a case as that now mentioned, to establish a *joint stock company* with peculiar privileges, and whether the same thing might not be more advantageously effected by the establishment of an open or regulated company.

4. *Open or Regulated Companies.* — The affairs of such companies or associations are managed by directors appointed by the members. They do not, however, possess a common or joint stock. Each individual pays a fine upon entering into the company, and most commonly an annual contribution: a duty applicable to the business of the company is also sometimes charged upon the goods imported and exported from and to the countries with which they trade. The sums so collected are applied by the directors to fit out ambassadors, consuls, and such public functionaries as may be required to facilitate commercial dealings, or to build factories, maintain cruisers, &c. The members of such companies trade upon their own stock, and at their own risk. So that when the fine, or the sum payable on admission into a regulated company, is moderate, it is impossible for its members to form any combination that would have the effect of raising their profits above the common level; and there is the same keen and close competition amongst them that there is amongst other classes of traders. A regulated company is, in fact, a device for making those engaged in a particular branch of trade bear the public or political expenses incident to it, at the same time that it leaves them to conduct their own business with their own capital, and in their own way.

Should, therefore, government at any time refuse, or be unable to afford, that protection to those engaged in any branch of trade which is necessary to enable them to carry it on, their formation into a regulated company would seem to be the most judicious measure that could be adopted; inasmuch as it would obtain for them that protection which is indispensable, without encroaching on the freedom of individual enterprise.

The African, the Levant, and some other branches of trade, were for a long time conducted by open or regulated companies. These, however, have been recently abolished: the African Company, by the act 1 & 2 Geo. 4. c. 28.; and the Levant Company, by the act 6 Geo. 4. c. 53. The Russia Company still exists. — (See *RUSSIA COMPANY*.)

In so far as relates to protection, it may perhaps be thought, for the reasons given by Dr. Smith, that a joint stock company is better calculated to afford it than a regulated company. The directors of the latter having, Dr. Smith alleges, no particular interest in the prosperity of the general trade of the company, for behoof of which, ships of war, factories, or forts, have to be maintained, are apt to neglect them, and to apply their whole energies to the care of their own private concerns. But the interest of the directors of a joint stock company are, he contends, in a great measure identified with those of the association. They have no private capital employed in the trade; their profits must depend upon the prudent and profitable management of the common stock; and it may, therefore, be fairly presumed that they will be more disposed to attend carefully to all the means by which the prosperity of the association may be best secured. On the other hand, however, it is seldom that the directors of joint stock companies stop at the proper point; having almost invariably attempted to extend their commercial dealings by force, and to become not only merchants but sovereigns. Nor is this any thing but

what might have been expected, seeing that the consideration and extensive patronage accruing from such measures to the directors is generally of far more importance to them than a moderate increase of the dividends on their stock. Whenever they have been able, they have seldom scrupled to employ arms to advance their projects; and instead of contenting themselves with shops and factories, have constructed fortifications, embodied armies, and engaged in war. But such has not been the case with regulated companies. The businesses under their control have uniformly been conducted in a comparatively frugal and parsimonious manner; their establishments have been, for the most part, confined to factories; and they have rarely, if ever, allowed themselves to be seduced by schemes of conquest and dominion.

And hence, considering them as *commercial machines*, it does not really seem that there can be any doubt as to the superiority of a regulated over a joint stock company. The latter has the defect, for which nothing almost can compensate, of *entirely excluding individual enterprise and competition*. When such a company enjoys any peculiar privilege, it naturally, in pursuing its own interest, endeavours to profit by it, how injurious soever it may be to the public. If it have a monopoly of the trade with any particular country, or of any particular commodity, it rarely fails, by understocking the home and foreign markets, to sell the goods which it imports and exports at an artificially enhanced price. It is not its object to employ a comparatively large capital, but to make a large profit on a comparatively small capital. The conduct of the Dutch East India Company in burning spices, that their price might not be lowered by larger importations, is an example of the mode in which such associations uniformly and, indeed, almost necessarily act. All individuals are desirous of obtaining the highest possible price for what they have to sell; and if they are protected by means of a monopoly, or an exclusive privilege, from the risk of being undersold by others, they never hesitate about raising the price of their products to the highest elevation that the competition of the buyers will allow them; and thus frequently realise the most exorbitant profits.

And yet, notwithstanding these advantages, such is the negligence, profusion, and peculation, inseparable from the management of great commercial companies, that even those that have had the monopoly of the most advantageous branches of commerce have rarely been able to keep out of debt. It will be shown in the article *EAST INDIA COMPANY*, that that association has lost by its trade; and that, had it not been for the aid derived from the revenues of India, it must long since have ceased to exist. To buy in one market; to sell with profit in another; to watch over the perpetually occurring variations in the prices, and in the supply and demand of commodities; to suit with dexterity and judgment the quantity and quality of goods to the wants of each market; and to conduct each operation in the best and cheapest manner; requires a degree of unremitting vigilance and attention, which it would be visionary to expect from the directors or servants of a great joint stock association. Hence it has happened, over and over again, that branches of commerce which proved ruinous to companies, have become exceedingly profitable when carried on by individuals.

5. Constitution of Companies. — When application is made to parliament for an act to incorporate a number of individuals into a joint stock company for the prosecution of any useful undertaking, care ought to be taken not to concede to them any privileges that may be rendered injurious to the public. If a company be formed for the construction of a dock, a road, or a canal, it may be necessary, in order to stimulate individuals to engage in the undertaking, to give them some peculiar privileges for a certain number of years. But if other persons were to be permanently hindered from constructing new docks, or opening new lines of communication, a lasting injury might be done to the public. It may be highly expedient to incorporate a company for the purpose of bringing water into a city; but supposing there were no springs in the vicinity, other than those to which this company has acquired a right, they might, unless restrained by the act incorporating them, raise the price of water to an exorbitant height; and make large profits for themselves at the expense and to the injury of the public. In all cases of this sort; and in the case, indeed, of all joint stock companies established for the formation of canals, railroads, &c.; it would be sound policy to limit the rates charged for their services, or on account of the water, ships, goods, &c. conveyed by their means, and also to limit the dividends, or to fix a *maximum* beyond which they should not be augmented; enacting, that if the rates charged by the company produce more than sufficient to pay the maximum rate of dividend, and to defray the wear and tear of the aqueduct, canal, &c., they shall be allowed to reduce them till they only yield this much; and, in the event of their declining to do so, that the whole surplus above paying the dividend shall be applied to purchase up the stock of the association, so that ultimately the charges on account of dividends may be entirely abolished. Had this principle been acted upon when canals first began to be formed in England, the carriage of goods conveyed by some of the most important lines of communication would now have cost almost nothing; and this desirable result might have been accomplished in the way now suggested, with-

out, we believe, diminishing in any degree the number of those undertakings. There are few who, at the time they engage in such enterprises, suppose that they will yield more than 10 or 12 per cent.; and vast numbers will always be disposed to engage in them, if there be any reasonable prospect of their yielding this much. Now, when such is the case, is it not the duty of government to provide, in the event of the undertaking becoming in an *unexpected and unusual degree profitable*, that the public should derive some advantage from it? This is not a case in which competition can reduce profits to the common level. The best, perhaps the only practicable, line for a canal or railroad between any two places will be appropriated by those who are first in the field; who thus, in fact, obtain a natural monopoly of which they cannot be deprived; and hence the advantage of limiting the charges and dividends: without discouraging enterprise, it affords a security that private individuals shall not reap an unusual and unlooked for profit at the expense of the public.

In all those cases in which companies are formed for the prosecution of undertakings that may be carried on, with equal advantage to the public, by individuals; or where there are no very considerable difficulties to overcome, or risks to encounter; they ought to enjoy no privilege whatever, but should be regarded, in every point of view, as if they were mere individuals.

For accounts of the principal joint stock and regulated companies established in this country, see the articles *BANK OF ENGLAND, DOCKS, EAST INDIA COMPANY, INSURANCE, RUSSIA COMPANY, &c. &c.*

6. *Companies en Commandite*. — In France there is a sort of companies denominated *sociétés en commandite*. A society of this description consists of one or more partners, liable, without limitation, for the debts of the company; and one or more partners, or *commanditaires*, liable only to the extent of the funds they have subscribed. A *commanditaire* must not, however, take any part in the business of the company; if he do this, he loses his inviolability, and makes himself responsible for the debts of the association. The names of the partners in such societies must be published, and the amount of the sums contributed by the *commanditaires*.

It has been proposed to introduce partnerships of this sort into this country; but it seems very doubtful whether any thing would be gained by such a measure. Partnerships *en commandite* may be very easily abused, or rendered a means of defrauding the public. It is quite visionary to imagine that the *commanditaires* can be prevented from indirectly influencing the other partners: and supposing a collusion to exist amongst them, it might be possible for them to divide large sums as profit, when, perhaps, they had really sustained a loss; and to have the books of the association so contrived, that it might be very difficult to detect the fraud. This, it is alleged, is by no means a rare occurrence in France.

7. *Civic Companies, or Corporations*. — Exclusive of the companies previously mentioned, a number of ancient companies or corporations exist in this and most other European countries, the members of which enjoy certain political as well as commercial privileges. When the feudal system began to be subverted by the establishment of good order and regular government in the towns, the inhabitants were divided into certain trades or corporations, by which the magistrates and other functionaries were chosen. The members of these trades, or corporations, partly to enhance the value of their privileges, and partly to provide a resource, in case of adversity, for themselves, acquired or usurped the power of enacting by-laws regulating the admission of new members, and at the same time set about providing a fund for the support of such as accident or misfortune might reduce to a state of indigence. Hence the origin of apprenticeships, the refusal to allow any one not a member of a corporation to carry on any business within the precincts of any town corporate, and the various regulations that had to be submitted to, and the fees that had to be paid by the claimants for enrolment in corporations. For a lengthened period these privileges and regulations were very oppressive. Within the last century, however, their influence has been progressively diminishing. In France, where the abuses inseparable from the system had attained to a very great height, it was entirely swept off by the Revolution: and though corporations still exist in this country, they have been stripped of several of their peculiar franchises; and should now, for the most part, be regarded more, perhaps, in the light of charitable than of political institutions. It would be well, however, were they reduced entirely to the former character; and were the few political and commercial privileges, which they still enjoy, communicated to the rest of the citizens. At their first institution, and for some time after, corporations, considered as political bodies, were probably useful: but such is no longer the case; and in so far as they now possess any special immunities, they tend to obstruct that free competition that is so advantageous.

The following extract from a *Report on the Commerce and Manufactures of the United States*, drawn up by Albert Gallatin, Esq., then secretary to the Treasury, and laid before Congress in 1816, sets the superior advantages resulting from the unrestricted

freedom of industry in a very striking point of view. "No cause," says he, "has, perhaps, more promoted in every respect the general improvement of the United States, than the absence of those systems of internal restriction and monopoly which continue to disfigure the state of society in other countries. No laws exist here, directly or indirectly, confining men to a particular occupation or place, or excluding any citizen from any branch he may, at any time, think proper to pursue. Industry is, in every respect, free and unfettered; every species of trade, commerce, and profession, and manufacture, being equally open to all, *without requiring any regular apprenticeship, admission, or licence*. Hence the improvement of America has not been confined to the improvement of her agriculture, and to the rapid formation and settlement of new states in the wilderness; but her citizens have extended their commerce to every part of the globe, and carry on with complete success even those branches for which a monopoly had heretofore been considered essentially necessary."

There is in *Rees's Cyclopædia*, article *Company*, a list of the different Civic Companies belonging to the City of London, in which the periods of their incorporation, and various other important particulars with respect to several of them, are specified.

COMPASS (Ger. *Ein Kompass*; Du. *Zeekompas*; Da. *Søekompass*; Sp. *Sjöcompas*; Fr. *Boussole*, *Compas de mer*; It. *Bussola*; Sp. *Aguja de marear*; Port. *Compasso de marear*; Rus. *Kompass korabelnii*), or mariner's compass, an instrument composed of a needle and card, by which the ship's course is directed. The needle, with little variation, always points towards the north, and hence the mode of steering by the compass.

The common opinion is that the compass was invented by Flavio Gioia, a citizen of the once famous republic of Amalphi, very near the beginning of the fourteenth century. Dr. Robertson has adopted this opinion, and regrets that contemporary historians furnish no details as to the life of a man to whose genius society is so deeply indebted. — (*Hist. of America*, vol. i. p. 47. 8vo ed.) But though Gioia may have made improvements on the compass, it has been claimed that he has no claim to be considered as its discoverer. Passages have been produced from writers who flourished more than a century before Gioia, in which the polarity of the needle, when touched by the magnet, is distinctly pointed out. Not only, however, had this singular property been discovered, but also its application to the purposes of navigation, long previously to the fourteenth century. Old French writers have been quoted (*Macpherson's Annals of Commerce*, anno 1200; *Rees's Cyclopædia*), that seem fully to establish this fact. But whatever doubts may exist with respect to them, cannot affect the passages which the learned Spanish antiquary, Don Antonio de Capmany (*Questiones Criticas*, p. 73—132.), has given from a work of the famous Raymond Lully (*De Contemplatione*) published in 1272. In one place Lully says, "as the needle, when touched by the magnet, naturally turns to the north" (*sicut acus per naturam vertitur ad septentrionem dum sit tacta à magnete*). This is conclusive as to the author's acquaintance with the polarity of the needle; and the following passage from the same work — "as the nautical needle directs mariners in their navigation" (*sicut acus nautica dirigit marinarios in sua navigatione*, &c.) is no less conclusive as to its being used by sailors in regulating their course. There are no means of ascertaining the mode in which the needle Raymond Lully had in view was made use of. It has been sufficiently established — (see the authorities already referred to, and Azuni, *Dissertation sur l'Origine de la Boussole*), — that it was usual to float the needle, by means of a straw, on the surface of a basin of water; and Capmany contends that we are indebted to Gioia for the card, and the method now followed of suspending the needle; improvements which have given to the compass all its convenience, and a very large portion of its utility. But this part of his *Dissertation*, though equally learned and ingenious, is by no means so satisfactory as the other. It is difficult to conceive how mariners at sea could have availed themselves of a floating needle; but, however this may be, it seems most probable that Gioia had considerably improved the construction of the compass; and that, the Amalphitans having been the first to introduce it to general use, he was, with excusable partiality, represented by them, and subsequently regarded by others, as its inventor.

The reader will not consider these details out of place in a work on commerce, which the compass has done so much to extend. "Its discovery," to borrow the language of Mr. Macpherson, "has given birth to a new era in the history of commerce and navigation. The former it has extended to every shore of the globe, and increased and multiplied its operations and beneficial effects in a degree which was not conceivable by those who lived in the earlier ages. The latter it has rendered expeditious, and comparatively safe, by enabling the navigator to launch out upon the ocean free from the danger of rocks and shoals. By the use of this noble instrument, the whole world has become one vast commercial commonwealth, the most distant inhabitants of the earth are brought together for their mutual advantage, ancient prejudices are obliterated, and mankind are civilised and enlightened." — (Vol. i. p. 366.)

COMPOSITION, in commerce, commonly implies the dividend or sum paid by an insolvent debtor to his creditors, and accepted by them in payment for their debts.

CONY WOOL (Ger. *Kaninchenwolle*; Du. *Konyuhair*; Fr. *Poil de lapin*; It. *Pelo di Coniglio*; Sp. *Conejuna*), the fur of rabbits. This article is extensively used in the hat manufacture; and besides the large supplies raised at home, a great deal is imported. The imports usually range from about 300,000 to about 500,000 skins a year; but, in 1831, they exceeded 900,000, while, in 1827, they were only 197,000.

CONSTANTINOPLE, formerly the metropolis of the Eastern, as it still is of the Turkish Empire, is situated on a triangular point of land, on the European side of the Sea of Marmara (Propontis), at the point where it unites with the Bosphorus, or channel leading to the Black Sea, in lat. $41^{\circ} 0' 12''$ N., lon. $28^{\circ} 59' 2''$ E. Population variously estimated at from 300,000 to 600,000, but believed, by the best authorities, to be about 400,000. The situation of this renowned city is, in a commercial point of view, one of the finest imaginable. Standing on the narrow straits uniting the Mediterranean and Euxine Seas, she at once commands, and is the *entrepôt* for, the commerce between them. The harbour, whence the Turkish court has taken the appellation of the Sublime Porte, is most excellent. It consists of an extensive inlet, or arm of the sea, stretching along the north-east side of the city, which it divides from the suburbs of Galata and Pera. It has sufficient depth of water to float the largest ships, and can accommodate more than 1,000 sail. The strong current that sets through the Bosphorus into the Sea of Marmara strikes against Seraglio Point—(see Plan); a part of the water, being in consequence forced into the harbour, runs along its south-western side in the direction marked by the arrows—(see Plan),—till, arriving at its extremity, it escapes by the opposite side. In the middle the water is still. On leaving the port, it is necessary to keep well over to the northern side; for otherwise the ship might be taken by the current, and driven on Seraglio Point. It may be worth while, however, to remark, that notwithstanding this inconvenience, the current has been of signal service to the city, by scouring the harbour, and carrying away the filth and ballast by which it must otherwise have been long since choked up. The distance across from Seraglio Point to the opposite suburb of Scutari, on the Asiatic coast, is rather more than an English mile. Within less than $\frac{1}{4}$ of a mile of the latter is a rocky islet, upon which is a tower and light-house, known by the name of the Tower of Leander. Foreigners reside in Galata, Pera, and the suburbs on the eastern side of the harbour; and it is there, consequently, that the principal trade of the place is carried on. The quays are good, and ships lie close alongside.

The Bosphorus, or channel of Constantinople, runs in a N.E. by N. direction about 15 miles, varying in breadth from $1\frac{1}{2}$ to $\frac{1}{2}$ mile. It is swept by a rapid current, which it requires a brisk gale to stem, and has throughout a great depth of water. The Hellespont, or strait of the Dardanelles, leading from the Archipelago to the Sea of Marmara, is about 13 leagues in length. Its direction is nearly N.E. Where narrowest, it is little more than a mile across. It also is swept by a strong current, and has deep water throughout.

The subjoined plan of part of Constantinople and its port is copied, without reduction, from the beautiful plan of the city and Bosphorus, drawn and engraved by M. Merzoff Robert of Munich, and published by Mr. Wilde, of this city.

Nothing can be more imposing than the appearance of the city when seen from the sea, but on landing the illusion vanishes. The streets are narrow, dark, ill-paved and irregular. Owing to the want of any effective system of police, and of the most ordinary attention to cleanliness, they are extremely filthy; and are infested with herds of dogs, and also with rats, which perform the functions of scavengers. The houses are mostly built of wood, and fires are very frequent. Most of these happen designedly; the burning of a few hundred houses being deemed the readiest and most effectual means of making the government aware of the public dissatisfaction, and of procuring a redress of grievances!

Money.—Accounts are kept in piastres of 40 paras, or 120 aspers. The Turkish coin has been so much degraded, that the piastre, which a few years ago was worth 2s. sterling, is now worth little more than 4d. A bag of silver (*kefer*) = 500 piastres, and a bag of gold (*kitze*) = 30,000 piastres.

Weights and Measures.—The commercial weights are—176 drams = 1 rottolo; 2·272 rottoli = 1 oke; 6 okes = 1 batman; $\frac{7}{8}$ batmans = 1 quintal or cantaro = 134·457 (124 $\frac{1}{2}$ very nearly) lbs. avoirdupois = 56·437 kilogrammes = 116·527 lbs. of Hamburg. The quintal of cotton is 45 okes = 127·2 lbs. avoirdupois.

The pik, or pike, is of two sorts, the greater and the less. The greater, called *kalebi* or *arschim* used in the measurement of silks and woollens, is very near 28 inches (27·9). The lesser, called *endese*, used in the measuring of cottons, carpets, &c. = 27 inches. Hence 100 long piks = 77·498 English yards, and 100 short piks = 75·154 do. But in ordinary commercial affairs, the pik is estimated at $\frac{3}{4}$ of an English yard.

Corn is measured by the *kisloz* or *kilow* = 0·941 of a Winchester bushel; $8\frac{1}{2}$ kisloz = 1 quarter. The *fortin* = 4 kisloz.

Oil and other liquids are sold by the *alna* or *meter* = 1 gallon 3 pints English wine measure. The *alna* of oil should weigh 8 okes.—(*Nelkenbrecher* and *Dr. Killy*.)

The *Port Charges* on account of English vessels in the harbours of the Ottoman empire are fixed by treaty at 300 aspers, neither more nor less.

References to Plan. — A, Seraglio Point; B, Galata; C, Scutari; D, Tower and lighthouse of Leander. The arrows show the direction of the currents. The soundings are in fathoms.

Trade, &c. — Owing to the vicious institutions of the Turks, and the disorganised state of the empire, the trade of Constantinople is very far from being so extensive as might be supposed from its situation and population. The imports consist of corn, iron, timber, tallow, and furs, principally from the Black Sea; and of cotton stuffs and yarn, tin, tin plates, woollens, silks, cutlery, watches and jewellery, paper, glass, furniture, indigo, cochineal, &c. from England and other European countries. Corn and coffee are imported from Alexandria; but a good deal of Brazil and West India coffee is also imported, particularly in American bottoms. Sugar is partly imported from the East, but

principally from the West Indies. The exports are very trifling, consisting of silk, carpets, hides, wool, goats' hair, potashes, wax, galls, bullion and diamonds, and a few other articles. Ships carrying goods to Constantinople, either return in ballast, or get return cargoes at Smyrna, Odessa, Salonica, &c., on which places they frequently procure bills at Constantinople. Trade is chiefly in the hands of English, French, and other European merchants (denominated Franks), and of Armenians and Greeks. Bargains are negotiated on their account by Jew brokers, some of whom are rich.

Commercial Policy of the Turks. — It is singular that as respects commerce, the policy of the Turkish government, whether originating in design or carelessness, is entitled to the highest praise. "No restrictions," says Mr. Thornton, "are laid on commerce, except in the instance of a general prohibition of exporting the articles necessary for the support of human life to foreign countries, especially from the capital, where alone it is rigorously enforced; and this impolitic restraint will no doubt be removed, when the Turkish government shall become sensible, that what is intended as the means of securing abundance, is, in fact, the sole cause of that scarcity which is sometimes experienced. With this one exception, commerce is perfectly free and unfettered. Every article of foreign or domestic growth or manufacture is conveyed into every port, and over every province, without any interference on the part of the magistrates, after payment of the duties. On this subject I speak from actual experience, and may appeal to every foreign or native merchant in Turkey for its general truth." — (*Present State of Turkey*, vol. i. p. 82.)

The duties, too, are extremely moderate, being only *three* per cent. on imports, and as much on exports; so that in almost all that relates to her commercial regulations, Turkey is entitled to read a lesson to the most civilised European powers; and this she has done in a very able manner, in an official paper published in the *Moniteur Ottoman*, in September, 1832. We extract a few paragraphs from this very interesting document.

"It is recognised throughout Europe that it would be useful to the great majority to substitute, for the system of prohibitions, that of liberty, which theoretical men advocate; the difficulty is, to find means to separate the future from the past without a violent rupture. Hence the difficulties of government in satisfying all the exigencies of agriculture, industry, and commerce, driven in a circle where every measure in favour of one, acts immediately in an inverse sense on the other. The endeavour is vain to establish, between so many crossing interests, a factitious equilibrium which absolute liberty of exchange alone can give.

"Thus, one of the most important questions which occupies the meditation of statesmen in Europe, is, to discover how the palings which pen commerce up in narrow spaces may be thrown down without shocks that might endanger public order.

"Good sense, tolerance, and hospitality, have long ago done for the Ottoman empire, what the other states of Europe are endeavouring to effect by more or less happy political combinations. Since the throne of the sultans has been elevated at Constantinople, commercial prohibitions have been unknown; they opened all the ports of their empire to the commerce, to the manufactures, to the territorial produce of the Occident, or, to say better, of the whole world. Liberty of commerce has reigned here without limits, as large, as extended as it was possible to be.

"Never has the divan dreamed, under any pretext of national interest, or even of reciprocity, of restricting that faculty which has been exercised, and is to this day, in the most unlimited sense, by all the nations who wish to furnish a portion of the consumption of this vast empire, and to share in the produce of its territory.

"Here every object of exchange is admitted, and circulates without meeting any obstacle other than the payment of an infinitely small portion of the value to the Custom-house. The chimera of a balance of trade never entered into heads sensible enough not to dream of calculating whether there was most profit in buying or selling. Thus the markets of Turkey, supplied from all countries, refusing no objects which mercantile spirit puts in circulation, and imposing no charge on the vessels that transport them, are seldom or never the scenes of those disordered movements occasioned by the sudden deficiency of such or such merchandise, which, exorbitantly raising prices are the scourges of the lower orders, by unsettling their habits, and by inflicting privations. From the system of restrictions and prohibitions arise those devouring tides and ebbs which sweep away in a day the labour of years, and convert commerce into a career of alarms and perpetual dangers. In Turkey, where this system does not exist, these disastrous effects are unknown.

"The extreme moderation of the duties is the complement of this régime of commercial liberty: and in no portion of the globe are the officers charged with the collection, of more confiding facility for the valuations, and of so decidedly conciliatory a spirit in every transaction regarding commerce.

"Away with the supposition that these facilities granted to strangers, are concessions extorted from weakness! The dates of the contracts termed capitulations, which establish the rights actually enjoyed by foreign merchants, recall periods at which the Mussulman power was altogether predominant in Europe. The first capitulation which France obtained was in 1535, from Soliman the Canonist (the Magnificent). The dispositions of these contracts have become antiquated, the fundamental principles remain. Thus, 300 years ago, the sultans, by an act of munificence and of reason, anticipated the most ardent desires of civilised Europe, and proclaimed unlimited freedom of commerce."

Did the policy of Turkey in other respects harmonise with this, she would be one of the most civilised and powerful of nations, instead of being one of the most abject and degraded. Unfortunately, however, this is very far from being the case. Tyranny, corruption, and insecurity universally prevail. "The cultivator of the soil is ever a helpless prey to injustice and oppression. The government agents have to suffer in their turn from the cruelty and rapacity of which they themselves have been guilty; and the manufacturer has to bear his full share of the common insecurity; he is fixed to the spot and cannot escape the grasp of the local governor. The raw material monopolised by a bey or ayan, may be forced upon him at a higher price than he could purchase it himself, and perhaps of inferior quality; fines may be imposed upon him, he may be

taken for forced labour, or troops may be quartered on his workshop." — (*Urquhart on Turkey and its Resources*, p. 139.)

This miserable system has overspread some of the fairest provinces of Europe and Asia with barbarism — turned their cities into villages, and their palaces into cottages: but the degradation in which they are involved, would have been still more complete, but for the freedom of commerce they have always enjoyed. This has tended to keep alive the seeds of industry, and to counteract the destructive influence of oppression and insecurity. Had their intercourse with foreigners been either prohibited, or placed under oppressive restrictions, the barbarism of Turkey would have been completed, and it is difficult to suppose that there could have been either wealth or industry in the empire.

Trade of Turkey with England. — The trade between this country and Turkey is of much greater value and importance than is generally supposed; and appears to be susceptible of an almost indefinite increase. Cotton stuffs and twist are the great articles of export from Great Britain to Turkey; and notwithstanding the convulsed and distracted state of the latter during the last 5 years, she has continued to take off a rapidly increasing amount of these staple articles. In 1825, for example, we exported direct for Turkey, (including what is now the kingdom of Greece), 13,674,000 yards of cotton cloth, and 446,462 lbs. of cotton twist; whereas, in 1831, we exported to Turkey (exclusive of the Morea), 24,565,000 yards of cloth, and 1,735,760 lbs. of twist, being an increase of nearly 100 per cent. in the exports of stuffs, and of 400 per cent. in those of yarn! The Turkish manufactures of muslins, ginghams, handkerchiefs, &c. have suffered severely from this extraordinary importation of British goods; so much so, that of 600 looms for muslins busily employed in Scutari in 1812, only 40 remained in 1831; and of 2,000 weaving establishments in Tournovo, at the former epoch, there were only 200 at the latter! — (*Urquhart on Turkey*, &c. p. 150.) But the great consumption of Turkey consists of coarse home-made fabrics; and we are assured by the very intelligent author now referred to, that this great branch has not been sensibly affected by our imports. Hitherto, indeed, they have been principally intended for the wealthier part of the community; but as cottons are universally worn by the mass of the people, the trade will not attain to any thing like the extent to which it may be carried, till we supply the peasantry with the stuffs suitable for their use. It is creditable to the discernment of the Americans, that they were the first to perceive the superior importance of this class of customers, and to set about supplying them with coarse unbleached stuffs. The Manchester manufacturers immediately followed in the same track, and with signal success. Plain goods now form the half of our investments for Turkey; and it is impossible, seeing the extent to which articles of this sort are made use of in all parts of the empire, and, indeed, of the East, to form any clear idea of what may be the future magnitude of this trade.

Of the European states, Austria and Switzerland have been our most formidable rivals in the supply of Turkey with cottons. The stuffs were, in several respects, well fitted for the Eastern markets; but owing to the difficulty they lay under of getting returns, and the continued and rapid reduction in the price of English cottons, we seem to have gained a decided advantage over them, and are now nearly in the exclusive possession of the market. Cheapness is every where the grand desideratum. Though our muslins and chintzes be still very inferior in fineness to those of the East, and our red dye (a colour in great esteem in Turkey, Persia, &c.) be inferior in brilliancy, these defects are more than balanced by the greater cheapness of our goods; and from Smyrna to Canton, from Madras to Samarcand, we are every where supplanting the native fabrics; and laying the foundations of a commerce that will be eminently beneficial to all parties.

Exclusive of cottons, we exported to Constantinople, Smyrna, and other Turkish ports, in 1831, arms and ammunition of the value of 21,785*l*.; earthenware, 6,434*l*.; hardware and cutlery, 11,667*l*.; iron and steel, 50,097*l*.; refined sugar, 41,020*l*.; woollens, to above 18,000*l*.; and some lesser articles; making, with cotton stuffs and yarn, the declared or real value of the direct exports of British produce and manufactures to the whole empire 888,654*l*., besides those exported to it at second hand from Malta, the Ionian Islands, &c. We also supplied her with a considerable quantity of colonial produce. Our imports from Turkey during the same year, were, wheat 7,383 quarters, currants 8,702 cwt., figs 26,243 cwt., hides 4,685, indigo 4,181 lbs., madder root 23,833 cwt., olive oil 108,193 gallons, opium 8,184 lbs., raisins 10,458 cwt., silk 452,566 lbs., valonia 102,225 cwt., cotton wool 366,550 lbs., with carpets, bullion, galls, sponges, &c. — (*Parl. Paper*, No. 55. Sess. 1833.)

Our commerce with Turkey would be considerably facilitated by a reduction of the duties on figs, currants, oil, and carpets. Nothing, however, would contribute so much to its extension, as the establishment of order and tranquillity throughout the country. But this, we fear, is beyond the ability of the Ottoman government. The abuses which have reduced the empire to its present state of degradation seem to be inherent in the structure of Turkish society, and to be in harmony with the habits and prejudices of the people. If such be the case, reform must come from without, and not from within. But of whatever other advantages a revolution might be productive, it is

difficult to believe that it would bring along with it a more liberal system of commercial policy than that which at present exists.*

CONSUL, in commerce, an officer appointed by competent authority to reside in foreign countries, in the view of facilitating and extending the commerce carried on between the subjects of the country which appoints him, and those of the country or place in which he is to reside.

Origin and Appointment of Consuls. — The office of consul appears to have originated in Italy, about the middle of the twelfth century. Soon after this, the French and other Christian nations trading to the Levant began to stipulate for liberty to appoint consuls to reside in the ports frequented by their ships, that they might watch over the interests of their subjects, and judge and determine such differences with respect to commercial affairs as arose amongst them. The practice was gradually extended to other countries; and in the sixteenth century was generally established all over Europe. — (*Martens, Précis du Droit des Gens*, § 147.)

British consuls were formerly appointed by the Crown, upon the recommendation of great trading companies, or of the merchants engaged in the trade with a particular country or place; but they are now directly appointed by government, without requiring any such recommendation, though it, of course, is always attended to when made.

The right of sending consuls to reside in foreign countries depends either upon a tacit or express convention. Hence their powers differ very widely in different states. In some they exercise a very extensive jurisdiction over the subjects of the state which appoints them; but the extent of this jurisdiction is not discretionary, and must, in all cases, be regulated either by an express convention between the state appointing and the state receiving the consul, or by custom. Consuls established in England have no judicial power; and the British government has rarely stipulated with other powers for much judicial authority for its consuls. Turkey, however, is an exception to this remark. English consuls enjoy in that country several peculiar privileges conferred by ancient treaties, and confirmed by that signed at the Dardanelles in 1809. It is there stipulated and agreed upon —

"That if there happen any suit, or other difference or dispute, among the English themselves, the decision thereof shall be left to their own ambassador or consul, according to their custom, without the judge or other governors, our slaves, intermeddling therein.

"That if an Englishman, or other subject of that nation, shall be involved in any lawsuit, or other affair connected with law, (with a Turk,) the judge shall not hear nor decide thereon, until the ambassador, consul, or interpreter shall be present; and all suits exceeding the value of 4,000 aspers, shall be heard at the Sublime Porte, and no where else.

"That the consuls appointed by the English ambassadors in our sacred dominions, for the protection of their merchants, shall never, under any pretence, be imprisoned, nor their houses sealed up, nor themselves sent away; but all suits or differences in which they may be involved, shall be represented to our Sublime Porte, where their ambassador will answer for them.

"That in case any Englishman, or other person subject to that nation, or navigating under its flag, should happen to die in our sacred dominions, our fiscal and other officers shall not, upon pretence of its not being known to whom the property belongs, interpose any opposition or violence, by taking or seizing the effects that may be found at his death, but they shall be delivered up to such Englishman, whoever he may be, to whom the deceased may have left them by his will; and should he have died intestate, then the property shall be delivered up to the English consul, or his representative who may be then present; and in case there be no consul, or consular representative, they shall be registered by the judge, in order to his delivering up the whole thereof, whenever any ship shall be sent by the ambassador to receive the same."

Conformably to these capitulations, and the by-laws of the Levant Company, Nos. 39, 40, and 41., the consuls were authorised to administer justice in all cases of contention amongst British subjects within the Turkish dominions; and they were further authorised to send to England, in safe custody, any British subject resident in Turkey, who should decline their jurisdiction, or appeal from them to the courts of the Grand Signior, or of any other potentate. And the act 6 Geo. 4. c. 33. § 4., for the abolition of the Levant Company, expressly provides for the continuance to the consuls appointed by his Majesty, of the same rights and duties of jurisdiction over British subjects in Turkey, that were enjoyed by the consuls appointed by the Company.

At present, therefore, consuls in Turkey enjoy extensive judicial powers; but owing to the freedom of Turkish commerce, and the simplicity of the regulations under which it is carried on, their other functions, with the exception of furnishing statistical details, none

* The treatise of Mr. Urquhart, entitled *Turkey and its Resources*, to which we are principally indebted for these details, is a work of distinguished talent, discovering throughout an intimate acquaintance with the subjects treated of. At the same time we cannot help differing wholly from Mr. Urquhart in his views as to direct and indirect taxation. We believe that no inconsiderable part of the poverty and degradation of Turkey is to be ascribed to the prevalence of the former, which has every where, and at all periods, been a fruitful source of oppression and misery. The most superficial reader of this work will see that we are no friends to excessive customs duties; but it is to their abuse, and not to the duties themselves, that we object. The duties we impose on brandy, for example, have been carried to such a height as to defeat their object, and to be productive of an immense amount of smuggling and demoralisation. And yet there can be no more proper subject of taxation; nor, provided the duties were reduced to 8s. or 10s. a gallon, is it possible to imagine any less unexceptionable tax. The defects inherent in our system of customs duties might easily be removed, not only without any diminution, but with a large accession, of revenue; but though it were otherwise, we are satisfied that the imposition of direct taxes on property or income would occasion more injury in the course of 4 or 5 years, than the present customs duties, with all their defects, would occasion in half a century.

of which they have hitherto communicated, are extremely unimportant.* Mr. Urquhart, whose opinion as to all that respects Turkey is deservedly of very great weight, seems to think that the judicial powers enjoyed by the European consuls in that country, have been productive of much mischief. Still, however, we doubt whether they could be entirely dispensed with in a country so peculiarly situated. But there can be no doubt that it is highly necessary that the greatest care should be taken in the selection of the individuals to whom such powers are intrusted.

Other states have occasionally given to consuls similar powers to those conceded to them in Turkey. Thus, in the treaty between Sweden and the United States of America, ratified on the 24th of July, 1818, it is stipulated that the consuls appointed by either government to reside within the dominions of the other, or their substitutes, "shall, as such, have the right of acting as judges or arbiters in all cases of differences which may arise between the captains and crews of the vessels of the nation whose affairs are intrusted to their care. The respective governments shall have no right to interfere in these sort of affairs, except in the case of the conduct of the crews disturbing public order and tranquillity in the country in which the vessel may happen to be, or in which the consul of the place may be obliged to call for the intervention and support of the executive power, in order to cause his decision to be respected; it being, however, well understood, that this sort of judgment or arbitration cannot deprive the contending parties of their rights of appealing on their return to the judicial authorities of their country."

Duties of Consuls. — The duties of a consul, even in the confined sense in which they are commonly understood, are important and multifarious. It is his business to be always on the spot, to watch over the commercial interests of the subjects of the state whose servant he is; to be ready to assist them with advice on all doubtful occasions; to see that the conditions in commercial treaties are properly observed; that those he is appointed to protect are subjected to no unnecessary or unjustifiable demands in conducting their business; to represent their grievances to the authorities at the place where they reside, or to the ambassador of the sovereign appointing him at the court on which the consulship depends, or to the government at home; in a word, to exert himself to render the condition of the subjects of the country employing him, within the limits of his consulship, as comfortable, and their transactions as advantageous and secure, as possible.

The following more detailed exposition of the *general* duties of a British consul, is taken from Mr. Chitty's work on *Commercial Law*: —

"A British consul, in order to be properly qualified for his employment, should take care to make himself master of the language used by the court and the magistracy of the country where he resides, so as to converse with ease upon subjects relating to his duties. If the common people of the port use another, he must acquire that also, that he may be able to settle little differences without troubling the magistracy of the place for the interposition of their authority; such as accidents happening in the harbour, by the ships of one nation running foul of and doing damage to each other.

"He is to make himself acquainted, if he be not already, with the law of nations and treaties, with the tariff or specification of duties on articles imported or exported, and with all the municipal ordinances and laws.

"He must take especial notice of all prohibitions to prevent the export or import of any articles, as well on the part of the state wherein he resides, as of the government employing him; so that he may admonish all British subjects against carrying on an illicit commerce, to the detriment of the revenues, and in violation of the laws of either. And it is his duty to attend diligently to this part of his office, in order to prevent smuggling, and consequent hazard of confiscation or detention of ships, and imprisonment of the masters and mariners. — (*Beaues, Lex Merc.* vol. ii. p. 42.)

"It is also his duty to protect from insult or imposition British subjects of every description within his jurisdiction. If redress for injury suffered is not obtained, he is to carry his complaint by memorial to the British minister residing at the court on which the consulship depends. If there be none, he is to address himself directly to the court; and if, in an important case, his complaint be not answered, he is to transmit the memorial to his Majesty's secretary of state. — (*Beaues, Warden, &c.*)

"When insult or outrage is offered by a British subject to a native of the place, and the magistrate thereof complains to the consul, he should summon, and in case of disobedience may by armed force bring before him the offender, and order him to give immediate satisfaction; and if he refuse, he resigns him to the civil jurisdiction of the magistrate, or to the military law of the garrison; nevertheless *always acting as counsellor or advocate at his trial*, when there is question of life or property.

* No answer has hitherto (15th of October 1833) been received to the *Circular Queries* from any one of the Turkish consuls.

"But if a British subject be accused of an offence alleged to have been committed at sea, within the dominion or jurisdiction of his sovereign, it is then the duty of the consul to claim cognizance of the cause for his sovereign, and to require the release of the parties, if detained in prison by the magistracy of the place on any such accusation brought before them, and that all judicial proceedings against them do instantly cease; and he may demand the aid of the power of the country, civil and military, to enable him to secure and put the accused parties on board such British ship as he shall think fit, that they may be conveyed to Great Britain, to be tried by their proper judges. If, contrary to this requisition, the magistrates of the country persist in proceeding to try the offence, the consul should then draw up and transmit a memorial to the British minister at the court of that country; and if that court give an evasive answer, the consul should, if it be a sea offence, apply to the Board of Admiralty at London, stating the case; and upon their representation, the secretary for the proper department will lay the matter before the king, who will cause the ambassador of the foreign state, resident in England, to write to his court abroad, desiring that orders may immediately be given by that government, that all judicial proceedings against the prisoner be stayed, and that he be released. — (See *Case of Horseman and his Crew*, *Beaves*, vol. ii. p. 422.)

"It is the duty also of a British consul to relieve all distressed British mariners, to allow them 6d. daily for their support, to send them home in the first British vessels that sail for England, and to keep a regular account of his disbursements, which he is to transmit yearly, or oftener if required, to the Navy Office, attested by two British merchants of the place: this is provided for by positive enactment — (1 *Geo. 2. s. 2. c. 14. § 12.*) He is also to give free passes to all poor British subjects wishing to return home, directed to the captains of the king's packet boats, or ships of war, requiring them to take them on board. — (See *SEAMEN*.)

"The consul is not to permit a British merchant ship to leave the port where he resides without his passport, which he is not to grant until the master and crew thereof have satisfied all just demands upon them; and for this purpose he ought to see the governor's pass of a garrisoned town, or the burgomaster's; unless the merchant or factor to whom the ship was consigned will make himself responsible. — (*Beaves*, *Lex Merc.* vol. ii. p. 423.)

"It is also his duty to claim and recover all wrecks, cables, and anchors, belonging to British ships, found at sea by fishermen or other persons, to pay the usual salvage, and to communicate a report thereof to the Navy Board.

"The consuls and vice-consuls of his Majesty are, by express enactment (46 *Geo. 3. c. 98. § 9.*), empowered to administer oaths in all cases respecting quarantine, in like manner as if they were magistrates of the several towns or places where they respectively reside. It is also laid down, that a consul is to attend, if requested, all arbitrations where property is concerned between masters of British ships and the freighters, being inhabitants of the place where he resides." — (*Chitty on Commercial Law*, vol. i. pp. 58 — 61., and the numerous authorities there quoted.)

Any individual, whether he be a subject of the state by which he is appointed, or of another, may be selected to fill the office of consul, provided he be approved and admitted by the government in whose territory he is to reside. In most instances, however, but not always, consuls are the subjects of the state appointing them.

Much, however, of the peculiar duties of a consul must always depend on the nature of the intercourse with the country to which he is sent, and of the instructions given him. British consuls are regularly supplied with copies of all acts relating to trade and navigation, quarantine, slave trade suppression, emigration, &c., and with the treaties between this and other countries, and must, of course, shape their conduct accordingly. They are strictly forbidden from corresponding with private parties on public matters. We subjoin an extract from the *General Instructions for British Consuls*.

"He will bear in mind that it is his principal duty to protect and promote the lawful trade and trading interests of Great Britain by every fair and proper means, taking care to conform to the laws and regulations in question; and whilst he is supporting the lawful trade of Great Britain, he will take special notice of all prohibitions with respect to the export or import of specified articles, as well on the part of the state in which he resides, as of the government of Great Britain, so that he may caution all British subjects against carrying on an illicit commerce to the detriment of the revenue, and in violation of the laws and regulations of either country; and he will not fail to give to this department immediate notice of any attempt to contravene those laws and regulations.

"The consul will give his best advice and assistance, when called upon, to his Majesty's trading subjects, quieting their differences, promoting peace, harmony, and good-will amongst them, and conciliating as much as possible the subjects of the two countries, upon all points of difference which may fall under his cognizance. In the event of any attempt being made to injure British subjects either in their persons or property, he will uphold their rightful interests, and the privileges secured to them by treaty, by due representation in the proper official quarter. He will, at the same time, be careful to conduct himself with mildness and moderation in all his transactions with the public authorities, and he will not upon any account urge claims, on behalf of his Majesty's subjects, to which they are not justly and fairly entitled. If redress cannot be obtained from the local administration, or if the matter of complaint be not within their jurisdiction, the consul will apply to his Majesty's consul-general, or to his Majesty's minister, if there be no consul-general in the country wherein he resides, in order that he may make a representation to the higher authorities, or take such other steps in the case as he may

think proper; and the consul will pay strict attention to the instructions which he may receive from the minister or consul-general."

Emoluments of Consuls. Prohibition of Trading, &c. — The emoluments of our consuls were, until these few years, principally derived from certain fees, depending on the tonnage, length of the voyages, &c. of the British ships entering and clearing out of the limits of their consulships. But this mode of remunerating them was materially changed by the act 6 Geo. 4. c. 87. The fees payable under this act — (see *post*) — are but inconsiderable; but the deficiency has been, partly at least, compensated by salaries allowed by government.

At present, British consuls are, in some instances, permitted to carry on trade, while in others they are interdicted from having any thing to do with it. The principle on which the distinction is made does not seem very obvious. We observe, for example, that the consul at Petersburg, who must have a great deal to do, is allowed to trade; while the consul at Odessa, whose duties must be much lighter, is denied this privilege. There is the same distinction between the consuls at Venice and Trieste; the latter, whose duties must be the heavier of the two, being allowed to act as a merchant, while the other is not. If this distinction must be kept up, the preferable plan would seem to be to interdict all consuls resident at the great ports, and those resident at other ports principally in the character of political agents, from trading; and to permit it to others. The public duties of the former are either quite sufficient wholly to engross their attention, or they are of such a kind as would make it very inexpedient for those employed in them to be occupied in mercantile pursuits: in the case of the smaller class of ports, but little frequented by British ships, and where the consuls have no peculiar political functions to discharge, there is a less urgent necessity for prohibiting them from carrying on business on their own account. At the same time, however, we are clearly of opinion that it would in all cases be better not to allow consuls to engage, either directly or indirectly, in any sort of industrious undertaking. The main end and purpose of their institution is the facilitating of commerce with the nation in which they reside; and in furtherance of such object they ought, on all occasions, to communicate the fullest and earliest information in their power touching commercial matters, not only to the government that appoints them, but to such of its subjects as may apply for their advice and assistance. But, however advantageous publicity may be to others, it may in various ways be extremely hostile to the interests of the consul considered in his capacity of merchant; and, when his own advantage and his public duty are set in opposition, it requires little sagacity to discover which will have the ascendancy. Hence the fair presumption is, that a trading consul will rather endeavour to profit by the peculiar information his situation may enable him to obtain, than to communicate it to others. His interests as a merchant must frequently, also, even when such is not really the case, appear to be in opposition to those of the parties for whose behoof he is said to be appointed; and under such circumstances, his proceedings, however fair, will always be liable to the suspicion of partiality. It is material, also, to observe that mercantile consuls labour under peculiar disadvantages in the obtaining of information. If a consul, not engaged in business, make a proper application to a public functionary, or merchant, for information as to any subject with which they may be acquainted, he will, in most instances, learn all that they know. But it is obvious, on general principles, and we have been assured of the fact by some of the most intelligent officers of the class, that if a trading consul make the same application, the chances are 10 to 1 he will either learn nothing, or nothing that is not false or misleading. The inquiries of the former excite no jealousy, those of the latter invariably do. The former is known to be actuated only by a feeling of liberal curiosity, or by a wish properly to discharge his public duties; but, the latter being engaged in business, gets credit only for selfish and interested motives, and is believed to be seeking the information merely that he may turn it to his own account. A mercantile consul is, therefore, uniformly the object of the suspicions of all parties, both of his countrymen, and of the foreigners amongst whom he resides. Instead of being, as he ought to be, an independent public functionary, he necessarily gets entangled in the cabals and intrigues of those whose differences it is his province to conciliate. He is tempted, also, to engage in smuggling adventures, contrary to his duty, and highly injurious to the character of his nation. And though he should be proof against temptations of this sort, he is, like all other individuals, subject to misfortune and bankruptcy; and may, in this way, bring discredit and embarrassment on the government that appoints him. These reasons seem to be far more than sufficient to vindicate the policy of interdicting consuls from trading. But were it otherwise, it is enough to decide the question to state, that if they be made properly to perform the functions of their office, it will occupy every moment of their time. To the argument in favour of the existing system derived from economical considerations we do not attach the smallest weight. To attempt to save a few thousand pounds by allowing an important class of public functionaries to engage in avocations inconsistent with

their duty, and destructive of their utility, would be something the very reverse of economy.

Cost of the Establishment. Improvements made in it. — We had occasion, in the former edition of this work, to complain of the cost and inadequacy of our consular establishment. But its expense has since been very much, and, in some instances perhaps, too much, reduced; at the same time that measures have been taken for increasing the duties of the consuls, by making them furnish details as to the trade, manufactures, duties, prices, &c. of the districts in which their consulships are situated. Hitherto this important department of what ought to be the peculiar duty of a consul has been most strangely neglected; but if it be properly attended to, it will occupy a large portion of the consul's time, and will be a field for the display of superior talents. Some of the answers made by the consuls to the *Circular Queries* prepared by the author of this work, have been drawn up with great care and intelligence, and reflect much credit on their authors. There are a good many certainly of a very inferior description; but this is not to be wondered at — it being hardly possible for those who have not given a good deal of their time to such subjects, to make a proper reply to queries relating to them. And if the system is to be perfected to the degree of which it is susceptible, the salaries allowed to the consuls ought to be such as to afford a sufficient remuneration for the services of gentlemen of character, familiar with the principles of public law, commerce, and statistics; and such only ought to be nominated to consular situations. We subjoin that part of the *General Instructions for the Consuls* that has reference to statistical inquiries.

"The consul will forward to the secretary of state, in duplicate, so soon as the information he can collect will enable him so to do, but at any rate within a period of 6 months from the date of his arrival at his residence, a general Report on the trade of the place and district, specifying the commodities, as well of the export as import trade, and the countries which supply the latter, together with the increase or decline in late years, and the probable increase or decline to be expected, and the causes in both cases. He will state the general regulations with respect to trade at the place where he is resident, and their effects. He will give the average market prices within the year of the several articles of export and import; he will particularise what articles, if any, are absolutely prohibited to be imported into the country wherein he resides; what articles are prohibited to be imported from any other places than from the place of their growth or production; whether there be any privileges of importation, and what those privileges are, in favour of ships that are of the build of, or belonging to, the country wherein he resides; whether there be any difference in the duty on goods when imported into that country in a foreign ship, and if so, whether it be general, or applicable only to particular articles; what are the rates of duty payable on goods imported into the said country; whether there be any tonnage duty or other port dues, and what, payable on shipping entering at, or clearing from, the ports of that country; whether there be any (and, if so, what) ports in that country wherein goods may be warehoused on importation, and afterwards exported with or without payment of any duties, and under what regulations."

He is also to transmit an annual statement of the trade with the principal ports of his consulships; and quarterly returns of the prices of corn, &c. This is a good beginning, and, if it be properly followed up, may lead to very advantageous results.

The following are the provisions of the act 6 Geo. 4. c. 87. with respect to the salaries and charges of consuls: —

Salaries to Consuls. — "Whereas the provision which hath hitherto been made for the maintenance and support of the consuls general and consuls appointed by his Majesty to reside within the dominions of sovereigns and foreign states in amity with his Majesty, is inadequate to the maintenance and support of such consuls general and consuls, and it is expedient to make further and due provisions for that purpose; it is therefore enacted, that it shall be lawful for his Majesty, by any orders to be issued by the advice of his privy council, to grant to all or any of the consuls general or consuls appointed by his Majesty to reside within any of the dominions of any sovereign or foreign state or power in amity with his Majesty, such reasonable salaries as to his Majesty shall seem meet, and by such advice from time to time to alter, increase, or diminish any such salaries or salary as occasion may require. — (6 Geo. 4. c. 87. § 1.)

Terms on which Salaries shall be granted. Leave of Absence. — Such salaries shall be issued and paid to such consuls general and consuls without fee or deduction; provided that all such salaries be granted during his Majesty's pleasure, and not otherwise, and be held and enjoyed by such consuls general and consuls, so long only as they shall be actually resident at the places at which they may be so appointed to reside, and discharging the duties of such their offices; provided nevertheless, that in case his Majesty shall, by any order to be for that purpose issued through one of his principal secretaries of state, grant to any such consul general or consul leave of absence from the place to which he may be so appointed, such consul general or consul shall be entitled to receive the whole, or such part as to his Majesty shall seem meet, of the salary accruing during such period of absence. — § 2.

Salaries in lieu of Fees formerly paid. Consuls not to take other than the Fees hereinafter mentioned. — The salaries so to be granted shall be taken by the consuls general and consuls as a compensation for all salaries heretofore granted, and all fees of office and gratuities heretofore taken by them from the masters or commanders of British vessels, or from any other person, for any duties or services by such consuls general or consuls done or performed for any such persons; and no such consuls general or consuls shall, from the 1st of January, 1826, be entitled, on account of any thing by him done in the execution of such his office, or for any service by him rendered to any masters or commanders of British vessels, or to any other person in the execution of such his office, to ask or take any fees, recompence, gratuity, compensation, or reward, or any sum of money, save as herein-after is excepted. — § 3.

Certain Fees still allowed to be taken. — It shall be lawful for all consuls general and consuls appointed by his Majesty, and resident within the dominions of any sovereign, or any foreign state or power in amity with his Majesty, to accept the several fees particularly mentioned in the tables to this present act annexed, marked with the letters A. and B. for the several things and official acts and deeds particularly mentioned in the said schedules; and it shall be lawful for his Majesty, by any orders to be by him made, by the advice of his privy council, from time to time, as occasion may require, to diminish, or wholly to abolish, all or any of the fees aforesaid, and to establish and authorise the payment of any greater or smaller or new or additional fees for the several things mentioned in the said schedules, or for any other thing to be by any such consul general or consul done in the execution of such his office. — § 4.

Penalty on Consuls demanding more Fees than specified in the Schedule. — In case any consul general or consul appointed by his Majesty as aforesaid shall, by himself or deputy, or by any person authorised thereto in his behalf, ask or accept for any thing by him done in the execution of such his office, or for any service, or duty by him rendered or performed in such his office, for any person whomsoever, any other or greater fee or remuneration than is specified in the schedule, or than shall be sanctioned and specified in or by any such order in council, the person so offending shall forfeit and become liable to pay to his Majesty any sum of sterling British money, not exceeding the amount of the salary of such person for 1 year, nor less than the 12th part of such annual salary, at the discretion of the court in which such penalty may be recovered; and shall moreover upon a second conviction for any such offence forfeit such his office, and for ever after become incapable of serving his Majesty in the same or the like capacity. — § 5.

Table of Fees to be exhibited at Custom-houses. — A printed copy of the tables of fees allowed by this act, or which may be sanctioned or allowed by any order to be made in pursuance of this act by his Majesty in council, shall be exhibited in a conspicuous manner, for the inspection of all persons, in the Custom-house in the port of London, and in all other Custom-houses in the several ports and harbours of the United Kingdom of Great Britain and Ireland; and printed copies thereof shall, by the collector or other chief officer of customs in all such ports and harbours, be delivered gratuitously, and without fee or reward, to every master of any vessel clearing out of any such port or harbour, and demanding a copy thereof. — § 6.

Table of Fees to be exhibited at Consuls' Offices. — A copy of the schedule or table of fees to this present act annexed, or which may be established and authorised by any such order in council, shall be hung up and exhibited in a conspicuous place in the public offices of all consuls general or consuls appointed by his Majesty, in the foreign places to which they may be so appointed, for the inspection of all persons interested therein; and any consul general or consul omitting or neglecting to exhibit any such copy of the schedules in such his public office, or refusing to permit the same to be inspected by any person interested therein, shall for every such offence forfeit and pay a sum of British sterling money not exceeding one half the amount of the salary of such person for 1 year, nor less than the 12th part of such annual salary, at the discretion of the court in which such penalty may be recovered. — § 7.

Superannuation. — "And whereas it is expedient that his Majesty should be enabled to grant to the said consuls general and consuls, appointed as aforesaid, allowances in the nature of superannuation or reward for meritorious public services;" it is further enacted, that all the regulations contained in 50 Geo. 3. c. 117., 3 Geo. 4. c. 113., 5 Geo. 4. c. 104., respecting superannuation allowances, are hereby extended to the said consuls general and consuls, so far as such regulations can be applied to the cases of such several persons respectively, as fully to all intents and purposes as if the same were repeated and re-enacted in this present act. — § 8.

Allowances during War. — If it shall at any time happen that by reason of any war which may hereafter arise between his Majesty and any sovereign, or foreign state or power, within the dominions of whom any such consul general or consul shall be appointed to reside, he shall be prevented from residing, and shall in fact cease to reside, at the place to which he may be so appointed, it shall be lawful for his Majesty, by any order to be issued by the advice of his privy council, to grant to any such consul general or consul, who may have served his Majesty in that capacity for any period not less than 3 years, nor more than 10 years next preceding the commencement of any such war, a special allowance not exceeding the proportion of their respective salaries to which such consuls general and consuls would be entitled under the provisions of the said act of 3 Geo. 4., in case the period of their respective service had exceeded 10 years and had not exceeded 15 years: provided that in case any such consul general or consul shall have served in such his office for the space of 10 years and more, it shall be lawful for his Majesty, by any such order in council as aforesaid, to grant to him such a proportion of his salary, which, by the said act is authorised to be granted, as a superannuation allowance, according to the several periods of service exceeding 10 years, in the said act. — § 9.

Commencement. — This act shall take effect from the 1st of January, 1826, except where any other commencement is particularly directed. — § 12.

Tables of Fees allowed to be taken by Consuls General and Consuls, by the preceding Act of 6 Geo. 4. c. 87.

<i>Table A.</i> — Certificate of due landing of goods exported from the United Kingdom	2 dollars.
Signature of ship's manifest	2 do.
Certificate of origin, when required	2 do.
Bill of health, when required	2 do.
Signature of muster roll, when required	2 do.
Attestation of a signature, when required	1 do.
Administering an oath, when required	1 do.
Seal of office, and signature of any other document not specified herein, when required	2 do.
<i>Table B.</i> — Bottomry or arbitration bond	1 do.
Noting a protest	1 do.
Order of survey	2 do.
Extending a protest or survey	1 do.
Registrations	1 do.
Vis-a of passport	1 do.
Valuation of goods	1 per cent.

Attending sales, $\frac{1}{2}$ per cent. where there has been a charge for valuing; otherwise, 1 per cent.

Attendance out of consular office at a shipwreck, 5 dollars per diem for his personal expenses, over and above his travelling expenses.

Ditto on opening a will 5 dollars. |

Management of property of British subjects dying intestate 2½ per cent. |

The dollars mentioned in the preceding tables are in all cases to be paid by the delivery of dollars, each of which is to be of the value of 4s. 6d. sterling, and no more, according to the rate of exchange prevailing at the place where such payment is made.

CONTRABAND, in commerce, a commodity prohibited to be exported or imported, bought or sold.

CONTRABAND is also a term applied to designate that class of commodities which neutrals are not allowed to carry during war to a belligerent power.

It is a recognised general principle of the law of nations, that ships may sail to and trade with all kingdoms, countries, and states in peace with the princes or authorities whose flags they bear; and that they are not to be molested by the ships of any other power at war with the country with which they are trading, unless they engage in the conveyance of *contraband* goods. But great difficulty has arisen in deciding as to the goods comprised under this term. The reason of the limitation suggests, however, the

species of articles to which it principally applies. It is indispensable that those who profess to act upon a principle of neutrality should carefully abstain from doing any thing that may discover a bias in favour of either party. But a nation who should furnish one of the belligerents with supplies of warlike stores, or with supplies of any article, without which that belligerent might not be able to carry on the contest, would obviously forfeit her neutral character; and the other belligerent would be warranted in preventing such succours from being sent, and in confiscating them as lawful prize. All the best writers on international law admit this principle; which, besides being enforced during every contest, has been sanctioned by repeated treaties. In order to obviate all disputes as to what commodities should be deemed contraband, they have sometimes been specified in treaties or conventions. — (See the references in *Lampredi del Commercio de' Popoli Neutrali*, § 9.) But this classification is not always respected during hostilities; and it is sufficiently evident that an article which might not be contraband at one time, or under certain circumstances, may become contraband at another time, or under different circumstances. It is admitted on all hands, even by M. Hubner, the great advocate for the freedom of neutral commerce — (*De la Saisie des Bâtimens Neutres*, tom. i. p. 193.) — that every thing that may be made *directly available* for hostile purposes is contraband, as arms, ammunition, horses, timber for ship-building, and all sorts of naval stores. The greatest difficulty has occurred in deciding as to provisions, which are sometimes held to be contraband, and sometimes not. Lord Stowell has shown that the *character of the port* to which the provisions are destined, is the principal circumstance to be attended to in deciding whether they are to be looked upon as contraband. A cargo of provisions intended for an enemy's port, in which it was known that a warlike armament was in preparation, would be liable to arrest and confiscation; while, if the same cargo were intended for a port where none but merchantmen were fitted out, the most that could be done would be to detain it, paying the neutral the same price for it he would have got from the enemy.

By the ancient law of Europe, a ship conveying any contraband article was liable to confiscation as well as the article. But in the modern practice of the courts of admiralty of this and other countries, a milder rule has been adopted, and the carriage of contraband articles is attended only with the loss of freight and expenses, unless when the ship belongs to the owner of the contraband cargo, or when the simple misconduct of conveying such a cargo has been connected with other malignant and aggravating circumstances. Of these a false destination and false papers are justly held to be the worst. — (5 *Rob. Adm. Rep.* 275.)

The right of visitation and search is a right inherent in all belligerents; for it would be absurd to allege that they had a right to prevent the conveyance of contraband goods to an enemy, and to deny them the use of the only means by which they can give effect to such right. — (*Vattel*, book iii. c. 7. § 114.) The object of the search is twofold: *first*, to ascertain whether the ship is neutral or an enemy, for the circumstance of its hoisting a neutral flag affords no security that it is really such; and, *secondly*, to ascertain whether it has contraband articles, or enemies' property, on board. All neutral ships that would navigate securely during war must, consequently, be provided with passports from their government, and with all the papers or documents necessary to prove the property of the ship and cargo — (see *Ship's Papers*); and they must carefully avoid taking any contraband articles or belligerent property on board. And hence, as Lampredi has observed, a merchant ship which seeks to avoid a search by crowding sail, or by open force, may justly be captured and subjected to confiscation. — (§ 12.)

It has, indeed, been often contended that *free ships make free goods* (*que le pavillon couvre la marchandise*), and that a belligerent is not warranted in seizing the property of an enemy in a neutral ship, unless it be contraband. The discussion of this important question would lead us into details which do not properly come within the scope of this work. We may, however, shortly observe, that no such privilege could be conceded to neutrals, without taking from belligerents the right, inseparable from a state of war, of seizing an enemy's property if found in places where hostilities may be lawfully carried on, as on the high seas. In fact, were the principle in question admitted, the commerce of a belligerent power with its colonies, or other countries beyond sea, might be prosecuted in neutral ships, with as much security during war as in peace; so that neutrals would, in this way, be authorised to render a belligerent more important assistance than, perhaps, they could have done had they supplied him with troops and ammunition! But it is surely unnecessary to say, that to act in this way is a proceeding altogether at variance with the idea of neutrality. Neutrals are bound to conduct themselves in the *spirit of impartiality*; and must not afford such aid or assistance to one party, as may the better enable him to make head against the other. It is their duty "*non interponere se bello, non hoste imminente hostem eripere*." And yet it is manifest that the lending of neutral bottoms to carry on a belligerent's trade is in direct contradiction to this rule. The ships or cruisers of a particular power may have swept those of its enemy from the

sea, and reduced him to a state of great difficulty, by putting a stop to his commerce with foreigners, or with his own colonies; but of what consequence would this be, if neutrals might step in to rescue him from such difficulties, by carrying on that intercourse for him which he can no longer carry on for himself? It is natural enough that such a privilege should be coveted by neutrals; but, however advantageous to them, it is wholly subversive of the universally admitted rights of belligerent powers, as well as of the principles of neutrality; and cannot, therefore, be truly said to be bottomed on any sound principle.

In the war of 1756, the rule was laid down by Great Britain, that neutrals are not to be allowed to carry on a trade during war, that they were excluded from during peace; so that, supposing a nation at war with Great Britain had, while at peace, prohibited foreigners from engaging in her colonial or coasting trade, we should not have permitted neutrals to engage in it during war. This rule has been much complained of; but the principle on which it is founded seems a sound one, and it may in most cases be safely adopted. The claims of neutrals cannot surely be carried further than that they should be allowed to carry on their trade during war, as they had been accustomed to carry it on during peace, except with places under blockade; but it is quite a different thing when they claim to be allowed to employ themselves, during war, in a trade in which they had not previously any right to engage. To grant them this, would not be to preserve to them their former rights, but to give them new ones which may be fairly withheld. Supposing, however, that either of the belligerent powers has *force sufficient to prevent any intercourse between the other and its colonies, or any intercourse between different ports of the other*, she might, in the exercise of the legitimate rights of a belligerent, exclude neutrals from such trade, even though it had formerly been open to them; because otherwise she would be deprived of the advantage of her superior force; and the neutrals would, in fact, when employed in this way, be acting as the most efficient allies of her enemy.

For a full discussion of this important and difficult question, and of the various distinctions to which it gives rise, see the work of Hubner (*De la Saisie des Bâtimens Neutres*, 2 tomes, 12mo. 1757), in which the different arguments in favour of the principle that "the flag covers the cargo" are stated with great perspicuity and talent. The opposite principle has been advocated by Lampredi, in his very able treatise *Del Commercio de' Popoli Neutrali*, § 10.; by Lord Liverpool, in his *Discourse on the Conduct of Great Britain in respect to Neutrals*, written in 1757; and, above all, by Lord Stowell, in his justly celebrated decisions in the Admiralty Court. Martens inclines to Hubner's opinion. — (See *Précis du Droit des Gens*, liv. 8. c. 7.)

CONVOY, in navigation, the term applied to designate a ship or ships of war, appointed by government, or by the commander in chief on a particular station, to escort or protect the merchant ships proceeding to certain ports. Convoys are mostly appointed during war; but they are sometimes, also, appointed during peace, for the security of ships navigating seas infested with pirates.

Individuals have not always been left to themselves to judge as to the expediency of sailing with or without convoy. The governments of most maritime states have thought proper, when they were engaged in hostilities, to oblige their subjects to place themselves under an escort of this sort, that the enemy might not be enriched by their capture. Acts to this effect were passed in this country during the American war and the late French war. The last of these acts (43 Geo. 3. c. 57.) enacted, that it should not be lawful for any ship belonging to any of his Majesty's subjects (except as therein provided) to depart from any port or place whatever, unless under such convoy as should be appointed for that purpose. The master was required to use his utmost endeavours to continue with the convoy during the whole voyage, or such part thereof as it should be directed to accompany his ship; and not to separate therefrom without leave of the commander, under very heavy pecuniary penalties. And in case of any ship departing without convoy contrary to the act, or wilfully separating therefrom, all insurances on the ship, cargo, or freight, belonging to the master, or to any other person directing or privy to such departure or separation, were rendered null and void. The customs officers were directed not to allow any ship that ought to sail with convoy to clear out from any place in the United Kingdom for foreign parts, without requiring from the master, bond with one surety, with condition that the ship should not depart without convoy, nor afterwards desert or wilfully separate from it. The regulations of this act did not extend to ships not requiring to be registered, nor to those licensed to sail without convoy, nor to those engaged in the coasting trade, nor to those belonging to the East India Company, &c.

It is very common, during periods of war, to make *sailing or departing with convoy* a condition in policies of insurance. This, like other warranties in a policy, must be *strictly* performed. And if a ship warranted to sail with convoy, sail without it, the

policy becomes void, whether this be imputable to any negligence on the part of the insured, or the refusal of government to appoint a convoy.

There are five things essential to sailing with convoy: viz. *first*, it must be with a regular convoy under an officer appointed by government; *secondly*, it must be from the place of rendezvous appointed by government; *thirdly*, it must be a convoy for the voyage; *fourthly*, the master of the ship must have sailing instructions from the commanding officer of the convoy; and *fifthly*, the ship must depart and continue with the convoy till the end of the voyage, unless separated by necessity.

With respect to the third of these conditions we may observe, that a warranty to sail with convoy generally means a convoy *for the voyage*; and it is not necessary to add the words "for the voyage" to make it so. Neither will the adding of these words in some instances, make the omission of them, in any case, the ground of a different construction. A warranty to sail with convoy does not, however, uniformly mean a convoy that is to accompany the ship insured the entire way from the port of departure to her port of destination; but such convoy as government may think fit to appoint as a sufficient protection for ships going the voyage insured, whether it be for the whole or only a part of the voyage.

Sailing instructions, referred to in the fourth condition, are written or printed directions delivered by the commanding officer of the convoy to the several masters of the ships under his care, that they may understand and answer signals, and know the place of rendezvous appointed for the fleet in case of dispersion by storm, or by an enemy, &c. These sailing instructions are so very indispensable, that no vessel can have the full protection and benefit of convoy without them: hence, when, through the negligence of the master, they are not obtained, the ship is not said to have sailed with convoy; and a warranty in a policy of insurance to that effect is held not to be complied with. If, however, the master do all in his power to obtain sailing instructions, but is prevented from obtaining them by any insuperable obstacle, as the badness of the weather; or if they be refused by the commander of the convoy; the warranty in the policy is held to be complied with.

For further information as to convoy, see *Abbott on the Law of Shipping*, part iii. c. 3.; *Marshall on Insurance*, book i. c. 9. § 5., and the *Act 43 Geo. 3. c. 57, &c.*

COPAIVA. See BALSAM.

COPAL, improperly called gum copal, is a valuable and singular kind of resin, that naturally exudes from different large trees, and is imported partly from America, and partly from the East Indies. The best copal is hard and brittle, in rounded lumps of a moderate size, easily reducible to a fine powder, of a light lemon yellow colour, beautifully transparent, but often, like amber, containing parts of insects and other small extraneous bodies in its substance. Its specific gravity varies from 1.045 to 1.139. It has neither the solubility in water common to gums, nor the solubility in alcohol common to resins, at least in any considerable degree. It may be dissolved by digestion in drying linseed oil, and other volatile menstrua. This solution forms a beautiful transparent varnish, which, when, properly applied, and slowly dried, is very hard and very durable. Copal varnish was first discovered in France, and was long known by the name of *vernix martin*. It is applied to snuff-boxes, tea-boards, and other utensils. It preserves and gives lustre to paintings; and contributes to restore the decayed colours of old pictures, by filling up cracks, and rendering the surface capable of reflecting light more uniformly. Copal is liable to be confounded with *gum animé*, when the latter is very clear and good. But it is of importance to distinguish between them, as the animé, though valuable as a varnish, is much less so than the finest copal; the varnish with the former being darker coloured, and not so hard. Besides the external appearance of each, which is pretty distinct to a practised eye, the solubility in alcohol furnishes a useful test, — the animé being readily soluble in this fluid, while the copal is hardly affected by it; copal is also brittle between the teeth, whereas animé softens in the mouth. — (*Rees's Cyclopædia*; *Ure's Dictionary*, &c.)

The imports of gum animé and copal are not distinguished in the custom-house accounts. The entries of both for home consumption amounted, at an average of the 3 years ending with 1831, to 123,743 lbs. a year. The duty has been judiciously reduced from 56s. to 6s. a cwt. Copal fetches in the London market from 6d. to 1s. 7d. per lb., duty paid.

COPENHAGEN, the capital of Denmark, situated on the east coast of the island of Zealand, in the channel of the Baltic called the Sound; in lat. 55° 41' N., lon. 12° 35' 46" E. Population about 105,000. It is a well-built, handsome city. In going into Copenhagen, the course is between the buoy on the Stubben Bank to the left, and the buoy on the Middle-grounds, and those in advance of the three Crown batteries on the right, W.S.W. by compass. From the three crowns to the roads the course is S.S.W. The water in the channel is from 6 to 4 fathoms deep; but it is narrow, and the navigation rather difficult. There is no obligation to take a pilot on board; but if a vessel wish for one, she may heave to abreast of the battery, when he will come to her.

Vessels not intending to come into harbour bring up in the roads, at from $\frac{1}{4}$ to $\frac{1}{2}$ a mile from shore, in about 4 fathoms, the town bearing S.S.W. In the harbour, within the boom, the water is from 17 to 18 feet deep. Vessels in harbour load and unload alongside the quay. The anchorage in the roads is good and safe.

Money.—Accounts are kept in rixdollars of 6 marcs, or 96 skillings; the rixdollar being formerly worth about 4s. 1d. sterling. But in 1813, a new monetary system was adopted, according to which the new or *Rigsbank* dollar is worth 2s. 3d., being half the value of the old specie dollar, and $\frac{1}{2}$ of the old current dollar. But the money generally used in commercial transactions is bank money, which is commonly at a heavy discount. The *par* of exchange, estimated by the Rigs-bank dollar, would be 8 dollars 7-6 skillings per pound sterling.

Weights and Measures.—The commercial weights are, 16 pounds = 1 lispound; 20 lispound = 1 shippound; 100 lb. = 110 $\frac{1}{4}$ lbs. avoirdupois = 134 lbs. Troy = 101 lbs. of Amsterdam = 103 lbs. of Hamburgh.

The liquid measures are, 4 ankers = 1 alm or ohm; 1 $\frac{1}{2}$ alm = 1 hogshhead; 2 hogshheads = 1 pipe; 2 pipes = 1 quarter. The anker = 10 (very nearly) English wine gallons. A *fuder* of wine = 930 pots; and 100 pots = 25 $\frac{1}{2}$ wine gallons.

The dry measures are, 4 viertels = 1 scheffel; 8 scheffels = 1 toende or ton; 12 tons = 1 last = 47 $\frac{1}{2}$ Winchester bushels. The last of oil, butter, herrings, and other oily substances, should weigh 224 lbs. nett.

The measure of length is the Rhineland foot = 12 $\frac{1}{2}$ inches very nearly. The Danish ell = 2 feet; 100 ells = 68 $\frac{1}{2}$ English yards.

Trade of Copenhagen.—This is not very considerable, and has latterly declined. Anchors, pitch, and tar, are chiefly imported from Sweden and Norway; flax, hemp, masts, sail-cloth, and cordage, from Russia; West India produce from the Danish West India islands; tobacco from America; wines and brandy from France; coal, earthenware, and salt are the principal articles of direct import from England. Of coal, we sent to Denmark (principally to Copenhagen), in 1830, 100,127 tons, and of salt 1,272,487 bushels. Owing to the erroneous policy of the Danish government, which is attempting, at a great public loss, to raise and bolster up manufactures, the direct imports of woollens and cottons are quite inconsiderable. These articles are not, however, absolutely prohibited; but are admitted on condition of their being stamped, and put up to auction by the Custom-house, which, after retaining 30 per cent. of the gross produce of the sale, pays over the residue to the importer, who is generally the purchaser. This oppressive regulation reduces the legitimate importation of these articles to next to nothing; but the illicit importation is very considerable, principally by the Elbe and the Holstein frontier. The exports consist, for the most part, of the produce of the soil, as grain, rapeseed, butter and cheese, beef and pork, hides, horses and cattle, corn, brandy, bones, &c. In 1830, the imports of grain into this country from Denmark were as follows, viz. wheat 88,033 quarters, barley 75,532 do., oats 118,203 do., rye 1,151 do., peas and beans 5,182 do., the importation of rapeseed during the same year was 286,569 bushels. — (See CORN LAWS.) We subjoin

An Account, extracted from the Returns published by the Danish Custom-house of the principal Articles of Agricultural Produce exported from Denmark in 1831.

We have no means of ascertaining the proportion shipped from Copenhagen, but it was very considerable.

Shipping.—In 1831, there entered the port of Copenhagen 1,565 ships; of which 309 were from Sweden, 305 from Prussia, 208 from Norway, 160 from Great Britain, 137 from Russia, 90 from Finland, 29 from

France, &c. The tonnage of these ships is not stated; but many were of very small burden. Subjoined is an

Account of the Danish Shipping employed in the Foreign and in the Carrying Trade of Denmark in the Year 1830.

This return does not, however, include vessels engaged in the fisheries, or in the coasting trade, the latter of which is very considerable.

About 200 Danish ships are engaged in the carrying trade of the Mediterranean. Latterly, however, the Swedes and Norwegians have obtained an ascendancy in this department.

Excluding vessels under 20 tons, there belonged, in 1830, to

	Ships.	Tonnage.

Total - - -	3,696	124,984

Colonial Trade.—In the West Indies, the Danes possess the island of St. Croix, which, though small, is fertile, and well cultivated. All the ports of Denmark may send vessels thither, but the return cargoes must be discharged at places having sugar refineries. The principal part of the trade is in the hands of Copenhagen merchants. St. Croix produces about 25,000,000 lbs. of sugar, and 1,400,000 gallons of rum. In 1831, 23 ships, of the aggregate burden of 5,772 tons, arrived at Copenhagen from St. Croix. A good deal of the colonial produce brought into Denmark is again exported.

The trade to the settlement of Tranquebar and Serampore, in India, is in the hands of an exclusive company. Whether it be owing to the deadening influence of monopoly, or to the real superiority of the Americans, who supply the Continental markets with tea, &c. at a cheaper rate, only one ship a year has latterly sailed from Copenhagen for India! The trade to the Danish settlements on the African coast is, if possible, of still less importance—(N. B. For an account of the trade on the Kiel Canal, see CANALS.)

Port Charges vary according as the vessel has come from this or the further side of Cape Finisterre, or from the Indian seas; as she is wholly, or only part loaded; and as she clears out with goods that have been *in transitu*, and are for the most part free of duty, or has on board a cargo of native produce subject to duty. On a ship of 300 tons belonging to a privileged nation from this side Cape Finisterre, unloading and loading mixed cargoes in Copenhagen, the different public charges, including Sound dues, brokerage, &c., would be about 67*l.* 10*s.*; and from the further side of Cape Finisterre, the charges would be about 99*l.* 10*s.* When a ship is not fully loaded, lastage money and light dues are only charged in proportion to the cargo on board. Lastage money is not charged on ships outward bound, laden with transit goods, as tar, pitch, iron, &c. But notwithstanding these deductions, it is obvious that port charges at Copenhagen are very heavy, and there can be no doubt that they are a material obstacle to the extension of trade.

Commission on purchases is generally 2 per cent., and on sales, 3 per cent., including 1 per cent. *del credere*.

Citizenship.—To enable a foreigner to trade as a merchant in Denmark, he must become a burgher, which costs about 100*l.*, and it will require about 60*l.* more to free him from the obligation of serving in the militia. The obstacles in the way of a foreigner establishing himself in Denmark as a manufacturer are much greater, on account of the exclusive privileges enjoyed by the guilds or corporations into which the principal crafts or trades are divided.

Credit.—Goods imported into Copenhagen are commonly sold on credit: 3 months is the term generally allowed on most sorts of goods, and in a few instances 6 months. The discount for ready money is 4 per cent. Bankruptcy is of rare occurrence.

Insurance. — Marine insurance is effected on liberal terms, by a company established in 1746. A good many risks are, however, insured at Amsterdam and Hamburg.

Careening, Ships' Stores, &c. — Copenhagen has good building-yards, and is in all respects an eligible place for the repair of ships, and for supplying them with provisions. Subjoined is an

Account of the Average Prices of Ships' Provision at Copenhagen in 1831, in Imperial Weights and Measures, and Sterling Money.

General Remarks. — On the whole, the commerce of Denmark may be pronounced to be in a stationary state. But from her advantageous situation between the Baltic and North Sea, and the industrious, persevering character of the inhabitants, there can be little doubt that it may be materially extended. It is needless, however, to expect any considerable improvement till the present system of domestic policy be, in many respects, altogether changed. The Danish government has long been exerting itself to bolster up a manufacturing interest, by laying oppressive duties on most species of manufactured articles. Even under the most favourable circumstances, such conduct, though it may benefit a few individuals, is sure to be productive of great national loss. But in the case of Denmark, the circumstances are such as to render the restrictive system peculiarly injurious. All, or nearly all, the branches of industry carried on in the kingdom are subjected to the government of guilds or corporations; no person can engage in any line of business until he has been authorised by its peculiar guild; and as the sanction of this body is rarely obtained without a considerable sacrifice, the real effect of the system is to fetter competition and improvement, and to perpetuate monopoly and routine. Even the Danish writers acknowledge that such is the influence of the present regulations. “*Nos ouriers,*” say they, “*sont chers, travaillent lentement, et souvent mal et sans goût; leur éducation est négligée. On ne les forme point à penser, et l'apprentif suit machinalement ce qu'il voit faire au maître.*” — (*Catteau, Tableau des Etats Danois*, tome ii. p. 260.) It would be idle to imagine that a country which has to import coal, should, however favourably situated in other respects, be able to manufacture cottons, woollens, &c. at so cheap a rate as they may be imported from others enjoying greater natural facilities for their production. But when to the physical obstacles in the way of manufactures, we add others, not less formidable, of a political nature, the attempt to force them into existence by dint of customs duties and regulations becomes absolutely ludicrous.

The port charges and transit duties are also exceedingly heavy; and the Sound duties, being charged on native as well as foreign ships, operate as an inland duty on the trade

between different parts of the country. We are glad, however, to be able to state, that the more intelligent portion of the Danish people are quite aware of the mistaken policy on which they are now proceeding; and there is reason to believe that it will, at no distant period, be rendered more in accordance with the spirit of the age, and more conducive to the improvement of the people. In 1832, a petition, signed by almost all the merchants of Copenhagen, was addressed to the king, containing an able and distinct exposition of the circumstances which depress Danish commerce. The petitioners pray for the emancipation of commercial pursuits from all the restrictions laid upon them by guilds and corporations, or, in other words, for the freedom of industry; for a revision and reduction of the transit duties, and a change in the mode of charging the Sound duties; for a reduction of the tonnage duties, and a remission of the charge on account of light money on ships arriving at Copenhagen that have already paid for the lights at Elsinæur; they further pray for the abolition of the East India Company's monopoly, and the freedom of trade to the East Indies and China; and for a reduction of the duties on several articles of domestic produce when exported, and of foreign produce when imported. What is here asked is so reasonable, and, if granted, would add so much to the real prosperity of the country, that we trust the government will earn for itself a new title to the public esteem by honestly endeavouring to meet the wishes of the petitioners.

In compiling this article, we have consulted *Oddy's European Commerce*, pp. 330—369; *Dictionnaire du Commerce* (Ency. Méthodique, tome II. pp. 3—16.); *Catteau, Tableau des Etats Danois*, tome ii. pp. 292—371.; the *Consul's Answers to Circular Queries*, which do that functionary great credit; and communications from merchants at Copenhagen.

COPPER (Ger. *Kupfer*; Du. *Koper*; Da. *Kobber*; Sw. *Kopper*; Fr. *Cuivre*; It. *Rame*; Sp. *Cobre*; Port. *Cobre*; Rus. *Mjed*, *Krasnoi mjed*; Pol. *Miedz*; Lat. *Cyprum*; Arab. *Nehass*; Sans. *Tamra*), a well-known metal, so called from its having been first discovered, or at least wrought to any extent, in the island of Cyprus. It is of a fine red colour, and has a great deal of brilliancy. Its taste is styptic and nauseous; and the hands, when rubbed for some time on it, acquire a peculiar and disagreeable odour. It is harder than silver; its specific gravity varies according to its state, being, when quite pure, near 9·000. Its malleability is great: it may be hammered out into leaves so thin as to be blown about by the slightest breeze. Its ductility is also considerable. Its tenacity is so great, that a copper wire 0·078 of an inch in diameter is capable of supporting 302·26 lbs. avoirdupois without breaking. Its liability to oxidation from exposure to air or damp is its greatest defect. The rust with which it is then covered is known by the name of verdigris, and is one of the most active poisons.—(*Thomson's Chemistry*.)

If we except gold and silver, copper seems to have been more early known than any other metal. In the first ages of the world, before the method of working iron was discovered, copper was the principal ingredient in all domestic utensils and instruments of war. Even now it is applied to so many purposes, as to rank next, in point of utility, to iron.

Alloys of Copper are numerous and of great value. Those of tin are of most importance. Tin added to copper makes it more fusible, less liable to rust, or to be corroded by the air and other common substances, harder, denser, and more sonorous. In these respects the alloy has a real advantage over unalloyed copper: but this in many cases more than counterbalanced by the great brittleness which even a moderate portion of tin imparts; and which is a singular circumstance, considering that both metals are separately very malleable.

Copper alloyed with from 1 to 5 per cent. of tin is rendered harder than before; its colour is yellow, with a cast of red, and its fracture granular: it has considerable malleability. This appears to have been the usual composition of many of the ancient edged tools and weapons, before the method of working iron was brought to perfection. The *χαλκός* of the Greeks, and, perhaps, the *as* of the Romans, was nothing else. Even their copper coins contain a mixture of tin. The ancients did not, in fact, possess (as has been often contended) any peculiar process for hardening copper, except by adding to it a small quantity of tin. An alloy in which the tin is from 0·1 to $\frac{1}{4}$ of the whole is hard, brittle, but still a little malleable, close grained, and yellowish white. When the tin is as much as $\frac{1}{2}$ of the mass, it is entirely brittle; and continues so in every higher proportion. The yellowness of the alloy is not entirely lost till the tin amounts to 0·3 of the whole.

Copper (or sometimes copper with a little zinc), alloyed with as much tin as will make from about 0·1 to $\frac{1}{2}$ of the whole, forms an alloy, which is principally employed for bells, brass cannon, bronze statues, and various other purposes. Hence it is called *bronze*, or *bell metal*; and is excellently fitted for the uses to which it is applied, by its hardness, density, sonorousness, and fusibility. For cannon, a lower proportion of tin is commonly used. According to Dr. Watson, the metal employed at Woolwich consists of 100 parts of copper and from 8 to 12 of tin; hence it retains some little malleability, and, therefore, is tougher than it would be with a larger portion of tin. This alloy being more sonorous than iron, brass guns give a louder report than iron guns. A common alloy for bell metal is 80 parts of copper and 20 of tin: some artists add to these ingredients zinc, antimony, and silver, in small proportions; all of which add to the sonorousness of the compound.—See *BELL METAL*.)

When, in an alloy of copper and tin, the latter metal amounts to about $\frac{1}{2}$ of the mass, the result is a beautiful compound, very hard, of the colour of steel, and susceptible of a very fine polish. It is well adapted for the reflection of light for optical purposes; and is therefore called *speculum metal*. Besides the above ingredients, it usually contains a little arsenic, zinc, or silver. The application of an alloy similar to the above, to the construction of mirrors, is of great antiquity, being mentioned by Pliny; who says, that formerly the best mirrors were reckoned those of Brundisium, of tin and copper mixed (*stanno et ære mistis*).—(*Hist. Nat. lib. xxxiii.* § 9.)

For the alloys of copper with zinc, see the articles *BRASS*, *PINCHBECK*. See, also, *Thomson's Chemistry*; *Rees's Cyclopædia*; *Dr. Watson's Chemical Essays*, vol. iv., &c.

British Copper Trade.—Great Britain has various copper mines, in Cornwall, Devonshire, Wales, &c., but particularly in the first. Though known long before, the Cornish copper mines were not wrought with much spirit till last century. From 1725 to 1735, they produced at an average about 700 tons a year of pure copper. During the ten years from 1766 to 1775, they produced, at an average, 2,650 tons. In 1798, the produce exceeded 5,000 tons; and it now amounts to about 12,000 tons, worth, at 100*l.* a ton, no less than 1,200,000 sterling! In 1708, the famous mines in the Parys mountain, near Amlwch, in Anglesea, were discovered. The supplies of ore furnished by them were for a long time abundant beyond all precedent; but for many years past the productiveness of the mine has been declining, and it now yields comparatively little copper. At present the mines in Anglesea, and other parts of Wales, yield from 1,750 to 2,000 tons of copper; those of Devonshire yield about 500 tons; the quantity produced in the other parts of England being quite inconsiderable. The Irish mines produce about 500 tons. Those of Scotland never were productive, and have been almost entirely abandoned. The entire produce of the copper mines of the empire may, therefore, be estimated at present at from 14,500 to 15,000 tons.

In consequence of the greatly increased supplies of copper that were thus obtained, England, instead of being, as formerly, dependent on foreigners for the greater part of her supplies of this valuable metal, became, previously to 1793, one of the principal markets for the supply of others. And notwithstanding the vastly increased demand for copper during the war for the sheathing of ships and other purposes, the exports continued to increase and the imports to diminish; the greater productiveness of the Cornish mines having sufficed not only to balance the increased demand, but also to make up for the falling off in the supplies from Anglesea.

Owing to the want of coal in Cornwall, the ores are not smelted on the spot, but are, for the most part, sent to Swansea; it being found cheaper to carry the ores to the coal than the contrary.

Account of the Copper produced from the Mines in Cornwall since 1800; showing the Quantity of Ore, of Metal or Fine Copper, the Value of the Ores in Money, the average Percentage or Produce, and the average Standard or Miner's Price of Fine Copper, made up to the End of June in each Year.

N.B.—The foreign copper imported is altogether intended for re-exportation. In 1832, 13,891 cwt of copper were smelted from foreign ore. The East Indies and China, France, and the United States, are the great markets for British copper. The exports to these countries, in 1832, were respectively 82,880, 35,581, and 31,245 cwt.

For the following details with respect to the state of the British copper trade in 1830, we are indebted to Mr. Pascoe Grenfell, who is largely engaged in it, and on whose accuracy every reliance may be placed:—

"The quantity of copper produced during last year, 1830, in Cornwall, from ores raised in that county,

exceeded *ten thousand* tons of pure metal: and if to this be added what has been produced in Wales, in other parts of England, and in Ireland, the whole quantity of *fine or pure* metal produced in the United Kingdom, in 1832, may be fairly stated at *twelve thousand* tons.

"The quantity of British copper exported in 1832 amounts, according to an account recently laid before the House of Commons, to 7,976 tons of fine metal; to which adding the exports of foreign copper, the total export was 8,817 tons. The copper imported is altogether intended for re-exportation. I cannot state its precise quantity in fine metal, because the greater part of it arrives in a state of *ore*, and I have no means of knowing the produce in pure metal of that ore, beyond such part of it as may come into my own possession.

"The value of the 12,000 tons of copper produced in the United Kingdom, as above stated, at 90*l.* per ton, is 1,080,000*l.*"

Foreign Copper.—Copper ores are abundant in Sweden, Saxony, Russia, Persia, Japan, China, Chili, &c. Near Fahlun, in the province of Dalecarlia, in Sweden, is the celebrated copper mine of the same name, supposed to have been wrought nearly 1,000 years. For a long time it was one of the most productive mines in the world. Towards the beginning of the seventeenth century it yielded an annual produce of about 8,000,000 lbs. of pure metal; but it has since greatly declined; and it is most probable that at no distant period it will be wholly abandoned. — (*Thomson's Travels in Sweden*, p. 221.) There are still, however, several productive copper mines in other parts of Sweden. The exports of copper from Stockholm in 1832 amounted to 4,336 skippons, or 723 tons English, besides the exports from Gottenburgh and other ports. The product of the copper mines in the government of Olonetz, in Russia, is estimated at 210,000 pounds, or 3,375 tons (Eng.) a year. — (*Schnitzler, Essai d'une Statistique Générale*, &c. p. 41.) The copper mines of Chili are also very rich, and their produce is at present imported into Canton and Calcutta direct from Valparaiso. The copper mines of Japan are said to be among the richest in the world. The Dutch annually import about 700 tons of their produce into Batavia; and the Chinese from 800 to 1,000 tons into Canton and other ports. In fact, Japan copper is spread over all the East, and is regularly quoted in the Price Currents of Canton, Calcutta, and Singapore. — (See p. 245.) It is purer, and brings a higher price, than any other species of bar or slab copper. It is uniformly met with in the shape of bars or ingots, very much resembling large sticks of red sealing wax. When the copper of South America is worth in the Canton market from 15 to 16 dollars per picul, that of Japan fetches from 18 to 20. Pretty considerable quantities of copper are imported into Calcutta from Bushire and Bussorah. This is mostly the produce of the Persian mines; but a little is understood to come from the Russian mines in Georgia.

Customs Regulations.—Old copper sheathing, old copper utensils, and old copper and pewter utensils of British manufacture, imported from British plantations, and also old copper stripped off vessels in ports in the United Kingdom, may be admitted to entry, duty free, under the following regulations; viz.—

1st. Old copper sheathing stripped off British vessels in ports in the British possessions, upon proof to the satisfaction of the Commissioners of Customs, that such sheathing was stripped off in such ports, and also that the said sheathing is the property of the owner of the ship from which it was so stripped, to be delivered to such owner.

2d. Old copper sheathing stripped off any ship in any port in the United Kingdom, upon the fact being certified by the landing-waiter superintending the process; the old copper to be delivered only to the copper-smith who may re-copper the vessel from which the copper was stripped, he making proof to that fact.

3d. Old worn-out British copper and pewter utensils to be in all cases delivered when brought from British possessions abroad in British ships, upon the consignee submitting proof that they had been used on a particular estate, and are consigned on account of the owner of that estate, and that he (the consignee) verily believes them to have been of British manufacture. — (*Min. Com. Cus.*, 15th of Feb. 1833.)

Copper ore may be taken out of warehouses to be smelted, on proper notice being given to the customs officers, and giving sufficient security, by bond, for returning the computed quantity of fine copper in it. — (7 & 8 Geo. 4. c. 58. § 23.)

Copper is in extensive demand all over India; being largely used in the dock-yards, in the manufacture of cooking utensils, in alloying spelter and tin, &c. The funeral of every Hindoo brings an accession to the demand, according to his station; the relatives of the deceased giving a brass cup to every Brahmin present at the ceremony: so that 5, 10, 50, 100, 1,000, and sometimes more than 10 times this last number, are dispensed upon such occasions. — (*Bell's Commerce of Bengal*.)

COPPERAS, a term employed by the older chemists, and popularly, as synonymous with vitriol. There are three sorts of copperas: the *green*, or sulphate of iron; the *blue*, or sulphate of copper; and the *white*, or sulphate of zinc. Of these, the first is the most important.

Sulphate of iron is distinguished in common by a variety of names, as Martial vitriol, English vitriol, &c. When pure, it is considerably transparent, of a fine bright, though not very deep, grass green colour; and of a nauseous astringent taste, accompanied with a kind of sweetness. Its specific gravity is 1.834. It uniformly reddens the vegetable blues. This salt was well known to the ancients; and is mentioned by Pliny, (*Hist. Nat. lib. xxxiv. § 12.*), under the names of *misy*, *sory*, and *calchantum*. It is not made in the direct way, because it can be obtained at less charge from the decomposition of pyrites on a large scale in the neighbourhood of collieries. It exists in two states; one containing oxide of iron, with 0.22 of oxygen, which is of a pale green, not altered by gallic acid, and giving a white precipitate with prussiate of potass. The other, in which the iron is combined with 0.30 of oxygen, is red, not crystallisable, and gives a black precipitate with gallic acid, and a blue with prussiate of potass. In the common sulphate, these two are often mixed in various proportions.

Sulphate of iron is of great importance in the arts. It is a principal ingredient in dyeing; in the manufacture of ink, and of Prussian blue: it is also used in tanning, painting, medicine, &c. Sulphuric acid, or oil of vitriol, was formerly manufactured from sulphate of iron. — (See *Acids*.)

Sulphate of copper, or *blue vitriol*, commonly called Roman or Cyprian vitriol, is of an elegant sapphire blue colour, hard, compact, and semi-transparent; when perfectly crystallised, of a flattish, rhomboidal, decahedral figure; its taste is extremely nauseous, styptic, and acrid; its specific gravity is 2.1943. It is used for various purposes in the arts, and also in medicine.

Sulphate of zinc, or *white vitriol*, is found native in the mines of Goslar and other

places. Sometimes it is met with in transparent pieces, but more commonly in white efflorescences. These are dissolved in water, and crystallised into large irregular masses, somewhat resembling fine sugar, having a sweetish, nauseous, styptic taste. Its specific gravity, when crystallised, is 1.912; when in the state in which it commonly occurs in commerce, it is 1.3275. Sulphate of zinc is prepared in the large way from some varieties of the native sulphuret. The ore is roasted, wetted with water, and exposed to the air. The sulphur attracts oxygen, and is converted into sulphuric acid; and the metal, being at the same time oxidized, combines with the acid. After some time the sulphate is extracted by solution in water; and the solution being evaporated to dryness, the mass is run into moulds. Thus, the white vitriol of the shops generally contains a small portion of iron, and often of copper and lead. — (*Lewis's Mat. Medica*; *Ure's Dictionary*; *Rees's Cyclopædia*; *Thomson's Chemistry*, &c.)

COPYRIGHT. See Books.

CORAL (Ger. *Korallen*; Du. *Koraalen*; Fr. *Corail*; It. *Corale*; Sp. and Port. *Coral*; Rus. *Koraliti*; Lat. *Corallium*; Arab. *Besed*; Pers. *Merjān*; Hind. *Moonga*), a marine production, of which there are several varieties. It was well known to the ancients, but it was reserved for the moderns to discover its real nature. It is, in fact, the nidus or nest of a certain species of vermes, which has the same relation to coral, that a snail has to its shell. As an ornament, black coral is most esteemed; but the red is also very highly prized. Coral is found in very great abundance in the Red Sea, the Persian Gulf, in various places in the Mediterranean, on the coast of Sumatra, &c. It grows on rocks, and on any solid submarine body; and it is necessary to its production, that it should remain fixed to its place. It has generally a shrub-like appearance. In the Straits of Messina, where a great deal is fished up, it usually grows to nearly a foot in length, and its thickness is about that of the little finger. It requires 8 or 10 years to arrive at its greatest size. The depth at which it is obtained is various—from 10 to 100 fathoms or more; but it seems to be necessary to its production that the rays of the sun should readily penetrate to the place of its habitation. Its value depends upon its size, solidity, and the depth and brilliancy of its colour; and is so very various, that while some of the Sicilian coral sells for 8 or 10 guineas an ounce, other descriptions of it will not fetch 1s. a pound. It is highly prized by opulent natives in India, as well as by the fair sex throughout Europe. The inferior or worm-eaten coral is used in some parts of the Madras coast, in the celebration of funeral rites. It is also used medicinally. Besides the fishery in the Straits of Messina already alluded to, there are valuable fisheries on the shores of Majorca and Minorca, and on the coast of Provence. A good deal of Mediterranean coral is exported to India, which, however, draws the largest portion of its supplies from the Persian Gulf. The produce of the fishery at Messina is stated by Spallanzani (*Travels in the Two Sicilies*, vol. iv. p. 308, &c.) to amount to 12 quintals of 250 lbs. each.

The manner of fishing coral is nearly the same every where. That which is most commonly practised in the Mediterranean, is as follows:—Seven or 8 men go in a boat, commanded by the proprietor; the caster throws his net, if we may so call the machine which he uses to tear up the coral from the bottom of the sea; and the rest work the boat, and help to draw in the net. This is composed of two beams of wood tied crosswise, with leads fixed to them to sink them; to these beams is fastened a quantity of hemp, twisted loosely round, and intermingled with some loose netting. In this condition the machine is let down into the sea; and when the coral is pretty strongly entwined in the hemp and nets, they draw it up with a rope, which they unwind according to the depth, and which it sometimes requires half a dozen boats to draw. If this rope happen to break, the fishermen run the hazard of being lost. Before the fishers go to sea, they agree for the price of the coral; and the produce of the fishery is divided, at the end of the season, into 13 parts; of which the proprietor has 4, the caster 2, and the other 6 men 1 each: the thirteenth belongs to the company for payment of boat-hire, &c. — (*See Ainslie's Mat. Indica*; *Rees's Cyclopædia*; *Ency. Metrop.*; *Bell's Com. of Bengal*, &c.)

CORDAGE (Ger. *Tauwerk*; Du. *Touwwerk*; Fr. *Manœuvres, Cordage*; It. *Caolame*; Sp. *Jarcia, Cordaje*), a term used in general for all sorts of cord, whether small, middling, or great, made use of in the rigging of ships. The manufacture of cordage is regulated by the act 25 Geo. 4. c. 56., which specifies the sort of materials that are to be employed in the manufacture of cables, hawsers, and other ropes, the marks that are to be affixed to them, and the penalties for non-compliance with the respective enactments. — (*See CABLE*.) Masters of British ships are obliged, on coming into any port in Great Britain or the colonies, to report, under a penalty of 100*l.*, the foreign cordage, not being standing or running rigging, in use on board such ship. (3 & 4 Will. 4. cap. 52. § 8.)

The following table shows how many fathoms, feet, and inches, of a rope of any size, not exceeding 14 inches, make 1 cwt.

At the top of the table, marked inches, fathoms, feet, inches, the first column is the circumference of a rope in inches and quarters; the second, the fathoms, feet, and inches, that make up 1 cwt. of such a rope. One example will make it plain.

Suppose it is required how much of a 7-inch rope will make 1 cwt.: find 7, in the 3d column, under inches, or circumference of the rope, and immediately opposite to it you will find 9, 5, 6; which shows that in a rope of 7 inches, there will be 9 fathoms 5 feet 6 inches required to make 1 cwt.

CORK (Ger. *Kork*; Du. *Kork*, *Kurk*, *Vlothout*; Fr. *Liège*; It. *Sughero*, *Suvero*; Sp. *Corcho*; Port. *Cortica* (*de Sovreiro*); Rus. *Korkowoe derewo*; Lat. *Suber*), the thick and spongy bark of a species of oak (*Quercus Suber* Lin.), abundant in dry mountainous districts in the south of France, and in Spain, Portugal, Italy, and Barbary. The tree grows to the height of 30 feet or more, has a striking resemblance to the *Quercus Ilex*, or evergreen oak, and attains to a great age. After arriving at a certain state of maturity, it periodically sheds its bark; but this valuable product is found to be of a much better quality when it is artificially removed from the tree, which may be effected without any injury to the latter. After a tree has attained to the age of from 26 to 30 years, it may be barked; and the operation may be subsequently repeated once every 8 or 10 years*, the quality of the cork improving with the increasing age of the tree. The bark is taken off in July and August; and trees that are regularly stripped are said to live for 150 years, or more.—(*Poiret, Hist. Philosophique des Plantes*, tom. vii. 419.)

Cork is light, porous, readily compressible, and wonderfully elastic. It may be cut into any sort of figure, and, notwithstanding its porosity, is nearly impervious to any common liquor. These qualities make it superior to all other substances for stoppers for bottles, in the manufacture of which it is principally made use of. It is also employed as buoys to float nets, in the construction of life-boats, the making of water-proof shoes, and in various other ways. Before being manufactured into stoppers, the cork is charred on each side; this makes it contract, lessens its porosity, and consequently fits it the better for cutting off all communication between the external air and the liquid in the bottle. Spanish black is made of calcined cork.

The Greeks and Romans were both well acquainted with cork. They seem also to have occasionally used it as stoppers for vessels (*Cadorum obturamentis*, Plin. Hist. Nat. lib. xvi. cap. 8.); but it was not extensively employed for this purpose till the 17th century, when glass bottles, of which no mention is made before the 15th century, began to be generally introduced.—(*Beckmann's Hist. Invent.* vol. ii. pp. 114—127. Eng. ed.)

The duty on manufactured cork is prohibitory; and on the rude article it is very heavy, being no less than 8s. a cwt. or 8*l.* a ton. The quantity entered for home consumption amounts, at an average, to from 40,000 to 45,000 cwt. Its price, including duty, varies with the variations in its quality, from about 2*l.* to about 7*l.* a ton. The Spanish is the best, and fetches the highest price.

CORN (Ger. *Corn*, *Getreide*; Du. *Graanen*, *Koren*; Da. *Korn*; Sw. *Säd*, *Spanmal*; Fr. *Bleds*, *Grains*; It. *Biade*, *Grani*; Sp. *Granos*; Rus. *Chljeb*; Pol. *Zboze*; Lat. *Frumentum*), the grain or seed of plants separated from the spica or ear, and used for making bread, &c. Such are wheat, rye, barley, oats, maize, peas, &c.; which see.

CORN LAWS AND CORN TRADE. — From the circumstance of corn forming, in this and most other countries, the principal part of the food of the people, the trade in it, and the laws by which that trade is regulated, are justly looked upon as of the highest importance. But this is not the only circumstance that renders it necessary to enter at some length into the discussion of this subject. Its difficulty is at least equal to its interest. The enactments made at different periods with respect to the corn trade, and the opinions advanced as to their policy, have been so very various and contradictory, that it is indispensable to submit them to some examination, and, if possible, to ascertain the principles which ought to pervade this department of commercial legislation.

I. HISTORICAL SKETCH OF THE CORN LAWS.

II. PRINCIPLES OF THE CORN LAWS.

III. BRITISH CORN TRADE.

IV. FOREIGN CORN TRADE.

* Beckmann (vol. ii. p. 115. Eng. ed.) says, that "when the tree is 15 years old, it may be barked, and this can be done successively for 8 years." This erroneous statement having been copied into the article CORK in Rees's Cyclopædia, has thence been transplanted to a multitude of other works.

I. HISTORICAL SKETCH OF THE CORN LAWS.

For a long time the regulations with respect to the corn trade were principally intended to promote abundance and low prices. But, though the purpose was laudable, the means adopted for accomplishing it had, for the most part, a directly opposite effect. When a country exports corn, it seems, at first sight, as if nothing could do so much to increase her supplies as the prevention of exportation: and even in countries that do not export, its prohibition seems to be a prudent measure, and calculated to prevent the supply from being diminished, upon any emergency, below its natural level. These are the conclusions that immediately suggest themselves upon this subject; and it requires a pretty extensive experience, an attention to facts, and a habit of reasoning upon such topics, to perceive their fallacy. These, however, were altogether wanting when the regulations affecting the corn trade began to be introduced into Great Britain and other countries. They were framed in accordance with what were supposed to be the dictates of common sense; and their object being to procure as large a supply of the prime necessary of life as possible, its exportation was either totally forbidden, or forbidden when the home price was above certain limits.

The principle of absolute prohibition seems to have been steadily acted upon, as far as the turbulence of the period would admit, from the Conquest to the year 1436, in the reign of Henry VI. But at the last mentioned period an act was passed, authorising the exportation of wheat whenever the home price did not exceed 6s. 8d. (equal in amount of pure silver to 12s. 10 $\frac{3}{4}$ d. present money) per quarter, and barley when the home price did not exceed 3s. 4d. In 1463, an additional benefit was intended to be conferred on agriculture by prohibiting importation until the home price exceeded that at which exportation ceased. But the fluctuating policy of the times prevented these regulations from being carried into full effect; and, indeed, rendered them in a great measure inoperative.

In addition to the restraints laid on exportation, it has been common in most countries to attempt to increase the supply of corn, not only by admitting its unrestrained importation from abroad, but by holding out extraordinary encouragement to the importers. This policy has not, however, been much followed in England. During the 500 years immediately posterior to the Conquest, importation was substantially free; but it was seldom or never promoted by artificial means: and during the last century and a half it has, for the most part, been subjected to severe restrictions.

Besides attempting to lower prices by prohibiting exportation, our ancestors attempted to lower them by proscribing the trade carried on by corn dealers. This most useful class of persons were looked upon with suspicion by every one. The agriculturists concluded that they would be able to sell their produce at higher prices to the consumers, were the corn dealers out of the way: while the consumers concluded that the profits of the dealers were made at their expense; and ascribed the dearths that were then very prevalent entirely to the practices of the dealers, or to their buying up corn and withholding it from market. These notions, which have still a considerable degree of influence, led to various enactments, particularly in the reign of Edward VI., by which the freedom of the internal corn trade was entirely suppressed. The engrossing of corn, or the buying of it in one market with intent to sell it again in another, was made an offence punishable by imprisonment and the pillory; and no one was allowed to carry corn from one part to another without a licence, the privilege of granting which was confided by a statute of Elizabeth to the quarter sessions. But as the principles of commerce came to be better understood, the impolicy of these restraints gradually grew more and more obvious. They were considerably modified in 1624; and, in 1663, the engrossing of corn was declared to be legal so long as the price did not exceed 48s. a quarter — (15 *Chas. 2. c. 7.*); an act which, as Dr. Smith has justly observed, has, with all its imperfections, done more to promote plenty than any other law in the statute book. In 1773, the last remnant of the legislative enactments restraining the freedom of the internal corn dealers, was entirely repealed. But the engrossing of corn has, notwithstanding, been since held to be an offence at common law; and, so late as 1800, a corn dealer was convicted of this imaginary crime. He was not, however, brought up for judgment; and it is not very likely that any similar case will ever again occupy the attention of the courts.

The acts of 1436 and 1463, regulating the prices when exportation was allowed and when importation was to cease, continued, nominally at least, in force till 1562, when the prices at which exportation might take place were extended to 10s. for wheat and 6s. 8d. for barley. But a new principle — that of imposing duties on exportation — was soon after introduced; and, in 1571, it was enacted that wheat might be exported, paying a duty of 2s. a quarter, and barley and other grain a duty of 1s. 4d., whenever the home price of wheat did not exceed 20s. a quarter, and barley and malt 12s. At the Restoration, the limit at which exportation might take place was very much extended; but as

the duty on exportation was, at the same time, so very high as to be almost prohibitory, the extension was of little or no service to the agriculturists. This view of the matter seems to have been speedily taken by the legislature; for, in 1663, the high duties on exportation were taken off; and an *ad valorem* duty imposed in their stead, at the same time that the limit of exportation was extended. In 1670, a still more decided step was taken in favour of agriculture; an act being then passed which extended the exportation price to 53s. 4d. a quarter for wheat, and other grain in proportion, imposing, at the same time, prohibitory duties on the importation of wheat till the price rose to 53s. 4d., and a duty of 8s. between that price and 80s. But the real effects of this act were not so great as might have been anticipated. The extension of the limit of exportation was rendered comparatively nugatory, in consequence of the continuance of the duties on exportation caused by the necessities of the Crown; while the want of any proper method for the determination of prices went far to nullify the prohibition of importation.

At the accession of William III. a new system was adopted. The interests of agriculture were then looked upon as of paramount importance: and to promote them, not only were the duties on exportation totally abolished, but it was encouraged by the grant of a bounty of 5s. on every quarter of wheat exported while the price continued at or below 48s.; of 2s. 6d. on every quarter of barley or malt, while their respective prices did not exceed 24s.; and of 3s. 6d. on every quarter of rye, when its price did not exceed 32s. — (1 *Will. & Mary*, c. 12.) A bounty of 2s. 6d. a quarter was subsequently given upon the exportation of oats and oatmeal, when the price of the former did not exceed 15s. a quarter. Importation continued to be regulated by the act of 1670.

Much diversity of opinion has been entertained with respect to the policy of the bounty. That it was intended to raise the price of corn is clear, from the words of the statute, which states, "that the exportation of corn and grain into foreign parts, *when the price thereof is at a low rate in this kingdom*, hath been a great advantage not only to the owners of land, but to the trade of the kingdom in general; therefore," &c. But admitting this to have been its object, it has been contended that the low prices which prevailed during the first half of last century show that its real effect had been precisely the reverse; and that it had, by extending tillage, contributed to reduce prices. It will be afterwards shown that this could not really be the case; and the fall of prices may be sufficiently accounted for by the improved state of agriculture, the gradual consolidation of farms, the diminution of sheep husbandry, &c., combined with the slow increase of the population. In point of fact, too, prices had begun to give way 30 years before the bounty was granted; and the fall was equally great in France, where, instead of exportation being encouraged by a bounty, it was almost entirely prohibited; and in most other Continental states. — (For proofs of what is now stated, see the article *Corn Laws*, in the new edition of the *Ency. Brit.*)

The Tables annexed to this article show that, with some few exceptions there was, during the first 66 years of last century, a large export of corn from England. In 1750, the wheat exported amounted to 947,000 quarters; and the total bounties paid during the 10 years from 1740 to 1751 reached the sum of 1,515,000*l.* But the rapid increase of population subsequently to 1760, and particularly after the peace of Paris, in 1763, when the commerce and manufactures of the country were extended in an unprecedented degree, gradually reduced this excess of exportation, and occasionally, indeed, inclined the balance the other way. This led to several suspensions of the restrictions on importation; and, at length, in 1773, a new act was framed, by which foreign wheat was allowed to be imported on paying a nominal duty of 6*d.* whenever the home price was at or above 48s. a quarter, and the bounty* and exportation were together to cease when the price was at or above 44s. This statute also permitted the importation of corn at any price, duty free, in order to be again exported, provided it were in the mean time lodged under the joint locks of the king and the importer.

The prices when exportation was to cease by this act seem to have been fixed too low; and, as Dr. Smith has observed, there appears a good deal of impropriety in prohibiting exportation altogether the moment it attained the limit, when the bounty given to force it was withdrawn; yet, with all these defects, the act of 1773 was a material improvement on the former system, and ought not to have been altered unless to give greater freedom to the trade.

The idea that this law must, when enacted, have been injurious to the agriculturists, seems altogether illusory: the permission to import foreign grain, when the home price rose to a moderate height, certainly prevented their realising exorbitant profits, in dear years, at the expense of the other classes; and prevented an unnatural proportion of the capital of the country from being turned towards agriculture. But as the limit at which importation at a nominal duty was allowed, was fixed a good deal above the average price

* The bounty amounted to 5s. on every quarter of wheat; 2s. 6*d.* on every quarter of barley; 3s. 6*d.* on every quarter of rye; and 2s. 6*d.* on every quarter of oats.

of the reign of George II., it cannot be maintained that it had any tendency to reduce previous prices, which is the only thing that could have discouraged agriculture: and, in fact, no such reduction took place.

It is, indeed, true, that, but for this act, we should not have imported so much foreign grain in the interval between 1773 and 1791. This importation, however, was not a consequence of the decline of agriculture; for it is admitted that every branch of rural economy was more improved in that period than in the whole of the preceding century; but arose entirely from a still more rapid increase of the manufacturing population, and hence, of the effective demand for corn.

By referring to the Tables annexed to this article, it will be seen that, in 1772, the balance on the side of wheat imported amounted to 18,515 quarters; and in 1773, 1774, and 1775, all years of great prosperity, the balance was very much increased. But the loss of a great part of our colonial possessions, the stagnation of commerce, and difficulty of obtaining employment, occasioned by the American war, diminished the consumption; and this, combined with unusually productive harvests, rendered the balance high on the side of exportation, in 1778, 1779, and 1789. In 1783 and 1784, the crop was unusually deficient, and considerable importations took place; but in 1785, 1786, and 1787, the exports again exceeded the imports; and it was not till 1788, when the country had fully recovered from the effects of the American war, and when manufacturing improvements were carried on with extraordinary spirit, that the imports permanently overbalanced the exports.

The growing wealth and commercial prosperity of the country had thus, by increasing the population and enabling individuals to consume additional quantities of food, caused the home supply of corn to fall somewhat short of the demand; but it must not, therefore, be concluded that agriculture had not at the same time been very greatly meliorated. "The average annual produce of wheat," says Mr. Comber, "at the beginning of the reign of George III. (1760), was about 3,800,000 quarters, of which about 300,000 had been sent out of the kingdom, leaving about 3,500,000 for home consumption. In 1773, the produce of wheat was stated in the House of Commons to be 4,000,000 quarters, of which the whole, and above 100,000 imported, were consumed in the kingdom. In 1796, the consumption was stated by Lord Hawkesbury to be 500,000 quarters per month, or 6,000,000 quarters annually, of which about 180,000 were imported; showing an increased produce in about 20 years of 1,820,000 quarters. It is evident, therefore, not only that no defalcation of produce had taken place in consequence of the cessation of exportation, as has been too lightly assumed from the occasional necessity of importation, but that it had increased with the augmentation of our commerce and manufactures."—(*Comber on National Subsistence*, p. 180.)

These estimates are, no doubt, very loose and unsatisfactory; but the fact of a great increase of produce having taken place is unquestionable. In a report by a committee of the House of Commons on the state of the *waste lands*, drawn up in 1797, the number of acts passed for enclosing, and the number of acres enclosed, in the following reigns, are thus stated:—

	Number of Acts.	Number of Acres.
In the reign of Queen Anne	2	1,439
George I.	16	17,960
George II.	226	318,778
George III. to 1797	1,532	2,804,197

It deserves particular notice, that from 1771 to 1791, both inclusive, the period during which the greater number of these improvements were effected, there was no rise of prices.

The landholders, however, could not but consider the liberty of importation granted by the act of 1773 as injurious to their interests, inasmuch as it prevented prices from rising with the increased demand. A clamour, therefore, was raised against that law; and in addition to this interested feeling, a dread of becoming habitually dependent on foreign supplies of corn, operated on many, and produced a pretty general acquiescence in the act of 1791. By this act, the price when importation could take place from abroad at the low duty of 6*d.*, was raised to 5*s.*; under 5*s.* and above 50*s.* a middle duty of 2*s.* 6*d.*; and under 50*s.* a prohibiting duty of 2*s.* 3*d.* was exigible. The bounty continued as before, and exportation without bounty was allowed to 4*s.* It was also enacted, that foreign wheat might be imported, stored under the king's lock, and again exported free of duty; but, if sold for home consumption, it became liable to a warehouse duty of 2*s.* 6*d.* in addition to the ordinary duties payable at the time of sale.

In 1797, the Bank of England obtained an exemption from paying in specie; and the consequent facility of obtaining discounts and getting a command of capital, which this measure occasioned, gave a fresh stimulus to agriculture; the efficacy of which was most powerfully assisted by the scarcity and high prices of 1800 and 1801. An agricultural mania now seized the nation; and as the prices of 1804 would not allow the cultivation of the poor soils, which had been broken up in the dear years, to be continued, a new

corn law, being loudly called for by the farmers, was passed in 1804. This law imposed a prohibitory duty of 2*s.* 3*d.* per quarter on all wheat imported when the home price was at or below 63*s.*; between 63*s.* and 66*s.* a middle duty of 2*s.* 6*d.* was paid, and above 66*s.* a nominal duty of 6*d.* The price at which the bounty was allowed on exportation was extended to 50*s.*, and exportation without bounty to 54*s.* By the act of 1791, the maritime counties of England were divided into 12 districts, importation and exportation being regulated by the particular prices of each; but by the act of 1804 they were regulated, in England, by the *aggregate average* of the maritime districts; and in Scotland by the aggregate average of the 4 maritime districts into which it was divided. The averages were taken 4 times a year, so that the ports could not be open or shut for less than 3 months. This manner of ascertaining prices was, however, modified in the following session; it being then fixed that importation, both in England and Scotland, should be regulated by the average price of the 12 maritime districts of England.

In 1805, the crop was very considerably deficient, and the average price of that year was about 22*s.* a quarter above the price at which importation was allowed by the act of 1804. As the depreciation of paper, compared with bullion, was at that time only *four* per cent., the high price of that year must have been principally owing to the new law preventing importation from abroad till the home price was high, and then fettering mercantile operations; and to the formidable obstacles which the war threw in the way of importation. In 1806*, 1807, and 1808, the depreciation of paper was nearly 3 per cent.; and the price of wheat in those years being generally from 66*s.* to 75*s.*, the importations were but small. From autumn 1808, to spring 1814 the depreciation of the currency was unusually great; and several crops in that interval being likewise deficient, the price of corn, influenced by both causes, rose to a surprising height. At that time no vessel could be laden in any Continental port for England without purchasing a licence, and the freight and insurance were at least 5 times as high as during peace. But the destruction of Napoleon's anti-commercial system, in the autumn of 1813, having increased the facilities of importation, a large quantity of corn was poured into the kingdom; and, in 1814, its *bullion* price fell below the price at which importation was allowed.

Before this fall of price, a committee of the House of Commons had been appointed to inquire into the state of the laws affecting the corn trade; and recommended in their Report (dated 11th of May, 1813) a very great increase of the prices at which exportation was allowable, and when importation free of duty might take place. This recommendation was not, however, adopted by the House; but the fact of its having been made when the home price was at least 112*s.* a quarter, displayed a surprising solicitude to exclude foreigners from all competition with the home growers.

The wish to lessen the dependence of the country on foreign supplies formed the sole ostensible motive by which the committee of 1813 had been actuated, in proposing an alteration in the act of 1804. But after the fall of price in autumn 1813, and in the early part of 1814, it became obvious, on comparing our previous prices with those of the Continent, that without an alteration of the law in question this dependence would be a good deal increased; that a considerable extent of such poor lands as had been brought into cultivation during the high prices, would be again thrown into pasturage; and that rents would be considerably reduced. These consequences alarmed the landlords and occupiers; and in the early part of the session of 1814, a series of resolutions were voted by the House of Commons, declaring that it was expedient to repeal the bounty, to permit the free exportation of corn whatever might be the home price, and to impose a graduated scale of duties on the importation of foreign corn. Thus, foreign wheat imported when the home price was at or under 64*s.* was to pay a duty of 24*s.*; when at or under 65*s.* a duty of 23*s.*; and so on, till the home price should reach 86*s.*, when the duty was reduced to 1*s.*, at which sum it became stationary. Corn imported from Canada, or from the other British colonies in North America, was to pay half the duties on other corn. As soon as these resolutions had been agreed to, two bills founded on them — one for regulating the importation of foreign corn, and another for the repeal of the bounty, and for permitting unrestricted exportation — were introduced. Very little attention was paid to the last of these bills; but the one imposing fresh duties on importation encountered a very keen opposition. The manufacturers, and every class not directly supported by agriculture, stigmatised it as an unjustifiable attempt artificially to keep up the price of food, and to secure excessive rents and large profits to the landholders and farmers at the expense of the consumers. Meetings were very generally held, and resolutions entered into strongly expressive of this sentiment, and dwelling on

* Several impolitic restraints had been for a long time imposed on the free importation and exportation of corn between Great Britain and Ireland, but they were wholly abolished in 1806; and the act of that year (46 Geo. 3. c. 97.) establishing a free trade in corn between the 2 great divisions of the empire, was not only a wise and proper measure in itself, but has powerfully contributed to promote the general advantage.

the fatal consequences which, it was affirmed, a continuance of the high prices would have on our manufactures and commerce. This determined opposition, coupled with the indecision of ministers, and perhaps, too, with an expectation on the part of some of the landholders that prices would rise without any legislative interference, caused the miscarriage of this bill. The other bill, repealing the bounty and allowing an unlimited freedom of exportation, was passed into a law.

Committees had been appointed in 1814, by both Houses of Parliament, to examine evidence and report on the state of the corn trade; and, in consequence, a number of the most eminent agriculturists were examined. The witnesses were unanimous in this only,—that the protecting prices in the act of 1804 were insufficient to enable the farmers to make good the engagements into which they had subsequently entered, and to continue the cultivation of the inferior lands lately brought under tillage. Some of them thought that 120s. ought to be fixed as the lowest limit at which the importation of wheat free of duty should be allowed: others varied from 90s. to 100s.—from 80s. to 90s.—and a few from 70s. to 80s. The general opinion, however, seemed to be that 80s. would suffice; and as prices continued to decline, a set of resolutions founded on this assumption were submitted to the House of Commons by Mr. Robinson, of the Board of Trade (now Lord Goderich); and having been agreed to, a bill founded on them was, after a very violent opposition, carried in both Houses by immense majorities, and finally passed into a law (55 Geo. 3. c. 26.). According to this act, all sorts of foreign corn, meal, or flour, might be imported at all times free of duty into any port of the United Kingdom, in order to be warehoused; but foreign corn was not permitted to be imported for home consumption, except when the average prices of the several sorts of British corn were as follows: viz. wheat, 80s. per quarter; rye, peas, and beans, 53s.; barley, bear, or bigg, 40s.; and oats, 26s.: and all importation of corn from any of the British plantations in North America was forbidden, except when the average home prices were at or under, wheat, 67s. per quarter; rye, peas, and beans, 44s.; barley, bear, or bigg, 33s.; and oats, 22s.

The agriculturists confidently expected that this act would immediately effect a rise of prices, and render them steady at about 80s. But, for reasons which will be afterwards stated, these expectations were entirely disappointed; and there has been a more ruinous fluctuation of prices during the 18 years that have elapsed since it was passed, than in any previous period of our recent history. In 1821, when prices had sunk very low, a committee of the House of Commons was appointed to inquire into the causes of the depressed state of agriculture, and to report their observations thereupon. This committee, after examining a number of witnesses, drew up a report, which, though not free from error, is a very valuable document. It contains a forcible exposition of the pernicious effects arising from the law of 1815, of which it suggested several important modifications. These, however, were not adopted; and as the low prices, and consequent distress of the agriculturists, continued, the subject was brought under the consideration of parliament in the following year. After a good deal of discussion a new act was then passed (3 Geo. 4. c. 60.), which enacted, that after prices had risen to the limit of free importation fixed by the act of 1815, that act was to cease and the new statute to come into operation. This statute lowered the prices fixed by the act of 1815, at which importation could take place for home consumption, to the following sums, viz. —

	For Corn not of the British Possessions in North America.	For Corn of the British Possessions in North America.
Wheat	- 70s. per quarter.	50s. per quarter.
Rye, peas, and beans	- 46s. —	39s. —
Barley, bear, or bigg	- 35s. —	30s. —
Oats	- 25s. —	20s. —

But, in order to prevent any violent oscillation of prices from a large supply of grain being suddenly thrown into the market, it was enacted, that a duty of 17s. a quarter should be laid on all wheat imported from foreign countries, during the first 3 months after the opening of the ports, if the price was between 70s. and 80s. a quarter, and of 12s. afterwards; that if the price was between 80s. and 85s., the duty should be 10s. for the first 3 months, and 5s. afterwards; and that if the price should exceed 85s., the duty should be constant at 1s.; and proportionally for other sorts of grain.

This act, by preventing importation until the home price rose to 70s., and then loading the quantities imported between that limit and the limit of 85s. with heavy duties, was certainly more favourable to the views of the agriculturists than the act of 1815. But, unluckily for them, the prices of no species of corn, except barley, were sufficiently high, while this act existed, to bring it into operation.

In 1825, the first approach was made to a better system, by permitting the importation of wheat from British North America, without reference to the price at home, on payment of a duty of 5s. a quarter. But this act was passed with difficulty, and was limited to one year's duration.

Owing to the drought that prevailed during the summer of 1826, there was every prospect that there would be a great deficiency in the crops of that year; and, in order to prevent the disastrous consequences that might have taken place, had importation been prevented until the season was too far advanced for bringing supplies from the great corn markets in the north of Europe, his Majesty was authorised to admit 500,000 quarters of foreign wheat, on payment of such duties as the order in council for its importation should declare. And when it was ascertained that the crops of oats, peas, &c. were greatly below an average, ministers issued an order in council, on their own responsibility, on the 1st of September, authorising the immediate importation of oats on payment of a duty of 2s. 2d. a boll; and of rye, peas, and beans, on payment of a duty of 3s. 6d. a quarter. A considerable quantity of oats was imported under this order, the timely appearance of which had undoubtedly a very considerable effect in mitigating the pernicious consequences arising from the deficiency of that species of grain. Ministers obtained an indemnity for this order on the subsequent meeting of parliament.

Nothing could more strikingly evince the impolicy of the acts of 1815 and 1822, than the necessity, under which the legislature and government had been placed, of passing the temporary acts and issuing the orders alluded to. The more intelligent portion of the agriculturists began, at length, to perceive that the corn laws were not really calculated to produce the advantages that they had anticipated; and a conviction that increased facilities should be given to importation became general throughout the country. The same conviction made considerable progress in the House of Commons; so much so, that several members who supported the measures adopted in 1815 and 1822, expressed themselves satisfied that the principle of exclusion had been carried too far, and that a more liberal system should be adopted. Ministers having participated in these sentiments, Mr. Canning moved a series of resolutions, as the foundation of a new corn law, on the 1st of March, 1827. These resolutions were to the effect that foreign corn might always be imported, free of duty, in order to be warehoused; and that it should always be admissible for home consumption on payment of certain duties. Thus, in the instance of wheat, it was resolved that, when the home price was at or above 70s. a quarter, the duty should be a fixed one of 1s.; and that for every shilling that the price fell below 70s. a duty of 2s. should be imposed; so that when the price was at 69s. the duty on importation was to be 2s., when at 68s. the duty was to be 4s., and so on. The limit at which the constant duty of 1s. a quarter was to take place in the case of barley, was originally fixed at 37s., but it was subsequently raised to 40s.; the duty increasing by 1s. 6d. for every 1s. which the price fell below that limit. The limit at which the constant duty of 1s. a quarter was to take place in the case of oats was originally fixed at 28s.; but it was subsequently raised to 33s., the duty increasing at the rate of 1s. a quarter for every shilling that the price fell below that limit. The duty on colonial wheat was fixed at 6d. the quarter when the home price was above 65s.; and when the price was under that sum, the duty was constant at 5s.; the duties on other descriptions of colonial grain were similar. These resolutions were agreed to by a large majority; and a bill founded on them was subsequently carried through the House of Commons. Owing, however, to the change of ministers, which took place in the interim, several peers, originally favourable to the bill, and some, even, who assisted in its preparation, saw reason to become amongst its most violent opponents; and a clause moved by the Duke of Wellington, interdicting all importation of foreign corn until the home price exceeded 66s., having been carried in the Lords, ministers gave up the bill, justly considering that such a clause was entirely subversive of its principle.

A new set of resolutions with respect to the corn trade were brought forward in 1828, by Mr. Charles Grant. They were founded on the same principles as those which had been rejected during the previous session. But the duty was not made to vary equally, as in Mr. Canning's resolutions, with every equal variation of price; it being 23s. 8d. when the home price was 64s. the Imperial quarter; 16s. 8d. when it was 69s.; and 1s. only when it was at or above 73s. After a good deal of debate, Mr. Grant's resolutions were carried in both Houses; and the act embodying them (9 Geo. 4. c. 60.) is that by which the corn trade is now regulated. An abstract of this act will be found in a subsequent part of this article.

II. PRINCIPLES OF THE CORN LAWS.

1. *Internal Corn Trade.* — It is needless to take up the reader's time by endeavouring to prove by argument the advantage of allowing the free conveyance of corn from one province to another. Every one sees that this is indispensable, not only to the equal distribution of the supplies of food over the country, but to enable the inhabitants of those districts that are best fitted for the raising and fattening of cattle, sheep, &c. so

addict themselves to these or other necessary occupations not directly connected with the production of corn. We shall, therefore, confine the few remarks we have to make, on this subject, to the consideration of the influence of the speculations of the corn merchants in buying up corn in anticipation of an advance. Their proceedings in this respect, though of the greatest public utility, have been the principal cause of that odium to which they have been so long exposed.

Were the harvests always equally productive, nothing would be gained by storing up supplies of corn; and all that would be necessary would be to distribute the crop equally throughout the country, and throughout the year. But such is not the order of nature. The variations in the aggregate produce of a country in different seasons, though not perhaps so great as are commonly supposed, are still very considerable; and experience has shown that two or three unusually luxuriant harvests seldom take place in succession; or that when they do, they are invariably followed by those that are deficient. The speculators in corn anticipate this result. Whenever prices begin to give way in consequence of an unusually luxuriant harvest, speculation is at work. The more opulent farmers withhold either the whole or a part of their produce from market; and the more opulent dealers purchase largely of the corn brought to market, and store it up in expectation of a future advance. And thus, without intending to promote any one's interest but their own, the speculators in corn become the great benefactors of the public. They provide a relief stock against those years of scarcity which are sure at no distant period to recur: while, by withdrawing a portion of the redundant supply from immediate consumption, prices are prevented from falling so low as to be injurious to the farmers, or at least are maintained at a higher level than they would otherwise have reached; provident habits are maintained amongst the people; and that waste and extravagance are checked, which always take place in plentiful years, but which would be carried to a much greater extent if the whole produce of an abundant crop were to be consumed within the season.

It is, however, in scarce years that the speculations of the corn merchants are principally advantageous. Even in the richest countries, a very large proportion of the individuals engaged in the business of agriculture are comparatively poor, and are totally without the means of withholding their produce from market, in order to speculate upon any future advance. In consequence the markets are always most abundantly supplied with produce immediately after harvest; and in countries where the merchants engaged in the corn trade are not possessed of large capitals, or where their proceedings are fettered and restricted, there is then, almost invariably, a heavy fall of prices. But as the vast majority of the people buy their food in small quantities, or from day to day as they want it, their consumption is necessarily extended or contracted according to its price at the time. Their views do not extend to the future; they have no means of judging whether the crop is or is not deficient. They live, as the phrase is, from hand to mouth; and are satisfied if, in the mean time, they obtain abundant supplies at a cheap rate. But it is obvious, that were there nothing to control or counteract this improvidence, the consequence would very often be fatal in the extreme. The crop of one harvest must support the population till the crop of the other harvest has been gathered in; and if that crop should be deficient—if, for instance, it should only be adequate to afford, at the usual rate of consumption, a supply of 9 or 10 months' provisions instead of 12—it is plain that, unless the price were so raised immediately after harvest, as to enforce economy, and put, as it were, the whole nation on short allowance, the most dreadful famine would be experienced previously to the ensuing harvest. Those who examine the accounts of the prices of wheat and other grain in England, collected by Bishop Fleetwood and Sir F. M. Eden, will meet with abundant proofs of the accuracy of what has now been stated. In those remote periods when the farmers were generally without the means of withholding their crops from market, and when the trade of a corn dealer was proscribed, the utmost improvidence was exhibited in the consumption of grain. There were then, indeed, very few years in which a considerable scarcity was not experienced immediately before harvest, and many in which there was an absolute famine. The fluctuations of price exceeded every thing of which we can now form an idea; the price of wheat and other grain being 4 or 5 times as high in June and July, as in September and October. Thanks, however, to the increase of capital in the hands of the large farmers and dealers, and to the freedom given to the operations of the corn merchants, we are no longer exposed to such ruinous vicissitudes. Whenever the dealers, who, in consequence of their superior means of information, are better acquainted with the real state of the crops than any other class of persons, find the harvest likely to be deficient, they raise the price of the corn they have warehoused, and bid against each other for the corn which the farmers are bringing to market. In consequence of this rise of prices, all ranks and orders, but especially the lower, who are the great consumers of corn, find it indispensable to use greater economy, and to check all improvident and wasteful consumption. Every class being thus immediately put upon short allowance,

the pressure of the scarcity is distributed equally throughout the year ; and instead of indulging, as was formerly the case, in the same scale of consumption as in seasons of plenty, until the supply became altogether deficient, and then being exposed without resource to the attacks of famine and pestilence, the speculations of the corn merchants warn us of our danger, and compel us to provide against it.

It is not easy to suppose that these proceedings of the corn merchants should ever be injurious to the public. It has been said that in scarce years they are not disposed to bring the corn they have purchased to market until it has attained an exorbitant price, and that the pressure of the scarcity is thus often very much aggravated ; but there is no real ground for any such statement. The immense amount of capital required to store up any considerable quantity of corn, and the waste to which it is liable, render most holders disposed to sell as soon as they can realise a fair profit. In every extensive country in which the corn trade is free, there are infinitely too many persons engaged in it to enable any sort of combination or concert to be formed amongst them ; and though it were formed, it could not be maintained for an instant. A large proportion of the farmers and other small holders of corn are always in straitened circumstances, more particularly if a scarce year has not occurred so soon as they expected ; and they are consequently anxious to relieve themselves, as soon as prices rise, of a portion of the stock on their hands. Occasionally, indeed, individuals are found, who retain their stocks for too long a period, or until a reaction takes place, and prices begin to decline. But instead of joining in the popular cry against such persons, every one who takes a dispassionate view of the matter will perceive that, inasmuch as their miscalculation must, under the circumstances supposed, be exceedingly injurious to themselves, we have the best security against its being carried to such an extent as to be productive of any material injury or even inconvenience to the public. It ought also to be borne in mind, that it is rarely, if ever, possible to determine beforehand, when a scarcity is to abate in consequence of new supplies being brought to market ; and had it continued a little longer, there would have been no miscalculation on the part of the holders. At all events, it is plain that, by declining to bring their corn to market, they preserved a resource on which, in the event of the harvest being longer delayed than usual, or of any unfavourable contingency taking place, the public could have fallen back ; so that, instead of deserving abuse, these speculators are most justly entitled to every fair encouragement and protection. A country in which there is no considerable stock of grain in the barnyards of the farmers, or in the warehouses of the merchants, is in the most perilous situation that can easily be imagined, and may be exposed to the severest privations, or even famine. But so long as the sagacity, the miscalculation, or the avarice of merchants and dealers retain a stock of grain in the warehouses, this last extremity cannot take place. By refusing to sell it till it has reached a very high price, they put an effectual stop to all sorts of waste, and husband for the public those supplies which they could not have so frugally husbanded for themselves.

We have already remarked that the last remnant of the shackles imposed by statute on the freedom of the internal corn dealer was abolished in 1773. It is true that engrossing, forestalling, and regrating — (see *ENGROSSING, &c.*) — are still held to be offences at common law ; but there is very little probability of any one being in future made to answer for such ideal offences.

2. *Exportation to Foreign Countries.* — The fallacy of the notion so long entertained, that the prevention of exportation was the surest method of increasing plenty at home, is obvious to every one who has reflected upon such subjects. The markets of no country can ever be steadily and plentifully supplied with corn, unless her merchants have power to export the surplus supplies with which they may be occasionally furnished. When a country without the means of exporting grows nearly her own average supplies of corn, an abundant crop, by causing a great overloading of the market, and a heavy fall of price, is as injurious to the farmer as a scarcity. It may be thought, perhaps, that the greater quantity of produce in abundant seasons will compensate for its lower price ; but this is not the case. It is uniformly found that variations in the quantity of corn exert a much greater influence over prices, than equal variations in the quantity of almost any thing else offered for sale. Being the principal necessary of life, when the supply of corn happens to be less than ordinary, the mass of the people make very great, though unavailing, exertions, by diminishing their consumption of other and less indispensable articles, to obtain their accustomed supplies of this prime necessary ; so that its price rises much more than in proportion to the deficiency. On the other hand, when the supply is unusually large, the consumption is not proportionally extended. In ordinary years, the bulk of the population is about adequately fed ; and though the consumption of all classes be somewhat greater in unusually plentiful years, the extension is considerable only among the lowest classes, and in the feeding of horses. Hence it is, that the increased supply at market, in such years, goes principally to cause a glut, and, consequently, a ruinous decline of prices. These statements are corroborated by the

widest experience. Whenever there is an inability to export, from whatever cause it may arise, an unusually luxuriant crop is uniformly accompanied by a very heavy fall of price, and severe agricultural distress; and when two or three such crops happen to follow in succession, the ruin of a large proportion of the farmers is completed.

If the mischiefs resulting from the want of power to export stopped here, they might, though very great, be borne; but they do not stop here. It is idle to suppose that a system ruinous to the producers can be otherwise to the consumers. A glut of the market, occasioned by luxuriant harvests, and the want of power to export, cannot be of long continuance: for, while it continues, it can hardly fail, by distressing all classes of farmers, and causing the ruin of many, to give a check to every species of agricultural improvement, and to lessen the extent of land in tillage. When, therefore, an unfavourable season recurs, the reaction is, for the most part, appalling. The supply, being lessened not only by the badness of the season, but also by a diminution of the quantity of land in crop, falls very far below an average; and a severe scarcity, if not an absolute famine, is most commonly experienced. It is, therefore, clear, that if a country would render herself secure against famine, and injurious fluctuations of price, she must give every possible facility to exportation in years of unusual plenty. If she act upon a different system, — if her policy make exportation in such years impracticable, or very difficult, — she will infallibly render the bounty of Providence an injury to her agriculturists; and two or three abundant harvests in succession will be the forerunners of scarcity and famine.

3. *Bounty on the Exportation of Corn.* — In Great Britain, as already observed, we have not only been allowed to export for a long series of years, but from the Revolution down to 1815 a bounty was given on exportation, whenever the home prices were depressed below certain limits. This policy, however, erred as much on the one hand as a restriction on exportation errs on the other. It causes, it is true, an extension of the demand for corn: but this greater demand is not caused by natural, but by artificial means; it is not a consequence of any really increased demand on the part of the foreigner, but of our furnishing the exporters of corn with a *bonus*, in order that they may sell it abroad below its natural price! To suppose that a proceeding of this sort can be a public advantage, is equivalent to supposing that a shopkeeper may get rich by selling his goods below what they cost. — (See BOUNTY.)

4. *Importation from Foreign Countries.* — If a country were, like Poland or Russia, uniformly in the habit of exporting corn to other countries, a restriction on importation would be of no material consequence; because, though such restriction did not exist, no foreign corn would be imported, unless its ports were so situated as to serve for an *entrepôt*. A restriction on importation is sensibly felt only when it is enforced in a country which, owing to the greater density of its population, the limited extent of its fertile land, or any other cause, would, either occasionally or uniformly, import. It is familiar to the observation of every one, that a total failure of the crops is a calamity to one description of soil, is generally favourable to some other description; and that, except in anomalous cases, the total produce is not very different. But what is thus generally true of single countries, is always true of the world at large. History furnishes no single instance of a universal scarcity; but it uniformly found, that when the crops in a particular country are unusually deficient, they are proportionally abundant in some other quarter. It is clear, however, that a restriction on importation excludes the country which enacts it from profiting by this benefit. She is thrown entirely on her own resources. Under the circumstances supposed, she has nothing to trust to for relief but the reserves in her warehouses; and should these be inadequate to meet the exigency of the crisis, there are apparently no means by which she can escape experiencing all the evils of scarcity, or, it may be, of famine. A country deprived of the power to import is unable to supply the deficiencies of her harvests by the surplus produce of other countries; so that her inhabitants may starve amidst surrounding plenty, and suffer the extreme of scarcity, when, but for the restrictions on importation, they might enjoy the greatest abundance. If the restrictions on importation, be conditional; if, instead of absolutely excluding foreign corn from the home markets, it merely loads it with a duty; the degree in which it will operate to increase the scarcity and dearth will depend on the magnitude of that duty. If the duty be constant and moderate, it may not have any very considerable effect in discouraging importation; but if it be fluctuating and heavy, it will, by falsifying the speculation of the merchants, and making a corresponding addition to the price of the corn imported, be proportionally injurious. In whatever degree foreign corn may be excluded in years of deficient crops, to the same extent must prices be artificially raised, and the pressure of the scarcity rendered so much the more severe.

Such would be the disastrous influence of a restriction on importation in a country which, were there no such obstruction in the way, would sometimes import and some-

times export. But its operation would be infinitely more injurious in a country which, under a free system, would uniformly import a portion of her supplies. The restriction, in this case, has a twofold operation. By preventing importation from abroad, and forcing the population to depend for subsistence on corn raised at home, it compels recourse to be had to comparatively inferior soils; and thus, by increasing the cost of producing corn above its cost in other countries, adds proportionally to its average price. The causes of fluctuation are, in this way, increased in a geometrical proportion; for, while the prevention of importation exposes the population to the pressure of want whenever the harvest happens to be less productive than usual, it is sure, at the same time, by raising average prices, to hinder exportation in a year of unusual plenty, until the home prices fall ruinously low. It is obvious, therefore, that a restriction of this sort must be alternately destructive of the interests of the consumers and producers. It injures the former by making them pay, at an average, an artificially increased price for their food, and by exposing them to scarcity and famine whenever the home crop proves deficient; and it injures the latter, by depriving them of the power to export in years of unusual plenty, and by overloading the market with produce, which, under a free system, would have met with an advantageous sale abroad.

The principle thus briefly explained, shows the impossibility of permanently keeping up the home prices by means of restrictions on importation, at the same time that it affords a clue by which we may trace the causes of most of that agricultural distress which has been experienced in this country since the peace. The real object of the Corn Law of 1815 was to keep up the price of corn to 80s. a quarter; but to succeed in this, it was indispensable not only that foreign corn should be excluded when prices were under this limit, but that the markets should never be overloaded with corn produced at home: for it is clear, according to the principle already explained, that if the supply should in ordinary years be sufficient to feed the population, it must, in an unusually abundant year, be more than sufficient for that purpose; and when in such a case, the surplus is thrown upon the market, it cannot fail, in the event of our average prices being considerably above the level of those of the surrounding countries, to cause a ruinous depression. Now, this was the precise situation of this country at the end of the war. Owing partly to the act of 1804, but far more to the difficulties in the way of importation, and the depreciation of the currency, prices attained to an extraordinary elevation from 1809 to 1814, and gave such a stimulus to agriculture, that we grew, in 1812 and 1813, sufficient corn for our own supply. And, such being the case, it is clear, though our ports had been hermetically sealed against importation from abroad, that the first luxuriant crop must have occasioned a ruinous decline of prices. It is the exclusion, not the introduction, of foreign corn that has caused the distress of the agriculturists; for it is this exclusion that has forced up the price of corn in this country, in scarce and average years, to an unnatural level, and that, consequently, renders exportation in favourable seasons impossible without such a fall of prices as is most disastrous to the farmer. It may be mentioned in proof of what is now stated, that the average price of wheat in England and Wales in 1814, was 74s. a quarter, and in 1815 it had fallen to 64s. But as these prices could not indemnify the occupiers of the poor lands brought under tillage during the previous high prices, they were gradually relinquishing their cultivation. A considerable portion of them was converted into pasture; rents were generally reduced; and wages had begun to decline: but the legislature having prohibited the importation of foreign corn, the operation of this natural principle of adjustment was unfortunately frustrated, and the price of 1816 rose to 75s. 10d. This rise was, however, insufficient to occasion any new improvement; and as foreign corn was now excluded, and large tracts of bad land had been thrown out of cultivation, the supply was so much diminished, that, notwithstanding the increase in the value of money, prices rose in 1817, no doubt, in consequence of the bad harvest of the previous year, to 94s. 9d.; and in 1818, to 84s. 1d. These high prices had their natural effect. They revived the drooping spirits of the farmers, who imagined that the Corn Law was, at length, beginning to produce the effects anticipated from it, and that the golden days of 1812, when wheat sold for 125s. a quarter, were about to return! But this prosperity carried in its bosom the seeds of future mischief. The increased prices necessarily occasioned a fresh extension of tillage; capital was again applied to the improvement of the soil, and this increase of tillage, conspiring with favourable seasons, and the impossibility of exportation, sunk prices to such a degree, that they fell, in October, 1822, so low as 38s. 1d., the average price of that year being only 43s. 3d.

It is thus demonstrably certain, that the recurrence of periods of distress, similar to those that have been experienced by the agriculturists of this country since the peace, cannot be warded off by restricting or prohibiting importation. A free corn trade is the only system that gives them that security against fluctuations that is so indispensable. The increased importation that would take place, were the ports always open, as soon as any considerable deficiency in the crops was apprehended, would prevent prices from

rising to an oppressive height; while, on the other hand, when the crops were unusually luxuriant, a ready outlet would be found for the surplus in foreign countries, without its occasioning any very heavy fall. To expect to combine steadiness of prices with restrictions on importation, is to expect to reconcile what is contradictory and absurd. The higher the limit at which the importation of foreign corn into a country like England is fixed, the greater will be the oscillation of prices. If we would secure for ourselves abundance, and avoid fluctuation, we must renounce all attempts at exclusion, and be ready to deal in corn, as we ought to be in every thing else, on fair and liberal principles.

That the restrictions imposed on the foreign corn trade during the last 10 years should not have been productive of more disastrous consequences than those that have actually resulted from them, is, we believe, principally to be ascribed to the very great increase that has taken place in the imports from Ireland. Previously to 1806, when a perfectly free corn trade between Great Britain and Ireland was for the first time established, the yearly imports did not amount to 400,000 quarters, whereas they now amount to 2,600,000; and any one who has ever been in Ireland, or is aware of the wretched state of agriculture in it, and of the amazing fertility of the soil, must be satisfied that a very slight improvement would occasion an extraordinary increase in the imports from that country; and it is believed by those best qualified to form an opinion on such a subject, that the settlement of the Catholic question, and the disfranchisement of the 40s. freeholders, by promoting the public tranquillity, and taking away one of the principal inducements to the pernicious practice of splitting farms, has, in this respect, already had great influence, and that it will eventually lead to the most material improvements. Hence it is by no means improbable, that the growing imports from Ireland may, at no distant period, reduce our prices to the level of those of the Continent, and even render us an occasionally exporting country. These, however, are contingent and uncertain results; and supposing them to be ultimately realised, the Corn Laws must in the mean time be productive of great hardship, and must, in all time to come, aggravate to a frightful extent the misery inseparable from bad harvests.

Nothing but the great importance of the subject could excuse us for dwelling so long on what is so very plain. To facilitate production, and to make commodities cheaper and more easily obtained, are the grand motives which stimulate the inventive powers, and which lead to the discovery and improvement of machines and processes for saving labour and diminishing cost; and it is plain that no system of commercial legislation deserves to be supported, which does not conspire to promote the same objects: but a restriction on the importation of corn into a country like England, which has made a great comparative advance in population and manufacturing industry, is diametrically opposed to these principles. The density of our population is such, that the exclusion of foreign corn forces us to resort to soils of a decidedly less degree of fertility than those that are under cultivation in the surrounding countries; and, in consequence, our average prices are comparatively high. We have resolved that our people should not employ their capital and labour in those branches of manufacturing and commercial industry in which they have a decided advantage over every other country; but that they should be made to force comparatively barren soils to yield them a scanty return for their outlay. If we could, by laying out 1000*l.* on the manufacture of cottons or hardware, produce a quantity of these articles that would exchange for 400 quarters of American or Polish wheat; and if the same sum, were it expended in cultivation in this country, would not produce more than 300 quarters; the prevention of importation occasions an obvious sacrifice of 100 out of every 400 quarters consumed in the empire; or, which is the same thing, it occasions an artificial advance of 25 per cent. in the price of corn. In a public point of view, the impolicy of such a system is obvious; but it seems, at first sight, as if it were advantageous to the landlords. The advantage is, however, merely apparent: at bottom there is no real difference between the interests of the landlords and those of the rest of the community. It would be ridiculous, indeed, to imagine for a moment that the landlords can be benefited by a system in which those tremendous fluctuations of prices, so subversive of all agricultural prosperity, are inherent; but though these could be got rid of, the result would be the same. The prosperity of agriculture must always depend upon, and be determined by, the prosperity of other branches of industry; and any system which, like the corn laws, is most injurious to the latter, cannot but be injurious to the former. Instead of being publicly advantageous, high prices are in every case distinctly and completely the reverse. The smaller the sacrifice for which any commodity can be obtained, so much the better. When the labour required to produce, or the money required to purchase, a sufficient supply of corn is diminished, it is as clear as the sun at noon-day that more labour or money must remain to produce or purchase the other necessities, conveniences, and amusements of human life, and that the sum of national wealth and comforts must be proportionally augmented. Those who suppose that a rise of prices can ever be a means

of improving the condition of a country might, with equal reason, suppose that it would be improved by throwing its best soils out of cultivation, and destroying its most powerful machines. The opinions of such persons are not only opposed to the plainest and most obvious scientific principles, but they are opposed to the obvious conclusions of common sense, and the universal experience of mankind.

Experience of the injurious effects resulting from the Corn Laws has induced many that were formerly their zealous advocates to come round to a more liberal way of thinking. It would, however, be unjust not to mention that there has always been a large and respectable party amongst the landlords, opposed to all restrictions on the trade in corn; and who have uniformly thought that their interests, being identified with those of the public, would be best promoted by the abolition of restrictions on importation. A protest expressive of this opinion, subscribed by 10 peers, was entered on the Journals of the House of Lords, against the corn law of 1815. This document is said to have been drawn up by Lord Grenville, who has always been the enlightened advocate of sound commercial principles. Its reasoning is so clear and satisfactory, that we are sure we shall gratify our readers, as well as strengthen the statements previously made, by laying it before them.

"*Dissentient.* — I. Because we are adverse in principle to all new restraints on commerce. We think it certain that public prosperity is best promoted by leaving uncontrolled the free current of national industry; and we wish rather, by well considered steps, to bring back our commercial legislation to the straight and simple line of wisdom, than to increase the deviation by subjecting additional and extensive branches of the public interest to fresh systems of artificial and injurious restrictions.

"II. Because we think that the great practical rule, of leaving all commerce unfettered, applies *more peculiarly*, and on still stronger grounds of justice as well as policy, to the corn trade than to any other. Irresistible, indeed, must be that necessity which could, in our judgment, authorise the legislature to tamper with the sustenance of the people, and to impede the free purchase of that article on which depends the existence of so large a portion of the community.

"III. Because we think that the expectations of ultimate benefit from this measure are founded on a delusive theory. We cannot persuade ourselves that this law will ever contribute to produce plenty, cheapness, or steadiness of price. So long as it operates at all, its effects must be the opposite of these. *Monopoly is the parent of scarcity, of dearness, and of uncertainty.* To cut off any of the sources of supply, can only tend to lessen its abundance; to close against ourselves the cheapest market for any commodity, must enhance the price at which we purchase it; and to confine the consumer of corn to the produce of his own country, is to refuse to ourselves the benefit of that provision which Providence itself has made for equalising to man the variations of climate and of seasons.

"IV. But whatever may be the future consequences of this law at some distant and uncertain period, we see with pain that these hopes must be purchased at the expense of a great and present evil. To compel the consumer to purchase corn dearer at home than it might be imported from abroad, is the immediate practical effect of this law. In this way alone can it operate. Its present protection, its promised extension of agriculture, must result if at all from the profits which it creates by keeping up the price of corn to an artificial level. These future benefits are the consequences expected, but, as we confidently believe, erroneously expected, from giving a bounty to the grower of corn, by a tax levied on its consumer.

"V. Because we think the adoption of any permanent law for such a purpose, required the fullest and most laborious investigation. Nor would it have been sufficient for our satisfaction, could we have been convinced of the general policy of a hazardous experiment. A still further inquiry would have been necessary to persuade us that the present moment is fit for its adoption. In such an inquiry, we must have had the means of satisfying ourselves what its immediate operation will be, as connected with the various and pressing circumstances of public difficulty and distress with which the country is surrounded; with the state of our circulation and currency, of our agriculture and manufactures, of our internal and external commerce, and, above all, with the condition and reward of the industrious and labouring classes of our community.

"On all these particulars, as they respect this question, we think that parliament is almost wholly uninformed; on all we see reason for the utmost anxiety and alarm from the operation of this law.

"Lastly, Because, if we could approve of the principle and purpose of this law, we think that no sufficient foundation has been laid for its details. The evidence before us, unsatisfactory and imperfect as it is, seems to us rather to disprove than to support the propriety of the high price adopted as the standard of importation, and the fallacious mode by which that price is to be ascertained. And on all these grounds we are anxious to record our dissent from a measure so precipitate in its course, and, as we fear, so injurious in its consequences."

Attempts have sometimes been made to estimate the pecuniary burden which the restrictions on importation entail in ordinary years upon the country. This, however, is a subject with respect to which it is not possible to obtain any very accurate data. But supposing the total quantity of corn annually produced in Great Britain and Ireland to amount to 52,000,000 quarters, every shilling that is added to its price by the Corn Laws is equivalent to a tax on corn of 2,600,000*l.*; and estimating the average rise on all sorts of grain at 7*s.* a quarter, the total sum will be 18,200,000*l.* So great a quantity of corn is, however, consumed by the agriculturists themselves as food, in seed, the keep of horses, &c., that not more than a half, perhaps, of the whole quantity produced is brought to market. If we are nearly right in this hypothesis, and in the previous estimates, it will follow that the restrictions cost the classes not engaged in agriculture no less than 9,100,000*l.*, exclusive of their own pernicious consequences. Of this sum a fifth, probably, or 1,800,000*l.* may go to the landlords as rent; and this is *all* that the agriculturists can be said to gain by the system, for the additional price received by the farmer on that portion of the produce exclusive of rent is no more than the ordinary return for his capital and labour. His profits, indeed, instead of being increased by this system, are really diminished by it; (for proofs of this, see the note on *Corn Laws*, in my edition of the *Wealth of Nations*, vol. iv. pp. 358—361.) and though the rents of the

landlords be, nominally at least, somewhat increased by it, it is, notwithstanding, abundantly certain that it is any thing but advantageous to them. It would require a far larger sum to balance the injury which fluctuations of price occasion to their tenants, and the damage done to their estates by over-cropping when prices are high, than all that is derived from the restrictions.

5. *Duties on Importation.* — A duty may be equitably imposed on imported corn, for two objects; that is, either for the sake of revenue, or to balance any excess of taxes laid on the agriculturists over those laid on the other classes. — (See my edition of *Wealth of Nations*, vol. iv. pp. 363—369.) With respect, however, to a duty imposed for the sake of revenue, it may be doubted whether corn be a proper subject for taxation. But at all events such a duty should be exceedingly moderate. It would be most inexpedient to attempt to add largely to the revenue by laying heavy duties on the prime necessary of life.

If it be really true that agriculture is more heavily taxed than any other branch of industry, the agriculturists are entitled to demand that a duty be laid on foreign corn when imported, corresponding to the *excess* of burdens affecting them. It has been doubted, however, whether they are in this predicament. But though the question be by no means free from difficulty, we should be disposed to decide it in the affirmative, being pretty well satisfied that, owing to the local and other burdens laid on the land, those occupying it are really subjected to heavier taxes than any other class. It is difficult, or rather, perhaps, impossible, to estimate with any degree of precision what the *excess* of taxes laid on the agriculturists beyond those laid on manufacturers and merchants may amount to; but we have elsewhere shown, that if we estimate it as making an addition of 5s. or 6s. to the quarter of wheat, we shall certainly be beyond the mark. — (See my edition of the *Wealth of Nations*, vol. iv. p. 369.) However, we should, in a case of this sort, reckon it safer to err on the side of too much protection than of too little; and would not, therefore, object to a fixed duty of 6s. or 7s. a quarter being laid on wheat, and a proportional duty being laid on other species of grain. Under such a system the ports would be always open. The duty would not be so great as to interpose any very formidable obstacle to importation. Every one would know beforehand the extent to which it would operate; at the same time that the just rights and interests of the agriculturists, and of every other class, would be maintained unimpaired.

When a duty is laid on the importation of foreign corn, for the equitable purpose of countervailing the peculiar duties laid on the corn raised at home, an *equivalent drawback* ought to be allowed on its exportation. “In allowing this drawback, we are merely returning to the farmer a tax which he has already paid, and which he must have, to place him in a fair state of competition in the foreign market, not only with the foreign producer, but with his own countrymen who are producing other commodities. It is essentially different from a bounty on exportation, in the sense in which the word bounty is usually understood; for, by a bounty, is generally meant a tax levied on the people for the purpose of rendering corn unnaturally cheap to the foreign consumer; whereas what I propose is to sell our corn at the price at which we can really afford to produce it, and not to add to its price a tax which shall induce the foreigner rather to purchase it from some other country, and deprive us of a trade which, under a system of free competition, we might have selected.” — (*Ricardo on Protection to Agriculture*, p. 53.)

A duty accompanied with a drawback, as now stated, would not only be an equitable arrangement, but it would be highly for the advantage of farmers, without being injurious to any one else. The radical defect, as already shown, of the system followed from 1815 down to the present moment, in so far, at least, as respects agriculture, is, that it forces up prices, in years when the harvest is deficient, while it leaves the market to be glutted when it is abundant. But while a constant duty of 6s. would secure to the home growers all the increase of price which the regard due to the interests of others should allow them to realise in a bad year, the drawback of 6s., by enabling them to export in an unusually plentiful year, would prevent the markets from being overloaded, and prices from falling to the ruinous extent that they now occasionally do. Such a plan would render the business of a corn dealer, and of agriculture, comparatively secure; and would, therefore, provide for the continued prosperity of them both. We are astonished that the agriculturists have not taken this view of the matter. If they be really entitled to a duty on foreign corn, on account of their being heavier taxed than the other classes of their fellow citizens, they must also be entitled to a corresponding drawback. And it admits of demonstration, that *their* interests, as well as those of the community, would be far better promoted by such a duty and drawback as we have suggested, than they can ever be by any system of mere duties, how high soever they may be carried.

The principal objection to this plan is, that it would not be possible to levy the duty when the home price became very high, and that, consequently, it would be every now and then necessary to suspend it. But this objection does not seem to be by any means

so formidable as it has sometimes been represented. It may, we think, be concluded on unassailable grounds, that were the ports constantly open under a moderate fixed duty and an equivalent drawback, extreme fluctuations of price would be very rare. Supposing it were enacted, that when the home price rises above a certain high level, as 80s., the duty should cease, we believe the clause would very seldom come into operation; and those who object that it is not fair to the farmers to deprive them of the full advantage to be derived from the highest prices, should recollect that in matters of this sort it is not always either possible, or, if possible, prudent, to carry the soundest principles to an extreme; and that, generally speaking, the public interests will be better consulted by guarding against scarcity and dearth, than by securing, at all hazards, a trifling though just advantage to a particular class.

III. BRITISH CORN TRADE.

1. *Quantity of Corn consumed in Great Britain.* — Attempts have sometimes been made to compute the quantity of corn raised in a country, from calculations founded on the number of acres in tillage, and on the average produce per acre; but it is plain that no accurate estimate can ever be framed of the extent of land under cultivation. It is perpetually changing from year to year; and the amount of produce varies not only with the differences of seasons, but also with every improvement of agriculture. This method, therefore, is now rarely resorted to; and the growth of corn is generally estimated from the *consumption*. The conclusions deduced from this criterion must indeed be subject to error, as well from variations in the consumption, occasioned by variations in the price of corn, as from the varying extent to which other food is used. But supposing the prices of corn to be reduced to an average, if the consumption of a considerable number of persons, of all ranks and orders, and of all ages and sexes, were accurately determined, we should be able, supposing the census of the population to be nearly correct, to make a very close approximation to the total consumption of the country. Mr. Charles Smith, the well-informed and intelligent author of the *Tracts on the Corn Trade*, made many curious investigations, with a view to discover the mean annual consumption of corn; and reducing it to the *standard of wheat*, he found it to be at the rate of about *a quarter for each individual*, young and old. This estimate has been confirmed by a variety of subsequent researches; and, among others, by inquiries made during the scarcity of 1795 and 1796, by the magistrates of Suffolk, in 42 different parishes, in the view of ascertaining the average consumption of each family, which they found to correspond very closely with Mr. Smith's estimate. It is also worthy of remark, that M. Paucton, the intelligent author of the *Métrologie*, estimates the mean annual average consumption in France, when reduced to the standard of wheat, at about 10 bushels for each individual; and as the French consume considerably more bread, and less animal food, than the English, this estimate affords a strong proof of the correctness of that of Mr. Smith.

Having taken the population of England and Wales in 1765 at 6,000,000, Mr. Smith reckoned the consumers of each kind of grain, the quantity consumed by each individual, and hence, the whole consumed by man, to be as follows: —

Estimated Population of England and Wales.	Average Consumption of each Person.	Consumed by Man.
3,750,000 consumers of wheat, at 1 quarter each	-	<i>Qrs.</i> 3,750,000
739,000 do. of barley, at $1\frac{1}{2}$ do.	-	1,016,125
888,000 do. of rye, at $1\frac{1}{2}$ do.	-	999,000
623,000 do. of oats, at $2\frac{1}{4}$ do.	-	1,791,225
Consumed by man	-	7,556,350
In addition to this, Mr. Smith estimated the wheat distilled, made into starch, &c.	-	90,000
Barley used in malting, &c.	-	3,417,000
Rye for hogs, &c.	-	31,000
Oats for horses, &c.	-	2,461,500
Total of home consumption	-	13,555,850
Add excess of exports over imports	-	398,024
	-	13,954,474
Add seed (one tenth)	-	1,395,447
Total growth of all kinds of grain in England and Wales in 1765	-	15,349,921

This estimate, it will be observed, does not include either Scotland or Ireland; and later inquiries have rendered it probable that Mr. Smith underrated the population of England and Wales by nearly 1,000,000. The most eminent agriculturists seem also to be of opinion that the allowance for seed ought to be stated as high as a *seventh*.

Mr. Chalmers, availing himself of the information respecting the numbers of the people furnished under the population act of 1800, estimated the total consumption of all the different kinds of grain in Great Britain at that epoch at 27,185,300 quarters,

whereof wheat constituted 7,676,100 quarters. The crops of 1800 and of 1801 being unusually deficient, the importation in these years was proportionally great; but excluding these scarcities, the total average excess of all sorts of grain imported from Ireland and foreign countries into Great Britain over the exports had previously amounted to about 1,000,000 quarters, which deducted from 27,185,300, leaves 26,185,300, to which if we add *one seventh* as seed, we shall have 29,925,057 quarters as the average growth of Great Britain in 1800.

The population of Ireland, as ascertained by the census of 1821, amounted to very near 7,000,000, and probably at present exceeds 8,000,000. The greatest portion of its inhabitants are, it is true, supported by the potato, and seldom or never taste bread; but we shall perhaps be within the mark, if we estimate the number of those fed on the various kinds of corn at 3,000,000, and the average quantity of the different sorts of grain consumed by each individual at 2 quarters. This would give 6,000,000 quarters as the total consumption of Ireland.

But the population of Great Britain increased, from 10,942,000 in 1800, to 16,537,000 in 1831; and both Mr. Western and Dr. Colquhoun concurred in estimating the average consumption of the whole empire, in 1812 and 1814, at about 35,000,000 quarters.

The following is Dr. Colquhoun's estimate:—

Species of Grain.	Estimated Average of the Population of Great Britain and Ireland.	Each Per-on averaged.	Consumed by Man.	Consumed by Animals.	Used in Beer and Spirits.	Used in various Manufactures.	Total of Quarters.
		Quarters.	Quarters.	Quarters.	Quarters.	Quarters.	
Wheat - - -	9,000,000	1	9,000,000	-	-	170,000	9,170,000
Barley - - -	1,500,000	1½	1,875,000	210,000	4,250,000	-	6,335,000
Oats - - -	4,500,000	1½	6,750,000	10,200,000	-	-	16,950,000
Rye - - -	500,000	1½	625,000	59,000	-	1,000	685,000
Beans and peas -	500,000	1	500,000	1,360,000	-	-	1,860,000
Totals -	16,000,000		18,750,000	11,829,000	4,250,000	171,000	35,000,000

Dr. Colquhoun has made no allowance for seed in this estimate; and there can be no doubt that he has underrated the consumption of oats by at least one half quarter in the consumption of each of the 4,500,000 individuals he supposes fed on them, or by 2,250,000 quarters. Adding, therefore, to Dr. Colquhoun's estimate 5,500,000 quarters for seed, and 2,250,000 quarters for the deficiency of oats, it will bring it to 42,750,000 quarters; and taking the increase of population since 1813 into account, it does not appear to us that the annual average consumption of the different kinds of grain in the United Kingdom can now be estimated at less than *forty-four* millions of quarters, exclusive of seed, and at *fifty-two* millions when it is included. Assuming this estimate to be correct, and the proportion of wheat to amount to *twelve* millions of quarters, the progressive consumption will be as follows:—

Consumption of Wheat and other Grain in the United Kingdom, in a Year, Six Months, a Month, a Week, &c.

	Wheat.	Other Grain.	Total.
	Qrs.	Qrs.	Qrs.
A year - - -	12,000,000	40,000,000	52,000,000
Six months - - -	6,000,000	20,000,000	26,000,000
Three months - - -	3,000,000	10,000,000	13,000,000
Six weeks - - -	1,500,000	5,000,000	6,500,000
One month - - -	1,000,000	3,333,333	4,333,333
Two weeks - - -	500,000	1,666,666	2,166,666
One week - - -	250,000	833,333	1,083,333
One day - - -	35,714	119,048	154,762

The total imports of foreign corn in 1831 amounted to 3,541,809 quarters, being the largest quantity ever brought into Great Britain in any 1 year. Now, as this quantity does not amount to one fourteenth part of the entire produce, it would seem as if the greatest importation could have but a very slight influence on prices; but it has been already shown that a very large proportion, perhaps a half, of the entire corn produced in the empire is never brought to market, but is partly consumed by the agriculturists, and partly used as seed and in the feeding of farm horses, &c. Hence, if we are nearly right in this estimate, it follows that an importation of 3,500,000 quarters is really equivalent to about *one seventh* part of the entire produce brought to market in an average year, and must consequently have a very material influence in alleviating the pressure of scarcity in a bad year, and in checking the rise of prices.

2. *Regulations under which the Corn Trade of Great Britain is at present conducted.*—These regulations are embodied in the act 9 Geo. 4. c. 60., an abstract of which is subjoined:—

Sections 1. and 2. repeal the acts 55 Geo. 3. c. 26., 3 Geo. 4. c. 60., and 7 & 8 Geo. 4. c. 58., and so much of the act 6 Geo. 4. c. 111. as imposes duties on the importation of buck-wheat and Indian corn.

Foreign Corn may be imported on Payment of the Duties specified. — And whereas it is expedient that corn, grain, meal, and flour, the growth, produce, and manufacture of any foreign country, or of any British possession out of Europe, should be allowed to be imported into the United Kingdom for consumption, upon the payment of duties to be regulated from time to time according to the average price of British corn made up and published in manner herein-after required; be it therefore enacted, that there shall be levied and paid to his Majesty, upon all corn, grain, meal, or flour entered for home consumption in the United Kingdom from parts beyond the seas, the several duties specified and set forth in the table annexed to this act; and that the said duties shall be raised, levied, collected, and paid in such and the same manner in all respects as the several duties of customs mentioned and enumerated in the table of duties of customs inwards annexed to the act 6 Geo. 4. c. 111. — § 3.

The following is the table referred to: —

<i>If imported from any foreign Country:</i>	<i>L. s. d.</i>		<i>L. s. d.</i>
Wheat: — According to the average price of wheat, made up and published in manner required by law; <i>vide infra</i> , —		Whenever such price shall be under 25s. and not under 24s., the duty shall be for every quarter	0 10 9
Whenever such price shall be 62s. and under 63s. the quarter, the duty shall be for every quarter	1 4 8	And in respect of each integral shilling, or any part of each integral shilling, by which such price shall be under 24s., such duty shall be increased by 1s. 6d.	
Whenever such price shall be 63s. and under 64s. the quarter, the duty shall be for every quarter	1 3 8	Rye, Peas, and Beans: — Whenever the average price of rye, or of peas, or of beans, made up and published in manner required by law, shall be 36s. and under 37s. the quarter, the duty shall be for every quarter	0 15 6
Whenever such price shall be 64s. and under 65s. the quarter, the duty shall be for every quarter	1 2 8	And in respect of every integral shilling by which such price shall be above 36s., such duty shall be decreased by 1s. 6d., until such price shall be 46s.	
Whenever such price shall be 65s. and under 66s. the quarter, the duty shall be for every quarter	1 1 8	Whenever such price shall be at or above 46s., the duty shall be for every quarter	0 1 0
Whenever such price shall be 66s. and under 67s. the quarter, the duty shall be for every quarter	1 0 8	Whenever such price shall be under 36s. and not under 35s., the duty shall be for every quarter	0 16 9
Whenever such price shall be 67s. and under 68s. the quarter, the duty shall be for every quarter	0 18 8	And in respect of each integral shilling, or any part of each integral shilling, by which such price shall be under 35s., such duty shall be increased by 1s. 6d.	
Whenever such price shall be 68s. and under 69s. the quarter, the duty shall be for every quarter	0 16 8	Wheat Meal and Flour: — For every barrel, being 196 lbs., a duty equal in amount to the duty payable on 35½ gallons of wheat.	
Whenever such price shall be 69s. and under 70s. the quarter, the duty shall be for every quarter	0 13 8	Oatsmeal: — For every quantity of 18½ lbs., a duty equal in amount to the duty payable on a quart of oats.	
Whenever such price shall be 70s. and under 71s. the quarter, the duty shall be for every quarter	0 10 8	Maize or Indian Corn, Buck-Wheat, Bear, or Bagg: — For every quarter, a duty equal in amount to the duty payable on a quarter of barley.	
Whenever such price shall be 71s. and under 72s. the quarter, the duty shall be for every quarter	0 6 8	<i>If the Produce of and imported from any British Possession in North America, or elsewhere out of Europe.</i>	
Whenever such price shall be 72s. and under 73s. the quarter, the duty shall be for every quarter	0 2 8	Wheat: — For every quarter	0 5 0
Whenever such price shall be at or above 73s. the duty shall be for every quarter	0 1 0	Until the price of British wheat, made up and published in manner required by law, shall be 67s. per quarter.	
Whenever such price shall be under 62s. and not under 61s. the duty shall be for every quarter	1 5 8	Whenever such price shall be at or above 67s., the duty shall be for every quarter	0 0 6
And in respect of each integral shilling, or any part of each integral shilling, by which such price shall be under 61s., such duty shall be increased by 1s.		Barley: — For every quarter	0 2 0
Barley: — Whenever the average price of barley, made up and published in manner required by law, shall be 35s. and under 34s. the quarter, the duty shall be for every quarter	0 12 4	Until the price of British barley, made up and published in manner required by law, shall be 34s. per quarter.	
And in respect of every integral shilling by which such price shall be above 35s., such duty shall be decreased by 1s. 6d., until such price shall be 41s.		Whenever such price shall be at or above 34s., the duty shall be for every quarter	0 0 6
Whenever such price shall be at or above 41s., the duty shall be for every quarter	0 1 0	Oats: — For every quarter	0 2 6
Whenever such price shall be under 35s. and not under 32s., the duty shall be for every quarter	0 13 10	Until the price of British oats, made up and published in manner required by law, shall be 25s. per quarter.	
And in respect of each integral shilling, or any part of each integral shilling, by which such price shall be under 32s., such duty shall be increased by 1s. 6d.		Whenever such price shall be at or above 25s., the duty shall be for every quarter	0 0 6
Oats: — Whenever the average price of oats, made up and published in manner required by law, shall be 25s. and under 26s. the quarter, the duty shall be for every quarter	0 9 5	Rye, Peas, and Beans: — For every quarter	0 3 0
And in respect of every integral shilling by which such price shall be above 25s., such duty shall be decreased by 1s. 6d., until such price shall be 31s.		Until the price of British rye, or of peas, or of beans, made up and published in manner required by law, shall be 41s.	
Whenever such price shall be at or above 31s., the duty shall be for every quarter	0 1 0	Whenever such price shall be at or above 41s., the duty shall be for every quarter	0 0 6
		Wheat Meal and Flour: — For every barrel, being 196 lbs., a duty equal in amount to the duty payable on 35½ gallons of wheat.	
		Oatsmeal: — For every quantity of 18½ lbs., a duty equal in amount to the duty payable on a quart of oats.	
		Maize or Indian Corn, Buck-Wheat, Bear, or Bagg: — For every quarter, a duty equal in amount to the duty payable on a quarter of barley.	

Regulations to be observed upon shipping Corn from any British Possession out of Europe, &c. — No corn, grain, meal, or flour shall be shipped from any port in any British possession out of Europe, as being the produce of any such possession, until the owner or proprietor or shipper thereof shall have made and subscribed, before the collector or other chief officer of customs at the port of shipment, a declaration in writing, specifying the quantity of each sort of such corn, grain, or flour, and that the same was the produce of some British possession out of Europe to be named in such declaration, nor until such owner or proprietor or shipper shall have obtained from the collector or other chief officer of the customs at the said port a certificate, under his signature, of the quantity of corn, grain, meal, or flour so declared to be shipped; and before any corn, grain, meal, or flour shall be entered at any port or place in the United Kingdom, as being the produce of any British possession out of Europe, the master of the ship importing the same shall produce and deliver to the collector or other chief officer of customs of the port or place of importation a copy of such declaration, certified to be a true and accurate copy thereof, under the hand of the collector or other chief officer of customs at the port of shipment before whom the same was made, together with the certificate, signed by the said collector or other chief officer of customs, of the quantity of corn so declared to be shipped; and such master shall also make and subscribe, before the collector or other chief officer of customs at the port or place of importation, a declaration in writing, that the several quantities of corn, grain, meal, or flour on board such ship, and proposed to be entered under the authority of such declaration, are the same that were mentioned and referred to in the declaration and certificate produced by him, without any admixture or addition; and if any person shall, in any such declaration, wilfully and corruptly make any false statement respecting the place of which any such corn,

grain, meal, or flour was the produce, or respecting the identity of any such corn, grain, meal, or flour, such person shall forfeit and become liable to pay to his Majesty the sum of 100*l.*, and the corn, grain, meal, or flour to such person belonging, on board any such ship, shall also be forfeited; and such forfeitures shall and may be sued for, prosecuted, recovered, and applied in such and the same manner in all respects as any forfeiture incurred under and by virtue of the said act 6 Geo. 4. c. 111.: Provided always, that the declarations aforesaid shall not be required in respect of any corn, grain, meal, or flour which shall have been shipped within 3 months next after the passing of this act. — § 4.

Penalty for importing Malt or ground Corn. — It shall not be lawful to import, from parts beyond the seas into the United Kingdom, for consumption there, any malt, or to import, for consumption into Great Britain, any corn ground, except wheat meal, wheat flour, and oatmeal; or to import, for consumption, any corn ground into Ireland; and that if any such article as aforesaid shall be imported contrary to the provisions aforesaid, the same shall be forfeited. — § 5.

Account of Corn and Flour imported, &c. to be published in the Gazette monthly. — The commissioners of his Majesty's customs shall, once in each calendar month, cause to be published in the London Gazette an account of the total quantity of each sort of corn, grain, meal, and flour respectively, which shall have been imported into the United Kingdom; and also an account of the total quantity of each sort of the corn, grain, meal, and flour respectively, upon which the duties of importation shall have been paid in the United Kingdom during the calendar month next preceding; together with an account of the total quantity of each sort of the said corn, grain, meal, and flour respectively remaining in warehouse at the end of such next preceding calendar month. — § 6.

Section 7. enacts, that if any foreign state shall subject British vessels, goods, &c., to any higher duties or charges than are levied on the vessels, &c. of other countries, his Majesty may prohibit the importation of corn from such state.

Weekly Returns of Purchases and Sales of Corn to be made in the Places herein mentioned. — And whereas it is necessary, for regulating the amount of such duties, that effectual provision should be made for ascertaining from time to time the average prices of British corn; be it therefore enacted, that weekly returns of the purchases and sales of British corn shall be made in the manner herein-after directed: — in the following cities and towns; (that is to say,) London, Uxbridge, Hertford, Royston, Chesham, Colchester, Rufford, Madstone, Canterbury, Dartford, Chichester, Guilford, Lewes, Hythe, Beudon, Windsor, Aylesbury, Ipswich, Woodbridge, Sudbury, Huntingdon, Hadleigh, Stowmarket, Bury Saint Edmunds, Beccles, Bungay, Lowestoft, Cambridge, Ely, Wisbeach, Norwich, Yarmouth, Lynn, Thetford, Watton, Diss, East Dereham, Harleston, Holt, Aylesham, Fakenham, North Walsham, Lanelu, Gainsborough, Grantham, Louth, Boston, Sleaford, Stamford, Spalding, Derby, Northampton, Leicester, Nottingham, Worcester, Coventry, Reading, Oxford, Wakefield, Warrminster, Birmingham, Leeds, Newark, York, Bridlington, Beverley, Howden, Sheffield, Hull, Whitby, New Malton, Durham, Stockton, Darlington, Sunderland, Barnard Castle, Walsingham, Belford, Hexham, Newcastle-upon-Tyne, Morpeth, Alnwick, Berwick-upon-Tweed, Carlisle, Whitehaven, Cockermouth, Penrith, Egremont, Appleby, Kirkcubright, Kendal, Liverpool, Ulverston, Lancaster, Preston, Wigan, Warrington, Manchester, Lifford, Chester, Nantwich, Middlewich, Four Lane Ends, Deulagh, Wrexham, Carnarvon, Haverford West, Carmarthen, Cardiff, Gloucester, Cirencester, Tedbury, Stow-on-the-Wold, Tewkesbury, Bristol, Taunton, Wells, Bridgewater, Frome, Chard, Monmouth, Abergavenny, Chepstow, Pontypool, Exeter, Barnstaple, Plymouth, Totness, Tavistock, Kingsbridge, Turo, Eodmin, Launceston, Redruth, Helstone, Saint Austel, Blandford, Bridport, Dorchester, Sherbourne, Shalston, Wareham, Winchester, Ancovert, Basingstoke, Fareham, Havant, Newport, Ringwood, Southampton, and Portsmouth; and for the purpose of duly collecting and transmitting such weekly returns as aforesaid, there shall be appointed in each of the said cities and towns, in manner herein-after directed, a fit and proper person to be inspector of corn returns. — § 8.

Appointing Comptroller of Corn Returns. — It shall be lawful for his Majesty to appoint a fit and proper person to be comptroller of corn returns, for the purposes herein-after mentioned, and to grant to such comptroller of corn returns such salary and allowances as to his Majesty shall seem meet: Provided always, that such person shall be appointed to and shall hold such his office during his Majesty's pleasure, and not otherwise; and shall at all times conform to and obey such lawful instructions, touching the execution of the duties of such his office, as shall from time to time be given to him by the Lords of the committee or privy council appointed for the consideration of all matters relating to trade and foreign plantations. — § 9.

Sections 10, 11, 12. embody the comptroller's oath, enact that he shall execute his office in person and not by deputy, provide for supplying his place during illness or absence, and authorise him to send and receive letters relating exclusively to the duties of his office free of postage.

Sections 13. and 14. authorise the Lord Mayor and aldermen to appoint an inspector for the city of London, who is to do the duty in person, &c.

Sections 15, 16. and 17. declare that no person shall be eligible to the office of corn inspector in the city of London, who shall be engaged in trade as a miller, maltster, or corn factor, or be in anywise concerned in the buying of corn for sale, or in the sale of bread made thereof; they also embody the oath the inspector is to take, and provide for the enrolment of his appointment.

Dealers in Corn in London to deliver in a Declaration to the Lord Mayor, &c. — Every person who shall carry on trade or business in the city of London, or within 5 miles from the Royal Exchange in the said city, as a corn factor, or as an agent employed in the sale of British corn, and every person who shall sell any British corn within the present Corn Exchange in Mark Lane in the said city, or within any other building or place which now is or may hereafter be used within the city of London, or within 5 miles from the Royal Exchange in the said city, for such and the like purposes for which the said Corn Exchange in Mark Lane hath been and is used, shall, before he or they shall carry on trade or business, or sell any corn in manner aforesaid, make and deliver to the Lord Mayor, or 1 of the aldermen of the city of London, a declaration in the following words; (that is to say,)

"I, A. B. do declare, that the returns to be by me made, conformably to an act passed in the ninth year of the reign of King George the Fourth, intitled *here set forth the title of this act*, of the quantities and prices of British corn which henceforth shall be by or for me sold or delivered, shall, to the best of my knowledge and belief, contain the whole quantity, and no more, of the corn *bona fide* sold and delivered by or for me within the periods to which such returns respectively shall refer, with the prices of such corn, and the names of the buyers respectively, and of the persons for whom such corn shall have been sold by me respectively; and to the best of my judgment the said returns shall in all respects be conformable to the provisions of the said act."

Which declaration shall be in writing, and shall be subscribed with the hand of the person so making the same; and the Lord Mayor or such alderman as aforesaid of the city of London for the time being shall and he is hereby required to deliver a certificate thereof, under his hand, to the inspector of corn returns for the city of London, to be by him registered in a book to be by him provided and kept for that purpose. — § 18.

Dealers in Corn to make Returns to Corn Inspector. — Every such corn factor and other person as aforesaid, who is herein-before required to make and who shall have made such declaration as aforesaid, shall and he or she is hereby required to return or cause to be returned, on Wednesday, in each and every week, to the inspector of corn returns for the city of London, an account in writing, signed with his or her own name, or the name of his or her agent duly authorised in that behalf, of the quantities of each respective sort of British corn by him or her sold during the week ending on and including the next preceding Tues-

day, with the prices thereof, and the amount of every parcel, with the total quantity and value of each sort of corn, and by what measure or weight the same was sold, and the names of the buyers thereof, and of the persons for and on behalf of whom such corn was sold; and it shall and may be lawful for any such inspector of corn returns to deliver to any person making or tendering any such returns a notice in writing, requiring him or her to declare and set forth therein where and by whom and in what manner any such British corn was delivered to the purchaser or purchasers thereof; and every person to whom any such notice shall be so delivered shall and he or she is hereby required to comply therewith, and to declare and set forth in such his or her return the several particulars aforesaid — § 19.

Sections 20, 21, 22, 23, and 24, authorize the appointment of corn inspectors in the places before-mentioned, forbid those being employed as such who have within the preceding 12 months been engaged in any department of the corn trade, or as a miller, or maltster, forbid those who are appointed from engaging in such occupations, prescribe the oath they are to take, and provide for the enrolment of their appointments, &c.

Dealers in Corn in Cities and Towns to make Declaration. — Every person who shall deal in British corn at or within any such city or town as aforesaid, or who shall at or within any such city or town engage in or carry on the trade or business of a corn factor, miller, maltster, brewer, or distiller, or who shall be the owner or proprietor, or part owner or proprietor, of any stage coaches, wagons, carts, or other carriages carrying goods or passengers for hire to and from any such city or town, and each and every person who, as a merchant, clerk, agent, or otherwise, shall purchase at any such city or town any British corn for sale, or for the sale of meal, flour, malt, or bread made or to be made thereof, shall, before he or she shall so deal in British corn at any such city or town, or shall engage in or carry on any such trade or business as aforesaid, or shall purchase any British corn for any such purpose as aforesaid, at or within any such city or town, make and deliver, in manner herein-after mentioned, a declaration in the following words; (that is to say,)

“ I A. B. do declare, that the returns to be by me made conformably to the act passed in the ninth year of the reign of King George the Fourth, intituled [*here set forth the title of this act*], of the quantities and prices of British corn which henceforward shall by or for me be bought, shall, to the best of my knowledge and belief, contain the whole quantity, and no more, of the British corn *bona fide* bought for or by me within the periods to which such returns respectively shall refer, with the prices of such corn, and the names of the sellers respectively; and to the best of my judgment the said returns shall in all respects be conformable to the provisions of the said act.”

Which declaration shall be in writing, and shall be subscribed with the hand of the person so making the same, and shall by him or her, or by his or her agent, be delivered to the mayor or chief magistrate, or to some justice of the peace for such city or town, or for the county, riding, or division in which the same is situate, who are hereby required to deliver a certificate thereof to the inspector of corn returns for any such city or town as aforesaid, to be by him registered in a book to be by him provided and kept for that purpose. — § 25.

Inspectors empowered to require such Declaration from Corn Dealers. — It shall and may be lawful for any inspector of corn returns for the city of London, or for any such other city or town as aforesaid, to serve upon and deliver to any person buying or selling corn in any such city or town, and who is not within the terms and meaning of this present act specially required to make any such declaration as aforesaid, a notice in writing under the hand of such inspector, requiring him to make such declaration as aforesaid; and any person upon whom such notice shall be served as aforesaid shall and he is hereby required to comply with such notice, and to make such declaration in such and the same manner in all respects as if he or she had been specially required to make the same by the express provisions of this present act. — § 26.

Corn Dealers to make Returns in Writing to Corn Inspectors. — All persons who are herein-before required to make and who shall have made such declaration as aforesaid, shall and they are hereby required, on the first market day which shall be holden in each and every week within each and every such city or town as aforesaid at or within which they shall respectively deal in corn, or engage in or carry on any such trade or business as aforesaid, or purchase any corn for any such purpose as aforesaid, to return or cause to be returned, to the inspector of corn returns for such city or town, an account in writing, signed with their names respectively, of the amount of each and every parcel of each respective sort of British corn so by them respectively bought during the week ending on and including the day next preceding such first market day as aforesaid, with the price thereof, and by what weight or measure the same was so bought by them, with the names of the sellers of each of the said parcels respectively, with the names of the person or persons, if any other than the person making such return, for or on account of whom the same was so bought and sold; and it shall and may be lawful for any such inspector of corn returns to deliver to any person making or tendering any such return a notice in writing, requiring him or her to declare and set forth therein where and by whom and in what manner any such British corn was delivered to him or her; and every person to whom any such notice shall be delivered shall and he or she is hereby required to comply therewith, and to declare and set forth in such his or her return, or in a separate statement in writing, the several particulars aforesaid. — § 27.

Inspector not to include Returns until he has ascertained that the Persons making them have taken the Declaration required. — No inspector of corn returns shall include, in the return so to be made by them as aforesaid to the comptroller of corn returns, any account of sales or purchases of corn, unless such inspector shall have received satisfactory proof that the person or persons tendering such account hath made the declaration herein-before required, and hath delivered the same to the mayor or chief magistrate or to some justice of the peace of the city or town for which such inspector shall be so appointed to act, or to some justice of the peace for the county, riding, or division in which such city or town is situate. — § 28.

Inspector to enter Returns made to him in a Book, &c. — Every inspector of corn returns shall duly and regularly enter, in a book to be by him provided and kept for that purpose, the several accounts of the quantities and prices of corn returned to him by such persons respectively as aforesaid; and every such inspector of corn returns for the city of London, and for the several other cities and towns aforesaid, shall in each and every week return to the comptroller of corn returns an account of the weekly quantities and prices of the several sorts of British corn sold in the city or town for which he is appointed inspector, according to the returns so made to him as aforesaid, and in such form as shall be from time to time prescribed and directed by the said comptroller of corn returns; and the said returns shall be so made to the said comptroller by the inspector of corn returns for the city of London on Friday in each week, and by the inspector of corn returns for the several other cities and towns as aforesaid within 3 days next after the first market day holden in each and every week in any such city or town. — § 29.

Average Prices to be made up and published every Week. — The average prices of all British corn, by which the rate and amount of the said duties shall be regulated, shall be made up and computed on Thursday in each and every week in manner following; (that is to say, the said comptroller of corn returns shall on such Thursday in each week, from the returns received by him during the week next preceding, ending on and including the Saturday in such preceding week, add together the total quantities of each sort of British corn respectively appearing by such returns to have been sold, and the total prices for which the same shall thereby appear to have been sold, and shall divide the amount of such total prices respectively by the amount of such total quantities of each sort of British corn respectively, and the sum produced thereby shall be added to the sums in like manner produced in the 5 weeks immediately preceding the same, and the amount of such sums so added shall be divided by 6, and the sum thereby given shall be deemed and taken to be the aggregate average price of each such sort of British corn respectively, for the

purpose of regulating and ascertaining the rate and amount of the said duties; and the said comptroller of corn returns shall cause such aggregate weekly averages to be published in the next succeeding Gazette, and shall on Thursday in each week transmit a certificate of such aggregate average prices of each sort of British corn to the collector or other chief officer of the customs at each of the several ports of the United Kingdom; and the rate and amount of the duties to be paid under the provisions of this act shall from time to time be regulated and governed at each of the ports of the United Kingdom respectively by the aggregate average prices of British corn at the time of the entry for home consumption of any corn, grain, meal, or flour chargeable with any such duty, as such aggregate average prices shall appear and be stated in the last of such certificates as aforesaid which shall have been received as aforesaid by the collector or other chief officer of customs at such port. — § 30.

How Quantities of Corn are to be computed. — In the returns so to be made as aforesaid to the comptroller of corn returns, and in the publications so to be made from time to time in the London Gazette, and in the certificate so to be transmitted by the said comptroller of corn returns to such collectors or other chief officers of the customs as aforesaid, the quantities of each sort of British corn respectively shall be computed and set forth by, according, and with reference to the imperial standard gallon. — § 31.

Comptroller may use the present Averages. — Until a sufficient number of weekly returns shall have been received by the said comptroller of corn returns under this act, to afford such aggregate average prices of British corn as aforesaid, the weekly average prices of British corn published by him immediately before the passing of this act shall by him be used and referred to in making such calculations as aforesaid, in such and the same manner as if the same had been made up and taken under and in pursuance of this act. — § 32.

What shall be deemed British Corn. — All corn or grain, the produce of the United Kingdom, shall be deemed and taken to be British corn for the purposes of this act. — § 33.

Provisions of this Act may be applied to any Town in the United Kingdom. — For the purpose of ascertaining the average price of corn and grain sold within the United Kingdom of Great Britain and Ireland, it shall and may be lawful for his Majesty, by any order or orders to be by him made, by and with the advice of his privy council, to direct that the provisions of this act, so far as regards the appointment of inspectors and the making of weekly returns, shall be applicable to any cities or towns within the United Kingdom of Great Britain and Ireland which shall be named in any such order or orders in council: Provided always, that the returns so received from such towns shall not be admitted into the averages made up for the purpose of regulating the duties payable upon foreign corn, grain, meal, or flour. — § 34.

Section 35. provides for the continuance in office of the present comptrollers and inspectors.

If Returns are untrue, Comptroller to lay a Statement thereof before the Committee of Privy Council. — If the said comptroller of corn returns shall at any time see cause to believe that any return so to be made as aforesaid to any such inspector of corn returns for the city of London, or for any other such city or town as aforesaid, is fraudulent or untrue, the said comptroller shall and he is hereby required, with all convenient expedition, to lay before the Lords of the said committee of privy council a statement of the grounds of such his belief; and if, upon consideration of any such statement, the said Lords of the said committee shall direct the said comptroller to omit any such return in the computation of such aggregate weekly average price as aforesaid, then and in that case, but not otherwise, the said comptroller of corn returns shall and he is hereby authorised to omit any such return in the computation of such aggregate weekly average price. — § 36.

Section 37. enacts, that corn dealers having made the declaration previous to this act shall transmit returns and comply with the rules hereby required.

Comptroller to issue Directions respecting Inspection of Books of Inspectors. — The comptroller of corn returns shall and he is hereby authorised from time to time, in pursuance of any instructions which he shall receive in that behalf from the Lords of the said committee of privy council, to issue to the several inspectors of corn returns any general or special directions respecting the inspection by any person or persons of the books so directed as aforesaid to be kept by every such inspector of corn returns; and no such inspector as aforesaid shall permit or suffer any person to inspect any such book, or to peruse or transcribe any entry therein, except in compliance with some such general or special directions from the said comptroller of corn returns as aforesaid. — § 38.

Copy of the last Return to be affixed on Market Place on each Market Day. — Each and every inspector of corn returns shall and he is hereby required on each and every market day to put up or cause to be put up in the market place of the city or town for which he shall be appointed inspector, or if there shall be no market place in such city or town, then in some other conspicuous place therein, a copy of the last return made by him to the comptroller of corn returns, omitting the names of the parties who may have sold and bought the said corn; and every such inspector shall also again put up such account on the market day immediately following that on which it shall first have been put up, in case the same shall from accident or any other cause have been removed, and shall take due care that the same shall remain up for public inspection until a new account for the ensuing week shall have been prepared and set up. — § 39.

Sections 40. and 41. relate to the payment of comptrollers and inspectors.

Penalty on Corn Dealers for not making Declarations or Returns. — If any person who is hereby required to make and deliver the declaration or declarations herein-before particularly mentioned and set forth, or either of them, shall not make and deliver such declaration or declarations at the time, and in the form and manner, and to the person or persons, herein-before directed and prescribed in that behalf, every person so offending shall forfeit and pay the sum of 20*l.* for each and every calendar month during which he shall neglect or delay to make and deliver any such declaration; and if any person who is herein-before required to make any return to any such inspector of corn returns as aforesaid shall not make such returns to such inspector, at the time and in the form and manner herein-before directed and prescribed, every such offender shall for such his offence forfeit and pay the sum of 20*l.* — § 42.

Sections 43, 44. and 45. regard the recovery and application of penalties, and impose a fine, not exceeding 10*l.*, on any person, lawfully summoned as a witness touching any matter of fact under this act, who refuses to attend without reasonable excuse.

Punishment for making false Returns. — If any person shall make any false and fraudulent statement in any such return as he is herein-before directed and required to make, or shall falsely and wilfully include, or procure or cause to be included, in any such return, any British corn which was not truly and bona fide sold or bought to, by, or on behalf of the person or persons in any such return mentioned in that behalf, in the quantity and for the price therein stated and set forth, every such offender shall be and be deemed guilty of a misdemeanor. — § 46.

Act not to affect the Practice of measuring or Privileges of the City of London. — Nothing in this act contained shall extend to alter the present practice of measuring corn, or any of the articles aforesaid, to be shipped from or to be landed in the port of London, but that the same shall be measured by the sworn meters appointed for that purpose, by whose certificate the searchers or other proper officers of his Majesty's customs are hereby empowered and required to certify the quantity of corn or other articles as aforesaid so shipped or landed; and that nothing in this act contained shall extend to lessen or take away the rights and privileges of, or the tolls or duties due and payable to, the mayor and commonalty and citizens of the city of London, or to the mayor of the said city for the time being, or to take away the privileges of any persons lawfully deriving title from or under them. — § 47.

Limitation of Actions. — Actions brought or commenced under this act must be within three months after the matter or thing done. Defendants may plead the general issue; and if judgment be given against the plaintiff, defendants shall have treble costs. — § 48.

3. TABLES SHOWING THE PRICES OF THE DIFFERENT SORTS OF GRAIN IN GREAT BRITAIN, THE QUANTITIES IMPORTED AND EXPORTED, &c.

The Eton Account of Prices commenced in 1595; the accuracy of the returns in the first years cannot, however, be so implicitly relied on, as those quoted above. — Bishop Electwood and Sir F. M. Eden have collected, with great industry, almost all the existing information respecting the state of prices in England during the last six hundred years.

* From this year, inclusive, the account at Eton College has been kept according to the bushel of 8 gallons, under the provision of the act 31 Geo. 3 c. 30. § 82.

N. B. — The Winchester bushel contains 2170.42 cubic inches, while the Imperial bushel contains 2218.192 cubic inches, being about one thirty-secondth part larger than the former. — (See BUSHEL, and WEIGHTS AND MEASURES.)

The following account of the current prices of all sorts of corn in the London market, 7th of October, 1833, is interesting, from its showing their comparative values, and the estimation in which they are held:—

IV. — Current Prices of Grain, Seeds, &c. per Imperial Quarter. London, 7th of October, 1833.

British.		Per Quarter.	Foreign.		Free. Per Qr.	In Bond. Per Qr.
		s. d.			s. d.	s. d.
Wheat, Essex, Kent, and Suffolk, old red	-	54 to 56	Wheat, Dantzic and Königsberg,	-	66 to 68	48 to 50
do. do. new red	-	51 to 53	do. good mixed	-	56 to 58	46 to 48

We have, in the previous parts of this article, sufficiently illustrated the impolicy, generally speaking, of imposing duties on the importation of corn; but besides the objections that may be made to all duties of this sort, from their tendency to force up average prices, and to render exportation in abundant years impossible, the duty now existing in this country is liable to some which may be looked upon as peculiar to itself. From the way in which it is graduated, it introduces a new element of uncertainty into every transaction connected with the corn trade; producing a disinclination on the part of the merchant to import, and of the foreigner to raise corn for our markets. Suppose a merchant commissions a cargo of wheat when the price is at 71s. a quarter; in the event of the price declining only 3s., or to 68s., the duty will rise from 6s. 8d. to 16s. 8d.; so that if the merchant brings the grain to market, he will realise 13s. 8d. a quarter less than he expected, and 10s. less than he would have done had there been no duty, or the duty been constant!

It may, perhaps, be said that if, on the one hand, the present scale of duties is injurious to the merchant when prices are falling, and when importation is consequently either unnecessary or of less advantage, it is, on the other hand, equally advantageous to him when prices are rising, and when the public interests require that importation should be encouraged: but the prices in the view of the merchant when he gives an order, are usually such as he supposes will yield a fair profit; and if they rise, this rise would, supposing the duty to be constant, yield such an extra profit as would of itself induce him to increase his importation to the utmost. If it were possible to devise a system that would diminish the losses of the merchants engaged in unfavourable speculations, by

making a proportional deduction from the extraordinary gains of those whose speculations turn out to be unusually successful, something, perhaps, might be found to say in its favour. But the system we have been considering proceeds on quite opposite principles: its effect is not to diminish risks, but to increase them; it adds to the loss resulting from an unsuccessful, and to the profit resulting from a successful, speculation!

It would, therefore, seem, that if a duty is to be imposed, one that is constant is preferable to one that fluctuates. When the duty is constant, all classes, farmers as well as merchants, are aware of its amount, and can previously calculate the extent of its influence. But the effect of a duty that fluctuates with the fluctuations of price, can never be appreciated beforehand. Its magnitude depends on contingent and accidental circumstances; and it must, therefore, of necessity, prejudice the interests of the farmer as well as of the corn dealer.

It appears, from No. IX. of the preceding accounts, that in 1828, 842,000 quarters of wheat were entered for home consumption, at an average duty of only 1s. 9½d. per quarter! In 1829 the imports were 1,364,000 quarters, and the duty 9s. 2¾d. In 1830 the imports rose to 1,702,000 quarters, and the duty fell to 6s. 4½d.; and in 1831 the imports were 1,491,000 quarters, and the duty 4s. 8d. Had the duty been a constant one of 6s. or 7s., the interests of all parties would have been materially promoted. But there are obviously very slender grounds for thinking that the quantity imported would have been considerably increased; for though the present system of duties frequently checks importation for a lengthened period, yet, on the other hand, when prices rise, and the duties are reduced, every bushel in the warehouses is immediately entered for home consumption; and the chance, which is every now and then occurring, of getting grain entered under the nominal duty of 1s., probably tempts the merchants to speculate more largely, though at a greater risk to themselves, than they would do under a different system. A moderate duty, accompanied by an equal drawback, besides giving a greater degree of security to the corn trade, would, in this respect, be particularly beneficial to the farmer. Under the present system it is not possible to foretell, with any thing approaching to accuracy, what may be the range of prices during any future period, however near; so that the trade of a farmer, which is naturally one of the most stable, has been rendered almost a species of gambling. But were the ports always open under the plan previously suggested, every one would be aware that variations of price would be confined within comparatively narrow limits: and the business of farming would acquire that security, of which it is, at present, so completely destitute, and which is so indispensable to its success.

IV. FOREIGN CORN TRADE.

Polish Corn Trade. — Dantzic is the port whence we have always been accustomed to import the largest supplies of corn; and it would seem fully established by the data collected by Mr. Jacob, in his tours, that 28s. or 30s. a quarter is the lowest price for which any considerable quantity of wheat for exportation can be permanently raised in the corn-growing provinces in the vicinity of Warsaw: its *minimum* cost price, when brought to London, according to the data furnished by Mr. Jacob, would be as under: —

	s.	d.
Cost of wheat, at Warsaw, per quarter	-	28 0
Conveyance to the boats, and charges for loading and stowing, and securing it by mats	-	0 6
Freight to Dantzic	-	5 0
Loss on the passage by pilfering, and rain causing it to grow	-	3 0
Expenses at Dantzic in turning, drying, screening, and warehousing, and loss of measure	-	2 0
Profit or commission, as the case may be, to the merchant at Dantzic	-	1 6
Freight, prime, insurance, and shipping charges, at Dantzic and in London	-	8 0
<i>Cost of the wheat to the English merchant</i>	-	<u>48 0</u>

It ought, however, to be observed, that the premium paid the underwriters does not cover the risk attending damage from heating or otherwise on the voyage; and it ought further to be observed, that the freight from Warsaw to Dantzic, and from Dantzic home, is here charged at the lowest rate. Mr. Jacob supposes that an extraordinary demand for as much wheat as would be equal to *six* days' consumption of that grain in England, or for 216,000 quarters, would raise the cost of freight on the Vistula from 30 to 40 per cent.; and as such a demand could hardly be supplied without resorting to the markets in the provinces to the south of Warsaw, its *minimum cost* to the London merchants could not, under such circumstances, amount, even supposing some of these statements to be a little exaggerated, to less than from 50s. to 53s. or 55s. a quarter.

Mr. Grade, of Dantzic, furnished the committee of 1831 with the following Table of the average prices of corn at that city, free on board, in decennial periods, from 1770 to 1820.

Average Price, from Ten to Ten Years, of the different Species of Corn, free on board, per Quarter, in Sterling Money, at Dantzic.

	Wheat.		Rye.		Barley.		Oats.	
	s.	d.	s.	d.	s.	d.	s.	d.

1780 — 1789	-	-	33	10	17	11	12	4
1790 — 1799	-	-	43	8	26	3	19	3
1800 — 1809	-	-	60	0	34	10	25	1
1810 — 1819	-	-	55	4	31	1	26	0
Aggregate Average Price of 49 Years	-	-	45	4	27	2	20	10

In 1823, 1824, 1825, and 1826, prices, owing to the cessation of the demand from England, were very much depressed; but they have since attained to near their former elevation.

We subjoin a statement, furnished by the British consul, of the

Average Prices of Grain, bought from Granary, in Sterling Money, at Dantzic, per Imperial Quarter.

Years.	Wheat.	Rye.	Barley.	Oats.	White and Yellow Peas.	Years.	Wheat.	Rye.	Barley.	Oats.	White and Yellow Peas.
s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
1822	30 3	18 4	12 5	10 11	15 7	1828	37 1	19 5	14 3	11 3	28 4
1823	27 9	18 6	14 10	11 0	18 2	1829	47 1	17 4	13 8	10 11	18 8
1824	23 8	11 2	8 11	7 7	11 11	1830	42 2	20 3	15 0	11 2	10 8
1825	24 2	11 4	10 5	8 1	14 7	1831	50 2	28 6	21 3	15 8	27 7
1826	25 1	15 3	13 5	12 5	23 1						
1827	26 11	18 2	16 9	13 10	31 11	Average	33 5	17 10	14 1	11 3	21 0

The shipping charges may, we believe, be taken at 8d. or 9d. a quarter; and this, added to the above, gives 34s. 1d. or 34s. 2d. for the average price of wheat, free on board, at Dantzic, during the 10 years ending with 1831. The charges on importation into England, warehousing here, and then delivering to the consumer, exclusive of duty and profit, would amount to about 10s. a quarter. This appears from the following

Account of the Ordinary Charges on 100 Quarters of Wheat, shipped from Dantzic on Consignment, and landed under Bond in London. — (*Part. Paper*, No. 333. Sess. 1827. p. 28.)

	£	s.	d.	£	s.	d.

				221	19	6
Would produce, at 44s. 4d. per quarter				£221	13	4

N. B. — Loss on remeasuring not considered.

Freight and insurance are taken in this statement at an average, being sometimes higher and sometimes lower.

Nothing, therefore, can be more perfectly unfounded, than the notions so prevalent in this country as to the extreme cheapness of corn at Dantzic. When there is little or no foreign demand, and all that is brought to the city is thrown upon the home market, prices are, of course, very much depressed; but when there is a moderate demand for exportation, they immediately rise to something like the average level of the European market. During the greater number of the years embraced in the consular return, the Polish corn trade was very much depressed; and in some seasons the exports were extremely limited. But notwithstanding these unfavourable circumstances, the price of wheat, free on board, at an average of the whole period, was 34s. 1d. a quarter. Now, if we add to this 10s. a quarter for freight and other charges attending its importation into England, and delivery to the consumer, it could not, in the event of its being charged with a duty of 6s. or 7s. a quarter on importation, be sold so as to indemnify the importer for his outlay, without yielding him any profit, for less than 50s. or 51s. a quarter. And there are really no very satisfactory reasons for supposing that it could be disposed of for so little; for whenever it has been admitted into the British ports under any thing like reasonable duties, prices at Dantzic have uniformly been above 40s. a

quarter. Supposing, however, that, in the event of our ports being always open, the growth of corn in Poland would be so much increased as to admit of wheat being shipped in ordinary seasons for 34s., still it is quite plain it could not be sold in London, under a duty of 6s. or 7s., for less than 53s. or 54s. a quarter.

It is difficult to draw any conclusions on which it would be safe to place much reliance as to the supplies of corn that might be obtained from Dantzic, were our ports constantly open under a reasonable duty. Mr. Jacob gives the following

Account of the Total annual Average Quantity of Wheat and Rye exported from Dantzic, in Periods of 25 Years each, for the 166 Years ending with 1825.

Years.	Wheat. Quarters.	Rye. Quarters.	Total. Quarters.
1651 to 1675	81,775	22,312	307,087
1676 — 1700	124,897	227,482	352,379
1701 — 1725	59,795	170,100	229,895
1726 — 1750	80,624	119,771	200,395
1751 — 1775	141,080	208,140	349,220
1776 — 1800	150,299	163,045	253,344
1801 — 1825	200,330	67,511	267,841

"The average of the whole period," Mr. Jacob observes, "gives an annual quantity of wheat and rye, of 279,794 quarters; and this surplus may be fairly considered as the nearest approach that can be made, with existing materials, to what is the usual excess of the produce of bread corn above the consumption of the inhabitants, when no extraordinary circumstances occur to excite or check cultivation." — (*Report*, p. 49.)

We have, however, been assured by gentlemen intimately acquainted with the countries traversed by the Vistula, the Bug, &c., that Mr. Jacob has very much underrated their capabilities of improvement; and that were our ports opened under a fixed duty of 6s. or 7s. a quarter on wheat, and other grain in proportion, we might reckon upon getting from Dantzic an annual supply of from 350,000 to 450,000 quarters. We incline to think that this is a very moderate estimate. Hitherto, owing to the fluctuating and capricious nature of our demand, it has proved of little advantage to the cultivators; and but little corn has been raised in the expectation of its finding its way to England. But it would be quite another thing were our ports always open. The supply of the English markets would then be an object of the utmost importance to the Polish agriculturists, who, there can be no doubt, would both extend and improve their tillage. We subjoin an

Account of the Exports of Corn from Dantzic during the Three Years ending with 1831, specifying the Quantities sent to different Countries, reckoned in Quarters of 10 $\frac{1}{4}$ to the Last.

Quality of Dantzic Wheat. — It will be seen from the subjoined accounts, that the price of wheat at Dantzic, during the 10 years ending with 1831, was very near 7s. a quarter above its average price at Hamburgh during the same period, and about 2s. above the average of Amsterdam. This difference is entirely owing to the superior quality of the Dantzic wheat. Though small grained, and not so heavy as several other sorts, it is remarkably thin-skinned, and yields the finest flour. Some of the best white, or, as it is technically termed, "high mixed" Dantzic wheat, is superior to the very best English; but the quantity of this sort is but limited, and the average quality of all that is exported from Dantzic is believed to approach very nearly to the average quality of English wheat. Allowing for its superior quality, it will be found that wheat is, speaking generally, always cheaper in Dantzic than in any of the Continental ports nearer to London. There are but few seasons, indeed, in which Dantzic wheat is not largely imported into Amsterdam; and it frequently, also, finds its way into Hamburgh. But it is quite impossible that such should be the case, unless, taking quality and other modifying circumstances into account, it were really cheaper than the native and other wheats met with in these markets. When there is any considerable importation into England, it is of every day occurrence for merchants to order Dantzic wheat in preference to that of Holstein, or of the Lower Elbe, though the latter might frequently

be put into warehouse here for 20s. a quarter less than the former ! It is, therefore, quite indispensable, in attempting to draw any inferences as to the comparative prices of corn in different countries, to make the requisite allowances for differences of quality. Unless this be done, whatever conclusions may be come to can hardly fail of being false and misleading ; and when they happen to be right, they can only be so through the merest accident.

Dantzic being by far the greatest port for the exportation of corn in the north of Europe, its price may be assumed as the general measure of the price in other shipping ports. At all events, it is certain that when Dantzic is exporting, wheat cannot be shipped, taking quality into account, at a cheaper rate from any other place. The importer invariably resorts to what he believes to be, all things considered, the cheapest market ; and it is a contradiction and an absurdity to suppose that he should burden himself with a comparatively high freight, and pay 34s. 1d. for wheat at Dantzic, provided he could buy an equally good article in so convenient a port as Hamburg for 26s. 6½d.

If, therefore, we are right in estimating the price at which wheat could be imported from Dantzic under a duty of 6s. or 7s., at from 53s. to 54s., we may be assured that this is the lowest importation price. The greater cheapness of the imports from other places is apparent only ; and is uniformly countervailed by a corresponding inferiority of quality. — (For further details as to the Polish corn trade, see DANTZIC, KÖNIGSBERG, &c.)

Russian Corn Trade.—Russia exports large quantities of wheat, rye, oats, and meal. The wheat is of various qualities ; but the greater portion of it is small grained, coarse, brown, and very badly dressed. The hard, or Kubanka, is the best ; it keeps well, and is in considerable demand for mixing with other wheats that are old or stale. Russian oats are very thin ; but, being dried in the straw, they weigh better than could be expected from their appearance, and are reckoned wholesome food. Our imports from Russia, in 1831, were extraordinarily large, she having supplied us with no fewer than 464,000 quarters of wheat and wheat flour, 369,000 quarters of oats and oatmeal, 54,000 quarters of rye and rye meal, 42,000 quarters of barley and barley meal, &c., making a grand total of 937,000 quarters ! Generally, however, our imports do not exceed a fifth part of this quantity. The quarter of hard wheat was worth, free on board, at Petersburg, in November 1832, when there was no demand for exportation, from 28s. to 28s. 6d.—(The reader will find notices of the Russian corn trade under the articles ARCHANGEL, PETERSBURGH, and RIGA. For an account of the corn trade by the Black Sea, see *post*, and the article ODESSA.)

Danish Corn Trade.—The export of wheat from Denmark Proper, that is, from Jutland and the islands, is but inconsiderable. There is, however, a pretty large exportation of wheat and other grain, as well as of butter, cheese, beef, &c., from Sleswick and Holstein. As already stated, the quality of the wheat is inferior ; for, though it looks plump, it is coarse and damp. The chief shipping port for Danish corn is Kiel ; but owing to the superior facilities enjoyed by Hamburg, the greater portion of it is consigned to that city. In 1831 we imported from Denmark 55,960 quarters of wheat, 115,658 do. of barley, 96,996 do. of oats, with some small quantities of rye and beans. — (For an account of the exports of raw produce from Denmark in 1831, see COPENHAGEN.)

Corn Trade of the Elbe, &c.—Next to Dantzic, Hamburg is, perhaps, the greatest corn market in the north of Europe, being a depôt for large quantities of Baltic corn, and for the produce of the extensive countries traversed by the Elbe. But the excess of the exports of wheat from Hamburg over the imports, is less than might have been expected, and amounted, at an average of the 10 years ending with 1825, to only 48,263 quarters a year. It appears from the subjoined table that the average price of wheat at Hamburg, during the 10 years ending with 1831, was only 26s. 6½d. a quarter, being about 7s. a quarter under the level of Dantzic ; but this extreme lowness of price is altogether ascribable to the inferiority of the Holstein and Hanover wheats, which are generally met with in great abundance at Hamburg. Wheat from the Upper Elbe is of a better quality. Bohemian wheat is occasionally forwarded by the river to Hamburg ; but the charges attending its conveyance from Prague amount, according to Mr. Jacob, to full 17s. a quarter, and prevent its being sent down, except when the price is comparatively high. In 1830, there was shipped from Hamburg for British ports, 271,700 quarters of wheat, 1,900 of rye, 18,200 of barley, and 2,600 of oats. Perhaps we might be able, did our prices average about 55s., to import in ordinary years from 250,000 to 300,000 quarters of wheat from Denmark and the countries intersected by the Weser and the Elbe.

Amsterdam is an important dépôt for foreign corn, every variety of which may be found there. Only a small part of its own consumption is supplied by corn of native growth; so that the prices in it are for the most part dependent on the prices at which corn can be brought from Dantzic, Kiel, Hamburg, and other shipping ports. Rotterdam is a very advantageous port for warehousing foreign corn; being conveniently situated, and the warehouse rent low, not exceeding 2*d.* or 2½*d.* per quarter per month. We subjoin an account of the

Average Prices, per Imperial Quarter, of Wheat, Rye, Barley, and Oats grown within the Consulship of Amsterdam, during the Ten Years ending with 1831.

Previously to the late revolution in the Netherlands, there used to be a considerable trade in corn from Antwerp to England. Wheats, both white and red, are among the finest we receive from the Continent, and are, of course, pretty high priced. Beans and peas are also fine. Antwerp buck-wheat is the best in Europe. According to Mr. Jacob, the cost of storing and turning wheat per month at Antwerp does not exceed 1½*d.* a quarter, or about half what it costs in London.

French Corn Trade.—It appears, from the accounts given by the Marquis Garnier in the last edition of his translation of the *Wealth of Nations*, that the price of the hectolitre of wheat at the market of Paris amounted, at an average of the 19 years beginning with 1801 and ending with 1819, to 20 fr. 53 cent.; which is equal to 30 fr. 80 cent. the septier; or, taking the exchange at 25 fr., to 45*s.* 6*d.* the quarter. Count Chaptal, in his valuable work, *Sur l'Industrie Française* (tom. i. p. 226.), published in 1819, estimates the ordinary average price of wheat throughout France at 18 fr. the hectolitre, or 42*s.* 10*d.* the quarter. The various expenses attending the importation of a quarter of French wheat into London may be taken, at a medium, at about 6*s.* a quarter. France, however, has very little surplus produce to dispose of; so that it would be impossible for us to import any considerable quantity of French corn without occasioning a great advance of price; and in point of fact, our imports from France have been at all times quite inconsiderable.

The mean of the different estimates framed by Vauban, Quesnay, Expilly, Lavoisier, and Arthur Young, gives 61,519,672 septiers, or 32,810,000 quarters, as the total average growth of the different kinds of grain in France.—(*Peuchet, Statistique Élémentaire*, p. 290.) We, however, took occasion formerly to observe (*Supp. to Encyc. Brit. art. Corn Laws*) that there could not be a doubt that this estimate was a great deal too low; and the more careful investigations of late French statisticians fully confirm this remark. It is said that the mean annual produce of the harvests of France, at an average of the 4 years ending with 1828, amounted to 60,533,000 hectolitres of wheat, and 114,738,000 ditto of other sorts of grain; making in all 175,271,000 hectolitres, or 62,221,205 Winchester quarters. Of this quantity it is supposed that 16 per cent. is consumed as seed, 19 per cent. in the feeding of different species of animals, and 2 per cent. in distilleries and breweries.—(*Bulletin des Sciences Géographiques*, tom. xxv. p. 34.) This estimate is believed to be pretty nearly accurate; perhaps, however, it is still rather under the mark.

The foreign corn trade of France was regulated down to a very late period by a law which forbade exportation, except when the home prices were below certain limits; and which restrained and absolutely forbade importation except when they were above certain other limits. The prices regulating importation and exportation differed in the different districts into which the kingdom was divided; and it has not unfrequently happened that corn warehoused in a particular port, where it was either not admissible at all, or not admissible except under payment of a high duty, has been carried to another port in

another district, and admitted duty free! But during the last 2 years importation has been at all times allowed under graduated duties, which, however, like those of this country, become prohibitory when the prices sink to a certain level. The division of the kingdom into separate districts is still kept up; and in June, 1833, while the duties on wheat imported into some of the departments were only 4 fr. 75 cent., they were, in others, as high as 12 fr. 25 cent. An official announcement is issued on the last day of each month, of what the duties are to be in that district during the succeeding month. These depend, with certain modifications, on the average prices of the districts.

Spanish Corn Trade. — The exportation of corn from Spain was formerly prohibited under the severest penalties. But in 1820, grain and flour were both allowed to be freely exported; and in 1823, this privilege was extended to all productions (*frutos*) the growth of the soil. There is now, in fact, no obstacle whatever, except the expense of carriage, to the conveyance of corn to the sea-ports, and thence to the foreigner. Owing, however, to the corn-growing provinces being principally situated in the interior, and to the extreme badness of the roads, which renders carriage to the coast both expensive and difficult, the exports are reduced within comparatively narrow limits; the same difficulty of carriage frequently gives rise to very great differences in the prices of places, in all parts of the country, only a few leagues distant. Were the means of communication improved, and any thing like security given to the husbandman, Spain would, in no long time, become one of the principal exporting countries of Europe. Old Castile, Leon, Extremadura, and that part of Andalusia to the south and east of Seville, are amongst the finest corn countries of Europe; and might be made to yield immense supplies. But owing to the disturbed state of the country, and the want of a market for their produce, they can hardly be said to be at all cultivated. And yet such is their natural fertility, that in good seasons the peasants only reap those fields nearest to the villages! Latterly we have begun to import corn from Bilbao, Santander, and other ports in the north of Spain; and in 1831, she supplied us with no fewer than 158,000 quarters. — (See BILBAO.)

Corn Trade of Odessa. — Odessa, on the Black Sea, is the only port in Southern Europe from which any considerable quantity of grain is exported. We believe, indeed, that the fertility of the soil in its vicinity has been much exaggerated; but the wheat shipped at Odessa is principally brought from Volhynia and the Polish provinces to the south of Cracow, the supplies from which are susceptible of an indefinite increase. Owing to the cataracts in the Dnieper, and the Dniester having a great number of shallows, most part of the corn brought to Odessa comes by land carriage. The expense of this mode of conveyance is not, however, nearly so great as might be supposed. The carts with corn are often in parties of 150; the oxen are pastured during the night, and they take advantage of the period when the peasantry are not occupied with the harvest, so that the charge on account of conveyance is comparatively trifling.

Both soft and hard wheat is exported from Odessa; but the former, which is by far the most abundant, is only brought to England. Supposing British wheat to sell at about 60s., Odessa wheat, in good order, would not be worth more than 52s. in the London market; but it is a curious fact, that in the Mediterranean the estimation in which they are held is quite the reverse; at Malta, Marseilles, Leghorn, &c., Odessa wheat fetches a decidedly higher price than British wheat.

The hard wheat brought from the Black Sea comes principally from Taganrog. It is a very fine species of grain; it is full 10 per cent. heavier than British wheat, and has less than half the bran. It is used in Italy for making macaroni and vermicelli, and things of that sort; very little of it has found its way to England.

The voyage from Odessa to Britain is of uncertain duration, but generally very long. It is essential to the importation of the wheat in a good condition, that it should be made during the winter months. When the voyage is made in summer, unless the wheat be very superior, and be shipped in exceedingly good order, it is almost sure to heat; and has sometimes, indeed, been injured to such a degree as to require to be dug from the hold with pickaxes. Unless, therefore, means be devised for lessening the risk of damage during the voyage, there is little reason to think that Odessa wheat will ever be largely imported into Britain. — (See the evidence of J. H. Lander, Esq. and J. Schneider, Esq. before the Lords' Committee of 1827, on the price of foreign corn.)

It appears from the report of the British consul, dated Odessa, 31st of December, 1830, that the prices of wheat during the quarter then terminated varied from 22s. 4d. to 54s. 6d. a quarter. During the summer quarter, 149,029 quarters of wheat were exported.

We copy the following account from the evidence of J. H. Lander, Esq. referred to above: —

Account of the average Prices of Wheat at Odessa, with the Shipping Charges, reduced into British Measure and Currency; the Rate of Exchange (the whole taken Quarterly for the Years 1814 to 1834, inclusive); and the Quantities annually exported.

The entire expense of importing a quarter of wheat from Odessa to London may be estimated at from 16s. to 19s. We borrow, from the valuable evidence of J. Schneider, Esq. already referred to, the following account, which states in detail the various items of expense.—(See Table, next page.)

The price free on board is estimated, in this Table, at under 16s., being no less than 12s. below the average price of October and December, 1830, as returned by the consul; but notwithstanding, if we add to the cost of the wheat in London, as given in this statement, 6s. of duty, and allow 10s. for its supposed inferiority to English wheat, its price here, when thus reduced to the standard of the latter, would be about 50s. 6d. At present (7th of October, 1833), Odessa wheat, entered for home consumption, is worth in the London market from 42s. to 46s.; being about 10s. below the average of English wheat.

American Corn Trade.—The prices of wheat at New York and Philadelphia may be taken, on an average, at from 37s. to 40s. a quarter; and as the cost of importing a quarter of wheat from the United States into England amounts to from 10s. to 12s., it is seen that no considerable supply could be obtained from that quarter, were our prices under 50s. or 52s. It ought also to be remarked, that prices in America are usually higher than in the Baltic; so that but little can be brought from the former, except when the demand is sufficient previously to take off the cheaper wheats of the northern ports.

The exports of wheat from the United States are, however, comparatively trifling; it being in the shape of flour that almost all their exports of corn are made. The shipments of this important article from Baltimore, Philadelphia, New York, New Orleans, and other ports, are usually very large. The British West Indies, Cuba, Mexico, Brazil, England, and France, are the principal markets to which it is sent. All sorts of flour, whether made of wheat, rye, Indian corn, &c. exported from the United States, must previously be submitted to the inspection of officers appointed for that purpose. The law further directs, that the barrels, in which it is shipped, shall be of certain dimensions, and that each barrel shall contain 196 lbs. of flour, and each half barrel 98 lbs. The inspector,

having ascertained that the barrels correspond with the regulations as to size, weight, &c., decides as to the quality of the flour: the first, or best sort, being branded *Superfine*; the second, *Fine*; the third, *Fine Middlings*; and the fourth, or lowest quality, *Middlings*. Such barrels as are not merchantable are marked *Bad*; and their exportation, as well as the exportation of those deficient in weight, is prohibited. Rye flour is divided into 2 sorts, being either branded *Superfine Rye Flour*, or *Fine Rye Flour*. Maize flour is branded *Indian Meal*; flour made from buck-wheat is branded *B. Meal*. Indian meal may be exported in hhds. of 800 lbs. Flour for home consumption is not subjected to inspection. The inspection must take place at the time and place of exportation, under a penalty of 5 dollars per barrel. Persons altering or counterfeiting marks or brands forfeit 100 dollars; and persons putting fresh flour into barrels already marked or branded, or offering adulterated wheaten flour for sale, forfeit in either case 5 dollars for each barrel.

The fees of branding were reduced in 1832. They amount, in New York, to 3 cents for each hogshead, and 1 cent for each barrel and half barrel of full weight. A fine of 30 cents is levied on every barrel or half barrel below the standard weight, exclusive of 20 cents for every pound that it is deficient.

The act 9 Geo. 4. c. 60. enacts, that every barrel of wheaten flour imported, shall be deemed equivalent to 38½ gallons of wheat, and shall be charged with a corresponding duty (*anté*, p. 418.). Hence, when the price of British wheat per quarter is between 52s. and 53s., the duty on the barrel of flour is 20s. 10¼d.; when wheat is between 60s. and 61s., the duty on flour is 16s. 0½d.; and when wheat is between 69s. and 70s., the duty on flour is 8s. 2¾d.*

The following Tables, derived principally from private but authentic sources, give a very complete view of the foreign corn trade of the United States during the last 10 years.

* There is a Table of the duties on flour, according to the variations in the price of British wheat, in the valuable work of Mr. Reuss (p. 117.) relating to the trade between Great Britain and America.

* Owing to the diminished demand in England, the exports in the year ending 30th of September, 1832, fell considerably under the level of the 2 preceding years, being only 864,919 barrels, valued at 4,880,623 dollars. There were exported, during the same year, 88,304 bushels of wheat, and 451,230 bushels of Indian corn. — *Papers laid before Congress*, 15th of February, 1833.)

Mr. Reuss gives (p. 120.) the following *pro forma* account of the expenses attending the importation of a cargo of 5,000 bushels of wheat from New York, supposing it to cost 1 doll. 12 cents a bushel, which is about its average price.

The usual price of wheat in Canada, when there is a demand for the English market, is about 40s. a quarter; but taking it as low as 35s., if we add to this 12s. a quarter as the expenses of carriage and warehousing, it will make its price in Liverpool, when delivered to the consumer, 47s.; and being spring wheat, it is not so valuable, by about 6s. a quarter, as English wheat. The duty on corn imported from a British colony being, when the home price is under 67s., only 5s., it is suspected that a good deal of the flour brought from Canada has been really furnished by the United States. It is certain, too, that in the present year (1833) wheat has been sent from Archangel to Canada, in the view (as is alleged) of its being re-shipped, under the low duty, to British ports; the saving of duty being supposed sufficient to counterbalance the cost of a double voyage across the Atlantic! But grain from the colonies is not admitted into England at the low duty, without the exporters subscribing a declaration that it is the produce of such colonies; any wilful inaccuracy in such document being punished by the forfeiture of the corn so imported, and of 100% of penalty; and in addition to this, the corn, flour, &c. must also be accompanied by a *certificate of origin* subscribed by the collector or comptroller at the port of shipment. It is, therefore, difficult to see how the importers of Russian corn into Canada are to succeed in getting it shipped for England as colonial corn; and we believe that most of it will go to the West Indies.

Account of all Corn and Flour imported into Great Britain from Canada, during the Five Years ending with 1832; specifying the Quantities in each Year.—(*Parl. Paper*, No. 206. Sess. 1832.)

Inferences from the above Review of Prices.—We may, we think, satisfactorily conclude, from this pretty lengthened review of the state of the foreign corn trade, that in the event of all restrictions on the importation of corn into our markets being abolished, it could not, in ordinary years, be imported for less than 46s. or 47s. a quarter. But taking it so low as 44s., it is plain it could not, in the event of its being charged with a duty of 6s. or 7s., be sold for less than 50s. or 51s.

Now, it appears, from the account No. III. page 423., that the average price of wheat in England and Wales, for the ten years ending with 1832, amounted to 61s. 8 $\frac{3}{4}$ d. a quarter; and it will be observed that the crops from 1826 to 1831 were very deficient, and that the importations in those years were unusually large. But without taking this circumstance into account, it is clear, from the previous statements, that the opening of the ports under a fixed duty of 6s. or 7s. could not occasion a reduction of more than 9s. or 10s. a quarter in the prices of the last 10 years; and not more than 7s. or 8s. on the prices of last year (1832).

We feel pretty confident that these statements cannot be controverted; and they show, conclusively, how erroneous it is to suppose that the repeal of the existing corn laws, and the opening of the ports for importation, under a duty of 6s. or 7s., would throw a large proportion of our cultivated lands into pasture, and cause a ruinous decline in the price of corn. The average price of wheat in England and Wales, in 1802, 1803, and 1804,—years of decided agricultural improvement,—was exactly 61s. a quarter, being almost identical with its price during the last 10 years; while the reduction of taxation, the greater cheapness of labour, and the various improvements that have been made in agriculture since 1804, must enable corn to be raised from the same soils at a less expense now than in that year. It cannot be justly said that 1823 was by any means an unfavourable year for the farmers; and yet the average price of wheat was then only 51s. 9d., being rather less than its probable average price under the system we have ventured to propose. The landlords and farmers may, therefore, take courage. Their prosperity does not depend on restrictive regulations; but is the effect of the fertility of the soil which belongs to them, of the absence of all oppressive feudal privileges, and of the number and wealth of the consumers of their produce. The unbounded freedom of the corn trade would not render it necessary to abandon any but the most worthless soils, which ought never to have been broken up; and would, consequently, have but a very slight effect on rent; while it would be in other respects supremely advantageous to the landlords, whose interests are closely identified with those of the other classes.

COTTON (*Ger. Baumwolle*; *Du. Katoen, Boomwol*; *Da. Bomuld*; *Sw. Bomull*; *Fr. Coton*; *It. Cotone, Bambaia*; *Sp. Algodon*; *Port. Algodão*; *Rus. Chlobtshataju bumaga*; *Pol. Bawełna*; *Lat. Gossypium, Bombax*; *Arab. Kutun*; *Sans. Kapasa*; *Hind. Rūhi*; *Malay, Kapas*), a species of vegetable wool, the produce of the *Gossypium herbaceum*, or cotton shrub, of which there are many varieties. It is found growing naturally in all the tropical regions of Asia, Africa, and America, whence it has been transplanted, and has become an important object of cultivation, in the southern parts of the United States, and to some extent also in Europe.

Cotton is distinguished in commerce by its colour, and the length, strength, and fineness of its fibre. White is usually considered as characteristic of secondary quality. Yellow, or a yellowish tinge, when not the effect of accidental wetting or inclement seasons, is considered as indicating greater fineness.

There are many varieties of raw cotton in the market, their names being principally derived from the places whence they are brought. They are usually classed under the denominations of *long* and *short stapled*. The best of the first is the *sea-island cotton*, or that brought from the shores of Georgia; but its qualities differ so much, that the price

of the finest specimens is often four times as great as that of the inferior. The superior samples of Brazil cotton are reckoned among the long stapled. The *upland* or *bowed* Georgia cotton forms the largest and best portion of the short stapled class. All the cottons of India are short stapled.

The estimation in which the different kinds of cotton wool are held may be learned from the following statement of their prices in Liverpool, on the 1st of November, 1833. The inferiority of Bengal and Surat cotton is sometimes ascribed to the defective mode in which it is prepared; but Mr. Horace H. Wilson doubts whether it can be grown in India of a better kind. The raw cotton of the Indian islands has hitherto been almost entirely consumed on the spot.

A small quantity of very superior cotton has been imported from New South Wales.

The manufacture of cotton has been carried on in Hindostan from the remotest antiquity. Herodotus mentions (lib. iii. c. 106.) that in India there are wild trees that produce a sort of wool superior to that of sheep, and that the natives dress themselves in cloth made of it.—(See, to the same effect, *Arrian Indic.* c. 16. p. 582.) The manufacture obtained no footing worth mentioning in Europe till last century.

1. *Rise and Progress of the British Cotton Manufacture.*—The rapid growth and prodigious magnitude of the cotton manufacture of Great Britain are, beyond all question, the most extraordinary phenomena in the history of industry. Our command of the finest wool naturally attracted our attention to the woollen manufacture, and paved the way for that superiority in it to which we have long since attained: but when we undertook the cotton manufacture, we had comparatively few facilities for its prosecution, and had to struggle with the greatest difficulties. The raw material was produced at an immense distance from our shores; and in Hindostan and China the inhabitants had arrived at such perfection in the arts of spinning and weaving, that the lightness and delicacy of their finest cloths emulated the web of the gossamer, and seemed to set competition at defiance. Such, however, has been the influence of the stupendous discoveries and inventions of Hargraves, Arkwright, Crompton, Cartwright, and others, that we have overcome all these difficulties—that neither the extreme cheapness of labour in Hindostan, nor the excellence to which the natives had attained, has enabled them to withstand the competition of those who buy their cotton; and who, after carrying it 5,000 miles to be manufactured, carry back the goods to them. This is the greatest triumph of mechanical genius: and what perhaps is most extraordinary, our superiority is not the late result of a long series of successive discoveries and inventions; on the contrary, it has been accomplished in a very few years. Little more than half a century has elapsed since the British cotton manufactory was in its infancy; and it now forms the principal business carried on in the country.—affording an advantageous field for the accumulation and employment of millions upon millions of capital, and of thousands upon thousands of workmen! The skill and genius by which these astonishing results have been achieved, have been one of the main sources of our power: they have contributed in no common degree to raise the British nation to the high and conspicuous place she now occupies. Nor is it too much to say that it was the wealth and energy derived from the cotton manufacture that bore us triumphantly through the late dreadful contest, at the same time that it gives us strength to sustain burdens that would have crushed our fathers, and could not be supported by any other people.

The precise period when the manufacture was introduced into England is not known; but it is most probable that it was some time in the early part of the 17th century. The first authentic mention is made of it by Lewis Roberts, in his *Treasure of Traffic*, published in 1641, where it is stated, “The town of Manchester, in Lancashire, must be also herein remembered, and worthily for their encouragement commended, who buy the yarn of the Irish in great quantity, and weaving it, returne the same again into Ireland to sell. Neither doth their industry rest here; for they buy cotton wool in London that comes first from Cyprus and Smyrna, and at home make the same, and perfect it into

fustians, vermillions, dimities, and other such stuffs, and then return it to London, where the same is vented and sold, and not seldom sent into forrain parts, who have means, at far easier terms, to provide themselves of the said first materials." — (Orig. ed. p. 32.) It is true, indeed, that mention is frequently made by previous writers, and in acts of the legislature passed at a much earlier period *, of "Manchester cottons," "cotton velvets," "fustians," &c.; but it is certain that these articles were *wholly composed of wool*, and had most probably been denominated cottons from their having been prepared in imitation of some of the cotton fabries imported from India and Italy.

From the first introduction of the cotton manufacture into Great Britain down to the comparatively late period of 1773, the weft, or transverse threads of the web, only, were of cotton; the warp, or longitudinal threads, consisting wholly of linen yarn, principally imported from Germany and Ireland. In the first stage of the manufacture, the weavers, dispersed in cottages throughout the country, furnished themselves as well as they could with the warp and weft for their webs, and carried them to market when they were finished: but about 1760, a new system was introduced. The Manchester merchants began about that time to send agents into the country, who employed weavers, whom they supplied with foreign or Irish linen yarn for warp, and with raw cotton, which being carded and spun, by means of a common spindle or distaff, in the weaver's own family, was then used for weft. A system of domestic manufacture was thus established; the junior branches of the family being employed in the carding and spinning of the cotton, while its head was employed in weaving, or in converting the linen and cotton yarn into cloth. This system, by relieving the weaver from the necessity of providing himself with linen yarn for warp and raw cotton for weft, and of seeking customers for his cloth when finished, and enabling him to prosecute his employment with greater regularity, was an obvious improvement on the system that had been previously followed; but it is at the same time clear that the impossibility of making any considerable division among the different branches of a manufacture so conducted, or of prosecuting them on a large scale, added to the interruption given to the proper business of the weavers, by the necessity of attending to the cultivation of the patches of ground which they generally occupied, opposed invincible obstacles to its progress, so long as it was conducted in this mode.

It appears from the Custom-house returns, that the total quantity of cotton wool annually imported into Great Britain, at an average of the *five* years ending with 1703, amounted to only 1,170,881 lbs. The accounts of the imports of cotton from 1720 to 1770 have not been preserved; but until the last 2 or 3 years of that period the manufacture increased very slowly, and was of very trifling amount. Dr. Percival, of Manchester, who had the best means of being accurately informed on the subject, states that the entire value of all the cotton goods manufactured in Great Britain, at the accession of George III. in 1760, was estimated to amount to only 200,000*l.* a year, and the number of persons employed was quite inconsiderable: but in 1767, a most ingenious person, James Hargraves, a carpenter at Blackburn in Lancashire, invented the *spinning jenny*. At its first invention, this admirable machine enabled *eight* threads to be spun with the same facility as one; and it was subsequently brought to such perfection, that a little girl was able to work no fewer than from *eighty* to *one hundred and twenty* spindles.

The jenny was applicable only to the spinning of cotton for weft, being unable to give to the yarn that degree of firmness and hardness which is required in the longitudinal threads or warp: but this deficiency was soon after supplied by the introduction of the *spinning-frame*, — that wonderful piece of machinery which spins a vast number of threads of any degree of fineness and hardness, leaving to man merely to feed the machine with cotton, and to join the threads when they happen to break. It is not difficult to understand the principle on which this machine is constructed, and the mode of its operation. It consists of two pairs of rollers, turned by means of machinery. The lower roller of each pair is furrowed or fluted longitudinally, and the upper one is covered with leather, to make them take a hold of the cotton. If there were only one pair of rollers, it is clear that a carding of cotton passed between them would be drawn forward by the revolution of the rollers, but it would merely undergo a certain degree of compression from their action. No sooner, however, has the carding, or *roving*, as it is technically termed, begun to pass through the first pair of rollers, than it is received by the second pair, which are made to revolve with (as the case may be) 3, 4, or 5 times the velocity of the first pair. By this admirable contrivance, the roving is drawn out into a thread of the desired degree of tenuity; a twist being given to it by the adaptation of the spindle and fly of the common flax-wheel to the machinery.

Such is the principle on which Sir Richard Arkwright constructed his famous spinning frame. It is obvious that it is radically and completely different from the previous

* In an act of 5 & 6 Edw. G. (1552), entitled, for the true making of WOOLLEN cloth, it is ordered, "*That all cottons called Manchester, Lancashire, and Cheshire cottons, full wrought for sale, shall be in length,*" &c. This proves incontestably, that what were then called cottons were made wholly of wool.

methods of spinning, either by the common hand-wheel or distaff, or by the jenny, which is only a modification of the common wheel. Spinning by rollers was an entirely original idea; and it is difficult which to admire most—the profound and fortunate sagacity which led to so great a discovery, or the consummate skill and address by which it was so speedily perfected, and reduced to practice.*

Since the dissolution of Sir Richard Arkwright's patent, in 1785, the progress of discovery and improvement in every department of the manufacture has been most rapid. The *mule-jenny*—so called from its being a compound of the jenny and the spinning frame—invented by Mr. Crompton, and the *power-loom*, invented by the Rev. Mr. Cartwright, are machines that have had the most powerful influence on the manufacture; and in consequence of their introduction, and of innumerable other inventions and improvements, the prices of cotton cloth and yarn have gone on progressively diminishing. But as the demand for cottons has been, owing to their extraordinary cheapness, extended in a still greater degree, the value of the goods produced, and the number of persons employed in the manufacture, are now decidedly greater than at any previous period.

2. *Imports of Cotton Wool. Countries whence it is imported. Prices, Duties, &c.*—The following Tables have been partly taken from official documents, and partly from the accounts of merchants of great experience. We believe they may be relied on as approaching as near to accuracy as it is possible to attain to in such matters.

Account of the Imports and Exports of Cotton Wool to and from Great Britain, from 1781 to 1812, both inclusive.

* There is, in the new edition of the *Encyclopædia Britannica*, a pretty full account of the life of Sir Richard Arkwright. The question as to his merit as an original discoverer is still undecided. Recently, however, it has been ascertained that a patent for spinning by rollers, revolving with different degrees of velocity, was taken out by Messrs. Wyatt and Paul, so early as 1738.—(See the excellent *Account of the Cotton Manufacture*, by Edward Baines, jun., Esq.) But it does not appear that the inventors had been able to give effect to their happy idea, and all traces of the invention seem to have been lost. The statements in the case printed by Sir Richard Arkwright and his partners in 1782, show, that he was aware of the attempts made in the reign of George II. to spin by machinery; but there is no evidence to prove that he was acquainted with the principle on which these attempts had been made, or that he had seen the patent referred to. Undoubtedly, however, the probability seems to be that he had. But admitting this to be the case, it detracts but little from the substantial merits of Sir Richard Arkwright. If the idea of spinning by rollers did not spring up spontaneously in his mind, he was, at all events, the first who made it available in practice; and showed how it might be rendered a most prolific source of wealth.

In 1786, the supplies of cotton wool were derived from the following sources: —

	Lbs.
From the British West Indies	5,800,000
French and Spanish colonies	5,500,000
Dutch colonies	1,600,000
Portuguese colonies	2,000,000
Smyrna and Turkey	5,000,000
	<hr/> 19,900,000 lbs.

or about 66,000 bales.—*N. B.* The bale or package is of various magnitudes; but may, at an average, be estimated at from 300 to 310 lbs.

Previously to 1790, North America did not supply us with a single pound weight of raw cotton. After the termination of the American war, cotton began to be cultivated in Carolina and Georgia; and it has succeeded so well, that it now forms the principal staple production of the United States. American cotton is generally known by the names of *sea-island*, *upland*, *New Orleans*, and *Alabama*. The first is the finest cotton imported into Britain. It grows on small sandy islands contiguous to the shores of Georgia, and on the low grounds along the sea. The *upland* grows at a distance from the coast, and is so very difficult to separate from the seed, that it was for a considerable period not worth cultivating. But the genius of Mr. Whitney, who invented a machine which separates the wool from the seed with the greatest facility, has done for the planters of Carolina and Georgia what the genius of Arkwright did for the manufacturers of Lancashire. Before Mr. Whitney's invention, in 1793, very little upland was produced, and none was exported from the United States. No sooner, however, had his machine been constructed, than the cultivation of this species of cotton became the principal object of the agriculturists of Carolina and Georgia; and the exports have increased to upwards of 100,000,000 lbs. New Orleans and Alabama cottons are so called from the ports whence they are shipped. At present, the exports of all sorts of cotton from the United States exceed 300,000,000 lbs. a year.

Quantity and Value of the Exports of Cotton Wool from the United States, during the Year ended 30th of September, 1832, specifying the Countries to which Exports were made, with the Quantities and their Values sent to each.

(*Papers laid before Congress, 15th of February, 1833, p. 218.*)

Brazil, the East Indies, Egypt, &c. are, after the United States, the countries that furnish the largest supplies of cotton for exportation.

Of 288,674,000 lbs. of cotton wool imported into the United Kingdom in 1831, 219,333,000 lbs. were from the United States, 31,695,000 lbs. from Brazil, 25,805,000 lbs. from the East Indies, 7,714,000 lbs. from Egypt, 2,401,000 lbs. from the British West Indies, 334,000 lbs. from Columbia, 366,000 lbs. from Turkey and Continental Greece, 344,000 lbs. from Malta, &c. — (*Parl. Paper, No. 550. Sess. 1833.*)

It has been the practice for many years past to levy a duty on cotton wool, when imported. The policy of such a duty is very questionable; and it would be quite intolerable, were it not kept at a low rate. For a number of years previously to 1831, it amounted (on foreign cotton) to 6 per cent *ad valorem*; but, in order to make up, in part, at least, for the loss of revenue caused by the repeal of the duty on printed cottons — (see *CALICO*), it was raised in that year to 5s. 10d. a cwt. Such a duty would have materially affected the imports of the inferior species of cotton, and the price of coarse goods; and being, in consequence, justly objected to, it was reduced last session (1833) to 2s. 11d. a cwt. The duty on cotton from a British possession is little more than nominal, being only 4d. a cwt. At an average of the 3 years ending with 1832, the duties on cotton produced 449,760*l.*

The subjoined statement is taken from the circular of George Holt and Co., eminent cotton brokers at Liverpool, dated 31st of December, 1832. It contains some additional

and instructive details. Its near agreement with the previous statements affords a strong proof of their and its accuracy.

Statement of the Consumption, Exportation, &c. of Great Britain, for the different Sorts of Cotton Wool, from 1824 to 1832, both inclusive.

				222,596,907

This annual quantity of 222,596,907 lbs. gives a weekly supply of 4,280,709 lbs. Mr. Burns estimates the quantity spun per spindle, per week, at 8½ oz., making the total number of spindles employed in England and Wales, in 1832, 7,949,508. Those employed in Scotland, during the same year, are estimated, in the same way, at 881,020. Mr. Burns further calculates the number of looms employed in England and Wales at 203,703. The consumption of flour in the manufacture is much greater than any one not pretty well acquainted with it would readily suppose. The average quantity required for each loom is estimated at 4 lbs. per week; making the total annual consumption, in England and Wales, 42,301,584 lbs., or 215,824 barrcls of 196 lbs. each!

We are indebted to Mr. Cook for the following

Account of the Imports of Cotton into the principal Continental Ports in 1830, 1831, and 1832, and of the Stocks on hand in these Years.

3. *Present Value of the British Cotton Manufacture. Amount of Capital, and Number of Persons employed in it.* — It would be very desirable to be able to form a tolerably accurate estimate of the present value of the cotton manufacture, and of the number of persons employed in its different departments; but the data on which such estimates are founded being necessarily very loose, it is impossible to arrive at any thing like precision. Perhaps, however, the following calculations are not very wide of the mark.

In 1817, Mr. Kennedy, one of the best informed cotton manufacturers in the empire, in a paper published in the *Manchester Transactions*, estimated the number of persons employed in the *spinning* of cotton in Great Britain at 110,763; the aid they derived from steam engines as equal to the power of 20,768 horses; and the number of spindles in motion at 6,645,833. Mr. Kennedy further estimated the number of hanks of yarn annually produced at £,987,500,000; and the quantity of coal consumed in their production at 500,479 tons. We subjoin Mr. Kennedy's statement for the year 1817: —

Raw cotton converted into yarn in the United Kingdom	-	110,000,000 lbs.
Loss in spinning estimated at $1\frac{1}{2}$ oz. per lb.	-	10,312,500
Quantity of yarn produced	-	99,687,500 lbs.
Number of hanks, taking the average at 40 per lb.	-	3,987,500,000
Number of spindles employed, each spindle being supposed to produce 2 hanks per day, at 300 working days in the year	-	6,645,833
Number of persons employed in spinning, supposing each to produce 120 hanks per day	-	110,763
Horse power employed, equal in number to	-	20,768
Four ounces and a half of coal estimated to produce one hank of No. 40.; and 130 lbs. of coal per day equal to one horse power.	-	

But the cotton manufacture has increased rapidly since 1817. Mr. Huskisson stated, in his place in the House of Commons, in March, 1824, that he believed the total value of the cotton goods then annually manufactured in Great Britain amounted to the prodigious sum of *thirty-three and a half* millions; and we believe we shall be about the mark, if we estimate their present value at *thirty-four* millions! If, indeed, we took the increase in the imports of the raw material as a test of the increase in the value of the manufacture, we should estimate it a great deal higher. But it will be afterwards seen that the improvements that have been made in the different processes, and the fall in the price of raw cotton, have had so powerful an influence in reducing the price of the goods brought to market, that, notwithstanding the increase of their quantity, their total value must have remained nearly constant.

The average annual quantity of cotton wool imported, after deducting the exports, may be taken at about 260,000,000 lbs. weight. It is supposed, that of this quantity about 20,000,000 lbs. are used in a raw or half manufactured state, leaving a balance of 240,000,000 for the purposes of manufacturing, the cost of which may be taken, on an average, at 7d. per lb. Deducting, therefore, from the total value of the manufactured goods, or 34,000,000*l.*, the value of the raw material, amounting to 7,000,000*l.*, there remains 27,000,000*l.*; which, of course, forms the fund whence the wages of the persons employed in the various departments of the manufacture, the profits of the capitalists, the sums required to repair the wear and tear of buildings, machinery, &c., the expense of coals, &c. &c., must all be derived. If, then, we had any means of ascertaining how this fund is distributed, we should be able, by taking the average of wages and profits, to form a pretty accurate estimate of the number of labourers, and the quantity of capital employed. But here, unfortunately, we have only probabilities and analogies to guide us. It may, however, be confidently assumed, in the first place, that in consequence of the extensive employment of highly valuable machinery in all the departments of the cotton manufacture, the proportion which the profits of capital, and

the sum to be set aside to replace its wear and tear, bears to the whole value of the manufacture, must be much larger than in any other department of industry. We have heard this proportion variously estimated, at from a fourth to a half of the total value of the manufactured goods, exclusive of the raw material; and as the weight of authority seems to be pretty much divided on the subject, we shall take an intermediate proportion. Assuming, therefore, that the profits of the capital employed in the cotton manufacture, the wages of superintendence, &c., the sum required to replace the wear and tear of machinery, buildings, &c., and to furnish coals, &c., amount together to *one third* of the value of the manufactured goods, exclusive of the raw material, or to 9,000,000*l.*, a sum of 18,000,000*l.* will remain as the wages of the spinners, weavers, bleachers, &c. engaged in the manufacture; and taking, inasmuch as a large proportion of children under 16 years of age are employed, the average rate of wages at only 22*l.* 10*s.* a year, we shall have (dividing 18,000,000 by 22.5), 800,000 as the total number of persons directly employed in the different departments of the manufacture.

We should mistake, however, if we supposed that this number, great as it certainly is, comprised the whole number of persons to whom the cotton manufacture furnishes subsistence, exclusive of the capitalists. Of the sum of 9,000,000*l.* set apart as the profit of the capitalists, and the sum required to furnish coal, and to defray the wear and tear of machinery, &c., a large proportion must annually be laid out in paying the wages of engineers, machine-makers, iron-founders, smiths, joiners, masons, bricklayers, &c. It is not easy to say what this proportion may amount to; but taking it at a *third*, or 3,000,000*l.*, and supposing the rate of wages of each individual to average 30*l.* a year, the total number employed in the various capacities alluded to will be (3,000,000 divided by 30) 100,000; and a sum of 6,000,000*l.* will remain to cover the profits of the capital employed in the various branches of the manufacture, to repair the different parts of the machinery and buildings as they wear out, and to buy coal, flour, &c. The account will, therefore, stand as under:—

Total value of every description of cotton goods annually manufactured in Great Britain	£ 34,000,000*
Raw material, 240,000,000 lbs. at 7 <i>d.</i> per lb.	£ 7,000,000
Wages of 800,000 weavers, spinners, bleachers, &c. at 22 <i>l.</i> 10 <i>s.</i> a year each	18,000,000
Wages of 100,000 engineers, machine-makers, smiths, masons, joiners, &c. at 30 <i>l.</i> a year each	3,000,000
Profits of the manufacturers, wages of superintendence, sums to purchase the materials of machinery, coals, &c.	6,000,000
	<hr/> 34,000,000
The capital employed may be estimated as follows:—	
Capital employed in the purchase of the raw material	4,000,000
Capital employed in payment of wages	10,000,000
Capital vested in spinning-mills, power and hand looms, workshops, warehouses, stocks on hand, &c.	20,000,000
	<hr/> £34,000,000

Now, this sum of 34,000,000*l.*, supposing the interest of capital, inclusive of the wages of superintendence, &c., to amount to 10 per cent., will yield a sum of 3,400,000*l.*; which being deducted from the 6,000,000*l.* profits, &c., leaves 2,600,000*l.* to purchase materials to repair the waste of capital, the flour required for dressing, the coals necessary in the employment of the steam engines, to effect insurances, and to meet all other outgoings.

The aggregate amount of wages, according to the above estimate, is 21,000,000*l.*; but there are not many departments of the business in which wages have to be advanced more than 6 months before the article is sold. We, therefore, incline to think that 10,000,000*l.* is a sufficient (perhaps too great) allowance for the capital employed in the payment of wages.

* Mr. Kennedy, to whose opinion, on a matter of this sort, the greatest deference is due, considers this estimate as a great deal too high. We cannot, however, bring ourselves to believe that such is really the case. It appears from the official accounts, that the real or declared value of the cotton fabrics exported in 1832 amounted to 12,622,880*l.*, and that of the twist to 4,736,790*l.* Now it appears from the statements in *Burns' Glance*, and other good authorities, that the weight of the cotton yarn retained at home to be wrought up into fabrics for domestic use is about 10 or 12 per cent. greater than the weight of the yarn exported in the shape of manufactured goods. But without taking this greater weight into account, if we suppose that the fabrics retained at home are nearly equal in point of quality to those exported, the value of the manufacture must be at least 30,400,000*l.*, viz. fabrics exported 12,622,000*l.*, twist exported 4,721,000*l.*, and fabrics consumed at home 12,622,000*l.* But a very large proportion of our exports consist of comparatively coarse fabrics destined for the West Indies, Brazil, &c.; and we have been assured by those well acquainted with the trade, that the value of the fabrics made use of at home cannot be less, at an average, than from 30 to 40 per cent. above the value of those exported; but taking it at only 30 per cent., it will make the total value of the manufacture 31,000,000*l.* We do not well see how this statement can be shaken. The exporters have no motive to exaggerate the real value of the goods and yarn sent abroad; but unless they have done so to a very great extent, it will be difficult to impeach the above conclusions.

If we are nearly right in these estimates, it will follow — allowance being made for old and infirm persons, children, &c. dependent on those actually employed in the various departments of the cotton manufacture, and in the construction, repair, &c. of the machinery and buildings required to carry it on — that it must furnish, on the most moderate computation, subsistence for from 1,200,000 to 1,400,000 persons! And for this new and most prolific source of wealth we are indebted partly and principally, as already shown, to the extraordinary genius and talent of a few individuals; but, in a great degree, also, to that security of property and freedom of industry which give confidence and energy to all who embark in industrious undertakings, and to that universal diffusion of intelligence which enables those who carry on any work to press every power of nature into their service, and to avail themselves of productive capacities of which a less instructed people would be wholly ignorant.

The effect that the sudden opening of so vast and profitable a field for the employment of capital and labour has had on the population of the different towns of Lancashire and Lanarkshire, the districts where the cotton manufacture is principally carried on — has been most striking. In 1774, for example, the parish of Manchester is estimated to have contained 41,032 inhabitants — a number which was swelled, in 1831, to 187,019, having more than quadrupled in the space of 57 years! The population of Preston, in 1780, is said not to have exceeded 6,000; whereas it amounts, at present, to 33,112. In like manner, the population of Blackburn has increased from 11,980, in 1801, to 27,091, in 1831; that of Bolton has increased in the same period, from 17,416 to 41,195; that of Wigan, from 10,989 to 20,774, &c. But the progress of Liverpool is most extraordinary, and can be matched only by the progress of one or two cities in the United States. Liverpool is not properly one of the seats of the cotton manufacture; but it is, notwithstanding, mainly indebted to it for the unparalleled rapidity of its growth. It is the grand emporium of the cotton district — the port where almost all the raw cotton, and the various foreign articles required for the employment and subsistence of the persons engaged in the manufacture, are imported, and whence the finished goods are exported to other countries. It has, therefore, become a place of vast trade, and is now, in that respect, second only to London. In 1700, according to the best accounts that can be obtained, the population of Liverpool amounted to only 5,145; in 1750, it had increased to 18,450; in 1770, it amounted to 34,050. The cotton manufacture now began rapidly to extend, and, in consequence, the population of Liverpool increased, in 1801, to 77,653; in 1821, to 118,972; and, in 1831, it amounted to 165,175. The progress of population in Lanarkshire and Renfrewshire has been equally striking. In 1780, the city of Glasgow contained only 42,832 inhabitants; in 1801, that number had increased to 83,769; and, in 1831, it amounted to nearly 203,000. The growth of Paisley is similar. In 1782, it contained, inclusive of the Abbey Parish, only 17,700 inhabitants; in 1801, it contained 36,722; in 1831, it contained about 47,000; and, in 1831, 57,466.

Since the repeal of the absurd system of Irish protecting duties, in 1823, the cotton manufacture has begun to make considerable progress in Ireland. This is proved by a statement laid before the House of Commons, which shows that the number of *yards* of cotton goods, manufactured chiefly from yarn sent from England, exported from Ireland to Great Britain, in 1822, amounted to 406,687; in 1823, to 556,646; in 1824, to 3,840,699; and in 1825, it amounted to no less than 6,418,645; — having increased in nearly a *twelffold* proportion in 2 years, by the abolition of duties that were intended to *protect* the industry of Ireland! But the unsettled state of the country and the want of coal are insuperable obstacles to the continued increase of the manufacture.

Exports of Cotton Goods and Yarn. Full of Prices, &c. — For a very long period the woollen manufacture was the great staple of the country. But the progress of improvement in the spinning and manufacturing of cotton, since 1770, being so much more rapid than any that has taken place in the woollen manufacture, the value of the former is now vastly greater than that of the latter. It appears, from the accounts of the declared or real values of the different sorts of exported commodities given by the Custom-house, that the exports of cotton goods, including yarn, amount, at an average, to about 17,000,000*l.* sterling, being about half the value of the whole manufacture; and form of themselves about *two thirds* of the total value of all the wove fabrics exported from the empire. We subjoin a statement, compiled from the Annual Finance Accounts, of the official and the declared or real values of the cotton manufactured goods, cotton yarn, woollen and silk manufactures, and the totals of all other articles of British produce and manufacture, exported from Great Britain to all parts of the world (except Ireland) annually since 1816.

It will be observed, from the above Table, that while the *official* value of the cotton goods exported has been rapidly increasing, their *declared* or real value has been about stationary, or has rather diminished. This circumstance has given rise to a great deal of irrelevant discussion; and has even been referred to as proving that the manufacture is in a declining state! But it proves precisely the contrary. It shows that the decline in the price of the raw material, and the improvements in the machinery and processes used in the manufacture have been so great, that we are now able to export and sell with a profit, (for, unless such were the case, the exportation would very speedily cease,) nearly double the quantity of cotton goods we exported in 1816, for about the same price. Had the Table been carried further back, the result would have been still more striking.

In illustration of this view of the matter, we beg to subjoin the following statement of the production and cost of the different species of cotton yarn in England, in 1812 and 1830. It was furnished by Mr. Kennedy, of Manchester, to the committee on the East India Company's affairs, so that no doubt can be entertained of its accuracy.

The following Table is interesting, from its exhibiting the state of our trade in wrought cottons with the different countries of the world. It sets the importance of the markets of Brazil, Chili, and the other states of South America, as outlets for our cottons, in a very striking point of view.

* Wages are estimated at the same rate, or at 20d. a day, for every person employed, men, women, and children, in 1812 and 1830; the saving being entirely in the better application of the labour.

Account of the Export of Cotton Goods and Yarn, in 1831; specifying the Countries to which they were sent, and the Quantity and Value of those sent to each.—(*Parl. Paper*, No. 550. Sess. 1833.).

Such being the vast extent and importance of the cotton manufacture, the probability of our preserving our ascendancy in it becomes a very interesting topic of inquiry. But it is obvious, that a great deal of conjecture must always insinuate itself into our reasonings with respect to the future state of any branch of manufacturing industry. They are all liable to be affected by so many contingent and unforeseen circumstances, that it is impossible to predicate, with any thing like certainty, what may be their condition a few years hence. But abstracting from the effect of national struggles and commotions, which can neither be foreseen nor calculated, we do not think that there is any thing in our state, or in that of the different commercial and manufacturing countries of the world, that should lead us to anticipate that the gloomy forebodings of those who countend that the cotton manufacture of England has reached its zenith, and that it must now begin to decline, will be realised. The natural capabilities we possess for carrying on the business of manufacturing are, all things considered, decidedly superior to those of any other people. But the superiority to which we have already arrived is, perhaps, the greatest advantage in our favour. Our master manufacturers, engineers, and artisans, are more intelligent, skilful, and enterprising, than those of any other country; and the extraordinary inventions they have already made, and their familiarity with all the principles and details of the business, will not only enable them to perfect the processes already in use, but can hardly fail to lead to the discovery of others. Our establishments for spinning, weaving, printing, bleaching, &c. are infinitely more complete and perfect than any that exist elsewhere; the division of labour in them is carried to an

incomparably greater extent; the workmen are trained from infancy to industrious habits, and have attained that peculiar dexterity and sleight of hand in the performance of their separate tasks, that can only be acquired by long and unremitting application to the same employment. Why, then, having all these advantages on our side, should we not keep the start we have already gained? Every other people that attempt to set up manufactures must obviously labour under the greatest difficulties as compared with us. Their establishments cannot, at first, be sufficiently large to enable the division of employments to be carried to any considerable extent, at the same time that expertness in manipulation, and in the details of the various processes, can only be attained by slow degrees. It appears, therefore, reasonable to conclude that such new beginners, having to withstand the competition of those who have already arrived at a very high degree of perfection in the art, must be immediately driven out of every market equally accessible to both parties; and that nothing but the aid derived from restrictive regulations and prohibitions will be effectual to prevent the total destruction of their establishments in the countries where they are set up.

4. *Progress of the Manufacture in other Countries.*—But notwithstanding what has now been stated, a notion seems to be spreading abroad, that we shall have no little difficulty in maintaining our ground against the competition of the Americans, Swiss, Austrians, French, &c., and a good deal of evidence upon this subject was taken before the committee of the House of Commons appointed in 1833 to inquire into the state of manufactures, commerce, and shipping. Such apprehensions appear to us to be quite destitute of any real foundation. Provided we have no agitation, that public tranquillity and security in fact and opinion be maintained unimpaired, we need be under no sort of uneasiness as to any competition to which we can be exposed. The tariff forced cotton, woollen, iron, and other manufactures, into a premature existence in the United States; but we have little doubt that, except in the coarser fabrics, and those where it is necessary to use large quantities of the raw material, the late modifications of the tariff have given a death-blow to the American manufacturing system. Independent, however, of this, there was nothing whatever to fear from that quarter. During the year ended the 30th of September, 1829, the exports of all sorts of cotton goods from America amounted to 1,259,457 dollars; while during the year ended the 30th of September, 1832, they amounted to 1,229,574 dollars. — (*Papers laid before Congress*, 5th of February, 1830, and 15th of February, 1833.) It is plain, therefore, notwithstanding the protection of the tariff, that the exports of manufactured cottons from America have not increased any thing during the last 3 years; and it is very unlikely that even the trifling quantity now exported will be maintained. They have been exported only because the fabrics contained a great deal of the best cotton, which made them more durable and heavy than those manufactured here. But goods of this sort are in very limited demand; and the Manchester manufacturers have already produced an article similar to and cheaper than the American “domestics,” which will go far to expel them from the market.

Among the singular statements that have been put forth as to the cotton manufactures of America, one is, that the wages of labour are lower there than here! To dwell on the absurdity of such a statement would be an insult to our readers. But though it were true that wages are as low in Massachusetts as in England, that would afford no real ground for anticipating any formidable competition from America in this department. The price of cottons depends more on the profits of stock than on the wages of labour; and, so far as we know, it has not yet been alleged that they are lower in America than here. Suppose an English and an American manufacturer have each 100,000*l.* vested in cotton mills, and in the floating stock required to carry on the business; if profits in England be 1 per cent. less than in America, the English manufacturer can afford, *ceteris paribus*, to sell his goods for 1,000*l.* less than the American. We are very far from insinuating or believing that this lowness of profit is an advantage; but whatever may be its influence in other respects, so long as it continues, it gives our manufacturers a decided superiority over those of every other country where profits are higher, in the manufacture and sale of all articles, such as cotton yarn and stuffs, principally produced by machinery. It is ludicrous, indeed, to suppose that a half-peopled country like America, possessed of boundless tracts of unoccupied land of the highest degree of fertility, should be able successfully to contend in manufacturing industry, with an old settled, fully peopled, and very rich country like Great Britain. The government which encourages such a misdirection of the public capital and industry, and those who suppose it can end in any thing else than ruin to the parties, are ignorant of the merest elements of the science of wealth.

The following results as to the state of the American cotton manufacture in 1831 have been deduced from the Report of a Committee of Congress in 1832:—

In 12 states they had, mills	-	-	-	-	795
— spindles	-	-	-	-	1,246,503
— looms	-	-	-	-	33,506
The weight of cotton consumed	-	-	-	-	77,557,316 lbs.
Allowing 2 oz. per lb. for loss	-	-	-	-	9,694,664
Total weight of yarn produced	-	-	-	-	67,862,652
Weekly amount	-	-	-	-	1,305,051
Averaging 16½ oz. per spindle weekly.	-	-	-	-	

If the 33,506 looms were employed, and the whole 1,305,051 lbs. of yarn manufactured, each loom must have consumed at an average 39 lbs. weekly, showing that the goods manufactured were of a very heavy description. It also appears from statements made by the same committee, that

The number of males employed were	-	-	-	-	18,539
— females	-	-	-	-	38,927
Total number employed in spinning and manufacturing	-	-	-	-	57,466

The amount paid for wages in the year was 10,294,444 dollars, or 2,144,780*l.*, being 42,895*l.* per week; averaging 1*l.* 11*d.* for each person employed.

They state that the consumption of flour in their manufacture was 1,641,253 lbs., or 8,374 barrels (196 lbs. each), averaging weekly 31,562 lbs., or nearly 1 lb. for each loom.

Note — By the new American tariff, plain calicoes, &c. imported, not exceeding in value 1*s.* 3*d.* the square yard, to pay 3*d.* per yard duty. Printed or coloured calicoes, &c., not exceeding 1*s.* 5*d.* the square yard, to pay 4*d.* per yard duty. Cotton yarn, unbleached and uncoloured, not exceeding in value 2*s.* 6*d.* per lb., to pay 7*d.* per lb. duty. If bleached or coloured, not exceeding 3*s.* 1*d.* per lb., to pay 9*d.* per lb. duty.

Little as we have to fear from American, we have still less to fear from Swiss or Austrian competition. America has some advantage over England in the greater cheapness of the raw material; but Switzerland and Austria, situated almost in the very centre of Europe, can only draw their supplies of raw cotton by a distant land carriage by way of Marseilles, Genoa, and Trieste; or by a lengthened navigation up the Rhine or the Elbe; and we have the best authority for affirming, that a bale of cotton may be conveyed at a less expense from Charleston to Manchester, than from Genoa or Trieste, Amsterdam or Hamburgh, to Switzerland or Austria. Switzerland is altogether destitute of coal; all that she does is done by water power, and that is already pretty well exhausted. It is not, however, to be wondered at that the Swiss and Austrians should have succeeded in supplying their own markets, and some of those immediately contiguous, with certain species of yarn; but it seems to us quite visionary to suppose that they will ever do much more than this.

It was stated before the committee of 1833, that the French cotton manufacture had increased, between 1812 and 1826, in the ratio of 310 per cent., while in England its increase was only 270 per cent. This statement is, we believe, accurate as far as it goes; and yet it is eminently calculated, although, no doubt, without being so intended, to mislead. In 1812, and for some years previously, it was hardly possible to import cotton wool into France, and its price was quite excessive. When, therefore, the manufacturers got wool after the return of peace at an ordinary price, it was impossible, seeing that foreign cottons are excluded from France, but that the manufacture should increase with extraordinary rapidity, until the home demand was pretty well supplied. An advance of this sort is assuredly no proof of the capacity of France to prosecute the manufacture with advantage, or to export cottons without the aid of a bounty. Had the manufacture gone on increasing in the above, or even in a very inferior ratio, down to the present time, the circumstance might have justly excited attention; but such has not been the case; on the contrary, it has been quite stationary, or has rather, perhaps, retrograded, from 1822 down to the present time. In proof of this, we beg to refer to the *Havre Price Current*, corrected and revised by a Board of merchants, for the 9th of May, 1833. It contains the following

Statement of the Imports of Cotton into France, the Deliveries from the Warehouses, and the Stocks on Hand in each Year from 1822:—

Years.	Imports.	Deliveries.	Stocks, 31st Dec.	Years.	Imports.	Deliveries.	Stocks, 31st Dec.
	<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>		<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>
1822	205,861	215,190	42,545	1828	216,132	239,723	54,812
1823	169,845	172,312	40,078	1829	242,230	264,750	29,292
1824	251,074	243,958	47,194	1830	282,752	250,784	61,260
1825	204,572	216,460	35,306	1831	218,393	243,843	35,810
1826	320,174	281,001	74,479	1832	259,159	272,463	22,506
1827	290,617	279,693	85,403				

It is supposed by some, that the competition we have to fear from the Continent does not consist so much in the spinning as in the weaving of cottons; and that the probability is, that our exports of yarn will increase, and our exports of manufactured goods diminish. We do not, however, imagine there is much in this. Our power looms are superior to those of any other country; and it is unhappily true, that the wages of hand

loom weavers here are sunk below the general level of Europe.* There is not, in fact, with the exception of the dyes, a single particular connected with the cotton manufacture, in which we have not a manifest superiority over the Swiss, Austrians, French, Prussians, and every Continental nation. Certainly, however, we are inferior to some of them in the brilliancy and durability of their dyes; and this circumstance occasioned a considerable demand for German and Swiss printed cottons in many parts of the East, where vivid colours are held in the highest estimation. But even there, the greater cheapness of our goods is proving an overmatch for the greater brilliancy of those of our rivals.

On the whole, therefore, we see no reason to think that the British cotton manufacture has reached, much less passed, its zenith. At the same time, however, it can hardly be necessary to observe, considering the vast importance of the trade, that while, on the one hand, nothing should be left undone that may serve to widen its foundations, and to promote its prosperity, on the other, nothing should be attempted that may, by possibility, have an opposite effect. The subsistence of 1,400,000 people is not to be endangered on slight grounds. The abuses even of such a business must be cautiously dealt with, lest, in eradicating them, we shake or disorder the whole fabric. We admit, however, that the case of children employed in the cotton factories is one of those that call fairly for legislative regulation. But it may be questioned whether the plan for having relays of children is the best that might be devised. The general opinion seems to be, that it will, in most instances, be found impossible to carry it into effect. The whole subject, as to the limitation of hours, is confessedly one of great difficulty; and it would perhaps be better, before taking any very decisive steps in the matter, to try the effect of the system of inspection, and of the publication of the inspectors' reports as to the condition of the children employed.

5. STATUTORY REGULATIONS AS TO THE EMPLOYMENT OF CHILDREN IN FACTORIES.

No statutory restrictions respecting the employment of children in the mills and factories of the United Kingdom existed until the year 1802, when an act of parliament was passed (42 Geo. 3.) for the preservation of the health and morals of apprentices and others employed in cotton and other factories, and directing the local magistrates to report whether the factories were conducted according to law, and to adopt such sanitary regulations as they might think fit. This act was followed, in 1816, by an act, generally called Sir Robert Peel's Act, imposing various regulations on the employment of children in cotton mills.

Both of these acts were repealed in 1831, by an act 1 & 2 Will. 4. c. 59, commonly called Sir John Hobhouse's Act, which provided, that in cotton factories, to which alone it related, no child could legally be employed till it had attained the age of 9 years; and that no person under 18 years of age could be suffered to remain in the factories more than 12 hours in one day; and that on Saturdays they should only be employed in the factories for 9 hours.

Sir John Hobhouse's act was repealed in 1833, by the act 3 & 4 Will. 4. c. 103, which contains the following provisions, comprehending the whole statutory regulations at present applicable to cotton and other factories in the United Kingdom:—

1. That after the 1st of January, 1834, no person under 18 years of age shall be allowed to work in the night, that is, between $\frac{1}{2}$ past 8 P. M. and $\frac{1}{2}$ past 5 A. M., in any cotton or other factory in which steam or water, or any other mechanical power, is or shall be used to propel the machinery, excepting in lace factories.

2. That no person under 18 shall be employed more than 12 hours in one day, nor more than 69 hours in one week.

3. That there shall be allowed, in the course of every day, not less than $\frac{1}{4}$ hour for meals to every person restricted to the performance of 12 hours' work.

4. That after the 1st of January, 1834, no child, except in silk mills, shall be employed, who shall not be 9 years old.

5. That after the 1st of March, 1834, no child, except in silk mills, shall be employed in any factory more than 48 hours in any one week, nor more than 9 hours in any day, who shall not be 11 years old; nor after the 1st of March, 1835, who shall not be 12 years old; nor after the 1st of March, 1836, who shall not be 13 years old; and that these hours of work shall not be exceeded, even if the child has worked during the day in more factories than one.

6. That children and young persons, whose hours of work are regulated, shall be entitled to 2 holidays and 8 half holidays in every year.

7. That children, whose hours of work are restricted to 9 hours a day, are not to be employed without obtaining a certificate from a physician or surgeon, certifying that they are of the ordinary strength and appearance of children of the age before mentioned, which certificate is to be countersigned by some inspector or justice.

8. That it shall be lawful for his Majesty to appoint, during pleasure, 4 persons to be inspectors of factories, with extensive powers, as magistrates, to examine the children employed in the factories, and to inquire respecting their condition, employment, and education; and that one of the secretaries of state shall have power, on the application of an inspector, to appoint superintendents to superintend the execution of the act.

9. That those inspectors are to make all rules necessary for the execution of the act, and to enforce the attendance at school, for at least 2 hours daily out of 6 days in the week, of children employed in factories, from whose weekly wages a deduction, not exceeding 1 penny in every shilling, for schooling, shall be made.

10. That no child shall be employed, who shall not, on Monday of every week, give to the factory master a certificate of his or her attendance at school for the previous week.

11. That the interior walls of every mill shall be whitewashed every year.

12. That a copy or abstract of the act shall be hung up in a conspicuous part of every mill.

13. That the inspectors shall regularly, once a year, report their proceedings to one of the secretaries of state.

* For an account of the circumstances which have occasioned this depression, we beg to refer the reader to an article on manufactures, commerce, &c. in the 117th No. of the *Edinburgh Review*. Some of the above statements are taken from that article.

The act also contains regulations extending the hours of work where time shall be lost by the want of, or an excess of, water, in mills situated upon a stream of water; respecting the steps to be taken in order to obtain regular certificates of age for the children requiring them; respecting the erection of schools, where necessary; and respecting the proceedings to be had before inspectors and magistrates for enforcing the act, and the right to appeal from their decisions.

COWHAGE, or **COWITCH** (Hind. *Kiwach*), the fruit or bean of a perennial climbing plant (*Dolichos pruriens* Lin.). It is a native of India, as well as of several other eastern countries, and of America. The pod is about 4 or 5 inches long, a little curved, and contains from 3 to 5 oval and flattish seeds; the outside is thickly covered with short, bristly, brown hairs, which, if incautiously touched, stick to the skin, and occasion intolerable itching. Syrup thickened with the hairs is prescribed in certain complaints. — (*Ainslie's Materia Indica*.)

COWRIES (Ger. *Kauris*; Du. *Kauris*; Fr. *Coris*, *Cauris*, *Bouges*; It. *Cori*, *Porcellane*; Sp. *Bucios Zimbos*) are small shells brought from the Maldives, which pass current as coin in smaller payments in Hindostan, and throughout extensive districts in Africa. They used to be imported into England previously to the abolition of the slave trade, in which they were subsequently employed. They are an article of trade at Bombay. The best are small, clean, and white, having a beautiful gloss; those that are yellow, large, and without lustre, should be rejected. The freight is calculated at 20 cwt. to the ton. — (*Milburn's Orient. Com.*)

CRANBERRIES, or **RED WHORTLEBERRIES**, the fruit of a moss plant, the *Vaccinium oxycoccus* of Linnaeus. The berries are globular, about the size of currants; are found in mossy bogs in different parts of Scotland, but not in great numbers; they were once common in Lincolnshire, and the northern parts of Norfolk; but since the bogs have been drained and cultivated, they are rarely met with. Cranberries have a peculiar flavour, and a sharp, acid, agreeable taste; they are easily preserved, and are extensively used in making tarts. They are very abundant in North America, and in the northern parts of Russia; the latter being of a superior quality. We import from 30,000 to 35,000 gallons annually. It is said that some very fine ones have recently been brought from New South Wales.

CRAPE (Fr. *Crêpe*; Ger. *Flohr*, *Krausflohr*; It. *Espumilla*, *Sopplillo*; Rus. *Flor*; Sp. *Crespon*), a light transparent stuff, in manner of gauze, made of raw silk, gummed and twisted on the mill and woven without crossing. It is principally used in mourning. Crape was originally manufactured in Bologna; but that made in this country is now deemed superior to any made in Italy.

CREAM OF TARTAR. See **ARGAL**.

CREDIT, the term used to express the trust or confidence placed by one individual in another, when he assigns him money, or other property in loan, or without stipulating for its immediate payment. The party who lends is said to give credit, and the party who borrows to obtain credit.

Origin and Nature of Credit. — In the earlier stages of society, credit is in a great measure unknown. This arises partly from the circumstance of very little capital being then accumulated, and partly from government not having the means, or not being sufficiently careful, to enforce that punctual attention to engagements so indispensable to the existence of confidence or credit. But as society advances, capital is gradually accumulated, and the observance of contracts is enforced by public authority. Credit then begins to grow up. On the one hand, those individuals who have more capital than they can conveniently employ, or who are desirous of withdrawing from business, are disposed to lend, or to transfer, a part or the whole of their capital to others, on condition of their obtaining a certain stipulated premium or interest for its use, and what they consider sufficient security for its repayment; and, on the other hand, there are always individuals to be met with, disposed to borrow, partly (and among merchants principally) in order to extend their business beyond the limits to which they can carry it by means of their own capital, or to purchase commodities on speculation, and partly to defray debts already contracted. These different classes of individuals mutually accommodate each other. Those desirous of being relieved from the fatigues of business, find it very convenient to lend their capital to others; while such as are anxious to enlarge their businesses, obtain the means of prosecuting them to a greater extent.

It is plain, that to whatever extent the power of the borrower of a quantity of produce, or a sum of money, to extend his business may be increased, that of the lender must be equally diminished. The same portion of capital cannot be employed by two individuals at the same time. If A. transfer his capital to B., he necessarily, by so doing, deprives himself of a power or capacity of production which B. acquires. It is most probable, indeed, that this capital will be more productively employed in the hands of B. than of A.; for the fact of A. having lent it shows that he either had no means of employing it advantageously, or was disinclined to take the trouble; while the fact of B. having borrowed it shows that he conceives he can advantageously employ it, or that he can invest it so as to make it yield an interest to the lender, and a profit to himself. It is

obvious, however, that except in so far as credit contributes, in the way now mentioned, to bring capital into the possession of those who, it may be fairly presumed, will employ it most beneficially, it conduces nothing to the increase of wealth.

The most common method of making a loan is by selling commodities on credit, or on condition that they shall be paid at some future period. The price is increased proportionally to the length of credit given; and if any doubt be entertained with respect to the punctuality or solvency of the buyer, a further sum is added to the price, in order to cover the risk that the seller or lender runs of not receiving payment, or of not receiving it at the stipulated period. This is the usual method of transacting where capital is abundant, and confidence general; and there can be no manner of doubt that the amount of property lent in Great Britain, the Netherlands, and most other commercial countries, in this way, is infinitely greater than all that is lent in every other way.

When produce is sold in the way now described, it is usual for the buyers to give their bills to the sellers for the price, payable at the period when the credit is to expire; and it is in the effects consequent to the negotiation of such bills that much of that magical influence that has sometimes been ascribed to credit is believed to consist. Suppose, to illustrate this, that a paper-maker, A., sells to a printer, B., a quantity of paper, and that he gets his bill for the sum, payable at 12 months after date: B. could not have entered into the transaction had he been obliged to pay ready money; but A., notwithstanding he has occasion for the money, is enabled, by the facility of negotiating or discounting bills, to give the requisite credit, without disabling himself from prosecuting his business. In a case like this, both parties are said to be supported by credit; and as cases of this sort are exceedingly common, it is contended that half the business of the country is carried on by its means. All, however, that such statements really amount to is, that a large proportion of those engaged in industrious undertakings do not employ their own capital, but that of others. In the case in question, the printer employs the capital of the paper-maker, and the latter employs that of the banker or broker who discounted the bill. This person had most likely the amount in spare cash lying beside him, which he might not well know what to make of; but the individual into whose hands it has now come, will immediately apply it to useful purposes, or to the purchase of the materials, or the payment of the wages of the workmen employed in his establishment. It is next to certain, therefore, that the transaction will have been advantageous. But still it is essential to bear in mind that it will have been so, not because credit is of itself a means of production, or because it can give birth to capital not already in existence; but because, through its agency, capital finds its way into those channels in which it has the best chance of being profitably employed.

The real advantage derived from the use of bills and bank notes as money consists, as has been already shown, in their substituting so cheap a medium of exchange as paper, in the place of one so expensive as gold, and in the facilities which they give to the transacting of commercial affairs. If a banker lend A. a note for 100*l.* or 1,000*l.*, the latter will be able to obtain an equivalent portion of the land or produce of the country in exchange for it; but that land or produce was already in existence. The issue of the note did not give it birth. It was previously in some one's possession; and it will depend wholly on the circumstance of A.'s employing it more or less advantageously than it was previously employed, whether the transaction will, in a public point of view, be profitable or not. On analysing any case of this kind, we shall invariably find that all that the highest degree of credit or confidence can do, is merely to change the distribution of capital—to transfer it from one class to another. These transfers are occasionally, too, productive of injurious results, by bringing capital into the hands of spendthrifts: this, however, is not, except in the case of the credit given by shopkeepers, a very common effect; and there can be no doubt that the vast majority of regular loans are decidedly beneficial.

Abuses of the present Credit System in Great Britain. Means of obviating them.—The previous observations refer rather to the credit given to individuals engaged in business, who mean to employ the capital which they borrow in industrious undertakings, than to that which is given to individuals not so engaged, and who employ the advances made to them in supporting themselves and their families. In neither case is credit of advantage, unless it be granted with due discrimination, and with reference to the character, condition, and prospects of those receiving it. In this country, however, these considerations have been in a great measure lost sight of, in the granting of credit by shopkeepers and tradesmen of all descriptions. Owing to the competition of such persons, their extreme eagerness to secure customers, and the general indolence of opulent persons, which disinclines them to satisfy every small debt when it is contracted, the system of selling upon credit has become almost universal. Few among us think of paying ready money for any thing; seven tenths of the community are in the constant practice of anticipating their incomes; and there is hardly one so backward in character

and fortune as to be unable to find grocers, bakers, butchers, tailors, &c. ready to furnish him upon credit with supplies of the articles in which they respectively deal. We look upon this facility of obtaining accommodations as a very great evil. They are not, in one case out of five, of any real advantage to the parties receiving them, while they are productive of very pernicious results. The system tempts very many, and sometimes even the most considerate individuals, to indulge in expenses beyond their means; and thus becomes the most fruitful source of bankruptcy, insolvency, and bad faith. To guarantee themselves from the extraordinary risk to which such proceedings expose them, tradesmen are obliged to advance the price of their goods to a most exorbitant height; so that those who are able, and who really mean to pay the debts they contract, are, in fact, obliged to pay those of the hosts of insolvents and swindlers maintained by the present system. Many tradesmen consider themselves as fortunate, if they recover from two thirds to three fourths of the sums standing in their books, at the distance of several years.

The extraordinary extent to which the credit practice is carried may be learned from the inquiries of the Parliamentary Committee on Small Debts. It appears from them, that hatters, shoemakers, &c. in the metropolis, have often 4,000*l.* and upwards on their books in debts below 10*l.*, and that *five sixths* of their book debts are below that sum! A large proportion of these debts are irrecoverable; but owing to the artificial enhancement of prices, those that are good are sufficient to indemnify the traders for the loss of the bad.

It is not easy, we think, to imagine any system better fitted to generate improvidence and fraud. The vast majority of those who become insolvent, or are imprisoned for debt, consist of labourers, artisans, half-pay officers, clerks in public and other offices, annuitants, &c. — persons whom no prudent shopkeeper would ever allow to get permanently into his debt. The following Table exhibits some of the effects resulting from this system. —

Number of Persons committed for Debt to the several Prisons of the Metropolis in the Year 1827, and the Sums for which they were committed. — (*Parl. Paper*, No. 76. Sess. 1828.)

	For Sums above 100 <i>l.</i>	For Sums between 50 <i>l.</i> & 100 <i>l.</i>	For Sums between 50 <i>l.</i> & 20 <i>l.</i>	For Sums under 20 <i>l.</i>	Total.	In Custody January 1. 1828.
King's Bench prison	474	354	550	213	1,591	674
Fleet prison	206	141	223	113	683	253
Whitecross Street prison	206	273	816	600	1,893	378
Marshalsea prison	20	30	166	414	630	102
Horsemonger Lane prison	57	58	134	923	1,172	105
Total	963	856	1,889	2,263	5,969	1,512

It is time, certainly, that something effectual were done to put an end to such flagrant abuses — to a system that sends 923 persons to a single prison for debts under 20*l.*! We do not mean to say or insinuate that credit may not frequently be given to the labouring classes with the best effects: but it is of its abuse that we complain, — of its being indiscriminately granted to every one; to those whom it encourages to continue in a course of idleness and profligacy, as well as to those industrious and deserving persons to whom it may occasionally be of the greatest service. To secure the advantages of credit to the public, free from the enormous evils that result from its abuse, is an object of the highest importance; and few things, we believe, would do so much to secure it, as the taking from creditors the power to arrest and imprison for debt. — (See BANKRUPTCY.)

It was stated in the House of Commons, (19th of February, 1827,) that in the space of 2½ years, 70,000 persons were arrested in and about London, at an expense to the parties, it may be estimated, of between 150,000*l.* and 200,000*l.*! In 1827, in the metropolis and two adjoining counties, 23,515 warrants to arrest were granted, and 11,317 bailable processes were executed. Hence it may be concluded, that in this single year, within the above limits, no fewer than 12,000 persons were deprived of their liberty, on the mere allegation of others, without any *proof* that they owed them a farthing! Well might Lord Eldon say “that the law of arrest is a permission to commit acts of greater oppression and inhumanity than are to be met with in slavery itself, and that the redress of such a grievance would not be attended with any fatal consequences to the country.”

The following Table, which shows that 1,120 persons were committed to Horsemonger Lane prison, in 1831, for debts amounting, in all, to only 2,417*l.* 7*s.* 5*d.*, being, at an average, no more than 2*l.* 3*s.* 2*d.* each, proves that the discussions which have taken place with respect to the law of arrest and imprisonment, have not, in any degree, lessened its mischievous operation. Whatever else may be dear in England, the fact that thousands of people are annually imprisoned for such miserable trifles, shows that personal liberty is, at all events, abundantly cheap.

A Return of the Number of Debtors committed to Horsemonger Lane Prison, on Process out of the Courts of Requests, during the Years ending 1st of January, 1832 and 1833; stating the aggregate Amount of Debts and Costs, separately, in each Year; showing, in Classes, the Number confined from One to less than Ten Days, for Ten Days and less than Thirty, Fifty, Seventy, and One Hundred Days; stating, also, the Amount paid out of the County or other Rates for the Maintenance and Support of such Prisoners, as accurately as possible.

	1831.	1832.
Number committed in the year	1,120	945
Aggregate amount of debts	£ 2,417	£ 2,039
costs	s. 7	s. 14
	d. 5	d. 9
	696	566
Number confined from 1 to less than 10 days	610	394
for 10 and - 30 -	336	317
30 - - 50 -	77	119
50 - - 70 -	47	65
70 - - 100 -	26	29
100 days and more	24	30
Amount paid out of the county or other rates for the main- tenance and support of such prisoners	£ 208	£ 226

We defy any one to show that the law of arrest and imprisonment has a single good consequence to be placed as a set-off against the intolerable evils of which it is productive. Tradesmen depend, as is clearly evinced by the above statements, upon the despotical power which it puts in their hands, to get them out of scrapes; and believe that the fear of being subjected to arrest will stimulate even the most suspicious portion of their debtors to make payment of their accounts. The records of our prisons, and of our insolvent and other courts, show how miserably these expectations are disappointed. We believe, indeed, that we are warranted in affirming that the more respectable classes of shopkeepers and tradesmen are now generally satisfied that the present system requires some very material modifications. The law of arrest and imprisonment is, in fact, advantageous to none but knaves and swindlers, and the lowest class of attorneys, who frequently buy up small accounts and bills, that they may bring actions upon them, and enrich themselves at the expense of the poor, by the magnitude of their charges. Such oppressive proceedings are a disgrace to a civilised country. Were the law in question repealed, credit would be granted to those only who deserved it; for, generally speaking, tradesmen, supposing they had nothing to trust to but their own discretion, would not deal, except for ready money, with those of whose character and situation they were not perfectly informed; and the difficulty under which all idle and improvident persons would thus be placed of obtaining loans, would do much to wean them from their vicious courses, and to render them industrious and honest. "Those," says Dr. Johnson, "who have made the laws, have apparently considered that every deficiency of payment is the crime of the debtor. But the truth is, that the creditor always shares the act, and often more than shares the guilt of improper trust. It seldom happens that any man imprisons another but for debts which he suffered to be contracted in hope of advantage to himself, and for bargains in which he proportioned his profit to his own opinion of the hazard; and there is no reason why one should punish another for a contract in which both concurred."

The power of taking goods in execution for debts is also one that requires to be materially modified. At present, the household furniture of every man, and even the *implements used in his trade*, should there be nothing else to lay hold of, may be seized and sold in satisfaction of any petty claim. It seems to us quite clear that some limits should be set to this power; and that such articles as are indispensable either to the subsistence or the business of any poor man ought to be exempted from execution, and, perhaps, distress. The present practice, by stripping its victims of the means of support and employment, drives them to despair, and is productive only of crimes and disorders.

We are glad to observe that there seems to be a growing conviction among mercantile men, of the inconveniences arising from the present practice. A petition against imprisonment for small debts, subscribed by many of the most eminent merchants, manufacturers, bankers, &c. of the city of Glasgow, was presented to the House of Commons in 1833. It contains so brief, and at the same time so forcible, an exposition of the evils resulting from the present system, that we shall take the liberty of laying it before our readers.

"Your petitioners have been long and seriously impressed with the belief that very great evils have arisen and do arise from the imprisonment of debtors in Scotland, especially for small sums.

"The petitioners will not here question the policy of the existing laws which authorise the imprisonment of debtors for considerable sums, nor do they intend to object to the creditor retaining the fullest power over the property and effects of his debtor; but they are humbly of opinion that, in so far as these laws give creditors the power to imprison debtors for small sums, such as for 8*l*. and under, they are not only injurious to the public, and ruinous to the debtor, but even hurtful to the creditor himself.

It would be a waste of time to dwell upon the hardship of subjecting debtors to imprisonment for small debts, contracted sometimes certainly under circumstances of real distress, but more frequently from the improper use of credit, with which they are too readily supplied. The creditor takes care that his profit shall be commensurate with his risk; and the debtor is induced to purchase freely, and at any price, that which he is not immediately called upon to pay; the creditor coolly and cruelly calculates upon the power which the law has granted him over the person of his debtor if he fail to discharge his debt to him, while the debtor forgets that, by the credit so imprudently afforded him, he is preparing the way for his own ruin, and that of all who have any dependence upon him.

"The total number of debtors imprisoned in the gaol of Glasgow alone, for debts of 8*l.* and under, was, in the year 1830, 353; in 1831, 419; and in 1832, 457; while the whole number of incarcerations in that gaol for sums of every description were, in the year 1830, 557; in 1831, 630; and in 1832, 696; the proportion of sums of 8*l.* and under being nearly two thirds of the whole on the average of these 3 years.

"To remedy these evils, your petitioners humbly submit that means should be adopted for the repeal of the laws at present in force, in so far as they sanction the recovery of small debts by imprisonment, reserving their effect in every other respect; the result of which would be, that credit for small sums would be greatly limited, if not entirely extinguished, and the poorer classes rendered more provident; and by purchasing with money at a cheaper rate what they now buy at an extravagant price, they would be enabled to procure for themselves additional comforts, from the more economical employment of their small incomes.

"May it therefore please your Honourable House to take this matter into your consideration, and to adopt such means as you in your wisdom shall see proper, to prevent the incarceration of debtors for sums under 8*l.*, and thereby remove or greatly mitigate the evils of improvidence on the part of the debtor, and of oppression on the part of the creditor, which necessarily arise under the present system."

So reasonable a proposal, supported by such conclusive statements, could not fail to make a deep impression; and a bill was consequently introduced by the solicitor general, taking away the power to arrest and imprison for petty debts. This bill was afterwards withdrawn; but there can be no doubt that it will be brought forward again, unless it be resolved to apply a still more radical cure to the abuses complained of.

Propriety of placing all small Debts beyond the Pale of the Law. — The taking away the power of arrest and imprisonment, except in the case of fraudulent bankruptcy would certainly be a material improvement upon the existing system. But we are satisfied that it does not go far enough; and that by far the most desirable and beneficial reform that could be effected in this department would be *to take away all action for debts under a given sum, as 50*l.* or 100*l.** The only exception to this rule should be in the case of *claims for wages*, or labour done under executory contracts. To prevent the measure from being defeated, no action should be granted on bills under 50*l.* or 100*l.*, except upon those drawn by or upon regular bankers. This would be a radical change certainly; but we are fully satisfied that it would be highly advantageous to every class of the community, and most of all to labourers, retail dealers, and small tradesmen. It would protect the former from oppression, at the same time that it would tend powerfully to render them more provident and considerate; it would teach the latter to exercise that discretion in the granting of credit which is so very indispensable; and it would be publicly beneficial, by strengthening the moral principle, and making the contraction of debts for small sums, without the means of paying them, at once difficult and disgraceful.

We agree entirely in opinion with those who think that it is to no purpose to attempt to remedy the defects now pointed out, by multiplying courts and other devices for facilitating the speedy recovery of small debts. This is beginning at the wrong end; or rather it is attempting to obviate the influence of one abuse by instituting another. No wise statesman will ever be easily persuaded to fill the country with petty local courts; for these, when not absolutely necessary, are the merest nuisances imaginable; and he would, at all events, exert himself, in the first instance, to do away, in so far as possible, with the circumstances that make individuals resort to them. But it is certain that nine tenths of the cases in county courts originate in questions as to simple contract debts under 50*l.*; and were such debts placed, as they ought to be, beyond the pale of the law, the courts would be wholly unnecessary. Our object ought not to be to provide means for enforcing payment of trifling debts, but *to prevent their contraction*. We believe, indeed, that, instead of lessening, the multiplication of district courts will materially aggravate, all the evils of the present credit system. The belief that they may readily enforce their claims by resorting to them will make shopkeepers and tradesmen still more disposed than at present to give credit, while the unprincipled, the inconsiderate, and the necessitous will eagerly grasp at this increased facility. What there is of caution amongst our retail dealers is in no inconsiderable degree owing to the want of those petty tribunals so many are anxious to have universally established. The more they are increased, the less will caution prevail. But instead of diminishing this virtue, — for such it really is, — it cannot be too much increased. Nothing will ever deter those who ought not to obtain credit from taking it while in their power; but those who give it may be made to exercise greater discretion; they may be made to know that it is a private transaction between themselves and those to whom they grant it; and that in the case of petty debts they have only their own sagacity to look to, such transactions not being cognizable by law. A measure of the sort here proposed would not, as some appear to imagine, annihilate credit. It would, no doubt, annihilate that spurious indiscriminating species of credit, that is as readily granted to the spendthrift and pro-

digal, as to the frugal and industrious individual; but to the same extent that it deprived the former of the means of obtaining accommodation, it would extend those of the latter. Nothing short of this — nothing but the placing all small debts beyond the pale of the law — will ever fully impress tradesmen with a conviction of the vast advantages that would result to themselves from their withdrawing their confidence from courts and prisons, and preventing every one from getting upon their books, of whose situation and circumstances they are not fully aware; nor will any thing else be able completely to eradicate the flagrant abuses inherent in the present credit system, and which have gone far to render it a public nuisance.

One of the worst consequences of the present system is the sort of thralldom in which it keeps thousands of labourers and other individuals, whom the improper facilities for obtaining credit originally led into debt. Such persons dare not leave the shops to which they owe accounts; and they dare neither object to the quality of the goods offered to them, nor to the prices charged. Dr. Johnson has truly observed, that “he that once owes more than he can pay, is often obliged to bribe his creditor to patience by increasing his debt. Worse and worse commodities at a higher and higher price are forced upon him; he is impoverished by compulsive traffic; and at last overwhelmed in the common receptacles of misery by debts, which, without his own consent, were accumulated on his head.” By taking away all right of action upon small debts, this system of invisible but substantial coercion would be put an end to. The tradesman would take care who got, in the first instance, upon his books; and instead of forcing articles upon him, would cease to furnish him with any unless he found he was regular in making his payments; while the customer, to whom credit was of importance, would know that his only chance of obtaining it would depend upon his character and reputation for punctuality. The abuses of the sort now alluded to, that grew out of what has been denominated the truck system, justly occasioned its abolition; but these were trifling compared with those that originate in the bringing of petty debts within the pale of the law.

When the former edition of this work was published, we were not aware that it had been previously proposed to take away all action for debts under 50*l.* or 100*l.*; but we have since met with a pamphlet, entitled *Credit Pernicious*, published in 1823, in which this plan is proposed and ably supported. There are also some valuable remarks and observations on the topics now treated of, in the *Treatise on the Police*, &c. of the *Metropolis*, by the author of the “*Cabinet Lawyer*,” pp. 114—124.

CREW, the company of sailors belonging to any ship or vessel. No ship is admitted to be a British ship, unless duly registered and navigated as such by a crew, *three fourths* of which are British subjects, besides the master. — (3 & 4 *Will.* 4. c. 54. § 12.) The master or owners of any British ship having a foreign seaman on board not allowed by law, shall for every such seaman forfeit 10*l.*; unless they can show, by the certificate of the British consul, or of two British merchants, or shall satisfactorily prove, that the requisite number of British seamen could not be obtained at the place where the foreign seaman was taken on board. It is also ordered that the master of every British vessel arriving from the West Indies shall deliver, within 10 days after arrival, to the Custom-house, a list of the crew on board at the time of clearing out from the United Kingdom, and of arrival in the West Indies, and of every seaman who has deserted or died during the voyage, and the amount of wages due to each so dying, under a penalty of 50*l.* — (3 & 4 *Will.* 4. c. 54. § 19.; 3 & 4 *Will.* 4. c. 52. § 16.)

CUBEBS (Ger. *Kubeben*; Fr. *Cubebes*; It. *Cubebi*; Sp. *Cubebas*; Rus. *Kubëü*; Lat. *Piper Cubeba*; Arab. *Kebäbeh*; Javan, *Kamunkus*; Hind. *Cubab-chinie*), the produce of a vine or climber, the growth of which is confined exclusively to Java. It is a small dried fruit, like a pepper corn, but somewhat longer. Cubebs have a hot, pungent, aromatic, slightly bitter taste; and a fragrant, agreeable odour. They should be chosen large, fresh, sound, and the heaviest that can be procured. The quantity entered for home consumption, in 1830, amounted to 18,540 lbs., producing a nett revenue of 1,854*l.* 6*s.* Their price in the London market, in bond, varies from 2*l.* 10*s.* to 4*l.* 4*s.* per cwt.

CUCUMBER, a tropical plant, of which there are many varieties, largely cultivated in hothouses in England.

CUDBEAR, a purple or violet coloured powder used in dyeing violet, purple, and crimson, prepared from a species of lichen (*Lichen tartareus* Lin.), or crustaceous moss, growing commonly on limestone rocks in Sweden, Scotland, the north of England, &c. About 130 tons of this lichen are annually exported from Sweden. It commonly sells in the port of London for about 20*l.* per ton; but to prepare it for use it must be washed and dried; and by these operations the weight is commonly diminished a half, and the price, in effect, doubled. Though possessing great beauty and lustre at first, the colours obtained from cudbear are so very fugacious, that they ought never to be employed but in aid of some other more permanent dye, to which they may give body and vivacity. In this country it is chiefly used to give strength and brilliancy to the blues dyed with indigo, and to produce a saving of that article; it is also used as a *ground*

for madder reds, which commonly incline too much to yellow, and are made *rosy* by this addition. The name cudbear was given to this powder by Dr. Cuthbert Gordon, who, having obtained a patent for the preparation, chose in this way to connect it with his own name. — (*Bancroft, Philosophy of Permanent Colours*, vol. i. pp. 300—304.)

CUMMIN SEED (Ger. *Kumin*; Fr. *Cumin*; It. *Comino*, *Cumino*; Sp. *Comino*; Arab. *Kemun*), the seeds of an annual plant (*Cuminum Cuminum* Lin.), a native of Egypt, but extensively cultivated in Sicily and Malta. They have a strong, peculiar, heavy odour, and a warm, bitterish, disagreeable taste. They are long and slender.

CURRANTS (Fr. *Raisins de Corinthe*; Ger. *Korinthen*; It. *Uve passe di Corinto*; Lat. *Passula Corinthiaca*; Rus. *Korinka*, *Opock*; Sp. *Pasas de Corinto*), a small species of grape, largely cultivated in Zante, Cephalonia, and Ithaca, of which islands they form the staple produce; and in the Morea, in the vicinity of Patras. The plant is delicate; and as 6 or 7 years must elapse, after a plantation has been formed, before it begins to produce, its cultivation requires a considerable outlay of capital. The crop is particularly liable to injury from rains in harvest, and is altogether of a very precarious description. After being dried in the sun, the currants are exported packed in large butts. They are in extensive demand in this country; and, when mixed with flour and suet, make a dish that is peculiarly acceptable to the lower classes. But, as if it were intended to put them beyond the reach of all but the richest individuals, they are burdened with the enormous duty of 44s. 4d. a cwt.! The fact, that in despite of this anti-consumption impost, the entries of currants for home consumption amounted, at an average of the 3 years ending with 1831, to 127,084 cwt. a year, producing an annual revenue of 281,787l., shows that the taste for them is both deeply rooted and widely diffused. With one or two exceptions, they are the most grossly over-taxed article in the British tariff. Their price in bond, in London, varies from 20s. to 27s. a cwt.; so that the duty amounts to more than 200 per cent. on the importation price! So exorbitant a tax admits of no justification. It is highly injurious to the consumers in Great Britain, to the merchants engaged in the Mediterranean trade, to the producers in the Ionian Islands and Greece, and, we may add, to the revenue: for, considering how highly esteemed the article is by all classes, and that it might be imported in much larger quantities without any considerable rise of price, there can be no manner of doubt that were the duty reduced to 10s. or 12s. a cwt. the consumption would be so much increased, that in a few years the revenue would be materially greater than at present.

By referring to the article **IONIAN ISLANDS**, it will be seen that the duty has been peculiarly hostile to their interests. It has, in fact, gone far to countervail all the advantages they have, in other respects, derived from our protection; and has done much to estrange the affections of the inhabitants, and to excite and keep alive a jealousy of this country.

The Mediterranean merchants, in a petition presented to the House of Commons last session, prayed for the repeal of the duty imposed since 1806, being 16s. 4d. a cwt., leaving a duty of 28s. a cwt. A reduction to this extent would, no doubt, be a considerable relief to the growers and importers; but it would be quite inadequate to bring the article fairly into consumption among the mass of the people. To accomplish this most desirable object, the duty ought not to exceed 10s. or 12s.; and we are well convinced it would yield more revenue at this rate than at 28s. A duty of 50 per cent. is surely high enough upon an article fitted to enter largely into the consumption of the labouring classes.

No abatement of duties is made on account of any damage received by currants.

Currants, the produce of Europe, are not to be imported for home use except in British ships, or in ships of the country of which they are the produce, or of the country whence they are imported. — (3 & 4 Will. 4. c. 54. § 2. 22.)

A Treasury letter of the 30th of March, 1816, directs the following tares to be allowed, with liberty to the merchant and officers to take the actual tare when either party is dissatisfied.

Currants in casks from Zante	-	-	13 per cent.
Leghorn	-	-	10 —
Trieste	-	-	10 —

CUSTOM-HOUSE, the house or office where commodities are entered for importation or exportation; where the duties, bounties, or drawbacks payable or receivable upon such importation or exportation are paid or received; and where ships are cleared out, &c.

For information as to the proceedings necessary at the Custom-house on importing or exporting commodities, see the article **IMPORTATION AND EXPORTATION**.

The principal British Custom-house is in London; but there are Custom-houses subordinate to the latter in all considerable sea-port towns.

CUSTOMS, are duties charged upon commodities, on their being imported into or exported from a country.

Custom duties seem to have existed in every commercial country. The Athenians laid a tax of a fifth on the corn and other merchandise imported from foreign countries, and also on several of the commodities exported from Attica. The *portaria*, or customs

payable on the commodities imported into, and exported from, the different ports in the Roman empire, formed a very ancient and important part of the public revenue. The rates at which they were charged were fluctuating and various, and little is now known respecting them. Cicero informs us, that the duties on corn exported from the ports of Sicily were, in his time, 5 per cent. Under the Imperial government, the amount of the *portaria* depended as much on the caprice of the prince as on the real exigencies of the state. Though sometimes diminished, they were never entirely remitted, and were much more frequently increased. Under the Byzantine emperors, they were as high as 12½ per cent. — (*Supp. to Encyc. Brit. art. Taxation.*)

Customs seems to have existed in England before the Conquest; but the king's claim to them was first established by stat. 3 Edw. 1. These duties were, at first, principally laid on wool, woofels (sheep-skins), and leather when exported. There were also extraordinary duties paid by aliens, which were denominated *parva costuma*, to distinguish them from the former, or *magna costuma*. The duties of tonnage and poundage, of which mention is so frequently made in English history, were custom duties; the first being paid on wine by the tun, and the latter being an *ad valorem* duty of so much a pound on all other merchandise. When these duties were granted to the Crown, they were denominated *subsides*; and as the duty of poundage had continued for a lengthened period at the rate of 1s. a pound, or 5 per cent., a subsidy came, in the language of the customs, to denote an *ad valorem* duty of 5 per cent. The *new subsidy* granted in the reign of William III. was an addition of 5 per cent. to the duties on most imported commodities.

The various custom duties were collected, for the first time, in a book of rates published in the reign of Charles II.; a new book of rates being again published in the reign of George I. But, exclusive of the duties entered in these two books, many more had been imposed at different times; so that the accumulation of the duties, and the complicated regulations to which they gave rise, were productive of the greatest embarrassment. The evil was increased by the careless manner in which new duties were added to the old; a percentage being sometimes added to the original tax; while at other times the commodity was estimated by a new standard of bulk, weight, number, or value, and charged with an additional impost, without any reference to the duties formerly imposed. The confusion arising from these sources was still further augmented by the special appropriation of each of the duties, and the consequent necessity of a separate calculation for each. The intricacy and confusion inseparable from such a state of things proved a serious injury to commerce, and led to many frauds and abuses.

The Customs Consolidation Act, introduced by Mr. Pitt in 1787, did much to remedy these inconveniences. The method adopted was, to abolish the existing duties on all articles, and to substitute in their stead one single duty on each article, equivalent to the aggregate of the various duties by which it had previously been loaded. The resolutions on which the act was founded amounted to about 3,000. A more simple and uniform system was, at the same time, introduced into the business of the Custom-house. These alterations were productive of the very best effects; and several similar consolidations have since been effected; particularly in 1825, when the various statutes then existing relative to the customs, amounting, including parts of statutes, to about 450, were consolidated and compressed into only 11 statutes of a reasonable bulk, and drawn up with great perspicuity. Since then, a few statutes were passed, amending and changing some of the provisions in the consolidated statutes; and these have been again embodied in consolidated acts passed last session.*

The Board of Customs is not to consist of more than 13 commissioners, and they are to be reduced to 11 as vacancies occur. The Treasury may appoint 1 commissioner, and 2 assistant commissioners, to act for Scotland and Ireland.

Officers of customs taking any fee or reward, whether pecuniary or of any other sort, on account of any thing done, or to be done, by them in the exercise of their duty, from any one, except by the order or permission of the commissioners of the customs, shall be dismissed their office; and the person giving, offering, or promising such gratuity, fee, &c. shall forfeit 100*l*.

Any officer of customs who shall accept of any bribe, recompence, or reward, to induce him to neglect his duty, or to do, conceal, or connive at any act whereby any of the provisions of the customs laws shall be evaded, shall be dismissed the service, and be rendered incapable of serving his Majesty in future in any capacity whatever; and the person offering such bribe, recompence, &c. shall, whether the offer be accepted or not, forfeit 500*l*.

Custom duties, like all duties on particular commodities, though advanced in the first instance by the merchant, are ultimately paid by those by whom they are consumed.

* 3 & 4 Will. 4. cap. 51, 52, 53, and 58.

When a government lays a duty on the foreign commodities which enter its ports, the duty falls entirely on such of its own subjects as purchase these commodities; for the foreigners would cease supplying its markets with them, if they did not get the full price of the commodities, exclusive of the tax; and, for the same reason, when a government lays a duty on the commodities which its subjects are about to export, the duty does not fall on them, but on the foreigners by whom they are bought. If, therefore, it were possible for a country to raise a sufficient revenue by laying duties on exported commodities, such revenue would be wholly derived from others, and it would be totally relieved from the burden of taxation, except in so far as duties might be imposed by foreigners on the goods it imports from them. Care, however, must be taken, in imposing duties on exportation, not to lay them on commodities that may be produced at the same, or nearly the same, cost by foreigners; for the effect of the duty would then be to cause the market to be supplied by others, and to put an entire stop to their exportation. But in the event of a country possessing any decided natural or acquired advantage in the production of any sort of commodities, a duty on their exportation would seem to be the most unexceptionable of all taxes. If the Chinese chose to act on this principle, they might derive a considerable revenue from a duty on exported teas, which would fall entirely on the English and other foreigners who buy them. The coal and tin, and perhaps, also, some of the manufactured goods produced in this country, seem to be in this predicament.

The revenue derived from the custom duties in 1590, in the reign of Elizabeth, amounted to no more than 50,000*l*. In 1613, it had increased to 148,075*l*.; of which no less than 109,572*l*. were collected in London. In 1660, at the Restoration, the customs produced 421,582*l*.; and at the Revolution, in 1688, they produced 781,987*l*. During the reigns of William III. and Anne, the customs revenue was considerably augmented, the nett payments into the exchequer in 1712 being 1,315,423*l*. During the war terminated by the peace of Paris in 1763, the nett produce of the customs revenue of Great Britain amounted to nearly 2,000,000*l*. In 1792, it amounted to 4,497,000*l*. In 1815, at the close of the war, it amounted to 11,360,000*l*.; and last year (1832) it amounted to about 17,000,000*l*., and, including Ireland, to about 18,500,000*l*!

Astonishing, however, as the increase of the customs revenue has certainly been, it is not quite so great as it appears. Formerly the duties on some considerable articles, such as sugar, brandy, wine, &c. imported from abroad, were divided partly into customs duties charged on their importation, and partly into excise duties on their being taken into consumption. But these duties have now, with the exception of tea*, been transferred wholly to the customs; the facilities afforded, by means of the warehousing system, for paying the duties in the way most convenient for the merchant, having obviated the necessity of dividing them into different portions.

It will be seen from various articles in this work—(see BRANDY, GENEVA, SMUGGLING, TEA, TOBACCO, &c.)—that the exorbitant amount of the duties laid on many articles imported from abroad leads to much smuggling and fraud; and requires, besides, an extraordinary expense in many departments of the customs service, which might be totally avoided were these duties reduced within reasonable limits. This, however, is the business of government, and not of those entrusted with the management of the customs; and it would be unjust to the latter not to mention that this department has been essentially improved, during the last few years, both as respects economy and efficiency. The following extracts from a letter to the Right Hon. H. Goulburn, ascribed to the present chairman of the Board of Customs (R. B. Dean, Esq.), give a brief but satisfactory view of the improvements that have been effected:—

“As regards the department of customs in 1792, the principal officers engaged in the receipt of the duties in the port of London were patent officers.

“The first Earl of Liverpool was collector inwards.

“The late Duke of Manchester, collector outwards.

“The Duke of Newcastle, and afterwards the Earl of Guilford, comptroller inwards and outwards.

“Lord Stowell, surveyor of subsidies and petty customs.

“These noblemen took no part in the official duties, but merely exercised the right of appointing deputies and clerks.

“Both principals and deputies were remunerated by fees. The patentees received the fees denominated patent, and the deputies retained the fees called the fees of usage for their own use. In addition to these fees, both deputies and clerks received fees for despatch.

“The same system prevailed throughout the whole department. The salaries of the officers were nominal; and the principal proportion of all official income was derived

* From the 22d of April, 1834, the collection of the tea duties by the excise is to cease; and they are to be transferred to the customs. — (See TEA.)

from fees. These fees were constantly varying both in rate and amount, and formed a continual source of dispute and complaint between the merchant and the officer.

"This system (after having been repeatedly objected to by various commissions of inquiry, and finally by the committee of finance in 1797.) was put an end to in the year 1812, by the act 51 Geo. 3. c. 71., by which all patent offices and fees were abolished, and compensation allowances granted to the patent officers, and fixed salaries established.

"The additional salaries granted under this arrangement amounted to about 200,000*l.*, and the temporary compensation allowances to about 40,000*l.* per annum.

"The fees abolished, and from which the public were relieved, amounted to about 160,000*l.* per annum.

"In addition to the amount of fees from which the public were relieved, various allowances made by the Crown to officers for quarantine, coal poundage, poundage on seizures, and many other incidental allowances, which did not appear on the establishment, were also abolished, and the salaries of every officer placed at one view upon the establishment.

"The effect of these salutary measures has been to give a great apparent increase to officers' salaries since 1792; and, upon a mere comparison of the establishment of 1792 with 1830, without the above explanation, it would appear that the pay of the officers had been most materially augmented, whereas, in point of fact, the difference is in the mode of payment: and the incomes of the officers at the present period (as compared with 1792) are in general less; and, consequently, the public are less taxed for the performance of the same duty *now* than in 1792.

"In the year 1792, the warehousing system had not been established. Officers were admitted at all ages, and there was no system of classification or promotion. The officers at the out-ports and in London were generally appointed through local influence; and were too often persons who had failed in trade, or had been in menial service, and who regarded their situations rather as a comfortable provision for their families than as offices for which efficient services were required. The superintendence and powers of the Board were cramped and interfered with by circumstances and considerations which prevented the enforcement of wholesome regulation. The whole system was so imperfect, so far back only as 1818, that a special commission was appointed to inquire into the department; and, upon the recommendation of that commission, various regulations have been adopted.

"The age of admission has been limited; a system of classification and promotion of officers, and a graduated scale of salaries, established throughout the whole department; and, by this means, local interference in the promotion of officers has been abolished; the attendance of officers increased, regulated, and strictly enforced; holidays reduced from 46 in the year to 3; viz. Good Friday, the King's birthday, and Christmas-day; useless oaths, and bonds, and forms of documents of various kinds, discontinued; increased facility and despatch afforded to the merchant's business; the accounts kept in the different offices, and returns of all kinds revised, simplified, and reduced; and various minor regulations of detail established; the whole machinery of the department remodelled, and adapted to the trade and commerce of the country.

"In Ireland, the number of officers employed at all the ports, in the year ended the 5th of January, 1830, and the salaries and charges, did not much exceed the number and expense at the port of Dublin alone in 1818: and, within the space of 11 years, nearly two thirds of the officers employed at the ports in Ireland have been discontinued; the number having been, in 1818, 1755; in 1829, 544: and an annual reduction in salaries and charges has been effected to the extent of 173,724*l.*; the amount having been, in 1818, 285,115*l.*; in 1829, 111,391*l.* (103,813*l.* of that amount having been reduced between the years 1823 and 1828), upon an expenditure of 285,115*l.*; and the receipts were nearly equal, in 1827, to those of 1818 and 1823, notwithstanding the total repeal of the cross Channel duties, amounting to about 340,000*l.* per annum, subsequent to the latter period.

"Already has government relinquished, it may be said, any interference with promotion in the department of the customs, and the road is open to advancement to the meritorious officer.

"Influence is no longer allowed to prevail; and in many cases which have recently occurred, and in which the patronage of government might have been fairly exercised, it has been at once abandoned, in order to give way to arrangements by which the services of some very intelligent and highly respectable officers, whose offices had been abolished, could be again rendered available, with a material saving to the public.

"By a recent order from the Lords of the Treasury, of the 20th of February, 1830, the salaries of the commissioners, and of other officers, have been prospectively reduced, and directions given to revise the whole establishment in the spirit of that order, with a view to every possible reduction."

These are very great improvements, certainly, and reflect much credit on the government, and on the Board by whom its efforts have been zealously seconded; but we are, notwithstanding, satisfied that very great reductions may still be made in the cost of the establishment. These, however, are not to be effected by reducing the salaries of the officers, which, if any thing, are now too low; but by lessening the demand for their services, by reducing and simplifying the duties. The coast guard and coast blockade (the latter is under the orders of the Admiralty), costing together about 400,000*l.* a year, might be wholly dispensed with, were it not for the exorbitant duties on brandy, gin, and tobacco—duties which seem to be intended only to encourage smuggling; and which it is quite certain would be 3 times as productive as they are at this moment, were they reduced to *one third* of their present amount. The duties on a great variety of small articles might also be entirely repealed, without any sensible loss of revenue, and with great advantage to commerce: and were these alterations effected, and the proceedings with respect to the entry and clearing out of ships and goods adequately simplified, a *very great saving* might be made in this department, and the services of a large number of those now employed in it might be dispensed with.

In Scotland, separate Custom-houses seem to be multiplied to an absurd extent. Within these few years, indeed, a very considerable change for the better was effected in the Scotch Custom-house; but it is still susceptible of, and ought to be subjected to, great curtailment.

The reader will find, in the accounts of most imported articles of any consequence given in this work, statements of the customs duty paid on their importation. It may be gratifying, however, to have them all brought together in one point of view, as in the following Table:—

An Account of the Gross Receipt and Net Produce of the Revenue of Customs in Great Britain in the Year ending the 5th of January, 1833; distinguishing the Amount collected on each Article usually producing 1,000*l.* or more per Annum.

Inspector General of Imports and Exports. Miserable Attempt at Economy in this Department. — The office of inspector general of imports and exports was established in 1696. The accounts of the trade and navigation of the country, annually laid before parliament, are furnished by this office; and, owing to the ability of the officers, the improved manner in which these accounts are now made out, and the practice of giving statements of the quantities of the principal articles exported and imported, and the declared or real value of the former, they have become of great public importance. It is singular, however, that after having existed for about 135 years, and being gradually brought to a high pitch of perfection, this office was, in 1830, rendered nearly useless by a pitiful attempt to *save the salary of a couple of clerks!* Previously to that year, the accounts of the trade and revenue of the two great divisions of the empire were exhibited separately and jointly; so that if any one, for example, wished to know the quantity of sugar entered for home consumption in 1829, in Great Britain and in Ireland, he would have found the results separately stated; and in the same way for the produce of any article or tax. Nothing, it is plain, could be more desirable than an arrangement of this sort; which, indeed, considering the entirely different situation of the two great divisions of the empire, is the only one capable of affording the means of drawing any useful conclusions. But in 1830, ministers, in order to accomplish the miserable object already alluded to, had all the accounts consolidated into one mass (*rudis et indigesta moles*); so that it became impossible to tell what was the consumption of any article, or the produce of any tax, either in Great Britain or in Ireland, — the only information communicated being the general result as to the United Kingdom! Nothing more absurd was ever imagined. On the principle that Ireland is taken into the same average with Great Britain, we might take in Canada; for there is decidedly less difference between the condition and habits of the people of Canada and those of Britain, than there is between those of the British and Irish. But this measure was not objectionable merely from its confounding such dissimilar elements, and laying a basis for the most absurd and unfounded inferences: it rendered all the previous accounts in a great measure useless; and would, had it been persevered in, have effectually deprived statesmen and statisticians of some of the very best means of instituting a comparison between the past and future state of both divisions of the empire. Happily, however, this abortive attempt at economy has been relinquished. The moment Mr. Poulett Thomson attained to office, he took measures for the restoration of that system which had been so unwisely abandoned; and every one in any degree conversant with matters of finance, commerce, or statistics, will agree with us in thinking that the Right Hon. Gentleman could have rendered few more acceptable services. The public accounts for 1830, the only ones made out on the new system, were a disgrace to the country. We are glad, however, to have to add that they have been withdrawn, and replaced by others.

CUTLERY, a term used to designate all manner of sharp and cutting instruments made of iron or steel, as knives, forks, scissors, razors, shears, scythes, &c. Sheffield is the principal seat of the cutlery manufacture; but the knives and other articles made in London are said to be of superior quality.

The act 59 Geo. 3. c. 7. gives the manufacturers of cutlery made of wrought steel, the privilege of marking or stamping them with the figure of a hammer; and prohibits the manufacturers of any articles of cutlery, edge tools, or hardware, *cast or formed in a mould*, or manufactured otherwise than by means of a hammer, from marking or impressing upon them the figure of a hammer, or any symbol or device resembling it, on pain of forfeiting all such articles, and 5*l.* for every dozen. A penalty of 10*l.* per dozen, exclusive of forfeiture, is also imposed upon every person having articles of cutlery in his possession for the purpose of sale, marked with the words *London*, or *London made*, unless the articles so marked have been really manufactured within the city of London, or a distance of 20 miles from it.

CYPRESS, a forest tree of which there are many varieties, the species denominated the evergreen cypress (*Cupressus sempervirens*) and the white cedar (*Cupressus Thyoides*) being the most celebrated.

The cypress is indigenous to the southern parts of Europe, to several parts of Asia, and to America. It grows to a great size, and is a most valuable species of timber. It is never attacked by worms; and exceeds all other trees, even the cedar, in durability. Hence the Athenians, when desirous to preserve the remains of their heroes and other great men, had them enclosed in cypress coffins; and hence, also, the external covering of the Egyptian mummies is made of the same enduring material. The cypress is said to live to a great age; and this circumstance, combined with its thick dark green foliage, has made it be regarded as the emblem of death and the grave.

In his *Geography and History of the Western States of America*, Mr. Timothy Flint has given the following account of the cypress trees found in the southern parts of the valley of the Mississippi: — "These noble trees rear their straight columns from a large cone-shaped buttress, whose circumference at the ground is, perhaps, 3 times that of the regular shaft of the tree. This cone rises from 6 to 10 feet, with a regular and sharp taper, and from the apex of the cone towers the perpendicular column, with little taper after it has left the cone, from 60 to 80 feet clear shaft. Very near the top it begins to

throw out multitudes of horizontal branches, which interlace with those of the adjoining trees, and, when bare of leaves, have an air of desolation and death, more easily felt than described. In the season of vegetation the leaves are short, fine, and of a verdure so deep as almost to seem brown, giving an indescribable air of funereal solemnity to this singular tree. A cypress forest, when viewed from the adjacent hills, with its numberless interlaced arms covered with this dark brown foliage, has the aspect of a scaffolding of verdure in the air. It grows, too, in deep and sickly swamps, the haunts of fever, mosquitoes, moccasin snakes, alligators, and all loathsome and ferocious animals, that congregate far from the abodes of man, and seem to make common cause with nature against him. The cypress loves the deepest, most gloomy, inaccessible swamps; and, south of 33°, is generally found covered with sable festoons of long moss, hanging, like shrouds of mourning wreaths, almost to the ground. It seems to flourish best when water covers its roots for half the year. Unpromising as are the places and circumstances of its growth, no tree of the country where it is found is so extensively useful. It is free from knots, is easily wrought, and makes excellent planks, shingles, and timber of all sorts. It is very durable, and incomparably the most valuable tree in the southern country of this valley."—(Vol. i. p. 62.)

D.

DAMAGED GOODS, in the language of the customs, are goods, subject to duties, that have received some injury either in the voyage home or in the bonded warehouses.

It is enacted by the 3 & 4 Will. 4. c. 52, that if any goods rated to pay duty according to the number, measure, or weight thereof (except those after mentioned), shall receive damage during the voyage, an abatement of such duties shall be allowed proportionally to the damage so received; provided proof be made to the satisfaction of the commissioners of customs, or of officers acting under their direction, that such damage was received after the goods were shipped abroad in the ship importing the same, and before they were landed in the United Kingdom; and provided claim to such abatement of duties be made at the time of the first examination of such goods.—§ 30.

It is further enacted, that the officers of customs shall examine such goods, and may state the damage which, in their opinion, they have so received, and may make a proportionate abatement of duties; but if the officers of customs be incompetent to estimate such damage, or if the importer be not satisfied with the abatement made by them, the collector and comptroller shall choose 2 indifferent merchants experienced in the nature and value of such goods, who shall examine the same, and shall make and subscribe a declaration, stating in what proportion, according to their judgment, the goods are lessened in value by such damage, and the officers of customs may make an abatement of the duties according to the proportion of damage declared by such merchants.—§ 31.

Provided always, that no abatement of duties shall be made on account of any damage received by any of the sorts of goods herein enumerated; viz. cocoa, coffee, oranges, pepper, currants, raisins, figs, tobacco, lemons, and wine.—§ 32.

DAMAR, a kind of indurated pitch or turpentine exuding spontaneously from various trees indigenous to most of the Indian islands. Different trees produce different species of resin, which are designated according to their colour and consistence. "One is called *Damor-batu* in Malay, or *Damar-selo* in Javanese, which means hard or stony rosin; and another in common use *Damar-patch*, or white rosin, which is softer. The trees which produce the damar yield it in amazing quantity, and generally without the necessity of making incisions. It exudes through the bark; and is either found adhering to the trunk or branches in large lumps, or in masses on the ground under the trees. As these often grow near the sea-side, or on the banks of rivers, the damar is frequently floated away, and collected in distant places as drift. It is exported in large quantities to Bengal and China; and is used for all the purposes to which we apply pitch, but principally in paying the bottoms of ships. By a previous arrangement, almost any quantity may be procured at Borneo, at the low rate of $\frac{1}{2}$ dollar per peul."—(Crawford, *East. Archip.* vol. i. p. 455., vol. iii. p. 420.)

DAMASK (Ger. *Damasten Tafelzeug*; Du. *Damaskuerk*; Fr. *Venise, Damas*; It. *Tela damaschina*; Sp. *Tela adamascada*; Rus. *Kamtschatnii salftki*), a species of table linen.—(See **LINEN**.)

DANTZIC, one of the principal emporiums of the north of Europe, in West Prussia, in lat. 54° 20' 48" N., lon. 18° 38' E. Population about 56,000. It is situated on the left or western bank of the Vistula, about 4 miles from where it falls into the sea. The harbour is at the mouth of the river, and is defended on each side by pretty strong forts. The town is traversed by the small river Motlau, which has been rendered navigable for vessels drawing 8 or 9 feet water.

Roads, Port, &c.—The road or bay of Dantzic is covered on the west side by a long, narrow, low, sandy tongue of land, extending from Reserhoff Point (on which is a light-house), in lat. 54° 56', lon. 18° 23' 15", upwards of 30 miles, in an E. by S. direction, having the small town of Hecla, or Heel, near its termination. A light-house, elevated 123 feet (Eng. above the level of the sea, has been erected within about $\frac{1}{2}$ mile of the extremity of this point. The flashes of the light, which is a revolving one, succeed each other every $\frac{1}{4}$ minute. Dantzic lies about S. $\frac{1}{2}$ W. from the Heel; its port, denominated the Fairwater.

being distant about 4 leagues. There is good anchorage in the roads for ships of any burden; but they are exposed, except immediately under the Heel, to the north and north-easterly winds. There are harbour lights at the entrance to the port. All ships entering the Vistula must heave to about a mile off the port, and take a pilot on board; and pilots must always be employed in moving ships in the harbour, or in going up and down the river. The usual depth of water at the mouth of the river is from 12 to 13 feet (Eng.); in the harbour, from 13 to 14 feet; at the confluence of the Motlau with the Vistula, from 9 to 9½ feet; and in town from 8 to 9 feet. Moles have been erected on both sides the entrance to the harbour: that on the eastern side, which is most exposed, is constructed of granite, but is not yet completed; the other is partly of stone and partly of timber.

Trade of Dantzic. — Next to Petersburg, Dantzic is the most important commercial city in the north of Europe. It owes its distinction in this respect to its situation; the Vistula, with its important tributaries the Bug, Narew, &c., giving it the command of a great internal navigation, and rendering it the *entrepôt* where the surplus products of West Prussia, Poland as far as Hungary, and part of Lithuania, are exchanged for those imported from the foreigner. The exports of wheat from Dantzic are greater than from any other port in the world. There are four sorts of wheat distinguished here; viz. *white, high-mixed, mixed, and red*, according as the white or red predominates. The quality of the Dantzic wheat is for the most part excellent; for, though small in the berry, and not so heavy as many other sorts, it is remarkably thin skinned, and yields the finest flour. The white Polish wheat exported here is the best in the Baltic. Rye is also very superior, being both clean and heavy; and the exports are very large. The exports of barley and oats are comparatively inconsiderable, and the qualities but indifferent. Very fine white peas are exported. Next to grain, timber is the most important article of export from Dantzic. The principal supply of fir timber, masts, &c. is brought by the River Narew, which, with its branches, rise in Old Prussia and Lithuania, and falls into the Bug near the confluence of the latter with the Vistula. Oak plank, staves, &c. are brought down from the higher parts of the Vistula, and the tributary streams of Dunajetz, Wieprez, &c. Weed ashes, pearl-ashes, bones, zinc, wool, spruce beer, feathers, &c. are also exported.

Money. — Accounts used formerly to be wholly kept in guildens, guilders, or florins of 30 groschen. The rixdollar = 3 florins = 90 groschen = 270 schillings = 1,620 pennings. The florin or guilder = 9*d.* sterling, and the rixdollar = 2*s.* 3*d.*

A new system was, however, introduced into all parts of the Prussian dominions, conformably to the decrees of the 30th of September, 1821, and of the 22d of June, 1823; but it has not hitherto entirely superseded the method of accounting previously in use.

The Cologne mark (containing 3,609 Eng. grains) is the weight at present used in the Prussian mint in weighing the precious metals. The fineness of the coins is not determined, as previously, by carats or loths, but the mark is divided for this purpose into 288 grains. Accounts are now kept in the public offices in thalers or dollars (R.), silver groschen, and pennings: 1 dol. = 30 sil. gr.; 1 sil. gr. = 12 pf.

The only silver monies now coined are dollars and ½ dollar pieces; but smaller coins are in circulation, of former coinages.

The Prussian silver coins have ¼ of alloy; and as the mark is coined into 14 dollars, each should contain 257·68 Eng. grains pure silver, and be worth about 2*s.* 11½*d.* sterling; but the assays do not always strictly coincide with the mint valuation.

The gold coins are Frederick d'ors, double, single, and half pieces. The mark of 288 grains, having 260 grains of fine gold, is coined into 35 Fred. d'ors. The Fred. d'or is worth from 5 dol. 18 sil. gr. to 5 dol. 22 sil. gr., according to the demand.

Weights and Measures. — The commercial weights are,

32 Loths	= 1 Ounce.	20 Pounds	= 1 Small stone.
16 Ounces	= 1 Pound.	33 Pounds	= 1 Large stone.
16½ Pounds	= 1 Lispound.		

110 lbs. = 1 centner; 3 centners = 1 shippund (330 lbs.); 160 lbs. of Dantzic = 100 lbs. avoirdupois = 46·85 kilog. = 94·7 lbs. of Amsterdam = 96·6 lbs. of Hamburg.

The liquid measures are, for beer,

5 Quarts	= 1 Anker.	2 Hhds.	= 1 Both.
4 Ankers	= 1 Ahm.	2 Both.	= 1 Fuder.
1½ Ahm	= 1 Hhd.	2 Fuder	= 1 Last = 6204 Eng. wine gallons.

In wine measure, which is less than beer measure, the ahm = 39½ Eng. gallons. The pipe = 2 ahms.

The last of corn = 3¼ malters = 60 scheffels = 240 viertels = 960 metzen; and weighs 1,680 lbs. Dantzic weight in rye. The scheffel = 547 of a hectolitre = 1·552 Winchester bushel. Hence the last of 60 scheffels = 11 quarters 3 bushels; the last of 54½ scheffels = 10 quarters 7 bushels.

The Dantzic foot = 11·3 Eng. inches, or 100 Dantzic feet = 94·16 Eng. feet. The ell is 2 feet Dantzic measure. The Rhineland or Prussian foot = 31·58 French metres, or 12·556 Eng. inches; hence 100 Prussian = 102·8 English feet. The Prussian or Berlin ell has 25½ Prussian inches = 26·256 Eng. ditto. 100 Berlin ells = 72·93 Eng. yards; and 157·142 Berlin ells = 100 Eng. yards. 1¼ Prussian miles are equal to 15 geographical miles.

Oak planks, deals, and pipe staves, are sold by the shoe of 60 pieces; wheat, rye, &c. are sold by the last of 50½ scheffels. — (*Kelly's Cambist; Nelkenbrecker, Manuel; Universel.*)

Imports. — We regret our inability to lay before the reader any account of the quantities of the different articles usually imported into Dantzic. They consist of sugar, coffee, wine, oil, brandy, spices, copper, lead, furs, cotton stuffs and cotton yarn, woollens, hardware, silks, indigo, dye woods, &c.

We subjoin an

Account of the principal Articles exported from Dantzic during each of the Three Years ending with 1831, with their Prices and Values in Sterling Money.

Remarks on Tariff.—The following Table affords a pretty sufficient specimen of the sort of tariff which the Prussian government are so anxious to extend all over Germany; and in furtherance of which object they have displayed equal address and perseverance. Some of the duties are abundantly moderate; but those on cotton goods, wrought iron, and woollen goods, are quite exorbitant. It is obvious too, that from their being imposed according to the weight, they fall principally on the coarser fabrics, or those worn by the mass of the people. The high duties on wrought iron are particularly objectionable. If Prussia wish to become a manufacturing country, she ought to open her ports for the reception of all articles made of iron, from wherever they may be had cheapest. They are the principal instruments by which manufactures are carried on; and if one were to set about contriving methods for depressing the latter, they would not easily find one better fitted to effect their object than by confining the manufacturers in their choice of tools and instruments, and making them adopt those that were bad and dear, because they happened to be made at home. The duties on sugar and coffee are also, in the circumstances of Prussia, quite excessive. We are, indeed, astonished that so liberal and intelligent a government as that of Berlin should, at this late period, become the patron of the exploded errors and absurdities of the mercantile system.

Rates of Duty on the chief Articles imported for Home Consumption into the Eastern Prussian Provinces in 1832.

With the exception of wool and bones, almost all articles of export are duty free.

Corn Trade of Dantzic.—The reader will find, under the head CORN LAWS AND CORN TRADE (pp. 427—430.), a pretty full account of the Polish corn trade. But the importance of the subject will excuse our giving a few additional details. Grain is almost wholly brought to Dantzic by water, in flat-bottomed boats suited to the navigation of the Vistula, Bug, &c. Mr. Consul Gibson estimates the expense of the conveyance of wheat and rye thither, including the duty at Thorn and the charges of turning on the river, till put into the granary, as follows:—

	Per Imp. qr.		Per Imp. qr.
	s. d. s. d.		s. d. s. d.
From the upper provinces on the Bug, a distance of from 700 to 500 miles	9 2 to 7 10	From Wlaciawek and its neighbourhood, about 110 miles	4 2 to 3 5
From the provinces of Cracow, Sendomir, and Lublin, 550 to 350 miles	6 6 to 5 4	From Grandentz, a distance of about 70 miles, no duty at Thorn, and when not turned on the river	0 10 to 0 9
From Warsaw and its neighbourhood, about 240 miles	4 9 to 3 11		

* N.B.—These are the ordinary charges. They are higher when there is any unusual demand for exportation.

The Bug has many windings, and its navigation, which is tedious and uncertain, can only be attempted in the spring, when the water is high. It is the same, though in a less degree, with some of the rivers that fall into the Vistula before it reaches Warsaw; and towards Cracow the Vistula itself is frequently un-navigable, especially in dry seasons, except in spring, and after the midsummer rains, when the snow melts on the Carpathian mountains. The navigation of the Polish rivers in 1832 was more than usually bad. The corn from the upper provinces did not reach Dantzic till from 2 to 4 months later than usual, and was hurried with a very heavy additional expense. In fact, the supplies of grain at Dantzic depend quite as much on the abundance of water in the rivers, or on their easy navigation in summer, as on the goodness of the harvests.

"There are," says Mr. Jacob, "two modes of conveying wheat to Dantzic by the Vistula. That which grows near the lower parts of the river, comprehending Polish Russia, and part of the province of Plock, and of Masovia, in the kingdom of Poland, which is generally of an inferior quality, is conveyed in covered boats, with shifting boards that protect the cargo from the rain, but not from pilfering. These vessels are long, and draw about 15 inches water, and bring about 150 quarters of wheat. They are not, however, so well calculated for the upper parts of the river. From Cracow, where the Vistula first becomes navigable, to below the junction of the Bug with that stream, the wheat is mostly conveyed to Dantzic in open flats. These are constructed on the banks, in seasons of leisure, on spots far from the ordinary reach of the water, but which, when the rains of autumn, or the melted snow of the Carpathian mountains in the spring, fill and overflow the river, are easily floated.

"Barges of this description are about 75 feet long, and 20 broad, with a depth of 2½ feet. They are made of fir, rudely put together, fastened with wooden treenails, the corners dovetailed and secured with slight iron clamps,—the only iron employed in their construction.

"A large tree, the length of the vessel, runs along the bottom, to which the timbers are secured. This roughly cut keelson rises 9 or 10 inches from the floor, and hurdles are laid on it, which extend to the sides. They are covered with mats made of rye straw, and serve the purpose of dunnage; leaving below a space in which the water that leaks through the sides and bottom is received. The bulk is kept from the sides and ends of the barge by a similar plan. The water which these ill-constructed and imperfectly caulked vessels receive, is dipped out at the end and sides of the bulk of wheat.

"Vessels of this description draw from 10 to 12 inches water, and yet they frequently get aground in descending the river. The cargoes usually consist of from 180 to 200 quarters of wheat.

"The wheat is thrown on the mats, piled as high as the gunwale, and left uncovered, exposed to all the inclemencies of the weather, and to the pilfering of the crew. During the passage, the barge is carried along by the force of the stream, oars being merely used at the head and stern, to steer clear of the sand banks, which are numerous and shifting, and to direct the vessel in passing under the several bridges. These vessels are conducted by 6 or 7 men. A small boat precedes with a man in it, who is employed sounding, in order to avoid the shifting shoals. This mode of navigating is necessarily very slow; and during the progress of it, which lasts several weeks, and even months, the rain, if any fall, soon causes the wheat to grow, and the vessel assumes the appearance of a floating meadow. The shooting of the fibres soon forms a thick mat, and prevents the rain from penetrating more than an inch or two. The main bulk is protected by this kind of covering, and, when that is thrown aside, is found in tolerable condition.

* A cask, or 1½ barrel, weighs about 5½ cwt.

† A puncheon of 90 to 100 gallons weighs 8 to 9 cwt., according to the degree of strength.

‡ A hogshead weighs about 5½ cwt.

"The vessels are broken up at Dantzic, and usually sell for about $\frac{3}{4}$ of their original cost. The men who conduct them return on foot.

"When the cargo arrives at Dantzic or Elbing, all but the grown surface is thrown on the land, spread abroad, exposed to the sun, and frequently turned over, till any slight moisture it may have imbibed is dried. If a shower of rain falls, as well as during the night, the heaps of wheat on the shore are thrown together in the form of a steep roof of a house, that the rain may run off, and are covered with a linen cloth. It is thus frequently a long time after the wheat has reached Dantzic, before it is fit to be placed in the warehouses.

"The warehouses (*speichers*) are very well adapted for storing corn. They consist generally of 7 stories, 3 of which are in the roof. The floors are about 9 feet asunder. Each of them is divided by perpendicular partitions, the whole length, about 4 feet high, by which different parcels are kept distinct from each other. Thus the floors have 2 divisions, each of them capable of storing from 150 to 200 quarters of wheat, and leaving sufficient space for turning and screening it. There are abundance of windows on each floor, which are always thrown open in dry weather to ventilate the corn. It is usually turned over 3 times a week. The men who perform the operation throw it with their shovels as high as they can, and thus the grains are separated from each other, and exposed to the drying influence of the air.

"The whole of the corn warehouses now left (for many were burnt during the siege of 1814), are capable of storing 500,000 quarters of wheat, supposing the quarters to be large enough to fill each of the 2 divisions of the floors with a separate heap; but as of late years it has come down from Poland in smaller parcels than formerly, and of more various qualities, which must of necessity be kept distinct, the present stock of about 280,000 quarters is found to occupy nearly the whole of those warehouses which are in repair, or are advantageously situated for loading the ships. Ships are loaded by gangs of porters, with great despatch, who will complete a cargo of 500 quarters in about 3 or 4 hours."—(*First Report*.)

We extract from the work of Mr. Oddy, the following additional information with respect to the Dantzic warehouses:—"The warehouses for linens, ashes, hemp, &c., and the extensive granaries, are situated in an island formed by the Motlau. To guard these warehouses, from 20 to 30 ferocious dogs of a large size, amongst which are blood-hounds, are let loose at 11 o'clock at night. To keep the dogs within their districts, as well as to protect the passengers, large high gates run across the end of each of the streets leading to the main one: no light is allowed, nor any person suffered to live on this island. These dogs prow about the whole night, and create great terror. It would be impossible otherwise to keep property secure amongst the hordes of Poles, Jews, &c. met with here; no punishment would have half the effect that the dread of the dogs produces. In winter, when the water is frozen over, there are keepers placed at particular avenues, with whips, to keep the dogs in their range.

"No fire or robbery was ever known; and the expense to each building, with the immense property they contain, is very reasonable. Vessels, either from the interior, or other quarters, lying alongside these warehouses, are not allowed to have a fire, or light of any kind, on board, nor is a sailor or any other person suffered even to smoke. These regulations partly extend to all shipping lying in the harbour."—(*European Commerce*, p. 243.)

Timber Trade, Brack.—Fir timber is usually brought down in its natural state, and is squared into logs, or sawn into planks, in winter, when the labourers cannot be otherwise employed. The staves shipped here are carefully assorted, and are reckoned superior to those of America.

The expenses of the water conveyance of squared timber, including duty at Thorn, are—

			s.	d.	s.	d.
From the Bug	-	-	from about	6	0	5
— Wicprez (above Warsaw)	-	-	—	4	6	4
— Vistula (above do.)	-	-	—	3	0	2
						per piece.

Being higher when the demand is unusually great, or when hands are scarce.

At Dantzic, as well as at Petersburg (which see), Riga, and several other Baltic ports, sworn inspectors (*brackers*) are appointed by authority to examine certain articles intended for exportation, and to classify them according to their qualities. Staves and timber of all sorts, with the exception of pine wood, is subjected to the brack. Prime quality is branded *Krohn* or *Crown*; second quality, *Brack*; and the third or lowest quality, *Bracks Brack*. All unmerchable articles are rejected by the brackers, and are not allowed to be exported.

The gauge for crown pipe staves, which the bracker has always in his hand, is $4\frac{1}{2}$ inches broad, $1\frac{1}{2}$ thick, and 64 inches in length, which they must be at least; but they are expected to be larger in every respect.

Pipe staves are from 64 to 68 inches long; 6, 5, and $4\frac{1}{2}$, at least, broad; and from $1\frac{1}{2}$ to 3 inches thick. Brandy staves are at least 54 to 58 inches long, as thick and broad as pipe staves.

Hogshead staves are 42 to 45 inches long, as thick and broad as pipe staves, all English measure.

The quality is ascertained by marks, to distinguish each sort, as follows:—

Crown pipe staves, stamped at the end, K.	Hogshead bracks brack, II.
— brack, in the middle, I.	Brandy hogshead crown, at the end, B K.
— bracks brack, II.	— brack, in the middle, K.
Hogshead crown, at the end, O K.	— bracks brack, K K.
— brack, in the middle, I.	

Oak planks are assorted in the same manner. Crown plank is marked in the middle, C. Brack, in the end and middle, B. Bracks brack, B B.

To distinguish $1\frac{1}{2}$ from 2, and $2\frac{1}{2}$ from 3 inches, the $1\frac{1}{2}$ are marked with I, and $2\frac{1}{2}$ with II.

At the end, in rough strokes, with coloured paint, brack is yellow I; bracks brack, white II; crown, red III.

Ashes are subjected to the brack. The calcined are opened, and the crust taken off; others are not examined unless there be any suspicion of their quality, or the staves of the hogshead be supposed to be too thick. Every cask of potashes is opened.

Shipping Charges and Duties, exclusive of Commission.

R. s. gr.		R. s. gr.	
On Wheat	about 2 22½	On Deck deals	- about 0 2½ per load.
Rye	-	Short deals	-
Barley	- 2 20	Deal ends	-
Pots	-	Lathwood	- 1 0 — fathom.
Oats	- 2 12	Clapboards	- 2 0 — shock of 60 pieces.
Flour	-	Oak plank	- 1 10 — load.
Ship biscuit	5 per cent.	Oak ends	-
Pearlashes	about 0 10 per shipload of 550 lbs.	Staves	- 15 10 — mille pipe.
Weed ashes	- 0 6 — barrel do.	Black or spruce beer	- 0 7½ — last of 11 kegs.
Fir timber	- 0 10 — load.	Feathers	- 2 0 — 100 lbs.

N. B. — The Prussian pound is about $\frac{3}{4}$ per cent. heavier than the English pound. The expenses of sending goods down : re taken at about an average rate; but if the whole, or the greater part of the cargo, were loaded in the Fairwater or roads, the expenses would be somewhat more.

Shipping.—Account of the Number of Ships, specifying the Countries to which they belonged, with their Tonnage and Crews, that arrived at and departed from Dantzic, in 1831.

Description.	Arrivals.			Departures.

	63		Remaining in port	64		4,646
	639			639		

Port Charges.—The charges on a ship of 200 lasts, or about 500 tons burden, are—

	R. s. g. d.
Harbour money	88 26 5
Ditto in gold (say in Fred. d'ors, reckoned at 5 r., in which this must be paid)	11 6 8
River money	0 0 0
Commercial contribution	3 10 0
Expedition expense	13 10 0
Captain's allowance for expenses on shore	16 20 0
Tracking the ship into the harbour (Fairwater)	2 0 0
Ballast money, &c.	10 21 0
Pilot to the ballast wharf	4 0 0
Ditto moving the ship in Fairwater	2 15 0
Police passport	3 5 0
Clearing the vessel in and out	16 20 0
Making 25l. 6s. 6d. sterling, at the exchange of 6 r. 28 s. gr.	175 17 4

The charges on the ships of all countries having reciprocity treaties with Prussia (which is generally the case) are the same, only Dantzic captains receive no allowance for shore expenses. River or stream money is only paid by vessel, that bring goods to town, or load in the Motlan (above the blackhouse): if a ship remain in the Fairwater or Vistula, the river money is levied on the craft carrying the goods, and falls on the latter.

Dantzic is a favourable place for ships crewing and repairing, and for obtaining supplies of all sorts of sea stores at a reasonable rate.

There being to the port 75 ships, measuring about 16,000 lasts = 21,000 tons, navigated by about 950 men. They are employed in foreign trade. The port has no fishery, and no coasting trade worth mentioning.

Custom-house Regulations.—The shipmaster must, within 24 hours after arrival in port, make a declaration of the cargo on board, and of the ship's provisions, and he incurs a severe penalty if the declaration do not prove correct. The ship's hatches (if goods are on board) are sealed on arrival, and an additional declaration is accepted before they are unsealed; but no *later* declaration, supplementary, or explanatory, of the first, and no submitting the goods to investigation by the officers, is received or allowed. If the shipmaster be unable to make a complete declaration on arrival, a custom-house officer is put on board, who remains until the ship is unloaded, at an expense to her of about 2s. per day and night. The cargo can only be discharged in presence of a customs officer.

The shipmaster, and not the receiver of the goods, is made responsible, if the contents of the packages do not correspond with his declaration; and he is only exonerated from this by solemnly averring, on making the declaration, that the contents are unknown to him. An evident mistake or oversight is treated as rigorously as an intentional fraud.

On commencing to load, the shipmaster receives a blank landing list, in which he must duly note the articles he takes on board, or he is liable to fine; but this regulation is not very rigidly enforced. On clearing out, this list is compared with the goods entered by the vessel, when the pass passport is given.

Ballast can be discharged only at stated places, on pain of the shipmaster being fined.

It is material, however, to observe, that the whole Custom-house business of the shipmaster is conducted by Custom-house brokers, so that he is never at a loss, being informed by the one he selects what he is to do. Alterations are frequently made in the Custom-house regulations.

The shipmaster receives, on arrival, from the pilot commander, a copy of the harbour regulations, in his own language, with instructions how to act as to ballast.

Warehousing.—Such goods as pay a higher duty than a dollar per centner (about 1s. 5½d. for about 115 lbs. English) may be placed in the king's stores (so where else), and remain there for 2 years without payment of duty. No allowance is made for waste or damage in the stores. Other goods, not capable of being charged, may be placed in private stores, under the king's lock; but not elsewhere, without permission. No rent is charged for goods in the king's store, during the first 3 months; afterwards about 1½d. monthly rent is charged for the first, and about 3s. monthly for the second year, per centner of about 115 lb. English.

In private warehouses, the monthly rent for 10 quarters of wheat or other grain is from about 5½d. to 7d., or more, ac-

cording as warehouse room is abundant or otherwise. Other goods do not usually pay by the piece, but part of a store is hired for them, and the rent generally comes somewhat higher in proportion.

The cost of rent and turning grain is from 1s. 2d. to 1s. 6d. monthly, for 10 quarters, according to the season of the year and other circumstances; but more when granary room is scarce, and wages high.

Banking Establishments.—There is none such here, excepting a branch of the Royal or Government Bank of Berlin. This was founded partly in the view of receiving deposits of money under litigation in the courts of the province; monies the property of minors and charitable institutions, the former until disposable or placed on good security; and monies belonging to individuals not merchants, and at times, also, those of the latter. Interest is paid on such deposits as follows: viz.

3 per cent. on sums belonging to minors.
2½ do. do. charitable institutions,
churches, and sums deposited by the courts of justice, and
2 do. do. all other deposits.

The principal is demandable at pleasure, unless otherwise stipulated. The bank makes advances on grain and some other kinds of goods at 5 per cent. interest; discounts bills of 3 signatures, not having more than 2 months to run, at 6 per cent., and sometimes, when money is plenty, at a lower rate. It also makes advances at 1 per cent. on deposits of Fred. d'ors, and certain foreign monies; and it occasionally buys bills for account of, and sells bills on, the Berlin bank. It does not issue notes. The amount of its capital is not fixed; but government guarantees its transactions. It is relieved from the payment of postage on money, and it is not required to use the stamps fixed by law, on bills for its deposit transactions, but only those of 10 s. gr. (about 1½d.); while individuals must use stamps for such bills of 5 s. gr. for every 400 r., of not longer date than 5 months, and for every 200 r. of longer date.

On negotiable bills, however, the bank must use the stamps fixed by law, say of 5 s. gr. (about 5½d.) for sums of 50 dol. to 100 dol., and at the same rate for every additional sum between 100 dol. and 100 dol.

Bills from and on foreign places, negotiated at Dantzic, are not subject to the stamp duty.

The affairs of the bank are not made public. Being a government concern, there are no dividends. It is not supposed to be very profitable, at least in the present circumscribed state of trade, although enjoying the advantages of exemption from postage of monies, and paying less stamp duty. It is true, however, that the direct advantage of the lower stamp duty is enjoyed by the borrower.

Credit, Brokerage, &c.—Very few goods are consigned from abroad for sale; for such consignments rarely turn to good account. Imports are seldom sold for cash, but generally at 1, 2, and 3 months' credit, or longer. The discount allowed for cash payments, when sold on time, is usually 6 per cent., but it varies according as money is plentiful or otherwise.

Any person, being a burgher of the town (which any one of good character may become), may transact business as a commission merchant, import or export; but brokers must be chosen by the elders of the Corporation of Merchants, approved by the regency of the province, and sworn in by the magistracy of the town.

The usual rates of commission are—

3 per cent. on wood articles } exported,
2 do. do. other goods }
2 do. do. goods imported,
with from from 1 to 2 per cent. on do. for *del credere*, or guarantee of debts.

The corn factor receives r. 17 (about 1s. 9d. sterling) per last of 60 scheffels of all grain, from the buyer, and 1 per cent. from the seller.

The rates of brokerage are—

1½ s. gr. (nearly 1s. 2½d.) per 1000.
7½ = (— 8½d.) per 1000.
5½ = (— 4½d.) per 100 r.
1 per cent. for bills on Berlin, Warsaw, and Paris.
½ per cent. on monies placed at interest, for a period not less than 6 months, from the borrower, and
1 per cent. from the lender.
1 per mille usually for short discount, from both parties.
1 per cent. on the actual or the computed amount of transaction on public fund, from both parties.
½ per cent. monthly (sometimes more or less) for merchandise, Origin for exportation, the brokerage is recently fixed at 1

Ships belonging to Prussia. — M. Ferber gives the following Table of the shipping of Prussia : —

Summary Indication of the Vessels belonging to Prussian Owners, in the Years 1825, 1826, 1827, 1828, 1829, 1830, and 1831. — (Ferber, p. 174.)

Influence of Reciprocity Treaties. — This Table is important, as exhibiting the utter groundlessness of the clamour raised in this country as to the reciprocity treaty with Prussia. Taking the last at 1½ ton, the total increase of Prussian shipping, from 1825 to 1831 inclusive, will be 76 ships and 28,470 tons, which is very little more than the increase, during the same period, of the shipping belonging to the port of Newcastle! It will be observed, too, that the increase since 1827 has only amounted to 29 ships and 9,584 tons. If, therefore, our shipping be distressed, it is quite impossible it should have been occasioned by the increase of shipping in Prussia. Considering, indeed, the extent of sea coast now in possession of that kingdom, the tranquillity she has enjoyed since the peace, and her rapid progress in manufactures and commerce, the small increase of her shipping is not a little surprising. It could not well have been less, though the reciprocity treaty had never been heard of. Indeed, many of the Prussian ship owners think, and, perhaps, justly, that it would have been greater had that treaty not been entered into. It must also be kept in view, that this trifling increase in the shipping of Prussia is the only increase that has taken place in the shipping of any country of the north of Europe since 1825. The mercantile navies of Sweden, Denmark, and Russia, have undergone little or no change; but it is a fact, that the shipping of Norway has fallen off even more rapidly than that of Prussia has increased, and yet we have a reciprocity treaty with her! Is not this sufficient to show that the influence of these treaties has been grossly exaggerated by our ship owners? and that they cannot really have done them any injury?

DATES (Ger. *Datteln*; Fr. *Dattes*; It. *Datteri*; Sp. *Dátiles*), the fruit of the palm tree (*Phoenix dactylifera* Lin.). This tree is abundant in Egypt, Barbary, Arabia, Persia, and the adjacent countries, particularly on the confines of the desert, and wherever there is sufficient moisture. It is a tall majestic tree; and repeated references are made to it in the sacred writings (Ecclus. xxiv. 14.), and in the Koran. Mohammed, in one of his sayings, beautifully compares the upright and generous man to the palm tree. "He stands erect before his Lord; in his every action he follows the impulse received from above, and his whole life is devoted to the welfare of his fellow-creatures." But the veneration in which the palm tree is held in the East is to be ascribed more to its utility than to its beauty. Dates form the principal part of the subsistence of the inhabitants of many parts of Arabia and Barbary, and they are held in the highest estimation wherever they are met with. "They are," says Burckhardt, "by far the most essential article of food for the lower classes of Medina; their harvest is expected with as much anxiety, and attended with as much general rejoicing, as the vintage in the south of Europe; and if the crop fails, which often happens, as those trees are seldom known to produce abundantly for 3 or 4 successive years, or is eaten up by the locusts, universal gloom overpreads the population, as if a famine were apprehended." — (*Travels in Arabia*, vol. ii. p. 214.)

There is an endless variety of dates. Generally, however, they may be described as being somewhat in the shape of an acorn, but usually larger, consisting of a thick fleshy substance, including and freely separating from an oblong stone or kernel, having a furrow on the one side. Their taste is agreeably sweet, accompanied with a slight astringency. The new fruit is called by the Arabs *ruteh*. When the dates are allowed to remain on the tree till they are quite ripe, and have become soft and of a high red colour, they are formed into a hard solid paste or cake called *adjoue*. This is formed by pressing the ripe dates forcibly into large baskets, each containing about 2 cwt. "In this state," says Burckhardt, "the Bedouins export the adjoue: in the market it is cut out of the basket, and sold by the pound. It forms part of the daily food of all classes of people: in travelling it is dissolved in water, and thus affords a sweet and refreshing drink. During the monsoon, the ships from the Persian Gulf bring adjoue from Bussorah to Djidda for sale in small baskets weighing about 10 lbs. each; this kind is preferred to every other. Ships bound from Arabia for India take with them a considerable quantity of adjoue, which is readily disposed of amongst the Mohammedans of Hindostan." — (*Travels in Arabia*, vol. i. p. 57.)

The Arabians and Egyptians use the leaves of the tree in the preparation of bags and baskets; the boughs, the outer and inner bark of the trunk, and the fleshy substance at the root of the leaves, where they spring from the trunk, have all their respective uses;

and besides this, the kernels of the fruit, notwithstanding their hardness, are used as food for cattle; they are soaked for two days in water, when they become softened, and are given to camels, cows, and sheep, instead of barley: they are said to be much more nutritive than that grain. There are shops at Medina in which nothing else is sold but date kernels; and the beggars are continually employed in all the main streets in picking up those that are thrown away. — (*Burchhardt*, vol. ii. p. 212.)

All the refinements of Arabian cookery are exhausted in the preparation of dates; and the Arabs say that a good housewife will daily supply her lord, for a month, with a dish of dates differently dressed.

Palm trees are raised by shoots; and Dr. Shaw mentions that they arrive at their vigour in about 30 years, and continue so 70 years afterwards, bearing yearly 15 or 20 clusters of dates, each of them weighing 15 or 20 lbs.: after this period, they begin to decline. — (*Travels in the Levant*, p. 142. 4to ed.)

The best dates imported into Great Britain are said to come from Tunis, but they are most commonly brought from Smyrna and Alexandria. They should be chosen large, softish, not much wrinkled, of a reddish yellow colour on the outside, with a whitish membrane betwixt the flesh and the stone. Those that are dry and hard are of little value.

DEALS, OR DEAL BOARDS (Ger. *Dielen*; Du. *Deelen*; Da. *Daler*; Sw. *Til-jor*; Fr. *Planches minces*; It. *Tavole, Piane*; Rus. *Doski*; Pol. *Tarceje*), a thin kind of fir planks, much used in carpentry: they are formed by sawing the trunk of a tree into longitudinal divisions, of greater or less thickness, according to the purposes they are intended to serve. They are imported from Dantzic, Petersburg, Narva, and many other ports in the Baltic, and from North America; but those from Christiania, the capital of Norway, are the best, and bring the highest price. They are distinguishable from those produced in the contiguous provinces of Norway; their superiority has been said to depend principally on their being more perfectly sawed; but it really depends on the greater care with which the sap-wood and other defective portions of the timber is cut away, and on the quality of the timber.

A Russian standard deal is 12 feet long, 11 inches wide, and $1\frac{1}{2}$ inch thick; 400 feet of $1\frac{1}{2}$ inch plank make a load.

A Christiania standard deal is 11 feet long, 9 inches wide, and $1\frac{1}{2}$ inch thick. There is another standard of Norway deals at Dram, 10 feet long, 9 inches wide, and $1\frac{1}{2}$ inch thick. — (See CHRISTIANIA.)

DEBENTURE, a term used at the Custom-house to signify the *certificate* subscribed by the customs officers, and given to the exporter of goods on which a bounty or drawback is allowed, bearing that the exporter has complied with the required regulations, and that he is entitled to such bounty or drawback.

It is enacted by 3 & 4 Will. 4. c. 52. § 86, that no drawback or bounty shall be allowed upon the exportation of any goods, unless entered in the name of the real owner thereof, or of the person who had actually purchased and shipped the same, in his own name and at his own risk, on commission.

Such owner or commission merchant shall make and subscribe a declaration on the debenture that the goods have been actually exported, and are not to be re-landed in any part of the United Kingdom, &c.; and if such owner or commission merchant shall not have purchased the right to such drawback or bounty, he shall declare under his hand in the entry, and in his oath upon the debenture, the person who is entitled thereto; and the name of such person shall be inserted in the cockpit, and in the debenture, and his receipt on the latter shall be the discharge of such drawback or bounty. — § 87.

For these and the other clauses in the act relating to debentures, see IMPORTATION AND EXPORTATION.

All debentures must be on *ss.* stamps.

Debentures or certificates for bounty on the exportation of linens or sailcloth exempted from duty.

DELFT, OR DELF (Ger. *Fayence, Unüchtes Porzellin*; Du. *Delfs porcelyn*; Fr. *Faïence*), a coarse species of porcelain originally manufactured at Delft, whence its name. It is now rarely used in this country.

DEMURRAGE, in commercial navigation, is an allowance made to the master or owners of a ship by the freighter, for detaining her in port longer than the period agreed upon for her sailing. It is usually stipulated in charterparties and bills of lading, that a certain number of days, called running or working days, shall be allowed for receiving or discharging the cargo, and that the freighter may detain the vessel for a further specified time, or as long as he pleases, on payment of so much *per diem* for such over-time. When the contract of allfreightment expressly stipulates that so many days shall be allowed for discharging or receiving the cargo, and so many more for over-time, such limitation is interpreted as an express stipulation on the part of the freighter, that the vessel shall in no event be detained longer, and that if detained he will be liable for demurrage. This holds even in cases where the delay is not occasioned by any fault on the freighter's part, but is inevitable. If, for example, a ship be detained, owing to the crowded state of the port, for a longer time than is allowed by the contract, demurrage is due; and it is no defence to an action for demurrage, that it arose from port regulations, or even from the unlawful acts of the Custom-house officers. Demurrage is not, however, claimable for a delay occasioned by the hostile detention of the ship, or the hostile occupation of the intended port; nor is it claimable for any delay wilfully occasioned by the master, or owners, or crew of the vessel. The claim for demurrage

ceases as soon as the ship is cleared out and ready for sailing, though she should be detained by adverse winds, or tempestuous weather. — (*Chitty's Commercial Law*, vol. iii. pp. 426—431.)

DENARIUS, a Roman coin, estimated by Dr. Arbuthnot to have been worth $7\frac{1}{2}d.$; but its value differed at different periods.

DENIER, a small French coin, of which there were 12 to a sol.

DIAMOND (Ger. *Da. Da.* and Fr. *Diamant*; Sw. *Demant*, *Diamant*; It. *Sp.* and Port. *Diamante*; Rus. *Almas*; Pol. *Dyament*; Lat. *Adamas*; Hind. *Hira*), a precious stone, which has been known from the remotest ages. Pliny has described it (*Hist. Nat.* lib. 37. § 4.); but his account is, in many respects, inaccurate. It is found in different parts of India, and in Borneo; it is also found in Brazil, on which, indeed, Europe may be said to be at present entirely dependent for supplies of diamonds. Hitherto, however, it has not been met with any where except within the tropics. It is the most beautiful and most valuable of precious stones. Its most common colours are white and grey of various shades. It occurs also red, blue, brown, yellow, and green. The colours are commonly pale. It is always crystallised, but sometimes so imperfectly that it might pass for amorphous. It is the hardest body in nature. External lustre from splendid to glimmering; internal always splendid. It is brittle; its specific gravity is 3.5. When rubbed, it becomes positively electric, even before it has been cut by the lapidary, which is not the case with any other gem. — (*Thomson's Chemistry*.)

According to Mr. Milburn (*Orient. Com.*), the colour should be perfectly crystalline, resembling a drop of clear spring water, in the middle of which you will perceive a strong light playing with a great deal of spirit. If the coat be smooth and bright, with a little tincture of green in it, it is not the worse, and seldom proves bad; but if there be a mixture of yellow with the green, then beware of it — it is a soft, greasy stone, and will prove bad.

Tests of Diamonds. Cutting, &c. — To ascertain whether any specimen is a true diamond or not, a fine file may be used; and if the surface of the stone be the least abraded or scratched by its action, it is not a diamond. The difference will also appear upon close examination without this instrument; the rays of light easily pass through other gems, but in the diamond they are refracted to the surface, which occasions its superior brilliancy. If the specimen under examination be very minute, it may be placed between 2 half-crowns, or other flat metallic surfaces, and pressed with the thumb and finger; if a diamond, it will not be injured, but if otherwise, it will break and fall to powder. On account of the extreme hardness of the diamond, the art of cutting and polishing it was for a long time unknown in Europe. But, in 1456, a young man of the name of Louis Berghen, a native of Bruges, is said to have constructed a polishing wheel for the purpose, which was fed with diamond powder instead of *corundum*, which the Chinese and Hindoos had been long accustomed to employ. Berghen was led to this discovery by observing the action produced by rubbing 2 rough diamonds together. Diamonds are cut into brilliant and rose diamonds; the former being, for the most part, made out of the octahedral crystals, and the latter from the spheroidal varieties. — *Joyce's Practical Mineralogy*; *Ros's Cyclopaedia*, &c.)

Commercial Value of Diamonds. — In the great or wholesale trade there is but little fluctuation in the price of those diamonds which may be termed *stones in general demand*. I will begin with brilliants from 1 grain to $\frac{1}{2}$ grains each. — Such brilliants, double cut, and what may be termed fine, are worth from 7*l.* to 8*l.* per carat. Noddy sellers may take 10 per cent. less for cash; but this is the general average price for a lot of 10, 20, or 50 carats of well-made stones, if the quality be good.

Brilliants, from 2 grains to $\frac{1}{2}$, may be bought in lots, at from 7*l.* 7*s.* to 8*l.* per carat. It is to be understood, that diamonds in a lot are never all quite free from faults; hence there may arise a difference of 10 per cent. in the price. Stones of $\frac{1}{2}$ grains, if fine and perfect, are always in demand, at 8*l.* or 9*l.* per carat.

Brilliants, from $\frac{1}{2}$ grains to $\frac{1}{4}$, if very fine and well proportioned, are worth from 8*l.* to 9*l.* per carat. Those of a carat each, if very fine and well selected, are worth 9*l.* or 10*l.* Three years ago I offered 12*l.* each for 8, and could not obtain them.

Brilliants, from $\frac{1}{4}$ grains to $\frac{1}{2}$, if pure, are worth from 13*l.* to 14*l.*; if perfectly fine, and of the full weight of $\frac{1}{2}$ grains, they are worth from 17*l.* to 18*l.* each: I have, for such, paid 20*l.*

Brilliants, of 2 carats each, are worth from 27*l.* to 30*l.* Stones of this weight, if well proportioned, are considered of a fine size, and well calculated for paws, or the centre of clusters; indeed, well proportioned diamonds, from 6 grains to 2 carats each, are always in demand, and are retailed at from 20*l.* to 35*l.* each, according to their degree of perfection, or as the retailer may think fit to charge them.

For brilliants of 3 carats, if fine and well formed, from 70*l.* to 80*l.* may be obtained. Stones of this size, and larger, are more liable to capricious fluctuations of price than the smaller ones before named, being chiefly required for the centre stones of saleable necklaces.

Brilliants of 4 carats, if fine, are worth from 100*l.* to 130*l.* I have sold stones, single cut, a little off colour, of this weight, at 80 guineas. I possessed one of 17 grains, perfectly white, having a surface as large as that of a 7 carat stone ought to be; it was, consequently, very thin, but being much in request, on account of its great spread, or surface, it was sold for 100*l.*

Brilliants of 5 carats are not frequently met with in general trade, and are valuable in price; as the dealers exact more if they know that such stones are wanted, than they would in the regular course of business. The prices may be said to vary from 180*l.* to 200*l.*

Brilliants of 6 carats, as before stated, are not common: they are suitable for centre stones of expensive necklaces, and single stone rings; if perfect and well shaped, they sell for 230*l.* to 250*l.* or more.

For estimating the value of peculiarly fine diamonds, there is no fixed standard. Rough diamonds, selected as fine, and well formed for cutting, may be estimated as follows: — Square the weight of the stone, multiply the product by 2, and the result will be the value in pounds sterling. Brilliants, if fine, may be estimated by squaring the weight in carats, and multiplying the product by 8, which will give the amount in pounds sterling.

As a very large property, both in this kingdom and in other countries of Europe, is vested in diamonds, it may be interesting to be informed, that not only the price of these gems has for several years been, upon the whole, gradually rising, but that it is likely to continue on the advance. At the present time, indeed, and for the last few years, there has been a dull sale of diamonds in England, nor did the coronation occasion a demand worth notice; but on the Continent the trade has been steady, and rough diamonds have been constantly rising in price. That this advance will be progressive, may be assumed

From the fact, that the best diamond ground now known, the Serrn do Frio in Brazil, has assuredly passed the zenith of its prosperity. I went over the greater part of what is yet reserved, and still remains to be worked, and I conceive that there would be no difficulty in calculating the length of time in which the present number of workmen may reduce it to a state of exhaustion, like that of the far-famed Golconda. The average annual produce of future years may be estimated by the amount obtained from that portion which has been already worked. Brazil may be said to furnish Europe with 25,000 or 30,000 carats *per annum* of rough diamonds; which, if reduced to brilliants, may make an influx into the market of 8,000 or 9,000 carats annually." — (*Mawe's Treatise on Diamonds*, 2d ed. pp. 9–14, and p. 60.)

The rule stated by Mr. Mawe, and adopted by the jewellers, for estimating the value of diamonds (multiplying the square of the weight in carats by 2, and the product is the value in pounds sterling), can only hold in the case of those that are of a small size, or do not weight more than 20 carats. The value of the largest diamonds, which are exceedingly rare, (*non nisi regibus, et is admodum paucis cognitus*, Pliny,) can, it is clear, depend upon nothing but the competition of the purchasers. The diamond belonging to the Emperor of Brazil is the largest in the world. It is still uncut, and weighs 1,680 carats; so that, according to the jewellers' rule, it must be worth the enormous sum of 5,644,800*l.*! It may, however, be doubted, whether his Imperial Majesty would have any disinclination to part with it for the odd sum of 644,800*l.* The famous diamond belonging to the Emperor of Russia, which the jewellers tell us is worth 4,803,000*l.*, did not cost 150,000*l.*

Diamonds are not used exclusively as articles of ornament or luxury. They are frequently employed with great advantage in the arts. "Bad, discoloured diamonds," says Mr. Mawe, "are sold to break into powder, and may be said to have a more extensive sale than brilliants, with all their captivating beauty. In many operations of art they are indispensable; the fine cameo and intaglio owe their perfection to the diamond, with which alone they can be engraved. The beauty of the onyx would yet remain dormant, had not the unrivalled power of the diamond been called forth to the artist's assistance. The carnelian, the agate, or cairngorm, cannot be engraved by any other substance; every crest or letter cut upon hard stone is indebted to the diamond. This is not all; for without it, blocks of crystal could not be cut into slices for spectacles, agate for snuff-boxes, &c."

Diamonds may be landed without report, entry, or warrant. — (3 & 4 Will. 4. c. 52. § 2.)

The carat grain used in weighing diamonds is different from the Troy grain, 5 diamond grains being only equal to 4 Troy grains.

DIAPER (Ger. *Drell*; Du. *Drel*; Fr. *Linge ouvré*; It. *Tela tessuta a opere*; Sp. *Manteles alemaniscas*; Rus. *Салфетотсшнот*), a sort of fine flowered linen, commonly used for table-cloths, napkins, &c., brought to the highest perfection in the manufactories in the north of Ireland, in Germany, and Scotland.

DICE (Ger. *Würfel*; Du. *Tuarlingen*; Fr. *Dés (à jouer)*; It. *Dadi*; Sp. *Dados*; Rus. *Кости*), cubical pieces of bone or ivory, marked with dots on each of their sides, from 1 to 6, according to the number of the face. The regulations as to the manufacture and sale of dice are the same as those with respect to CARDS (which see). Every pair of dice is to pay a duty of 20*s.* All pieces of ivory, bone, or other matter, used in any game, having letters, figures, spots, or other marks denoting any chance, marked thereon, to be adjudged dice; and if more than 6 chances are signified on any one piece, then such piece to be charged with the full duty of a pair of dice. — (9 Geo. 4. c. 18.)

DIMITY (Fr. *Basin*; It. *Dobletto*; Sp. *Dimite*), a species of cross-barred stuff entirely composed of cotton, similar in fabric to fustian.

DISCOUNT, an allowance paid on account of the immediate advance of a sum of money not due till some future period. It is usually said to be of two kinds; viz. discount of bills, and discount of goods; but they are essentially the same.

When a bill of exchange is presented at a banker's for discount, it is the practice to calculate the simple interest for the time the bill has to run, including the days of grace, which interest is called the *discount*; and this being deducted from the amount of the bill, the balance is paid over to the presenter of the bill. This is the method followed by the Bank of England, the London and provincial bankers, and by commercial men in general. But it is, notwithstanding, inaccurate. The true discount of any sum for any given time is such a sum as will in that time amount to the interest of the sum to be discounted. Thus, if interest be *five* per cent., the proper discount to be received for the immediate advance of 100*l.* due 12 months hence is not 5*l.*, but 4*l.* 15*s.* 2½*d.*; for this sum will, at the end of the year, amount to 5*l.*, which is what the 100*l.* would have produced. Those, therefore, who employ their money in discounting, make somewhat more than the ordinary rate of interest upon it; for a person discounting 100*l.* due at the end of a year, advances, supposing interest to be 5*l.* per cent., only 95*l.*; so that, as this 95*l.* produces 100*l.* at the period in question, the interest received has really been 5*l.* 5*s.* 3*d.* per cent.

The rule for calculating discount on correct principles is as follows: —

As the amount of 100*l.* for the given rate and time
Is to the given sum or debt;
So is 100*l.* to the present worth, or
So is the interest of 100*l.* for the given time
To the discount of the given sum.

Mr. Smart has calculated, on this principle, a Table of the discount of 1*l.* for any number of days, at 2, 2½, 3, 3½, &c. to 10 per cent., to 8 decimal places. But the simple interest of the sum being the only thing looked to in practice, such Tables are hardly ever referred to.

Bills in the highest credit are discounted on the lowest terms; the discount increasing according to the suspicions entertained of the punctuality or solvency of the parties subscribing the bills. During the war, the rate of interest, or, which is the

same thing, of discount, was comparatively high; but since 1818, the rate of discount upon good bills has seldom been above 4, and has often been as low as 3 and even $2\frac{1}{2}$ per cent.

Discount on merchandise takes place when, after making a purchase of goods at a fixed term of credit, the buyer finds means to make his payment before the expiration of that term, receiving from the seller a discount or allowance, which is commonly a good deal above the current rate of interest. The discount on goods varies, of course, according to the interest of money. During the late war, the loans to government were so large, and the facility of investing money was such, that the discount on goods was often as high as 5 per cent. for 6, and 10 per cent. for 12 months. Now, however, the discount on goods has fallen, with the fall in the rate of interest, to 7 or $7\frac{1}{2}$ per cent. for 12 months; being about double the current interest arising from funded property, or the discount of good mercantile bills.

Long credits and discounts upon goods have, for a lengthened period, been usual in England. This arose from a variety of causes, but principally, perhaps, from the magnitude of our exports to the United States, Russia, and other countries where there is a great demand for capital; but in whatever causes it originated, it has latterly been carried to what seems to be an injurious extent. — (See CREDIT.) In France and Germany, the manufacturers, in general bare of capital, are obliged to stipulate with the merchants for short credits. In Holland, the *usage* of the exporting merchants has been to pay either in ready money, or at so short a date as to put discounting out of the question, the manufacturer setting at once the lowest price on his goods.

DIVIDEND, the name given to the payment made to creditors out of the estate of a bankrupt, and to the annual interest payable upon the national debt, and other public funds.

DJIDDA, a town of Arabia, on the Red Sea, about 21 miles from Mecca, of which it is the sea-port, in lat. $21^{\circ} 29'$ N., lon. $39^{\circ} 14'$ E. It is well built; the streets are unpaved, but spacious and airy; the houses high, and constructed, for the most part, of madrepores and other marine fossils. The supply of water is scanty, and its quality indifferent. Small vessels approach close to the quays; but large vessels are obliged to anchor in the roads, about 2 miles off, loading and unloading by means of lighters. The entrance to the roads is difficult, and should not be attempted without a pilot. Djidda is a place of considerable commercial importance. It is the *entrepôt* in which is centred the greater part of the commerce between India, Egypt, and Arabia. Many of its merchants possess large capitals; some of them as much as from 150,000*l.* to 200,000*l.* The trade in coffee brought from Mocha, and other ports in Yemen, is the most considerable, but it is said also to be the most hazardous. The returns are principally made in cash. The trade with India and the Gulf of Persia is safer than the coffee trade, and is very considerable. Djidda has also a good deal of intercourse with the ports of Cosseir, Souakin, and Massouah, on the opposite coast of the Red Sea. The imports from the last two principally consist of slaves, gold, tobacco, dhourra or barley, hides, butter (of which immense quantities are made use of in Arabia), mats, &c.; in return for which the Africans receive Indian goods suitable for their markets, dresses and ornaments for their women, dates (which are not produced in any part of Nubia), iron, &c. The principal article of import from Cosseir is wheat; and not only Djidda, but the whole Hedjaz, or Holy Land of Arabia, is almost entirely dependent upon Egypt for corn. Coffee is the principal article sent in return. Business is transacted at Djidda with ease and expedition. The number of ships belonging to the port is estimated at 250. Owing to the scarcity of timber, none of them are built at Djidda; those belonging to it being either purchased at Bombay or Muscat, or at Mocha, Hodeida, or Suez. For a considerable period each year, before and after the feast of Ramadhan, when pilgrims come from all quarters to visit Mecca, the town is thronged with strangers, and a great deal of mercantile business is transacted. Djidda is at present, and has been for a number of years, under the government of Mohammed Ali, pacha of Egypt. The *moneys*, *weights*, and *measures* of the latter country (for which, see ALEXANDRIA), are now generally used in Djidda, the commerce of which has been much improved and extended in consequence of the comparative security and good order enforced by the pacha. — (We have gleaned these details from the different works of Burekhardt, particularly from his *Travels in Arabia*, vol. i. pp. 1—100.)

DOCKS are artificial basins for the reception of ships. The term has been supposed by some to be derived from the Greek *δεκομαι*, to receive; but it is obviously no other than the Teutonic *dock*, originally perhaps derived from *dekken*, to cover, enclose, or protect.

Docks are of 2 sorts — *wet* and *dry*. Wet docks are generally constructed with gates to retain the water. Ships are admitted at high water; and the gates being shut, they are kept constantly afloat. A dry dock is intended for the building, repairing, or examination of ships. The ships to be repaired or examined are admitted into it at high water; and

the water either ebbs out with the receding sea, or is pumped out after the gates are shut.

Utility of Docks. — The construction of wet docks has done much to facilitate and promote navigation. A large vessel, particularly if loaded, could not be allowed to come to the ground, or to lie on the beach, without sustaining considerable injury, and perhaps being destroyed; and even the smaller class of vessels are apt to be strained, and otherwise hurt, if they are left dry, unless the ground be very soft. Hence, when large vessels have to be loaded or unloaded where there are no docks, and where the water close to the shore or quay is not sufficiently deep, the work can only be carried on during a particular period of each tide; it being necessary, in order to keep the vessel afloat, that she should leave the shore with the ebbing tide. Attempts have sometimes been made to obviate this inconvenience, by running jetties or piers to such a distance into the sea, that there might always be a sufficient depth of water at their heads: but this can only be done in peculiar situations; and it requires that the ship's position should be frequently changed. It is in most cases, too, impossible properly to protect the cargoes of ships loading or unloading at quays, or on the beach, from depredation. Previously to the construction of the wet docks on the Thames, the property annually pillaged from ships was estimated to amount to 500,000*l.* a year, though this is probably much exaggerated.

I. DOCKS ON THE THAMES.

It is singular that, notwithstanding the obvious utility of wet docks, and the vast trade of the metropolis, there was no establishment of this sort on the Thames till nearly a century after a wet dock had been constructed at Liverpool. The inconvenience arising from the crowded state of the river, at the periods when fleets of merchantmen were accustomed to arrive, the insufficient accommodation afforded by the legal quays and sufferance wharfs, the necessity under which many ships were placed of unloading in the river into lighters, and the insecurity and loss of property thence arising, had been long felt as almost intolerable grievances: but so powerful was the opposition to any change, made by the private wharfingers and others interested in the support of the existing order of things, that it was not till 1793 that a plan was projected for making wet docks for the port of London; and 6 years more elapsed before the act for the construction of the West India Docks was passed.

1. *West India Docks.* — These were the first, and continue to be the most extensive, of the great warehousing establishments formed in the port of London. Their construction commenced in February, 1800, and they were partially opened in August, 1802. They stretch across the isthmus joining the Isle of Dogs to the Middlesex side of the Thames. They originally consisted of an Import and Export Dock, each communicating, by means of locks, with a basin of 5 or 6 acres in extent at the end next Blackwall, and with another of more than 2 acres at the end next Limehouse; both of these basins communicate with the Thames. To these works the West India Dock Company have recently added the South Dock, formerly the City Canal, which runs parallel to the Export Dock. This canal was intended to facilitate navigation, by enabling ships to avoid the circuitous course round the Isle of Dogs. It was, however, but little used for that purpose, and is now appropriated to the wood trade, for the greater accommodation of which, a pond of 19 acres has been recently formed on the south side for the reception of bonded timber. The Export Dock, or that appropriated for ships loading outwards, is about 870 yards in length, by 135 in width; so that its area is near 25 acres: the North, or Import Dock, or that appropriated for ships entering to discharge, is of the same length as the Export Dock, and 166 yards wide; so that it contains nearly 30 acres. The South Dock, which is appropriated both to import and export vessels, is 1,183 yards long, with an entrance to the river at each end; both the locks, as well as that into the Blackwall Basin, being 45 feet wide, or large enough to admit ships of 1,200 tons burden. At the highest tides, the depth of water in the docks is 24 feet; and the whole will contain, with ease, 600 vessels of from 250

to 500 tons. The separation of the homeward bound ships, which is of the utmost importance for preventing plunder, and giving additional security to the revenue and the merchant, was, for the first time, adopted in this establishment. The Import and Export Docks are parallel to each other, being divided by a range of warehouses, principally appropriated to the reception of rum, brandy, and other spirituous liquors. There are smaller warehouses and sheds on the quays of the Export and South Docks, for the reception of goods sent down for exportation. The warehouses for imported goods are on the four quays of the Import Dock. They are well contrived, and of great extent, being calculated to contain 160,000 hlds. of sugar, exclusive of coffee and other produce. There have been deposited, at the same time, upon the quays, under the sheds, and in the warehouses belonging to these docks, 148,563 hlds. of sugar, 70,875 casks and 433,648 bags of coffee, 35,158 puncheons of rum and pipes of Madeira wine, 14,021 logs of mahogany, 21,350 tons of logwood, &c. The whole area occupied by the docks, warehouses, &c. includes about 295 acres; and the most effectual precautions are adopted for the prevention of fire and pilfering.

This spacious and magnificent establishment was formed by subscription, the property being vested in the West India Dock Company, the affairs of which are managed by 21 directors, as a body corporate. The right of voting is vested in those shareholders only who hold 500*l.* of the Company's stock. The Company's capital is 1,380,000*l.*

The West India Docks have proved a very successful undertaking, and have been highly beneficial to the original shareholders. All West India ships frequenting the Thames were obliged to use them for a period of 20 years from their completion. The dividend on the Company's stock was limited to 10 per cent.; and, after making dividends to the full amount, with the exception of the first half year, they had, in 1819, an accumulated fund of near 400,000*l.* But they then diminished their charges, at the suggestion of the committee of the House of Commons on the foreign trade of the country, so as to give the trade using the docks the benefit of the surplus fund, which was to be reduced to 100,000*l.* before the 30th of January, 1826. Latterly the Company have been obliged, in consequence of the competition of the other Companies, to make further reductions of dividend. It now amounts to 5*l.* per cent. At present, the Company's stock sells at about par.

The nearest dock gate at Limehouse is about 3 miles from the Exchange; and the other, next Blackwall, about $\frac{1}{2}$ a mile more. This distance has the disadvantage of increasing the expense of cartage, and of being inconvenient to the merchants and others using the docks. On the other hand, however, ships entering the West India Docks avoid a considerable extent of troublesome, if not dangerous, navigation, that must be undertaken by those bound for the St. Katherine's and London Docks.

Convenience for clearing Water in the West India Docks.—In almost all docks and harbours, a serious evil is felt from the constant accumulation of mud, and the consequent expense of preserving the proper depth of water. In various situations, provision has been made for scouring out or raising mud and silt by means of hack-water, dredgers, &c., according to local circumstances; but, in the West India Docks, the evil has been entirely obviated: a brief notice of the manner in which so important an object has been accomplished, may be both interesting and useful.

The water of the Thames is generally very muddy, and when it is admitted into the basins and docks in large quantities, to replace the water lost by evaporation, leakage, locking vessels in and out, &c., the deposit is very great. In the West India Docks, the accumulation of mud, from this cause, was most considerable in the Eastern or Blackwall Basin; and the annual cost of clearing out the same was between 5,000*l.* and 4,000*l.*

And yet the process by which that basin was cleared, was probably the most economical which could be adopted. A floating dredger, of the usual description, raised the mud, which was thrown into barges; and these, when loaded, were emptied by a stationary crane, working an endless chain of buckets, similar to those of the dredger. But the field where the mud was deposited having become full, additional expense was likely to be incurred by removing the mud to a greater distance, so that the subject called for and received more attention; and the result will show, that the Company have at length provided the most effectual remedy.

All the gates of the locks point upwards, to sustain the water of the docks; as long as the level of the water within, is higher than the level of the river, those gates remain closed; but as soon as the river rises above the level of the Blackwall Basin, the gates of the outer lock are thrown open; while the gates of the two locks at the west end of that basin

remain closed, the influx from the river would not be considerable; but when the tide has risen above the level of the Import and Export Docks, those gates would also be thrown open, and then the river would flow in with considerable force; the muddy water discolouring that of the docks, and of course depositing the silt or mud held in suspension.

These facts showed that the exclusion of the river water was the only effectual cure for the evil; but the loss or waste of water from the docks was equal, on an average, to 5 inches over the whole surface in 24 hours, and this loss had to be supplied; and not only that, but to keep the river out, it was necessary at all times to keep the water of the docks and basins up to a higher point than that to which the river would rise at the highest spring tides.

After long consideration, the following plan was matured for effecting this object:—

The Company's spare land on the north side of the Blackwall Basin lay below high water mark, and there three reservoirs were formed: the two next the basin receive the water from the river by a culvert with sluices, which are closed as soon as they are filled; from these the water is pumped by an engine of 56 horse power, after having had time to deposit the silt into the elevated reservoir, from whence it flows by a conduit into the basin, and thence into the dock, and thus the level of the whole is kept up to the highest point which can be desired, and the river Thames with its mud is no longer admitted.

The great body of water in the docks is thus constantly maintained, and is at all times clear and sweet, and no mud will hereafter be deposited; great advantage arises, however, from the depth of water, which is preserved from fluctuating with the level of the neap and spring tides, as the deepest laden ship can at all times be transported,—the depth throughout being from 25 to 26 feet.

RULES AND REGULATIONS TO BE OBSERVED, AND RATES TO BE PAID, BY THE SHIPPING FREQUENTING THE WEST INDIA DOCKS.

RULES AND ORDERS to be observed by Masters, Pilots, and other Persons having the Charge of Ships, Vessels, Lighters, or Craft, coming into, lying in, and going out of, the West India Docks, pursuant to Act 1 & 2 Will 4. c. 52.

The Company's Moorings.—The moorings in the river, within 200 yards of each of the entrances at Blackwall, and that into Limehouse Basin, and within 150 yards of the Limehouse entrance of the South Dock, are reserved for the exclusive use of vessels entering into, or which have recently come out of, the docks.

Every master or person in charge of any ship, lighter, barge, boat, or other vessel, of any description whatsoever, lying within the above distance, shall immediately remove the same, when required by the dock masters or their assistants. Penalty 5*l.* for every hour which such vessel may remain.

Pilots shall not attempt to place ships inside the buoys, if other ships have previously brought up, but shall bring them to their berths in due succession on the outside, unless they shall be expressly ordered by the dock master to take a berth inside the tier for the convenience of docking.

All parties creating obstructions will be prosecuted, and the penalties will be rigidly enforced.

Vessels about to enter the Docks, &c. Signals.—The red flag on the flag-staff at the entrance is the signal for ships to prepare. A blue flag will be kept flying the whole time proper for docking; when the tide has reached high water mark, that flag will be struck, after which no ship can be taken in.

Declaration Book.—When ships have brought up properly at the moorings, an officer will deliver the Company's regulations, and the commander or pilot of every vessel exceeding 100 tons must certify in the Declaration Book her draught of water; that she is provided with all necessary and sufficient warps, ropes, and tackle, to remove and moor her in safety; and that her anchors are (or shall be before leaving the moorings) so secured and stowed as not to endanger the works, the ships therein, or the vessel herself.

Preparing Ships for Admission.—Every master or pilot, in charge of a ship, should lose no time in making the following preparations, viz. her anchors to be properly secured and stowed; her sails all furled; all quarter boats lowered down, guns unloaded, gunpowder put out, fires extinguished, and such other precautions taken as the dock master may direct: when these preparations are completed, a flag must be hoisted at the fore, as a signal that the ship is ready.

All ships are required to send down top-gallant yards and strike top-gallant masts, and to have their jib and mizen booms rigged close in, bomskins, martingales, and all out-riggers unshipped, if time will permit, and at all events immediately after entering. Vessels will, however, be exempted from striking lower yards and top-masts, upon the master certifying that the same may be safely dispensed with, and engaging to be answerable for all consequences; but before being placed at the quay, the yards must be topped well up, and the yard-arms lashed close in to the rigging.

Docking Tickets and Order of Admission.—In fixing the order of admission, and issuing the docking tickets, regard will be had to the state of the tides, and the size and draught of water of each vessel, as well as the time of arrival: the largest ships must necessarily be taken in when the tides are highest, although they may have arrived subsequent to smaller vessels. Loaded vessels must always have the preference over light ships.

No ship can be admitted, if neither the master nor pilot are on board.

The docking ticket will only remain in force for the tide for which it is granted.

At the proper time for the admission of each ship, notice will be given by hoisting her ticket number at the pier head, provided she has made the signal for being properly prepared.

If any vessel shall attempt to gain admittance before her number is hoisted, the owners, and the master, pilot, or other person in charge, must be responsible for all consequences of such misconduct.

Entering.—When a ship's number is hoisted, she must drop up to the entrance, and have good and sufficient warps ready to send to each pier, when ordered by the dock masters. If the ship shall not so come to the entrance, she shall forfeit her turn.

When within the piers, proper ropes will be sent on board to guide and check the vessel through the lock: the master and pilot will be held responsible for making these, as well as the ship's warps, properly fast on board: the vessel must be hauled ahead by her own warps, and they are on no account to be cast off, unless ordered by the dock master, until the ship is in the basin.

Every pilot must bring his boat into the basin, or South Dock, as it is a most essential part of his duty to moor the ship.

The owners must be answerable for all ships' boats, and none can be admitted into the Import Dock except such as are conveniently stowed on deck. All other boats must be sent out of the docks.

The boats of ships in the South Dock which cannot be securely stowed on deck, must be hauled up on the north bank, or secured afloat in such manner as the dock master may direct, after the ship is moored. Ships, however, which are not lying at a jetty, will be allowed to employ 1 boat during the legal hours of business, which boat must be chained by the Company's officers to the north bank as soon as that time has expired.

Any boats found afloat in any of the docks or basins, contrary to these regulations, will be removed by the dock master, and will be detained until the charges occasioned by such removal shall be paid.

The hatches of all loaded ships are to be locked down, and the keys delivered to the officer appointed to receive the same.

Import Dock.—No person whatever can be allowed to remain in this dock after the established hours of business: nor can any person be permitted to have access to vessels therein, excepting the owner, master, or chief officer, without a pass.

Passes will be given on the application of the captain or chief mate, to admit the ship's apprentices, or other persons, to prepare the ship for discharging, or to do any other work which may be unavoidably necessary; but, to prevent the abuses which sometimes occur, it is strongly recommended that the Company's labourers be employed.

Ships discharging.—Previously to any ship being quayed, the decks must be cleared, and every thing prepared to begin working out the cargo. If, through want of proper tackle, or any neglect, a ship be not in readiness to take her turn, another will be quayed in the mean time.

It is desirable that all baggage or presents should be sent, as promptly as possible, to the Company's baggage warehouse, where an authority from the master for the delivery thereof must be lodged. Masters are particularly cautioned against signing such authorities in blank, or allowing themselves to be influenced by the importunity of brokers; and it is most desirable that one agent only should be appointed for each ship.

Packages of bullion or specie (whether cargo or private property) must be delivered by the captain, under his own responsibility, unless from their being liable to examination or other circumstance he may be desirous of placing the same in the Company's charge, in which case such packages, or any other of considerable value, should be particularly specified, and, if bills of lading have been granted for them, inserted in the regular manifest of the ship. The delivery of goods overseas will also rest with the master, and he must take such steps as he may think necessary to protect his owners in respect to their freight.

An officer of the revenue is authorised to forward all despatches for the departments of government; packets so addressed will therefore be delivered into his charge, unless the Company receive express directions to the contrary.

When a ship is finally discharged and moored in the Export Dock, or either of the basins, for the purpose of going out to the river, all the services provided for in the import rate are completed.

For the more expeditious discharge of vessels, or despatch in reloading, every assistance will be given in clearing the decks, or stiffening them; cooping water casks, and shipping them, when filled, clearing the hold after discharge; shipping and stowing the outward cargo, under the directions of the ship's officers; and any other services which can be reasonably required.—Should the Company's movable machinery be desired, it will be lent upon application to the principal dock master.—The following charges will be made for such services:—

For labourers hired to work under the directions of the commanding officer of the ship, each man per day, of the regulated hours of attendance	s. d.	Two tons, and under 5 tons (and not less than 1 ton to be charged.)	s. d.
(and not less than ½ day to be charged. Over-time will be charged in proportion.)	3 6	Movable machinery lent, each jigger with its gear, per day	10 0
Articles loaded, shipped, or struck down by the dock cranes or jiggers, under 2 tons, per ton	1 0	The use of the floating engine for washing ships, including the attendance of the man in charge, per day	20 0
		(and not less than 1 day to be charged.)	

Conditions to be observed by Ships taking in Cargoes from the Import Warehouses.—1. The taking the ship in and out of dock, or to and from the quay, to be performed by the master and crew, as directed by the dock masters.

2. The goods to be taken from the slings, and to be stowed away by the crew, under the orders of the master.

3. If a sufficient crew be not on board to receive and stow away the goods as delivered, or to transport the vessel, a further number of men shall be provided by the Company, at the charge of 3s. 6d. per man per day, to work under the direction and responsibility of the master and his officers.

4. The vessel to be hauled into the basin or Export Dock after the usual hours of business, by her own officers and crew, and to continue in their charge.

Ships, from the Export or South Docks, will be allowed to go into the Import Dock to load, without any addition to the rate to which they may be liable for the use of the docks.

Goods sent by land carriage will be shipped in either of the docks, on payment of the usual charges.

To prevent delay in loading export vessels, the shippers should pay up the rent and charges upon the goods; or where the amount cannot be ascertained without weighing, &c., make a deposit to cover the same.

Export and South Docks.—All vessels entering or lying in these docks are in charge of the masters and owners; and it is the duty of the pilots, or officers and crews, to transport their respective vessels, under their own responsibility, as directed by the dock master, to or from the river, and to or from any part of the docks or basins.

Light ships on entering from the river must be provided with sufficient hands to dock and transport them, and should move in due time into the dock; otherwise they will be removed by the dock master, and the owners charged with the expense.

Vessels discharged of their inward cargoes by the Company in these docks will be regarded as privileged ships, and all transporting within the docks will be performed by the dock master, assisted by the crew, gratuitously; but unless there are sufficient crew on board to assist in transporting the outward-bound ships, they will not be moved.

Whenever assistance is required by other vessels, it will be furnished by the dock master on the following terms: viz.—

A boat with warp and 2 hands	-	-	10s. 0d.
— and 4 hands	-	-	15s. 0d.

And for every additional hand employed, either on board or in the boats, 6d. per hour.

The warps are only lent in aid of the ship's warps.

Ships taking in cargoes will be moored at the quays in due rotation. Light ships not taking in goods shall be moored in either of the docks or basins, as the dock masters may judge convenient.

While ships are lying at, or moving to or from the quay, all out-riggers should be got in and made snug; and sails are by no means to be loose while so moving.

No ship must be removed from her berth without notice being given to the dock master, and his assent as to the time of removal being obtained.

Craft must be fastened to the ships from which they are receiving, or to which they may be delivering goods: the charge upon craft which shall not be *bona fide* so engaged, will be the same as the rent upon sloops and craft coastwise, and, as usual, not less than 1 week's rent will be charged. To obviate any doubt as to the time for which they may be fairly entitled to exemption, 24 hours will be allowed, from the time of entering the dock, for receiving goods, and 24 hours after being loaded or discharged, for going out of the docks.

Convenient receptacles on the quays and craft are provided, wherein all dust, ashes, &c. are to be deposited, and which shall be cleared by the persons appointed by the Company, and by no one else.

No vessel shall be permitted to take in ballast after daylight, or before daybreak.

Ships' provisions or stores cannot be permitted to pass the gates without an order signed by the captain or owner.

No repair or caulking can be permitted without the special permission of the court of directors, to whom application should be made through the principal dock master.

The Jetties.—Ships landing cargoes in the South Dock, or taking in goods by land, shall have the preferable use of the jetties.

Ships which are fitting out, but have not commenced loading, shall be accommodated as far as possible; but such ships must be removed to make room for vessels about to discharge or take in cargo by land.

In other respects, preference will be given to ships intended for sale, over those which are merely lying up; and as between ships which are similarly circumstanced, the priority of their entering the dock shall determine the preference.

The captains or commanding officers of ships are cautioned to be attentive and careful to boom off when the ship is fast loading down in the water, or on the approach of neap tides.

Fire and Candle.—Vessels in these docks shall be considered as forming 3 classes; viz.—

- I. Vessels actually discharging, having their crews on board, or loading outwards.
- II. Vessels rigging or fitting out, but which shall not have commenced taking in goods.
- III. Vessels for sale or lying up.

To each of these classes special licences will be granted.

Every such licence will express the place in which fire may be kept, and the circumstances under which it may be used: upon the slightest infringement of the conditions, the penalty prescribed by law will be rigidly enforced.

Every application for a licence must be made by the master or owner, specifying the names and capacity of the persons in charge of the ship, and engaging to be responsible for their attention to the regulations.

Opening and shutting the Gates.—The gates of the Export and South Docks will be opened at 6 o'clock in the morning and shut at 8 o'clock in the evening, from the 1st of March to the 10th of November; and, from the 11th of November to the last day of February, opened at 8 in the morning and shut at 7 in the evening.

Captains and mates may be furnished with tickets upon applying at the police office, at the Import Dock, which will entitle them to admission till 9 o'clock p. m., but no person whatever can be allowed to go out after the hour for closing the gates.

Vessels about to leave the Docks.—Export vessels should be hauled out in sufficient time to be at the River Locks, at Blackwall, at low water; to prevent the inconvenience of hauling down the Blackwall Basin or South Dock during the time that other vessels are requiring admission, which must have the preference.

Vessels can only be let out after high water, upon the special request of the officers in charge of them. Ships going into the river must use their own ropes, as they are out of the dock master's charge when clear of the outer gates.

Notice.—Two true copies of the manifest of the cargo must be delivered into the General Office, at the West India Dock House, within 12 hours after every vessel shall enter the docks, or after the cargo shall have been reported at the Custom-house, which shall first happen. Penalty for refusal or neglect, any sum not exceeding 5*l.*—(1 & 2 Will 4 c. 52. s. 84.)

No manifests will be required for ships discharging by their own crews.

No ships can receive their rotation, or be allowed to break bulk until their cargoes are duly entered; and such cargoes will be landed in due succession, according to the strict order in which the manifests are delivered and entries completed.

If such manifest, or bill of lading, or copy, shall be false; or if any bill of lading be uttered by any master, and the goods expressed therein shall not have been *bona fide* shipped on board such ship; or if any bill of lading uttered or produced by any master shall not have been signed by him; or any such copy shall not have been received or made by him previously to his leaving the place where the goods expressed in such bill of lading, or copy, were shipped; penalty 100*l.*—(3 & 4 Will. 4. c. 52. § 11.)

Hours of Attendance are, from the 10th of May to the 9th of November inclusive, 8 in the morning to 2 in the afternoon; from the 10th of November to the 9th of May inclusive, 9 in the morning to 4 in the afternoon; and there is to be no intermission of business during these hours.

No holidays are to be kept, except Sundays, Christmas-day, Good Friday, fast days appointed by royal proclamation, and the King's or Queen's birthdays.

In all cases not specified or provided for in the foregoing rules and orders, application must be made to the principal dock master.

The foregoing regulations approved and confirmed by the Court of Directors of the West India Dock Company.

CHARLES C. PARISH, Principal Dock Master.

H. LONGLANDS, Secretary.

West India Dock House, September 24th, 1833.

N. B.—Ships entering the West India Docks are permitted to retain their crews on board, when required by the owners; and the directors have fitted up the ship *Waterloo*, in the South Dock, for the accommodation of junior officers and apprentices, while their ships are discharging their cargoes in the Import Dock.

The captains, officers, and crews of ships are requested not to give either wine, spirits, or grog, to the servants of the Company, as, by so doing, they expose them to the certain and immediate forfeiture of their situations.

No fee, perquisite, or reward, of any kind or denomination whatsoever, is to be taken by the Company's officers, or any persons who shall be employed in the service of the Company, for any act done within the docks. Penalty, forfeiture of the sum taken, and any sum not exceeding 5*l.* for each offence.

Dock Rates.—*Import Vessels, when discharged by the Company, including docking, mooring, and removing within the docks until discharged, ships' cooage or mending, and the use of the docks, if from Hamburg or the Mediterranean, for 6 weeks from the date of entrance; if from any other port or place, for 4 weeks from the final discharge; viz.*

	Per Ton reg.
	s. d.
Ships laden entirely, or in part, with hogsheds and tierces of sugar or molasses	2 6
laden entirely, or in part, with chests of sugar above 5 cwt.	2 0
entirely, with chests under 5 cwt., or bags of sugar, coffee, spirits, wine, iron, copper, brass, lead, spelter, or other metal, in pigs, bars, rods, plates, or similar pieces, rice, or other goods, (except oil, tallow, or ashes), packed in bales, bags, serons, casks, chests, or similar packages, or wood in planks or billets, such as dye wood, staves, &c.	1 6
laden entirely or in part, with mahogany, timber, or other wood in logs	2 6
entirely with hemp, or entirely or in part with goods in bulk	1 9
laden entirely or in part with tobacco or oil, not including ship's cooage	1 6
entirely with tallow, not including ship's cooage	1 3
laden entirely with mixed cargoes of hemp and tallow, or ashes, not including ship's cooage; viz.	s. d.

For every ton of hemp 2 0 } The number of tons charged
For every ton of tallow 1 3 } not to exceed the register
or ashes 1 3 } tonnage.

Ships Wood laden from Europe, or the North American Colonies, when discharged by the Company, including docking, mooring, and removing within the docks, until discharged; unloading the cargoes, and the use of the docks for any period not exceeding 4 weeks from the date of the final discharge.

	Per Ton reg.
	s. d.
Laden entirely with deals, planks, staves, or wood in billets	1 6
principally with ditto, and bringing hard wood	

or pine timber (for every load of hard wood	s. d.
and pine timber <i>od.</i> in addition)	1 6
entirely with hard wood or pine timber	2 0

Ships discharged in either of the Docks or Basins by their own Crews, the expense of docking, mooring, unmooring, and removing, not included.

	Per Ton reg.
	s. d.
For the use of the docks for any period not exceeding, if from the Mediterranean, 6 weeks; from other ports or places 4 weeks, from the date of entrance	0 9
Vessels from any port in the United Kingdom, or European port, outside the Baltic, between the North Cape and Ushant, with cargoes for trans-shipment, for delivery on board ships, or for landing in either dock (except when wood laden), not remaining beyond, if from Hamburg, 6 weeks; if from any other port or place, 4 weeks, from the date of entrance	0 6
Sloops and craft coastwise, with bricks for delivery on board ships and vessels with broken granite or paving-stones, not remaining beyond 1 week	0 3
Vessels entirely corn laden (in lieu of tonnage rate), of 100 tons and upwards, each	21 0
Under 100 tons, each	10 6
Rent to commence after 1 clear day from final discharge.	
Vessels two thirds laden with corn, will be charged the usual tonnage rates in proportion to the other part of their cargoes.	

Vessels entering to load from the Import Warehouses only.

	Per Ton on
	gr. wt. shipped.
	s. d.
For the use of the dock for 1 week	0 6

Light Vessels, the expense of docking, mooring, unmooring, and removing, not included.

	Per Ton reg.
	s. d.
Not having discharged in either of the docks, for any period not exceeding 4 weeks from the date of entering	0 6

Dock Rent.

For remaining over the periods specified, per week	0 1
Vessels which re-enter after having been out for repair, will be allowed their privilege without reckoning the time they remained out.	

TABLE FOR IMPORTED GOODS.

The Prime Rate includes all expenses for landing, wharfage, weighing, or gauging at landing, cooeping, marking, sampling, housing, weighing for actual delivery, and delivering; furnishing landing and delivery weights or gauges, surveying and furnishing certificates of damage, and rent for 12 weeks from the date of the ship's commencement of discharge.

This rate will be charged on all goods imported from the East or West Indies, the Mauritius, Mexico, or South America, and upon wood, spirits, or wine, and tobacco, from whatever place of importation, unless notice be given by the importers, of their desire to have them placed under the landing rate, or their intention to remove them without housing or piling. If such notice is given before housing or piling, the rate in the second column will be discharged.

The Landing Rate includes landing, wharfage, and housing, or delivering from the quay, and furnishing landing accounts.

This rate will attach to all other merchandise than as above specified, which may be imported; to East India cotton, to hides and skins, hair, horns and tips, to manufactures returned, and to every description of goods relanded, or removed in bond or coastwise into the docks, unless the importers signify their wish that they should be warehoused under the prime or consolidated rates.

The Rates for Unhousing and Loading, or Unloading and Housing, when not otherwise specified, are each one third of the landing rate; and that for unhousing, wharfage, and shipping, is the whole rate, as stated in the second column. When the prime rate has not been paid, those charges will be made, together with reasonable charges for cooeping, sampling, and other operations contingent on housing.

The Charges for Weighing and Rehousing are each one third of the rate in the second column. For repiling or weighing wood, one fourth of that rate is charged.

Goods sold from the Landing Scale, or not intended to be warehoused, will be allowed 4 clear days from the final weighing of the parcel for removal; in default of which, they will be housed or piled. If intended for immediate trans-shipment, they may remain on the quay, subject to the same regulations as goods prepared for shipment, paying rent as if housed at landing.

Warehouse Rent, on goods to which the prime rate does not attach, will be charged from the date of the ship's breaking bulk; but when goods sold from the landing scale are housed, the rent will be charged from the final weighing of the parcel.

A week's rent will be charged for all fractions of a week.

Before the transfer by the Company, or delivery of any goods can take place, the charges on the quantity to be transferred or delivered must be paid either to the collector, at the General Office in London, or to the comptroller, at the General Office at the docks.

Rates on Goods imported.

N. B.—All sorts of goods may be imported into and warehoused at the West India Docks, on about the same terms as at the other docks. We have given, under the head *London Docks*, a Table of the dock dues, &c. on most articles commonly imported, which may be applied, with very trifling modifications, either to the West India or St. Katharine's Docks. The following Table includes merely the dock charges on the importation, warehousing, &c. of the principal articles of West India produce:—

Articles.	Prime Rate.	Landing Rate.	Rent per Week.	Articles.	Prime Rate.	Landing Rate.	Rent per Week.
<i>Nett per ton</i>	<i>s. d.</i>	<i>s. d.</i>	<i>Gross per s. d.</i>	<i>Nett per ton</i>	<i>s. d.</i>	<i>s. d.</i>	<i>Gross per s. d.</i>

Wood Rates.—The West India Dock Company having appropriated the South Dock to the timber trade, and afforded other facilities for carrying it on with ease and expedition, we subjoin a Table of the dock rates on wood imported. *N. B.*—For the rates on ships laden with wood, see *ante*, p. 480.

* The quarter to be calculated from the date of the ship's breaking bulk.

† If not removed within 2 tides after being brought for delivery, to be charged per tide per load 2d.

Memoranda for the information of the consignees and proprietors of goods imported in ships which discharge their cargoes in the West India Docks.

No ship is allowed to break bulk until her cargo is duly entered; it is therefore important that consignees should give directions for the entry of their respective consignments at the Custom-house as soon as the ship is reported.

Baggage and presents may be cleared at the baggage warehouse at the docks, after examination by the revenue.

The original bills of lading must be deposited, when required, except where a part of the goods are intended to be placed under the East India Company's care; in that case the original bill must be exhibited, and a true copy thereof deposited. Should the original bill have been previously delivered at the East India House, a certified copy must be obtained from the accountant-general of the Honourable Company.

Particular attention is necessary to the regularity of the indentments, as the Company's officers cannot pass any bill of lading on the authority from the shipper to the holder is not deduced by a complete and accurate chain of indentment.

Every bill of lading should be specially indorsed, so as clearly to designate the party to whose order the contents are to be delivered.

In all cases of informality in bills of lading, from want of indorsement, &c., or of their being lost, application must be made to the court by letter, stating the circumstances, and enclosing any documents which will show the title to the goods; in every such case the applicant must engage to indemnify the Company by bond, or otherwise, as the Court may direct.

When bills of lading are produced, which are at variance with the manifest, as to the original consignee, the Company will not pass any delivery order founded thereon, until 3 clear days shall have elapsed.

The delivery of goods afloat will be the act of the captain or officer in charge of the vessel.

No order can be received until the manifest of the cargo, duly certified by the captain, has been deposited at the West India Dock House; but the orders of the proprietors of all goods entrusted to the West India Dock Company's management may then be passed.

When parties holding orders for delivery from the quays wish the goods housed in their own names or in the names of other parties, they must lodge the order indorsed to that effect, and warrants will be granted accordingly.

All merchandise warehoused under the care of the West India Dock Company is deliverable in the ordinary course of business by warrant, with the exception of muscovado sugar, which, returned manufactures, and articles imported in bulk, of which the weight or measure is liable to increase or decrease from natural causes, and the contents of which are not to be warehoused, or are intended for immediate shipment; in the latter case, the importers must state on their orders that "warrants are not required."

All goods entrusted to the management of the East India Company, although deposited in the West India Docks, will be delivered in the usual course of the Honourable Company's business by East India warrants.

To facilitate passing orders and paying the charges due upon the goods, the Company will open deposit accounts upon request from the merchants as herein-after noticed.

That the course of business, as respects the West India Dock Company, may be fully understood, the attention of importers and purchasers of produce is particularly requested to the following memoranda:—

The West India Dock warrants for goods which are usually sold without lotting, will be made out for such quantities as have been found generally convenient to the importers. Warrants or cheques for smaller quantities, or single packages, may, however, be granted, on paying for the extra number, at the rates herein fixed.

For goods which are lotted, made merchantable, &c., the warrants will be made out as soon as the operations are performed. When directions from the importer are required, notice will be given on the landing accounts; it is desirable that particular and early attention should be paid to such notices, and that the importers of cotton, pepper, or other articles which usually require being made merchantable, should lodge a general order directing that operation to be performed to all their importations.

The first warrants of the West India Dock Company will be issued to the order of the importers or their assigns (provided there is no stop upon the goods for freight or otherwise), upon payment of the prime rates or landing charges.

Such payments must include all charges to the time of housing, and those for lotting or making merchantable for the importer, but, if the goods are deliverable by warrant, are not to include rent;—charges for subsequently, and the rent, must be paid by the holders of the warrants before delivery of the goods. The proprietors of goods may, however, clear the rent and incidental charges to any desired date, and have new warrants or cheques accordingly.

When the assignment or removal of part of the goods only is intended, the warrants or cheques should be divided at the dock house in London, as hereafter provided.

If the delivery of the whole of the contents is directed and the goods are not removed within 2 days, a new warrant or cheque for the remainder of the parcel must be taken out.

In the case of casks of liquids used to fill up others, the warrant must be lodged, and the proprietor may either have a new warrant for the remainder, or it may be delivered (if not required again to be used in the same way) to his order.

When the holders of warrants or cheques are desirous of assigning part of their contents, without delivery, reweighing, rehousing, &c., new documents will be given in exchange, on lodging the originals, duly indorsed. The indorsement

should specially direct the manner in which the contents are to be divided, and state the names of the parties in whose favour the new warrants or cheques are to be issued, in the following form:—"Please to divide the within; or when part is to be delivered, 'Deliver to bearer (state how many packages), and grant new one for (state how many packages) in favour of' &c.

Warrants may be exchanged or divided without assigning the goods, when desired by the holder, at the same rate of charge.

The original warrant is not charged for; but the charges for dividing or issuing new documents, or transferring, are—For each warrant or transfer,

1 or 2 packages or quantities	d.	26 to 30 packages or quantities	d.
3 or 4 do. ties	- 1	31—50 do. ties	- 8
5 to 7 do.	- 2	51—60 do.	- 9
8—10 do.	- 3	41—45 do.	- 10
11—15 do.	- 4	46 and upwards	- 11
16—20 do.	- 5	Goods in bulk, per ton	- 12
21—25 do.	- 6	Every new cheque granted	- 2

If from the nature of the contract between the seller and buyer, reweighing, &c., may be necessary, the warrants should be deposited indorsed with directions to that effect, and new warrants will be issued, containing the landing weights and reweights, as soon as the operations are completed.

When any alterations, such as repacking, &c., are to be made (except when preparatory to immediate delivery), the warrants must be lodged; and others, representing the goods correctly, issued in the same manner.

The warrants must likewise be lodged on giving orders to vat, but if immediate shipment is not intended, new warrants will be issued as soon as the casks are refilled.

In the 3 last-mentioned cases the charges for performing the operations include the expense of the new warrants.

When warrants or cheques are lost or mislaid, the Company require that they should be advertised in the *Public Ledger*, the paper containing the advertisement, and an engagement to indemnify the Company, by bond or otherwise, to be enclosed with the application for duplicates. The new documents not to be issued (unless the original shall be found and delivered up) until 7 clear days shall have elapsed from the date of notice by advertisement. Upon notice of the loss, the goods will be stopped; and the original document can on no account be acted upon. When East India warrants are lost, the notice should be given to the Honourable Company's warehouse keeper.

Irregularities in the indorsements lessen the security of the proprietors of goods, and render the documents incomplete as authorities. The attention of the holders is therefore particularly called to that point, to prevent the impediments which may otherwise arise to the regular despatch of business.

Any attempt to remove such impediments by indorsing any warrant, order, or cheque without due authority, even although no fraud may be intended, will be invariably noticed in the most serious manner by the directors of the West India Dock Company.

Persons on which persons may be authorised to sign for others, may be obtained in the general office at the dock house; and as no signature but that of the party named on the warrant, delivery order, or cheque, can be acted upon, when goods are made deliverable to order, persons so authorised should adhere to the following form:—"For (name or firm.) (Signature of the person authorised.)"

Deposit Accounts may be opened with such deposits as the merchants think proper; when the balance is reduced below 10*l.*, a further deposit must be made, 10*l.* being the smallest sum which can be received at a time.

Parties having deposit accounts with the Company, must transmit a note of advice on the proper form, with each deposit, and it will be necessary that they should invariably state on their orders or warrants whom the charges are to be paid by, thus:—

"Charges to the (date) to our account. (Signature.)"

Or, "Charges to be paid by the holder. (Signature.)"

By opening such accounts, the business of merchants with the Company, particularly where goods are upon rent, is much facilitated. The proper forms and pass books may be obtained on application at the dock house.

Orders for Extra Work.—The charges for repacking, or preparing for exportation, and all work not comprised in these Tables, will be fixed from time to time, with reference to the cost of labour and materials. No such work, however, can be done but by the order of the proprietors of goods, or parties duly authorised by them. The warrants, or other documents, must therefore be produced, to show their authority, except for tating of wine, and sampling wine and spirits; in these cases the number of the warrant must be inserted on the order.

The charges under this head must be paid by the parties giving the order or clearing the goods.

Costs of Goods for Shipment.—When goods housed in the import warehouses are prepared for shipment, and are not taken away within the fixed number of days, they will be rehoused at the expense of the proprietor, and the charge for such rehousing, and any additional rent which may have accrued, must be paid before delivery.

The time allowed to elapse before rehousing, or restowing, is as follows: mahogany and other measured wood, 4 days; dye woods, and all other goods, 7 clear days; when the export vessel loads in the docks, the time will be extended to the date of her departure.

2. *London Docks.*—These were the next undertaking of this sort set on foot in the Thames. They are situated in Wapping, and were principally intended for the reception of ships laden with wine, brandy, tobacco, and rice. The western dock covers a space

* Warrants will be granted, however, at the desire of the proprietor, for dye wood imported from the East Indies, or any article that can be separated into distinct and corresponding parcels, on his paying the expenses of making such allotment.

of above 20 acres; and the new or eastern dock covers about 7 acres. The tobacco dock lies between the above, and exceeds 1 acre in extent, being destined solely for the reception of tobacco ships. The entire space included within the outer dock wall is 71 acres and 3 roods. The warehouses are capacious and magnificent. The great tobacco warehouse, on the north side of the tobacco dock, is the largest, finest, and most convenient building of its sort in the world. It is calculated to contain 24,000 hhd. of tobacco, and covers the immense space of near *five* acres! There is also a very large tobacco warehouse on the south side of the tobacco dock. These warehouses are wholly under the management of the officers of customs; the Dock Company having nothing whatever to do with them, save only to receive the rent accruing upon the tobacco deposited in them. The vaults are under the tobacco and other warehouses; they include an area of about $18\frac{1}{2}$ acres, and, after allowing for gangways, &c., have stowage for 66,000 pipes of wine and spirits! These docks were opened in 1805. All ships bound for the Thames, laden with wine, brandy, tobacco, and rice (except ships from the East and West Indies), were obliged to unload in them for the space of 21 years: but this monopoly expired in January, 1826; and the use of the docks is now optional.

The only entrances to the London Docks were, until lately, by the basins at Hermitage and Wapping. Recently, however, another entrance has been completed from old Shadwell Dock, through what was formerly Milkyard, to the eastern dock. This new entrance is $\frac{3}{4}$ of a mile lower down than Wapping entrance, and is a most material improvement.

The capital of the Company amounts to 3,238,310*l.* 5*s.* 10*d.* A considerable portion of this vast sum, and of a further sum of 700,000*l.* borrowed, was required for the purchase of the houses, about 1,300 in number, that occupied the site of the docks. The present dividend is $2\frac{1}{2}$ per cent., and a 100*l.* share is worth about 55*l.* 10*s.* The Board of directors consists of 25 members, of whom the Lord Mayor, as conservator of the river Thames, is one.

The Regulations to be observed by Ships in the different Docks being very much alike, as are also the regulations as to loading and unloading, working hours, &c., it seems unnecessary, having already given those issued by the West India Dock Company, to do more than refer to them.

TONNAGE RATES.

Vessels are not permitted to leave the dock until the tonnage dues and other expenses have been paid; for which purpose the register must be produced at the superintendent's office, if British, or a certificate of admeasurement by the proper officer of the customs, if foreign; when a pass will be granted, which must be lodged with the dock master on leaving the dock.

First Class.—Vessels arriving from any port in the United Kingdom, Isle of Man, Jersey, Guernsey, Alderney, Sark, or other European ports outside the Baltic, between the North Cape and Ushant (Hamburgh excepted, see *Second Class*), with liberty to reload for any port, for every register ton of the vessel 6*d.*; and rent, after 4 weeks from date of entrance, if cargo discharged by own crew; from the date of final discharge, if cargo discharged by the Dock Company, 1*d.* per register ton per week. If with part of their cargoes, for every ton of goods landed, 6*d.*; and rent, after 1 week from date of entrance, 1*d.* per register ton per week.

Vessels loading for any of those places, not having previously discharged their cargoes in the docks, for every register ton of the vessel, 6*d.*; and rent, after 4 weeks from date of entrance, 1*d.* per register ton per week.

Second Class.—Vessels arriving from Hamburgh, with liberty to reload, for every register ton of the vessel, 6*d.*; and rent, after 6 weeks from date of entrance, 1*d.* per register ton per week.

Vessels loading for Hamburgh, not having previously discharged their cargoes in the docks, for every register ton of the vessel, 6*d.*; and rent, after 4 weeks from date of entrance, 1*d.* per register ton per week.

Third Class.—Vessels arriving from any port in the Mediterranean, with liberty to reload for any port, for every register ton of the vessel, 9*d.*; and rent, after 6 weeks from date of entrance, 1*d.* per register ton per week.

Vessels loading for any port in the Mediterranean, not having previously discharged their cargoes in the docks, for every register ton of the vessel, 9*d.*; and rent, after 4 weeks from date of entrance, 1*d.* per register ton per week.

Fourth Class.—Vessels arriving from any other port or place whatsoever (with the exception of those hereafter enumerated), with liberty to reload, for every register ton of the vessel, 9*d.*; and rent, after 4 weeks from date of entrance, if cargo discharged by own crew; from date of final discharge, if cargo discharged by Dock Company, 1*d.* per register ton per week.

Vessels loading for any other port or place whatsoever (with the exception of those hereafter enumerated), not having previously discharged their cargoes in the dock, for every register ton of the vessel, 9*d.*; and rent, after 4 weeks from date of entrance, 1*d.* per register ton per week.

Exceptions.—Vessels from Spain, laden with cork or wool, for every register ton of the vessel, 6*d.*, and rent, after the expiration of 3 weeks, 1*d.* per register ton per week.

Vessels to or from the whale fisheries, for every register ton of the vessel, 1*s.*; and rent, after the expiration of 6 weeks, 1*d.* per register ton per week; for every ton of oil delivered into craft, 6*d.*

Vessels (excepting coasters, for which see *First Class*), landing part of their cargoes, for every ton of goods landed, 9*d.*; and rent, after 1 week from date of entrance, 1*d.* per register ton per week.

Vessels loading part of their cargoes, for every ton of goods taken on board from the quays or by craft, 9*d.*; and rent, after 1 week from date of entrance, 1*d.* per register ton per week.

Vessels two thirds laden with corn will be charged dock dues on the proportion which the other part of the cargo bears to the register tonnage.

No tonnage rates will be charged on vessels wholly corn-laden, but they will be charged for docking and undocking as under:—

Vessels of 100 tons and upwards, 1*l.* 1*s.*
Do. under 100 tons, 10*s.* 6*d.*

with liberty to remain in the dock, without further charge, for 24 hours after final discharge. Rent, after the expiration of that period, 1*d.* per register ton per week. Should the vessel load outwards, the usual tonnage rates, according to the port of destination, will be charged, instead of the rate for docking and undocking.

Vessels coal laden, for docking and undocking, 21s. each; for every ton of coals landed, 6d.; for every ton of coals transhipped, 6d.; and rent, after 1 week, 1d. per register ton per week.

Vessels which enter the docks light, and load out, pay dues according to their ports of destination, instead of those on light vessels.

Light vessels entering the dock to lie up, for every register ton of the vessel, 6d.; and rent, after 4 weeks from date of entrance, 1d. per register ton per week.

Whenever required, the Company will discharge the cargo of a vessel upon the following terms; viz. Cargoes consisting, either in the whole or in part, of hogs-heads or tierces of sugar (including ship coopeage), 1s. 9d. per register ton.

Cargoes consisting of sugar in chests, 5 cwt. and upwards (including ship coopeage), 1s. 3d. per register ton.

Cargoes consisting of sugar in bags or chests, under 5 cwt., or other goods (not being oil direct from the fisheries, tallow, hemp, ashes, corn, wool goods, pitch, tar, hay, or straw), contained in casks, bales, serons, chests, cases, bags, baskets, mats, bundles, or similar packages; also, spelter or metal in pigs, bars, rods, plates, &c., 9d. per register ton.

Cargoes consisting of mahogany timber, or other wood, in logs, 1s. 9d. per register ton.

Blue gum wood, or large timber, additional for every load delivered, 6d.

Cargoes consisting of hemp only, or merchandise, in bulk, 1s. per register ton.

Cargoes consisting of tallow only, 6d. per register ton.

Mixed cargoes, hemp, 1s. 3d. per ton of goods; tallow, 6d. per ditto; ashes, 6d. per ditto.

Mixed cargoes, part being in bulk, on the latter, 1s. per ton of goods.

(No charge made for excess beyond the register tonnage.)

Vessels which leave the docks for repairs are not charged rent while absent.

Memoranda. — Registers of ships inwards and outwards are kept in the superintendent's office.

The wicket gates at the north-west principal entrance, at Wapping, and on the east side of the eastern dock, are opened and closed as under: —

From 23d Sept. to 20th Oct., both inclusive, opened at 6 o'clock, closed at 6 o'clock
21st Oct. 20th March — 7 — 6 —

Visitors are not admitted on Sundays.

No person is permitted to quit a vessel after the wicket gate is closed.

The hours for the commencement of business, and opening and closing the barrier gate, are,

From 1st March to 31st Oct., both inclusive, opened at 8 o'clock, closed at 4 o'clock.
1st Nov. 20th Feb. — 9 — 4 —

Lodgment of Manifest. — Masters of ships are required to deliver at the superintendent's office, within 12 hours after the arrival of the vessel in the dock, or reporting at the Custom-house, (which shall first happen,) a true copy of the manifest or report of the cargo, signed by themselves.

Discharge of Vessels. — Vessels are not to break bulk, without the permission of the superintendent, until the whole of the cargo has been entered at the Custom-house.

Upon application of the master, the Company will pass a warehousing entry for such goods as the owners or consignees may have neglected or refused to enter within 48 hours; and will also land goods not entered within 7 days; both periods to be computed from the date of the report.

Labourers or lumpers are not allowed to work on board vessels, on the quays, or in the warehouses, unless engaged by the Company; but may be hired of the Company, to work under the direction and responsibility of the master, the charge being 3s. 6d. per day for each man: and should not a sufficient number be employed for the timely discharge of the cargo, additional hands will be provided by the Company, at the expense of the vessel.

The decks are to be speedily cleared of such articles as may impede the discharge; and the master, mate, or some person duly authorised by the owners, is to remain on board during the unloading.

Stops for Freight. — Goods landed will be detained for the freight, on due notice in writing, by the owner, master, or other person interested therein; and will not be delivered, nor warrants granted for them, until orders shall have been given for the release of the goods, or the freight deposited with the Company; nor can a stop be received after the goods have been transferred in the Company's books, or a warrant has been granted for them.

Goods delivered into craft to be landed elsewhere, cannot be detained for freight.

Vessels leaving the dock for repairs are not charged rent whilst absent; nor is any charge made for ballast, chalk, or flints, received from or delivered into craft.

Water is supplied from the reservoir, and delivered into the ships' boats, at 1s. per tun, on application to the dock master.

Abstracts of cargoes, for the purpose of making up freight accounts, will be supplied on application at the comptroller's office, at the following charge: —

	s.	d.
If the goods have 10 marks or under	-	2 0
— 11 to 20 marks	-	5 0
— 21 and upwards, 2d. each mark or parcel.		

Steam boats are furnished by the Company, in certain cases, to vessels (not laden with corn or timber) proceeding to these docks, arriving from North and South America, the West India Islands, the Cape of Good Hope, and all ports to the eastward thereof, upon application to the secretary, the superintendent, or the agent of the Company.

Regulations regarding Goods and the Rates and Charges thereon.

Rent is charged on goods from the day on which the importing vessel breaks bulk. If goods be landed by a duty paid, a sight, or a warehousing entry, and taken away within 3 days, no rent is payable; but if they remain on the quay after that time, quay rent or watching is charged for such longer period.

Goods landed by Dock Order. — Before goods which have been landed by the Company for want of entry, can be delivered or transferred, the bill of lading must be lodged at the warehouse, and the goods entered at the Custom-house: and such goods are subject to an additional charge for portage.

Orders for transfer or delivery (the forms of which may be obtained at the comptroller's office), unless the goods are to be delivered from the landing scale, cannot be accepted until the goods have been landed.

Neither can orders for transfer be received, until the charges due on the goods composing the whole of the entry have been paid; goods landed under the consolidated rate, and wines and spirits, excepted.

Orders for delivery cannot be acted upon, unless signed by the party in whose name the goods stand in the Company's books, or by a person duly authorised to sign them: and should any intermeddling, erasure, or alteration have been made in an order, it can only be accepted with the initials of the party set against such alteration.

Payment of Charges and Deposit Accounts. — The only persons authorised to receive money are, the collectors at the superintendent's office, and wine and spirit department; the deputy warehouse-keeper at the tobacco warehouse; the dock master (for water furnished to vessels in the dock); and the warehouse-keeper at the eastern dock; except for consolidated rates, which may be paid at the London Dock House, in New Bank Buildings.

Deposit accounts may be opened at the superintendent's office.

If the order does not specify the party by whom the charges due at the date of the order or transfer are to be paid, the amount thereof will be placed to the deposit account of the party transferring.

Warrants and Transfers.—Warrants for goods in general, are granted on written application at the dock, in favour of such person as the party in whose name they stand in the Company's books may direct. The first are issued free of charge; on all subsequent warrants and transfers, the charges are as follow:—

For each warrant or transfer containing	s. d.	For each warrant or transfer containing	s. d.
1 or 2 packages	0 1	25 to 30 packages	0 8
3 — 4	0 2	31 — 35	0 9
5 — 7	0 3	36 — 40	0 10
8 — 10	0 4	41 — 45	0 11
11 — 15	0 5	46 and upwards	1 0
16 — 20	0 6	and for goods in bulk, per ton	0 2
21 — 25	0 7		

The contents of one warrant may be divided into warrants for smaller quantities, at the will of the holder.

Whenever housing, taring, weighing, dipping, rehousing, or counting of goods is required, the operation must be performed before a warrant can be issued; and if reweighing, &c. be required, a new one must be obtained.

Applications for duplicate warrants, in consequence of the originals being lost or mislaid, must be addressed to the secretary, at the London Dock House, who will make known the conditions on which the Company will issue them.

Weights of Goods.—Duplicates are furnished, upon reasonable cause for requiring them being assigned.

Second Samples of Goods.—Orders for second samples, if the goods are for "exportation only," are issued at the comptroller's office, the proprietor paying the customs' duty thereon.

Empty Casks and Packages.—If not removed from the dock within 7 days, are sold by the Company, and the proceeds paid to the owners, after deducting the sale charges and other expenses.

Explanation of the following Table of Rates and Charges on Goods imported into the London Docks.

The consolidated rate is charged upon the nett weight, and includes landing, wharfage, and housing, or piling on the quay, cooping, sampling, weighing for delivery, delivery, and 12 weeks' rent from the date of the importing ship breaking bulk; which may be paid on each mark separately, and will attach unless notice be given to the contrary, prior to final weighing or gauging.

The import rate is charged upon the gross weight, and includes landing, wharfage, and housing, or piling on the quay, or loading from the landing scale, and furnishing the landing weights or tales; to be paid before the delivery of any part of an entry can take place.

The charges for reweighing, rehousing, unhousing and loading, or repiling, are each one third of the import rate; those for unhousing or unpiling, wharfage and shipping, the same as the import rate; when not otherwise specified.

Goods not included in the foregoing Tables pay in proportion to the rates therein contained, according to weight or size.

3. *East India Docks.*—These docks, situated at Blackwall, were principally intended for the accommodation of the ships employed by the East India Company. There are 2 docks; 1 for ships unloading inwards, and 1 for those loading outwards. The Import Dock contains about 18 acres, and the Export Dock about 9 acres. The entrance basin, which connects the docks with the river, contains about $2\frac{3}{4}$ acres; the length of the entrance lock is 210 feet, the width of the gates 48 feet clear. Having to receive vessels of great burden, the depth of water in the East India Docks is never less than 23 feet. Most of the merchandise imported into these docks is conveyed, without loss of time, to warehouses in the city; so that the extent of warehouses belonging to them is comparatively small.

The discharging of ships in the Import Dock is wholly performed by the servants of the Company; and the regulations as to fire, cooking, &c. are stricter than in the other docks.

The East India Docks are at the greatest distance from town. The Company's tea and other goods are conveyed to the warehouses in the city in locked wagons of a peculiar description.

The capital of the Company is under 500,000*l.*, and the dividend is 4 per cent. A 100*l.* share of the Company's stock is at present worth about 50*l.* The management is confided to 13 directors, 4 of whom must be directors of the East India Company, and they must each hold at least 20 shares of the Company's stock.

RATES charged on Ships from the East Indies using the East India Docks.

The rate for receiving and unloading ships or vessels under 800 tons, in the East India Docks, and for the use of the same for 28 days from the date of the final discharge, is 1s. 6d. per ton register.

Dock rent, if the 25 days be exceeded, 1d. per register ton per week, which is also the rate for light ships laying up in the dock.

up in the dock.

The following ships and vessels as are loaded outwards by the Dock Company will be 2s. per ton register, should the packages or articles laden not exceed 2 tons each by measurement or weight; but on such as exceed 2 tons, and up to 10 tons, 3s. per ton additional will be charged on the quantity laden; packages or articles exceeding 10 tons the Dock Company will not load, except by special agreement. The rate of 2s. per ton register shall apply to all ships and vessels registered only, for the use and accommodation of the dock. Ships and vessels loading outwards to be allowed 28 days for the purpose, from their commencement of receiving cargo.

Dock rent, if the 28 days be exceeded, 1*d.* per register ton per week.

Coasters, or other vessels, loading from the import warehouses, will be charged 6d. per ton on the gross weight they take on board; to be allowed 1 week for such purpose.

Do not rent, if the 1 week be exceeded, 1d. per register ton per week.

Mm.—These docks receive no other than ships or vessels in the East India trade, or coasters to load from the warehouses.

RATES charged for Wharfage, Storehouses, &c., and for sundry Work done by the East India Dock Company.

Wharfage of guns above 20 cwt. each	2	6
above 15 cwt. and under 20 cwt. do.	2	0
10 " " 15 "	1	6
under 10 "	1	0
of gun carriages belonging to the guns of the above scale, 1s. 5d., 1s., 5d., and 6d.		
of anchors, per cwt.	0	3
of kentledge, per ton	1	6
of other articles deposited on the wharfs or quays, do.	2	6

These rates of wharfage are for the season the ship may remain at home; or for a period not exceeding 12 months: if the 12 months be exceeded, the same rate of charge will be made as if a new season had been commenced, and this rate of wharfage be considered an annual charge — N. B. By the present existing agreement between the East India Company and the Dock Company, the guns and anchors of ships whilst in the Company's service are free of wharfage.

500 DOCKS ON THE THAMES (ST. KATHARINE'S).

Landing guns from craft, and stowing them on skids, 2*d.* per cwt. — Ditt. — Carriages of guns, above 10 cwt., 1*s.*; under ditto, 6*d.* each. — Shipping of ditto into craft, the same rate. — Getting guns on board ship and mounting them, 2*s.* 6*d.* per ton. — Getting on board gun carriages, of guns above 10 cwt., 6*d.* each; under ditto, 1*d.* each. — Landing anchors from craft and placing them at racks, 5*d.* per cwt. — Shipping off ditto into craft, the same rate. — Placing anchors for unstocking or for stocking, 1*d.* per cwt. — Discharging kentledge from ships, and stacking it on the wharf, 1*s.* 2*d.* per ton. — Discharging ditto from ships into craft, 1*s.* per ton. — Shipping off kentledge from the wharf, and stowing it in the hold, 1*s.* 2*d.* per ton. — Shipping off ditto into craft, 10*d.* per ton. — Discharging shingle or stone ballast into craft or on the quay, 1*s.* 5*d.* per ton. — Water supplied to outward-bound ships, as well as what is used for securing their casks, 1*s.* per ton Imperial measure.

Admission of loaded wagons, *s.* *d.* } *N. B.* — Ships' stores, conveying cargo, or passengers' baggage, in lieu of wharfage, each - 5 0 } and commanders' and officers' baggage, admitted free to outward-bound ships.
Do. of carts, with do., do. - 2 6 }
Do. of trucks, with do., do. - 1 0 }

Use of the rigging shed for fitting rigging, *s.* *d.* }
For ships of 800 tons and upwards - 5 5 } *N. B.* — Time
500 to 800 tons - 4 4 } for this operation limited
500 - 500 - 3 3 } to 1 month.
under 500 - 2 2 }

Every ship using the docks, outwards or homewards, and making fast alongside the hulk, of 500 tons burden, or upwards, to pay 1*l.* 1*s.*, and ships and vessels under that burden, 10*s.* 6*d.* for every 24 hours, for the first 3 days; should this period be exceeded, to pay for every 24 hours beyond the same, 5*s.* 5*s.*, unless such detention is caused by special circumstances, such as the by-laws provide for.

The charge for any description of labour or service performed by the Dock Company, and not specified in this Table, will be made on moderate terms.

Note. — In loading ships outward, the Dock Company engage to get on board all goods and stores from craft, or the wharf, without extra charge, except the following, viz. kentledge, anchors, guns and carriages, sails, standing and running rigging, booms, and boats.

Charges for Masting or Dismasting at the Mast-Building.

N. B. — Owners in ships may purchase not less than half a fall, at 15 per cent. under the ready money cost price.

4. *St. Katharine's Docks.* — The Company for the construction of these docks was incorporated by the act 6 Geo. 4. c. 105. (local), and they were partially opened on the 25th of October, 1828. They are situated immediately below the Tower, and are consequently the most contiguous of any to the city, the Custom-house, and other places where business is transacted. The capital raised by shares amounts to 1,352,800*l.*; but an additional sum of 800,000*l.* has been borrowed, on the security of the rates, for the completion of the works, and the purchase of a freehold property possessing river frontage from the Tower to the corner of Lower East Smithfield, of the value of upwards of 100,000*l.*, but not required for the immediate purpose of the act. A portion of this property has been appropriated as a steam packet wharf, where passengers embark and land without the aid or risk of boat conveyance. The purchase of the numerous houses that stood upon the ground occupied by the docks proved, as in the case of the London Docks, a heavy item of expense. The space included within the outer wall is about 24 acres, nearly 11 of which are water. There are 2 docks, communicating by a basin. The lock leading from the river is 180 feet long, and 45 broad: it is so constructed, that ships of upwards of 600 tons burden may pass in and out 3 hours before high water, so that outward-bound ships have the opportunity of reaching Blackwall before the tide begins to recede. Ships of upwards of 800 tons register are docked and undocked without difficulty, and the depth of water at the entrance exceeds that of any other wet dock in the port of London. Vessels are also docked and undocked by night as well as by day, — an advantage peculiar to this establishment. A clear channel of not less than 300 feet in width is at all times to be kept in the pool; and vessels drawing 18 feet water may lie afloat at low water at the principal buoy off the dock entrance. The warehouses and vaults are upon a very large scale; far more so than one might be disposed to infer from the extent of water. The warehouses are exceedingly well contrived and commodious; and, owing to their being built partly on pillars (within which what is called the quay work of the other docks is transacted), close to the water's edge, goods are hoisted direct from the hold of the vessel, without its being necessary, as in the West India and London Docks, to land them on quays; so that there is in this way a great saving both of room, time, and labour. The whole establishment is exceedingly complete, and reflects the greatest credit on the public spirit, enterprise, and skill, of those by whom it was projected and executed.

The regulations to be observed by vessels using the *St. Katharine's Docks* are similar to those enforced in the *West India Docks*, to which, as in the case of the *London Docks*, we beg to refer.

Table of Tonnage Rates chargeable on Vessels entering the St. Katharine Docks, and also of the Rates for discharging Cargoes landed by the Company, subject to such Revision, from Time to Time, as shall be found expedient.

Vessels Inwards.		
On Vessels laden, arriving from	Per Ton Register.	Privilege.
<i>s. d.</i>		
First Class. —Any port of the United Kingdom, Isle of Man, Jersey, Guernsey, Alderney, Sark, or other European ports outside the Baltic, between the North Cape and Ushant -	0 6	Vessels whose cargoes are discharged by the Dock Company. Use of the Docks, to vessels arriving from Hambro', or from any port in the Mediterranean, for 6 weeks from the date of entrance; if arriving from any other port, 4 weeks from the date of final discharge, with liberty to load outwards for any port or place, and to quit the docks for repairs, and re-enter; the period of absence from dock for such purposes not to affect the privilege.
Second Class. —Any other port -	0 9	Vessels whose cargoes are discharged by their crews. The like privilege, but to commence from the date of entrance.
		Per Ton Register.
Rent, in each case, after the expiration of the privilege, per week -	s. d.	0 1
For partial remissions and exemptions on vessels partly laden, or arriving from Spain or Portugal, wool or cork laden, or vessels with corn, see annexed Table.		
Rules for discharging Cargoes by the Company.		
Cargoes, consisting, in the whole or in part, of sugar in hogsheads or tierces, including ship cooerage -	1 9	
Cargoes, consisting of sugar in chests of 5 cwt. and upwards, including ship cooerage -	1 3	
Cargoes, consisting of sugar in bags, mats, or chests under 5 cwt., or other goods (not being hemp, tallow, ashes, wood goods, corn, pitch, tar, hay, or straw), contained in casks, bales, serons, chests, cases, bags, baskets, or similar packages; also spelter, or metal in pigs, bars, rods, plates, &c. -	0 9	
Cargoes, consisting of hemp only, or merchandise in bulk, wholly or in part -	1 0	
tallow only -	0 6	
Mixed cargoes of { hemp - - - - - tallow - - - - - ashes - - - - -	s. d. 0 7 0 6	Per ton of goods, charge in no case to exceed the register tonnage of the vessel.
Blue gum wood, or large timber, additional for every load delivered -	0 6	
No charge upon excess landed beyond a ship's register tonnage -		
Oil, additional for every tun delivered into craft -	0 6	
Vessels Outwards, entering the Docks without Cargoes.		
	Per Ton Register.	Privilege.
<i>s. d.</i>		
Loading for any port (enumerated in the Import Table in first class -	0 6	Use of dock to load 4 weeks from date of entrance -
Do. do. 2d do. -	0 9	
Vessels loading in part, on quantity taken on board according to their port of destination, as above classified -	as above	Use of dock to load 1 week from entrance -
		Rent after expiration of the privilege, 1d. per ton register per week.

TABLE of special Regulations, Remissions, and Exemptions, and Miscellaneous Charges applicable to Vessels inwards, not being fully laden, or laden with the Articles enumerated, or entering the Docks light, &c.

No tonnage rate will be charged on vessels wholly or in part laden, whose cargoes shall be landed in the docks; but a charge will in such case be made for docking and undocking, as under:

Vessels of 100 tons and upwards -	L. s. d.
Vessels under 100 tons -	1 1 0
	0 10 6

with liberty to remain in dock without further charge for 24 hours after final landing. Rent, after expiration of that period, 1d. per ton register per week. Should the vessel load outwards, the usual tonnage rates, according to the port of destination, will be charged, instead of the rate for docking and undocking. The Dock Company reserve the power of refusing the admission of ships laden entirely with corn.

Other vessels, not being fully laden at the time of entering the docks, will be charged tonnage rate only, the proportion of cargo brought in; the amount of rate to be determined by the port from whence the vessel has arrived; and if discharged by the Company, rates for unloading in addition, according to the description of the cargo and quantity so discharged. Rent, after 1 week, 1d. per ton register per week.

Vessels laden with cork or wool from Spain or Portugal will be charged only 1d. per ton register. Rent, after 3 weeks from date of entrance, 1d. per ton register per week.

Light vessels entering the dock to lie on, will be charged, for any period not exceeding 4 weeks, per ton register -

Rent per week, after the expiration of the 4 weeks, on the register tonnage, per ton -	L. s. d.
	0 0 6
	0 0 1

Vessels two thirds laden with corn will be charged tonnage rate only on the proportion which the other part of the cargo bears to the register tonnage.

Vessels chiefly laden with wood goods, pitch, tar, hay, straw, or intending to discharge the whole of their cargoes into lighters, will only be permitted to enter or depart the docks, subject to such terms as shall be first mutually agreed upon between the owners and the Dock Company.

Miscellaneous Charges.

For labourers hired of the Company, to work on board, and who shall be under the directions and responsibility of captains or owners of vessels, both or either (which rule applies to all over-board deliveries), a charge will be made for each man per day, of -

Thames water supplied to vessels by the Company, per tun -	s. d.
	1 0

For an abstract of a ship's cargo inwards, and weights thereof, for the purpose of making up freight accounts, the following charge will be made:—

If the goods have 10 marks, or under -	s. d.
10 marks to 20 marks -	2 0
20 marks to 30 marks -	3 6
30 marks and upwards -	0 2 each mark or parcel.

N. B.—The dock-dues, rent, &c. of most articles landed, warehoused, or shipped at the different docks, being, in general, nearly identical, the reader is referred for an account of the same to the Table under the head *London Docks*.

5. *Commercial Docks.*—Exclusive of the previously mentioned docks, which are all on the north side of the river, there are on the south side the *Commercial Docks*, opposite to the west end of the West India Docks. These docks are of large extent; the space included within the outer wall being about 49 acres, of which nearly 38 acres are water. They are principally intended for the reception of vessels with timber, corn, and other bulky commodities. They have but little accommodation for warehousing; and their establishments are not constructed so as to entitle them to bond all goods. The Surrey Canal Company also admit vessels to be docked in the basin of their canal.

6. *London Port Dues; Charges on Account of Lights, Pilotage, &c. in the Thames; Shipping, &c. of London.*

It is highly desirable that expert pilots, brilliant lights, and every other means that it is possible to devise, should be afforded to render navigation safe and expeditious. But to secure these advantages, it is indispensable that the charges on their account should be moderate. If they be otherwise, navigators are not unfrequently tempted to resort to what

are less expensive, though less secure, channels. This principle has not, however obvious, been always kept sufficiently in view either in this or in other countries. During the latter years of the war, and down to 1825, the charges on account of docks, lights, pilotage, &c. on ships in the Thames, and most other British ports, were exceedingly heavy; and would, no doubt, had they been maintained, have materially injured our commerce. Instead, also, of encouraging the resort of foreign ships to our ports, a contrary policy was adopted; the charges laid on them being usually about double those laid on British ships. This regulation was intended to promote the employment of the latter; but, as it led to reprisals in other countries, its real influence is believed to have been quite different; while by driving away foreigners, it injured the trade of the country, and prevented our ports from becoming, what they are so well fitted to be, the emporiums of the world. We are glad, however, to have to state that the circumstances now alluded to have been materially changed within the last dozen years. In 1825, the various dock monopolies expired; and a very great reduction has been made in the charges on account of the docks, which, as already seen, are now very moderate indeed.

Exclusive of the dock duties, certain *port or tonnage duties* were imposed on ships frequenting the port of London, by the acts 39 Geo. 3. c. 69., 43 Geo. 3. c. 124., &c., partly to pay the harbour masters, provide mooring chains, &c., and partly to create a fund for the improvement of the port, and in particular for defraying the cost of making a navigable canal across the Isle of Dogs. But this canal having been sold (*ant.* p. 476.) for 130,000*l.* to the West India Dock Company, under the 10 Geo. 4. c. 130., and the sums advanced by the public for the improvement of the port having been repaid, it was judiciously resolved to reduce the port duties to the lowest rates capable of defraying the necessary expenses. This was effected by the 4 & 5 Will. 4. c. 32., which imposes the following tonnage duties on vessels in the port:—

- | | Per Ton. |
|--|----------|
| 1st Class. —For every ship or other vessel trading coastwise between the port of London and any port or place in Great Britain, Ireland, the Orkneys, Shetland, or the Western Islands of Scotland, there shall be paid for every voyage in and out of the said port | 1d. |
| 2d Class. —For every ship, &c. entering inwards or clearing outwards from or to Denmark, Norway, or Lapland (on this side of the North Cape), or from Holstein, Hamburg, Bremen, or any other part of Germany bordering on or near the Germanic Ocean, or from or to Holland or any other of the United Provinces, or Brabant, Antwerp, Flanders, or any other part of the Netherlands, or from or to France (within Ushant), Guernsey, Jersey, Alderney, Sark, or the Isle of Man, there shall be paid for every, &c., as above | 1d. |
| 3d Class. —For every ship, &c. entering inwards or clearing outwards from or to Lapland (beyond the North Cape), Finland, Russia (without or within the Baltic Sea), Livonia, Courland, Poland, Prussia, Sweden, or any other country or place within the Baltic Sea, there shall be paid for every, &c., as above | 1d. |
| 4th Class. —For every ship, &c. entering inwards or clearing outwards from or to France (between Ushant and Spain), Portugal, Spain (without the Mediterranean), or any of the Azores, Madeira, or Canary Islands, or any of the United States of America, or of the British colonies or provinces in North America or Florida, there shall be paid for every, &c., as above | 2d. |
| 5th Class. —For every ship, &c. entering inwards or clearing outwards from or to Greenland, Gibraltar, France, or Spain (within the Mediterranean), or any country, island, port, or place within or bordering on or near the Mediterranean or Adriatic Sea, or from the West Indies, Louisiana, Mexico, South America, Africa, East India, China, or any other country, island, port, or place within or bordering on or near the Pacific Ocean, or from any other country, island, port, or place whatsoever to the southward of 25 degrees of north latitude, there shall be paid, &c., as above | 2d. |

Exemptions.—Ships of war, and ships the property of his Majesty or any of the royal family.—Any vessel coming to or going coastwise from the port of London, or to any part of Great Britain, unless such vessel shall exceed 45 tons.—Any vessel bringing corn coastwise, the principal part of whose cargo shall consist of corn.—Any fishing smacks, lobster and oyster boats, or vessels for passengers.—Any vessel or craft navigating the Thames above and below London Bridge, as far as Gravesend only.—Any vessel entering inwards or outwards in ballast.

N. B.—The *port or tonnage duties* paid by ships in the port of London, as stated in the accounts on the opposite page, were those payable previously to the act 4 & 5 Will. 4. c. 32., which only took effect on the 25th of July, 1834; and were, at an average, from 4 to 6 times as high as at present.

Owing to the distance of London from the sea, and the rather intricate navigation at the mouth of the river, the charges on account of lights and pilotage must necessarily be pretty heavy. They have, however, been very materially reduced of late years. The charges on account of the lights under the management of the Trinity House have been diminished, in almost every instance, at least one third; and in many instances as much as a half, and sometimes even more, since 1823.—(See **LIGHT-HOUSES.**) The illiberal and impolitic practice of imposing discriminating light and pilotage dues on foreign vessels is still kept up; but owing to the general establishment of reciprocity treaties with foreign powers, the grievance thence arising has become rather nominal than real, and at present affects very few of the foreign vessels coming to our ports.

The act 6 Geo. 4. c. 125. made a reduction of 8 per cent. in the charges authorised to be demanded by the pilots licensed by the Trinity House for the port of London; and foreign vessels, privileged as British vessels, have been relieved from the additional or surplus rate of 25 per cent. payable to the Trinity pilots, as well as to those licensed by the Lord Warden of the Cinque Ports.—(See **PILOTAGE.**)

The oppressive and troublesome charges in the port of London, imposed on alien goods under the names of package, scavage, &c.—(see **PACKAGE**)—were put an end to during last session (1833). At present, therefore, we believe we are warranted in affirming that, considering its distance from the sea, the public charges on shipping in the port of London are quite as reasonable as in any other port of the empire, or of the world.

But we are inclined to think that further reductions may still be effected, particularly in the article pilotage.

The following accounts show the nature and amount of the various charges that are at present incurred by vessels in the port of London : —

Pro forma Account of Charges on a Ship of about 480 Tons, entering and departing the Port of London, laden both Ways, supposing every thing to be conducted with strict Economy, and excluding any Charge on account of extraordinary Despatch or superior Accommodation.

	£	s.	d.
Reporting the ship and appointment	-	-	1 1 0
Pilotage from the Downs	-	-	14 0 4
Boarding the pilot at sea	-	-	2 0 0
Waterman, boat, and kedge, from Gravesend	-	-	1 11 6

Advertisements in bills of entry	-	-	0 10 6
	£132	18	0

In this case, the pilotage inwards and outwards, lights, &c. are charged from Cowes, so that a considerable portion of these items cannot be considered as an expense peculiar to the Thames. A part of the dock charges might also have been avoided, by employing the crew; the last two items are not properly port charges.

Amount of Shipping, &c. belonging to the Port of London. — According to the official accounts, there belonged to this port, in 1832, besides boats and other vessels not registered, 2,669 ships, of the burden of 565,174 tons, manned by 32,786 men and boys. In 1819, the gross customs' duty collected in the port of London amounted to 7,749,463*l.*, the expenses of collection being 277,913*l.*, or at the rate of 3*l.* 11*s.* 8½*d.* per cent. In 1852, the gross duty had risen to 9,424,854*l.*, while the expenses of collection had sunk to 243,678*l.*, being at the rate of only 2*l.* 11*s.* 7¾*d.* per cent. — (*Parl. Paper*, No. 414. Sess. 1833.) So vast an amount of shipping and commerce was never previously concentrated in any single port. London may be truly said to be *universi orbis terrarum emporium*. May her prosperity be as lasting as it is great!

* If discharged by the Dock Company, there would be an additional charge of 12*l.* on that account.

The following tabular statement will serve to illustrate the progress of the foreign trade and navigation of London : —

Number and Tonnage of Vessels entering the Port of London from Foreign Parts, distinguishing between British and Foreign Ships.

Years.	British		Foreign		Years.	British		Foreign	
	<i>Ships.</i>	<i>Tons.</i>	<i>Ships.</i>	<i>Tons.</i>		<i>Ships.</i>	<i>Tons.</i>	<i>Ships.</i>	<i>Tons.</i>

II. LIVERPOOL DOCKS, SHIPPING, &c.

The first wet dock in the British empire was constructed at Liverpool, in pursuance of an act of parliament obtained in 1708. At this period Liverpool was but an inconsiderable town; and the accommodation she has derived from her docks is one of the circumstances that has done most to promote her extraordinary increase in commerce, population, and wealth. A second wet dock was opened about the middle of last century; and since that period many more have been constructed, some of them on a very magnificent scale, and furnished with all sorts of conveniences. When those now in progress are completed, the total area of water in the docks will exceed 90 acres.

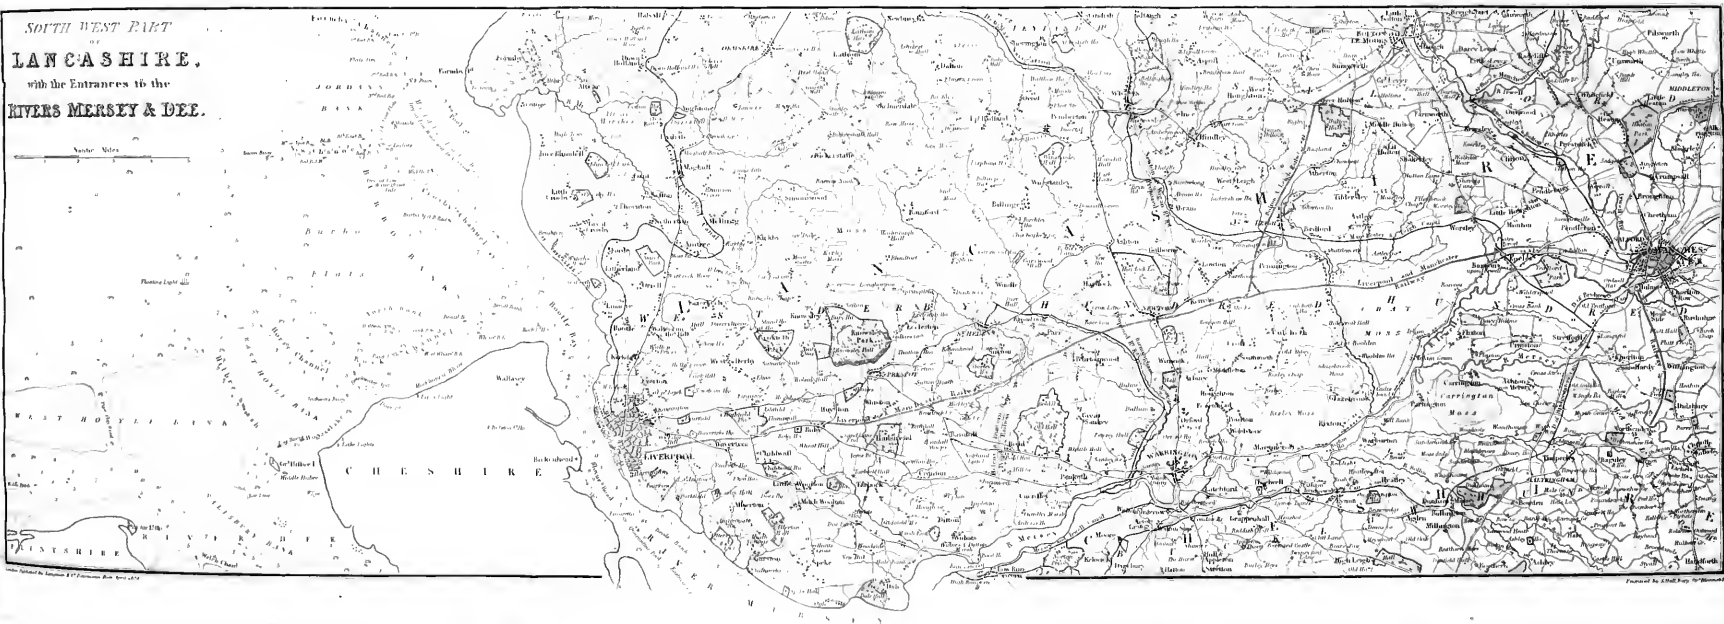

The entrance to the port of Liverpool is a good deal incommoded with sand banks; through which, however, there are several channels which, when the proper precautions are observed, afford an easy and safe access to the port. Being anxious to contribute all the information in our power as to this great and growing emporium, we have annexed to this edition, a chart of the entrance to the Mersey, and of part of that river, with a map of the country from Liverpool to Manchester, exhibiting all the great lines of communication between these and the adjacent towns. The recently opened, or at least recently discovered, channel (now called the SOUTH CHANNEL), leading through the banks to Liverpool, is laid down in the chart. In compiling it, we have availed ourselves of Lieutenant Evans's large and valuable chart of the Mersey and contiguous coasts. In spring tides, the water rises in the Mersey about 30 feet, and in neap tides about 15; but the height depends much on the state of the winds, and other circumstances.

The following Table gives the annual amount of the Liverpool dock duties since 1757, the number of vessels entering the docks since that period, and the tonnage of the same since 1800. It exhibits an increase of commerce unequalled in any other port.

Dock Office, Liverpool, 24th of June, 1833.

Dock Dues. — The following dues are payable upon all vessels entering inwards, or clearing outwards at the port of Liverpool, for dock rates and harbour lights : —

From between the Mull of Galloway and St. David's Head, Isles of Man and Anglesea, the ton	s. d.
From between the Mull of Galloway and Duncan's Bay Head, Orkney Isles, and islands on the western coast of Scotland; between St. David's Head and the Land's End, the Scilly Islands, and the east coast of Ireland, from Cape Clear to Mallin Head, the ton	0 3½
	0 6½

From the east and southern coast of Great Britain, between Duncan's Bay Head and the Land's End, the islands of Shetland, the west coast of Ireland, from Cape Clear to Malling Head, including the islands on that coast, the ton	1 4
From Europe, north of Cape Finisterre, and westward of the North Cape, and without the Cattegat and Baltic Sea, the islands of Guernsey, Jersey, Alderney, Sark, the Faro Isles, and Iceland, the ton	0 8 1
From within the Cattegat and Baltic, the whole of Sweden, the White Sea, eastward of the North Cape, Europe, south of Cape Finisterre, without the Mediterranean, Newfoundland, Greenland, Davis's Straits, Canaries, Western Islands, Madeira, and Azores, the ton	1 3
From the east coast of North America, the West Indies, east coast of South America, north of Rio Plata, the west coast of Africa, and islands north of the Cape of Good Hope, all parts within the Mediterranean, including the Adriatic, the Black Sea, and Archipelago, the islands of St. Helena, Ascension, and Cape de Verd Islands, the ton	1 7
From South America, south of Rio Plata, the Pacific Ocean, Africa and Asia, eastward of the Cape of Good Hope, the ton	2 3
Note. — Vessels remaining longer than six months in dock, to pay in addition to the above rates, per month	3 4
	0 2

All vessels arriving at or clearing from the said port, are to pay the said rates from or for the most distant port or place from or for which they shall trade; but vessels arriving from any parts in ballast do not pay dockage on entering inwards; and should such vessels proceed to sea again in ballast, then only one half of the dock rates are due, with the whole of the lights; but taking a cargo outwards subjects such vessels to full dock dues.

N. B. — New vessels built in Liverpool are subject only to half the above rates on the first outward clearance.

Floating Light, at the Entrance of the River Mersey. — Towards this light, the following rates are payable: —

All vessels sailing to or from Liverpool, to any port or place between Duncan's Bay Head and the Land's End, on the west side of Great Britain, and between Malling Head and Cape Clear on the east side of Ireland, $\frac{1}{2}d.$ per ton.

All vessels sailing to or from Liverpool, to any port or place between Duncan's Bay Head and the Land's End, on the east and southern coast of Great Britain, and between Malling Head and Cape Clear on the west coast of Ireland, $\frac{1}{2}d.$ per ton.

All vessels sailing to or from Liverpool, to any port or place not being within the United Kingdom of Great Britain and Ireland, or the adjacent islands to the northward of the Cape of Good Hope, and the northward of Cape Horn, $1d.$ per ton.

All vessels sailing to and from Liverpool, to any port or place to the eastward of the Cape of Good Hope, and the westward of Cape Horn, $\frac{1}{2}d.$ per ton.

~~At~~ In the day time, from sunrise to sunset, a blue flag, with the letters N.W. in white, will be hoisted at the main-mast head, and in thick and foggy weather, either by night or day, a bell will be kept constantly ringing, to prevent vessels from running foul of the light-vessel.

Dock Regulations. Extracts from Acts of Parliament. — Any owner, or master, or any person having the command, agency, or consignment of any vessel chargeable with dock duties, refusing to pay the same, is liable to have such vessel or goods seized.

Any person throwing any ballast or rubbish from out of any vessel upon any of the quays, &c., shall immediately cart or carry away the same: penalty 40s.

Every ship shall, before she comes within any of the piers, take down all her sails: penalty 5*l*.

Any person having the charge of any vessel in any of the docks, refusing to remove the same, after 24 hours' notice in writing, shall forfeit 20*l*., and pay the expenses of removal by the water bailiff.

Any person having the command of any vessel moored in the river, refusing to remove the same, when ordered by the water bailiff, shall forfeit 20*l*.

The master, or other person having the command of any vessel from which any cannon or gun shall be fired whilst in the port, shall forfeit 10*l*.

Any person making payment of dock duties, who refuses to answer such questions as shall be put to him by the collector, or give a false or untrue answer, shall forfeit 10*l*.

Any master, &c. evading payment of the duties, shall forfeit and pay double the duties evaded; and by 53 Geo. 3. a sum of 20*l*. in addition thereto.

Whenever it shall be necessary, for the purpose of cleaning or repairing the docks, to remove the vessels lying therein, the master, mate, or other person taking the command of such vessel, shall, within 3 days after notice given, remove such ship from such dock, on pain of forfeiting 10*l*.

Any master, &c. refusing to moor and remove the same in docks, according to the direction of the dock master, will forfeit 5*l*., together with the costs of removal by the dock master.

Any master, &c. acting contrary to the direction of the dock master, will forfeit 20*l*.

Any master, &c. entering and giving false information of the draught of water of any ship to any of the dock masters, will forfeit 20*l*.

Any master, &c. bringing the same into the entrance basins, when a signal is hoisted on the pier, at the entrance of such basin, signifying that such dock is full of vessels, will forfeit 20*l*.

Any master, &c. bringing his vessel into any of the docks, contrary to the directions of the dock master, will forfeit 20*l*.

Every master, or other person, damaging any of the dock gates, bridges, piers, quays, &c. is liable to have the ship seized, and sold to compensate for damage done.

Any person opening or shutting any of the dock gates, sluices, or clews, is liable to forfeit 100*l*.; or opening or shutting any drawbridge, 20*l*.

Any owner, &c. leaving gunpowder, pitch, tar, &c., or combustible matter of any kind, on the quays of the docks, &c., or upon the deck of any vessel lying in any of the docks, for above 48 hours after passing the Custom-house officers, is liable to a penalty of 3*s*. an hour; on neglecting to watch such goods in the night time, to a penalty of 5*l*.

Any master, or other person, having the command of any ship, suffering any fire, candles, or lamp to be lighted and burning on board: penalty 10*l*.

Any owner, &c., landing, or causing to be landed and laid, any pumps, boats, anchors, cables, lime-stones, &c., or other things whatsoever, upon any of the dock quays, shall within 48 hours wholly remove the same from off such quay, or shall forfeit 5*s*. per hour above the 48.

Any person wilfully cutting, damaging, or destroying any cables, &c. by which any vessel in the river or in any of the docks shall be fastened: penalty, 50*l*.

Any person damaging or breaking any lamp, &c. set up near the docks: penalty for each lamp, 5*l*.

Any master, or other person, having the command of any vessel about which any offence shall have been committed, in relation to any of the docks, &c., is liable to the penalty imposed for such offence.

Any owner or master of any ship or vessel giving or offering a bribe to any officer employed in pursuance of the dock acts: penalty 20*l*.

Any owner, consignee, or master of any vessel arriving and departing in ballast without payment of dock duties, is liable to a sum equal to double the amount of dock duty which should have been paid, and the master liable to the penalty of 20*l*. in addition.

Every master, &c. wilfully throwing, casting, or putting any earth, stones, rubbish, &c. out of any ship, &c. into any part of the port : penalty 50*l*.

Any owner, &c. of any vessel laid up for sale, or which shall not be actually employed for two months, not removing the same within 24 hours' notice in writing from the harbour master, or left on board : penalty 5*l*., and costs of removal.

Any person discharging timber in any dock without having obtained the consent in writing of the chairman or deputy chairman of the dock committee, or of some justice of the peace : penalty 1*l*0*s*.

Any person having consent, not removing the same therefrom within 24 hours, liable to a fine of 5*s*. an hour.

Any person damaging any ship, &c. in any of the docks, &c., or in the river, and refusing to make compensation, liable to have his goods, or the tackle of the ship, &c. doing the damage, seized.

Any justice of the peace for the county of Chester or borough of Liverpool, upon complaint made to them, may summon persons to appear before him, and may fix the amount to be paid to boatmen, and persons finding and taking possession of anchors, &c. in any part of the port of Liverpool.

Any person throwing, casting, or emptying any ballast, ashes, &c. out of any ship, &c. into the river Mersey, the Rock or Horse Channel, or Forinby Channel, to the eastward of the Floating Light, or from any of the piers into the docks or basins, or into the river Mersey : penalty 10*l*.

That every vessel laden with a cargo consisting solely of limestones, paving-stones, flintstones, grave, and chalk, shall be charged tonnage rates, as if coming in ballast.

Every owner or master, &c. of any vessel arriving at or departing from the said port, shall produce to the collector, upon demand, at the time of making entry, all books, accounts, &c. in relation to such vessel, or which show the weights and quantities of the goods, &c. In case of dispute, such owner, &c. shall produce a statement in writing, to be verified by oath, and showing the actual weights and quantities of such goods, &c., or the accuracy of the said books, &c.

In case the master, &c. of any vessel from which rubbish, ballast, dirt, or other refuse of any kind shall be landed, shall permit or suffer the same to be so landed, or laid within 3 yards from the margin of any such dock or basin, or of the river Mersey, and shall not cause such rubbish, &c. to be wholly removed from off such quays, &c. within 24 hours after the same shall be so landed or laid : penalty 5*l*.

Any owner, &c. of any boat or vessel, permitting gunpowder, exceeding 10 pounds in weight, to be brought into any of the docks or basins, or any vessel or boat lying therein, without the previous consent in writing of a justice of the peace of the borough of Liverpool : penalty 100*l*.

That upon due proof, on oath, to the satisfaction of any justice of the peace of the borough of Liverpool, or county of Lancaster, that any dealer in marine stores, within the said borough, or Toxteth Park, shall have been guilty of receiving stolen goods, or purchasing or receiving, &c., every such person shall forfeit 20*l*. for the first offence, 30*l*. for the second offence ; and after conviction for such second offence, shall not carry on business as such dealer in marine stores within 200 yards from the margin or side of any dock or basin (exclusive of 40 yards prohibited by a former act) on pain of forfeiting the sum of 10*l*. for every day he, she, or they shall carry on such trade or business.

In case any person or persons giving or accepting any bribe to or from any water bailiff, harbour master, &c. give information thereof, he or they shall be excused from the penalty of 20*l*. imposed by the 51 Geo. 3. for such offence, provided such information be given before any proceeding for punishing the said offence shall have commenced, or any information laid before any justice of the peace against such person in respect of the same.

Justices of the peace may, upon complaint made, summon parties and ascertain and award the amount of recompence, for any services rendered by boatmen, &c. to vessels in the said docks or basins, and, in case of non-payment, may levy the sum so awarded by distress.

By-laws. — 1. That the master, &c. who shall permit or suffer any pitch or tar, or any other combustible matter, to be boiled or heated for the use of such ship or vessel, either on board of such vessel, or within 5 yards of the same, shall forfeit 40*s*. for every offence.

2. That the master, &c. discharging or loading any cotton or other combustible goods on or from any of the quays, who shall permit or suffer any person or persons to smoke or burn tobacco, shall for each offence forfeit 20*s*. ; and any other person or persons who shall burn or smoke tobacco, or any other thing, amongst cotton or any other combustible goods, lying and being on the quays, shall for each offence forfeit the like penalty of 20*s*.

3. That if the master, &c. shall bring the same into any of the docks, basins, or entrances, with loaded cannon or guns, with gunpowder on board, or, when driven in by stress of weather, shall neglect immediately to discharge the same, or who shall take gunpowder on board, until clear of the docks and pier-heads, shall forfeit 5*l*.

4. That the master, &c. of any vessel, or any other person or persons whomsoever, who shall permit or suffer any rope from such vessel to be made fast to any chain-post or quay-fender, or any rope, chain, or tackle of any description, to be made fast to any of the pillars of any iron or other shed on any of the quays, or to the roof or any other part of such shed, shall for every offence forfeit 40*s*.

5. That the master, &c. of any vessel lying within or up to any of the docks, basins, &c., who shall suffer any ballast, &c. to be taken on board such vessel, or thrown, discharged, or carried out of the same, without having a canvass nailed to the ship's side, or some other safeguard from falling into any such docks or basins, shall for every offence forfeit the sum of 40*s*.

6. That the master, &c. of any ship or vessel lying in any of the said docks or basins, or the entrances to the same, who shall suffer any repairs to be done to the outsides of such vessels, without having a canvass or some other safeguard secured from the side of such vessel, and placed or fixed so as to prevent any chips or pieces of wood from falling into the said docks or basins during the whole of such work or repairs, shall for every offence forfeit 40*s*.

7. That the master, &c. of any vessel lying or being within any of the docks, &c. who shall not cause all ballast, &c. discharged from or to be laden on board of any vessel, to be thrown at least 5 feet from the edge of the quay, or on the outsides of the cart or chain-posts of the said quay, and taken away immediately, shall for every offence forfeit 40*s*.

8. That the master, &c. or other person having the charge or command of every vessel lying within any of the docks or basins, shall have a ship-keeper on deck to attend the vessel every tide, at least 2 hours before the time of high water, and 1 hour after high water, under the penalty of 10*s*.

9. That the master, &c. of any vessel, when hauling into or out of the docks or basins, &c., shall (except when any such vessel be driven by stress of weather) have the yards apeak, and the sprit-sail yard fore and aft, and the jib-boom run in, within 3 feet from the cap, if practicable ; and, after any such vessel shall be brought into any dock or basin, shall have the anchors got in on the fore-castle or deck, and shall have the steering-sail booms and irons taken off from the yards, and shall have the main or mizen booms, and the stern or quarter davits rigged in, within 24 hours, under the penalty of 40*s*.

10. That the master or other person having the command of any vessel, who shall, by negligence or otherwise, leave an anchor in the entrance to any of the docks, or upon the strand of the river, without a buoy, for a longer period than one tide, shall for every offence forfeit 5*l*.

11. That the owner, &c. of any vessel who shall refuse to strike the top-gallant masts and yards of every such vessel entering any of the repairing or graving docks, shall forfeit 5*l*.

12. That the owner or driver of any cart, &c., or any other person or persons who shall draw, or cause, or permit, or suffer to be drawn upon or over any of the dock bridges, any anchors, balks, &c. shall for every offence forfeit 40*s*.

Every day, 2 hours before high water, a bell will be rung for 1 minute at each dock, when every ship-keeper is to make his appearance on the deck of his vessel, or incur the penalty of 40s.

All merchants and other owners or agents of ships and vessels trading to the port of Liverpool, will be required to enter the names of such vessels, their draught of water, and the date of their arrival at the port of Liverpool, together with the name of the dock into which they are intended to be brought, in a book kept for that purpose, in the office of the harbour master, in Trentham Street. And all vessels will thereafter be admitted into the said docks or basins in the order only in which they shall be so entered; except when vessels are prevented entering the docks in their regular turn by want of sufficient water; in which cases lighter vessels will be allowed to enter the docks out of their regular turn, provided space be reserved for the accommodation of such heavier vessels when the tides will admit of their entrance.

LIVERPOOL DOCK RATES.—The following is a Table of the dock duties on goods imported, exported, or brought coastwise into the port of Liverpool:—

The Duties Outwards are for Foreign, British, or Irish Goods, except those marked thus (*) which are for British or Irish Goods only.

ing.

LIVERPOOL TOWN DUES. — Besides the dock rates, town dues are levied on goods inwards and outwards, at a certain rate per package. The annual amount of these duties, since 1812, is shown in a previous Table, and we now subjoin an account of the rate at which they are charged.

The above duties are not due on goods, the property of, and to be sold solely on account of, persons free of Liverpool, Bristol, London, Waterford, or Wexford; nor on the exportation of goods, which may have been imported, or brought coastwise, provided they are, at the time of exportation, the same property as when so imported, or brought coastwise.

The Liverpool Docks are all constructed upon the estate of the corporation, and are managed by commissioners appointed by parliament. The warehouses belong to

individuals, and are private property. None of them belong to the Dock estate. Most of them are, of course, situated in the immediate vicinity of the docks. The discharging and loading of vessels in Liverpool is effected by a class of men called *lumpers*. Individuals who follow this business engage to discharge a ship for a specific, or *lump* sum, from 2 guineas, perhaps, up to 20, according to the size and description of cargo, having the requisite number of common labourers (chiefly Irishmen) to do the work; the lumper being master and superintendent: these labourers are generally paid day wages, but sometimes the job is a joint concern among the whole.

A West India ship of 500 tons would be discharged by lumpers for from 15*l*. to 20*l*.: a cotton ship of the same burden for 4*l*. to 6*l*. By discharging is merely meant putting out the cargo on the quay; the proprietors of the goods employ their own porters to weigh, load, and warehouse the property: they likewise employ their own coopers, where coopership is required.

It will be seen that the system of managing business of this sort in Liverpool is entirely different from the plan followed in London, at least in the East India Docks, where all these operations are performed by the Dock Company.

The expense of loading a West India ship of 500 tons *outwards* would not be half as much as that of discharging inwards, because they very seldom take a full cargo *outwards*. The average does not, perhaps, exceed a *third*. Hence the total expense of a West India ship of 500 tons, coming into and going out of the port of Liverpool, may be estimated as follows:—

	£	s.	d.		£	s.	d.		
Pilotage inwards	-	8	11	0	Pilotage outwards	-	3	8	0
Boat hire, warping, &c.	-	0	10	6	Boat hire assisting out	-	0	10	6
Lumpers discharging	-	17	10	0					
Labourers' hire for loading	-	5	10	0					
						£36	0	0	

Besides these, there is the charge for the various light-houses in St. George's Channel, which cannot be called an expense peculiar to Liverpool.

In 1832, there belonged to Liverpool 853 registered vessels, of the burthen of 166,028 tons, manned by 9,329 men and boys. The gross customs duty collected in the port during the year 1833 amounted to the enormous sum of 3,733,132*l*. !

Imports of the principal Articles of East and West Indian, American, &c. Produce into Liverpool, during each of the *Five Years* ending with 1834, with the Stocks on Hand on the 31st of December each Year.
—(From the *Circular Statement of Messrs. Jee, Brothers, and Co.*, 31st of December, 1834.)

The falling off in 1832 is ascribable partly to the cholera then prevailing; but more to the rupture with the Dutch towards the end of the year.

Irish Trade. — The trade between Liverpool and Ireland has always been of considerable value and importance; but since the establishment of regular steam-packets to Dublin, Belfast, &c., it has increased prodigiously. The imports from Ireland into Liverpool may, at present, be estimated at about 4,500,000*l.* a year. They consist principally of articles of provision, which meet a ready and advantageous market in Manchester, and the surrounding manufacturing towns. The benefits resulting to Ireland from this intercourse are quite equal to those it confers on England; and the influence of the wealth arising from it is sufficiently apparent in the improved, aspect of all the eastern parts of the country. We subjoin an account, which, though not official, may be depended upon as being sufficiently accurate for all practical purposes, of

The Quantity and Value of the various Articles of Irish raw Produce imported into Liverpool in 1831.

III. BRISTOL DOCKS, SHIPPING, ETC.

The Bristol Docks were formed in pursuance of the act 43 Geo. 3. c. 142., by changing the course of the rivers Avon and Frome, and placing gates or locks at each extremity of the old channel. The accommodation thus obtained is very extensive. The warehouses at Bristol, as at Liverpool, are not in any way connected with the docks: they all belong to private individuals.

Bristol, as a port, used to be inferior only to London; but now she ranks far below Liverpool, and probably is second to Hull. However, she still enjoys a very extensive trade, particularly with the West Indies and Ireland. The custom duties collected in Bristol amounted, in 1831, to 1,161,976*l.* In 1832, there belonged to the port 296 registered vessels, of the burden of 46,567 tons.

The produce of the dock duties on tonnage and goods, since 1820, has been as follows:—

Years.	Tonnage Rates.			Rates on Goods.			Years.	Tonnage Rates.			Rates on Goods.		
	£	s.	d.	£	s.	d.		£	s.	d.	£	s.	d.
1821	10,469	19	6	7,237	7	6	1826	14,863	10	0	9,438	14	3
1822	10,530	11	2	8,062	5	3	1827	13,934	1	8	7,773	12	0
1823	10,747	19	2	7,746	7	7	1828	15,292	0	2	8,396	16	2
1824	12,395	6	4	7,990	7	2	1829	15,833	4	6	8,871	13	0
1825	13,124	4	10	9,409	11	0	1830	15,998	12	8	8,087	1	0

The charges on ships entering Bristol are very heavy. They are as follow:—

For every vessel on entering into the port of Bristol, except barges or other vessels passing or going to or from the Bath River Navigation, or Kennet and Avon Canal, or re-shipping or discharging their cargoes to be again laden, and pass or go up the said navigation or canal, but not discharging any part of their cargoes at the quays of Bristol for sale, the several rates or duties, according to the register tonnage of such vessels following, viz:—

	£	s.	d.
<i>First Class.</i> — For every vessel trading from Africa, Honduras, Surinam, and other ports in South America, the United States of America, the East and West Indies, all the ports within the Straits of Gibraltar, and the Southern Whale Fishery	0	3	0
<i>Second Class.</i> — For every vessel trading from the British Colonies, Portugal, Prussia, Russia, Spain without the Straits, and Sweden	0	2	0
<i>Third Class.</i> — For every vessel trading from Flanders, France without the Straits, Germany, Guernsey, Holland, Jersey, Norway, Poland, and Zealand	0	1	0
<i>Fourth Class.</i> — For every vessel trading from Ireland, the Isle of Man, and Scotland	0	0	8
<i>Fifth Class.</i> — For every vessel employed as a coaster, except as aforesaid, not including vessels from Cardiff, Newport, and other ports to the eastward of the Holmes, at each entering into the said port	0	0	6
For vessels from Cardiff, Newport, and other ports to the eastward of the Holmes (except as aforesaid), being market boats or vessels, having one third part at least of the lading consisting of coal, scruff, tin, iron, tin plates, grain, copper, bricks, stones, coal, tar, slate, bark, timber, or wood, and not exceeding 75 tons burden, each voyage	0	5	0
— if exceeding 75 tons burden, each voyage	0	7	6
For all other vessels from Cardiff, Newport, and other ports to the eastward of the Holmes (except as aforesaid), if under 40 tons burden, each voyage	0	7	6
— if of 40 tons and under 75 tons burden, each voyage	0	12	6
— if 75 tons and under 100 tons burden, each voyage	0	16	0
— if 100 tons burden or upwards, each voyage	1	1	0

The following is an estimate of the various expenses incurred by a West India ship of 500 tons, entering and discharging at Bristol:—

Inwards.—Anchorage, moorage, and lights, about 6d. per ton.—Dock dues, 3s. per do.—Pilotage, 15s. to 25s.—Warner, 1l. 1s.—Mayor and quay wardens' fees, 2l. 5s.—Craneage about 30l.—Labour discharging, 30l. to 40l.—Coopers' charges, from 50l. to 100l. The two last items depend greatly on the condition the cargo is in.

Outwards.—Lights, about 4d. per ton.—Pilotage, 15l. to 20l.

Account of the Number of Ships and their Tonnage, distinguishing between British and Foreign, which have entered inwards at Bristol since 1820.

Years.	British.		Foreign.		Years.	British.		Foreign.	
	Ships.	Tons.	Ships.	Tons.		Ships.	Tons.	Ships.	Tons.
1820	311	53,919	46	5,652	1827	412	75,916	72	8,368
1821	266	46,811	52	7,350	1828	357	66,558	61	8,508
1822	291	53,808	56	8,165	1829	371	73,129	63	8,561
1823	305	57,186	39	7,121	1830	357	66,479	50	7,818
1824	338	65,878	64	10,177	1831	404	76,807	97	12,387
1825	359	73,709	68	11,323	1832	240	46,871	29	4,352
1826	334	65,087	60	6,931					

IV. HULL DOCKS, SHIPPING, ETC.

There are three considerable docks in Hull; occupying, inclusive of their basins, an area of 26 acres. They are capable of affording accommodation for about 312 ships of the average size of those that frequent the port. Hull is the next port in the empire, after Bristol, or perhaps Liverpool; for, although the customs duty collected in Hull be inferior to that of Bristol, it having amounted, in 1831, to only 689,116l., she has a larger amount of shipping. In 1832, there belonged to this port 557 registered vessels, of the aggregate burden of 68,892 tons.

The produce of the Hull dock duties, since 1824, has been as follows:—

Years.	Amount.			Years.	Amount.			Years.	Amount.		
	£	s.	d.		£	s.	d.		£	s.	d.
1824	18,776	6	3	1827	22,381	9	9	1830	18,544	19	4
1825	25,861	16	0	1828	18,546	18	5	1831	22,386	18	5
1826	19,089	16	0	1829	19,609	5	4	1832	16,797	9	2

The decline in the last year was owing to the temporary falling off in the trade of the port, occasioned by the cholera, and the interruption of the intercourse with Holland.

The regulations to be observed by ships using the Hull Docks are similar to those in the Thames; but the dues on most articles are higher.

The dock and harbour dues on ships are as follow : —

	Per Ton.
	s. d.
From within the Baltic - - - - -	1 3
Denmark, Sweden, Norway below Elsinore, or any place in Germany, Holland, Flanders, France, to the eastward of Ushant, Ireland, Guernsey, and Jersey - - - - -	0 10
Westward of Ushant, without the Straits of Gibraltar - - - - -	1 3
West Indies, North and South America, Africa, Greenland, eastward of the north cape of Norway, within the Straits of Gibraltar - - - - -	1 9

1825 1,171	227,363	1,000	100,773	1832 762	140,788	454	43,481
1826 717	130,674	854	70,137				

The port of Goole has latterly drawn off some portion of the trade of Hull. A large proportion of the foreign vessels frequenting the port are of small burden, and are engaged in the importation of bones, rags, rapeseed, &c.

V. GOOLE DOCKS, SHIPPING, ETC.

The port of Goole, situated on the Ouse, a little above its junction with the Humber, about 22 miles more inland than Hull, promises to prove a formidable rival to the latter. Ten or 12 years ago, Goole was but an insignificant hamlet. It communicates by means of canals with Liverpool, Manchester, Leeds, Wakefield, &c. Though so remote from the sea, vessels drawing 15 or 16 feet of water reach Goole in safety. It has 2 wet docks and a basin. The first, or *ship dock*, is 800 feet long by 200 in breadth. The second, or *barge dock*, is 900 feet long by 150 wide, and is intended for the accommodation of the small craft which ply upon the canals and rivers. The warehouses at Goole are extensive and convenient; and it has been admitted to the privileges of a bonding port. There belonged to it, in 1832, 119 registered ships, of the burden of 8,545 tons.

VI. LEITH DOCKS, SHIPPING, ETC.

Leith has 2 wet docks, constructed in the very best manner, containing more than 10 acres of water room, and capable of accommodating 150 such ships as frequent the port. There are also 3 dry docks contiguous to the wet docks.

The total expense of these docks seems to have amounted to 285,108*l.* sterling. Extensive improvements are at present going forward at the harbour of Leith; but the money for this purpose has not been furnished by individuals, but by government, and there is much reason to doubt whether the expenditure will be profitable.

The customs duty collected at Leith in 1831 amounted to 431,821*l.*; the number of registered vessels belonging to the port is 246, and their burden 25,629 tons.

Dock Rates at Leith are as follow : —

	Per Ton.
	s. d.
For every ship or vessel, from any port between Buchanness and Eyemouth, including the great canal and the river Clyde, as far down as Greenock, coming by the canal - - - - -	0 4

<i>Flag, or Light Dues.</i> — Every vessel, of whatever burden, from foreign ports - - - - -	2 6
— of 40 tons burden and upwards, to pay for each coasting voyage - - - - -	2 6
Beacon and anchorage, per ton - - - - -	0 1½

This duty is only charged upon four fifths of the register tonnage.

DOG (Fr. *Chien*; Ger. *Hund*; It. *Cane*; Lat. *Canis familiaris*). Of this quadruped, emphatically styled "the friend and companion of man," there is a vast variety of species. But to attempt to give any description of an animal so well known, would be quite out of place in a work of this kind; and we mention it for the purpose principally of laying the following account before our readers, with a remark or two with respect to Asiatic dogs.

An Account of the Number of Dogs entered, and for which Duty was paid in Great Britain, in the Year 1830; distinguishing the Number of Packs of Hounds, and the Number of each Description of Dog, the Rate of Duty on each, and the aggregate Amount paid.

Description of Dogs.	Rates of Duty.	Total Number.	Amount of Duty.
	£ s. d.		£ s. d.
Greyhounds - - - - -	1 0 0	18,192	18,192 0 0
Pointers, hounds, setting dogs, spaniels, terriers, lurchers, or any other dogs, where persons keep two or more dogs - - -	0 14 0	113,307	79,314 18 0
Other dogs; persons keeping one only - - -	0 8 0	219,013	87,605 4 0
Total, exclusive of packs of hounds - - -	- - -	350,512	185,112 2 0
Packs of hounds - - - - -	36 0 0	68	2,448 0 0

"Many dogs are exempted, either as belonging to poor persons, or as sheep dogs on small farms.

"From the number of persons compounding for their taxes, it is impossible to ascertain the number of dogs kept; the account is, therefore, made out of the number assessed."

Cuvier, the great French naturalist, says, "The dog is the most complete, the most remarkable, and the most useful conquest ever made by man: every species has become our property; each individual is altogether devoted to his master, assumes his manners, knows and defends his goods, and remains attached to him until death; and all this proceeds neither from want nor constraint, but solely from true gratitude and real friendship. The swiftness, the strength, and the scent of the dog have created for man a powerful ally against other animals, and were, perhaps, necessary to the establishment of society. He is the only animal which has followed man through every region of the earth."

It is singular, however, that neither Cuvier, nor any one of those by whom his statements have been copied, should have mentioned that this account is applicable only to Europe. All Mohammedan nations regard the dog as impure, and will not touch it without an ablution. The same is also the case with the Hindoos. From the Hellespont to the confines of Cochin-China, dogs are unappropriated, and have no master. They prowl about the towns and villages; and though they are naturally more familiar, they are in no respect more domesticated, than the carrion crows, kites, vultures, &c. which assist them in performing the functions of scavengers. In China and Cochin-China, the dog is eaten as food; its flesh being, with the exception of that of the hog, the most common in their markets.

The unnecessary multiplication of dogs, particularly in large cities, is a very great nuisance: coming, as they often do, into the possession of those who are without the means of providing for them, they are frequently left to wander about in the streets; and from ill usage, want of food and of proper attention, are apt, during hot weather, to become rabid. In several districts of the metropolis the nuisance has attained to a formidable height; and it is singular, considering the numerous fatal occurrences that have taken place, that no effort should have been made to have it abated. It has grown to its present excess, partly from too many exemptions being granted from the duty, and partly from a want of care in its collection; but besides lessening the number of the former, and more rigidly enforcing the latter, it would be proper to enact that all dogs found wandering in the streets without masters should be destroyed.

DOWN (Ger. *Dunen*, *Flaumfedern*; Du. *Dons*; Fr. *Duvet*; It. *Penna matta*, *Piumini*; Sp. *Flojel*, *Plumazo*; Rus. *Puch*; Lat. *Plumæ*), the fine feathers from the breasts of several birds, particularly those of the duck kind. That of the eider duck is the most valuable. These birds pluck it from their breasts and line their nests with it. Mr. Pennant says that it is so very elastic, that a quantity of it weighing only $\frac{3}{4}$ of an ounce, fills a larger space than the crown of the greatest hat. That found in the nest is most valued, and termed *live down*; it is much more elastic than that plucked from the dead bird, which is comparatively little esteemed. The eider duck is found on the western islands of Scotland, but the down is principally imported from Norway and Iceland.

DRAGONS' BLOOD. See BALSAM.

DRAWBACK, a term used in commerce to signify the remitting or paying back of the duties previously paid on a commodity on its being exported.

A drawback is a device resorted to for enabling a commodity affected by taxes to be exported and sold in the foreign market on the same terms as if it had not been taxed at all. It differs in this from a bounty, — that the latter enables a commodity to be sold

abroad for less than its natural cost, whereas a drawback enables it to be sold exactly at its natural cost. Drawbacks, as Dr. Smith has observed, “do not occasion the exportation of a greater quantity of goods than would have been exported had no duty been imposed. They do not tend to turn towards any particular employment a greater share of the capital of the country than would go to that employment of its own accord, but only to hinder the duty from driving away any part of that share to other employments. They tend not to overturn that balance which naturally establishes itself among all the various employments of the society; but to hinder it from being overturned by the duty. They tend not to destroy, but to preserve, what it is in most cases advantageous to preserve—the natural division and distribution of labour in the society.” — (Vol. ii. p. 352.)

Were it not for the system of drawbacks, it would be impossible, unless when a country enjoyed some very peculiar facilities of production, to export any commodity that was heavier taxed at home than abroad. But the drawback obviates this difficulty, and enables merchants to export commodities loaded at home with heavy duties, and to sell them in the foreign market on the same terms as those fetched from countries where they are not taxed.

Most foreign articles imported into this country may be warehoused for subsequent exportation. In this case they pay no duties on being imported: and, of course, get no drawback on their subsequent exportation.

Sometimes a drawback exceeds the duty or duties laid on the article; and in such cases the excess forms a real bounty of that amount, and should be so considered.

It is enacted by the act 3 & 4 Will. 4. c. 52., that no drawback or bounty shall be allowed upon the exportation from the United Kingdom of any goods, unless such goods shall have been entered in the name of the person who was the real owner thereof at the time of entry and shipping, or of the person who had actually purchased and shipped the same, in his own name and at his own liability and risk, on commission, according to the practice of merchants, and who was and shall have continued to be entitled in his own right to such drawback or bounty, except in the cases herein-after provided for. — § 86.

No drawback shall be allowed upon the exportation of any goods, unless such goods be shipped within 3 years after the payment of the duties inwards thereon. And no drawback for any drawback or bounty upon the exportation of any goods, shall be paid after the expiration of 2 years from the shipment of such goods; and no drawback shall be allowed upon any goods which, by reason of damage or decay, shall have become of less value for home use than the amount of such drawback; and all goods so damaged which shall be cleared for drawback shall be forfeited; and the person who caused such goods to be so cleared shall forfeit 200*l.*, or treble the amount of the drawback, at the option of the commissioners of customs. — § 90.

No drawback or bounty shall be allowed upon goods exported and cleared as being press-packed, unless the quantities and qualities of the same be verified by oath of the master packer thereof, or, in case of his unavoidable absence, by oath of his foreman. — § 93.

No goods cleared for drawback or bounty, or from any warehouses, shall be carried to be put on board ship for exportation, except by a person authorised for that purpose by licence of the commissioners of customs. — § 94. — (See IMPORTATION AND EXPORTATION.)

DUBBER, a leathern vessel, bottle, or jar, used in India to hold oil, ghee, &c. Barrels, as already observed — (see BARRELS), — are entirely a European invention. Liquids, in Eastern countries, are for the most part packed for exportation in leathern vessels. Dubbers are made of thin untanned goat skins; and are of all sizes, from a quart up to nearly a barrel.

DUNNAGE, in commercial navigation, loose wood, consisting of pieces of timber, boughs of trees, faggots, &c., laid in the bottom and against the sides of the ship's hold, either, 1st, by raising the cargo when she is loaded with heavy goods, to prevent her from becoming too stiff — (see BALLAST); or, 2d, to prevent the cargo, should it be susceptible of damage by water, from being injured in the event of her becoming leaky. A ship is not reckoned seaworthy unless she be provided with proper and sufficient dunnage. — (*Falconer's Marine Dictionary*; *Abbott (Lord Tenterden) on the Law of Shipping*, part iii. c. 3.)

E.

EARNEST, in commercial law, is the sum advanced by the buyer of goods in order to bind the seller to the terms of the agreement. It is enacted by the 17th section of the famous Statute of Frauds, 29 Cha. II. c. 3., that “no contract for the sale of any goods, wares, and merchandises, for the prices of 10*l.* sterling or upwards, shall be allowed to be good, except the buyer shall accept part of the goods so sold, and actually receive the same, or give something in earnest to bind the bargain, or in part payment, or that some note or memorandum in writing of the said bargain be made and signed by the parties to be charged by such contract, or their agents thereunto lawfully authorised.”

As to what amounts to sufficient earnest, Blackstone lays it down, that “if any part of the price is paid down, if it is but a penny, or any portion of the goods is delivered

by way of earnest, it is binding." To constitute earnest, the thing must be given as a token of ratification of the contract, and it should be expressly stated so by the giver. — (*Chitty's Commercial Law*, vol. iii. p. 289.)

EARTHENWARE (Ger. *Irdene Waaren*; Du. *Aardgoed*; Fr. *Vaisselle de terre*, *Poterie*; It. *Stoviglie*, *Terraglia*; Sp. *Loza de barro*; Rus. *Gorschetschnie possodii*; Pol. *Glinianæ naczyńia*), or crockery, as it is sometimes termed, comprises every sort of household utensil made of clay hardened in the fire. Its manufacture is, in England, of very considerable importance; and the improvements that have been made in it since the middle of last century have contributed powerfully to its extension, and have added greatly to the comfort and convenience of all classes.

"There is scarcely," it has been well observed, "any manufacture which is so interesting to contemplate in its gradual improvement and extension as that of earthenware, presenting, as it does, so beautiful a union of science and art, in furnishing us with the comforts and ornaments of civilised life. Chemistry administers her part, by investigating the several species of earths, and ascertaining as well their most appropriate combinations, as the respective degrees of heat which the several compositions require. Art has studied the designs of antiquity, and produced from them vessels even more exquisite in form than the models by which they have been suggested. The ware has been provided in such gradations of quality as to suit every station from the highest to the lowest. It is to be seen in every country, and almost in every house, through the whole extent of America, in many parts of Asia, and in most of the countries of Europe. At home it has superseded the less cleanly vessels of pewter and of wood, and, by its cheapness, has been brought within the means of our poorest housekeepers. Formed from substances originally of no value, the fabrication has induced labour of such various classes, and created skill of such various degrees, that nearly the whole value of the annual produce may be considered as an addition made to the mass of national wealth. The abundance of the ware exhibited in every dwelling-house is sufficient evidence of the vast augmentation of the manufacture, which is also demonstrated by the rapid increase of the population in the districts where the potteries have been established." — (*Quarterly Review*.)

For the great and rapid extension of the manufacture we are chiefly indebted to the late Mr. Josiah Wedgwood; whose original and inventive genius enabled him to make many most important discoveries in the art; and who was equally successful in bringing his inventions into use. The principal seat of the manufacture is in Staffordshire, where there is a district denominated the Potteries, comprising a number of villages, and a population which is supposed to amount, at this moment, to above 60,000, by far the greater proportion of which is engaged in the manufacture. There are no authentic accounts of the population of this district in 1760, when Mr. Wedgwood began his discoveries; but the general opinion is, that it did not at that time exceed 20,000. The village of Etruria, in the Potteries, was built by Mr. Wedgwood. The manufacture has been carried on at Burslem, in the same district, for several centuries.

The canals by which Staffordshire is intersected, have done much to accelerate the progress of the manufacture. Pipe-clay from Dorsetshire and Devonshire, and flints from Kent, are conveyed by water carriage to the places where the clay and coal abound; and the finished goods are conveyed by the same means to the great shipping ports, whence they are distributed over most parts of the globe.

It is estimated that the value of the various sorts of earthenware produced at the Potteries may amount to about 1,500,000*l.* a year; and that the earthenware produced at Worcester, Derby, and other parts of the country, may amount to about 750,000*l.* more; making the whole value of the manufacture 2,250,000*l.* a year. The consumption of gold at the Potteries is about 650*l.* a week, and of coal about 8,000 tons a week.

The earthenware manufacture has increased considerably since 1814, but it is not possible to state the exact ratio. It has been estimated at $\frac{3}{4}$ for the porcelain, $\frac{3}{4}$ for the best earthenware, and at $\frac{1}{4}$ or $\frac{1}{2}$ for the common or cream-coloured ware. The prices of the different sorts of earthenware are said to have fallen 20 per cent. during the last 15 years. Wages have not fallen in the same proportion; but we are assured that a workman can, at the present day, produce about *four* times the quantity he did in 1790. — (This article has been prepared from information obtained at the Potteries, obligingly communicated by James Loch, Esq. M. P.)

The real value of the earthenware exported from Great Britain to foreign countries, during the 6 years ending with 1832, according to the declarations of the exporters, was as follows: —

	£	s.	d.		£	s.	d.						
1827	-	-	-	497,812	17	8	1830	-	-	-	439,566	19	2
1828	-	-	-	499,743	6	6	1831	-	-	-	458,965	11	11
1829	-	-	-	461,710	5	7	1832	-	-	-	489,980	17	7

The foreign demand for earthenware has increased considerably since 1815. The exports to South America, Cuba, and other *ci-devant* Spanish colonies, have been largely

increased. But, notwithstanding this increase, the United States continues to be by far the best market for British earthenware. Of the entire value exported in 1831, amounting to 458,965*l.*, the exports to the United States amounted to no less than 255,159*l.* The markets next in importance are Brazil, the British North American and West Indian colonies, Cuba, Germany, the Netherlands, &c. We have been assured that it is necessary to add $\frac{1}{4}$ to the declared value of the exports, to get their true value.

EAST INDIA COMPANY, a famous association, originally established for prosecuting the trade between England and India, which they acquired a right to carry on exclusively. Since the middle of last century, however, the Company's political have become of more importance than their commercial concerns.

EAST INDIES, a popular geographical term not very well defined, but generally understood to signify the continents and islands to the east and south of the river Indus, as far as the borders of China, including Timor and the Moluccas, but excluding the Philippine Islands, New Guinea, and New Holland. China and the Philippine Islands were, however, included within the limits of the East India Company's peculiar privileges.

- III. EAST INDIES (STATE OF SOCIETY IN, GROWING DEMAND FOR ENGLISH GOODS, TRADE, COLONISATION, ETC.).
- IV. EAST INDIES (EXTENT, POPULATION, MILITARY FORCE, REVENUE, ETC. OF BRITISH).

I. EAST INDIA COMPANY (HISTORICAL SKETCH OF).

The persevering efforts of the Portuguese to discover a route to India, by sailing round Africa, were crowned with success in 1497. And it may appear singular, that, notwithstanding the exaggerated accounts that had been prevalent in Europe, from the remotest antiquity, with respect to the wealth of India, and the importance to which the commerce with it had raised the Phœnicians and Egyptians in antiquity, the Venetians in the middle ages, and which it was then seen to confer on the Portuguese, the latter should have been allowed to monopolise it for nearly a century after it had been turned into a channel accessible to every nation. But the prejudices by which the people of most European states were actuated in the sixteenth century, and the peculiar circumstances under which they were placed, hindered them from embarking with that alacrity and ardour that might have been expected in this new commercial career. Soon after the Portuguese began to prosecute their discoveries along the coast of Africa, they applied to the pope for a bull, securing to them the exclusive right to and possession of all countries occupied by infidels, they either had discovered, or might discover, to the south of Cape Non, on the west coast of Africa, in 27° 54' north latitude: and the pontiff, desirous to display, and at the same time to extend, his power, immediately issued a bull to this effect. Nor, preposterous as a proceeding of this sort would now appear, did any one then doubt that the pope had a right to issue such a bull, and that all states and empires were bound to obey it. In consequence, the Portuguese were, for a lengthened period, allowed to prosecute their conquests in India without the interference of any other European power. And it was not till a considerable period after the beginning of the war, which the blind and brutal bigotry of Philip II. kindled in the Low Countries, that the Dutch navigators began to display their flag on the Eastern Ocean, and laid the foundations of their Indian empire.

The desire to comply with the injunctions in the pope's bull, and to avoid coming into collision, first with the Portuguese, and subsequently with the Spaniards, who had conquered Portugal in 1580, seems to have been the principal cause that led the English to make repeated attempts, in the reigns of Henry VIII. and Edward VI., and the early part of the reign of Elizabeth, to discover a route to India by a north-west or north-east passage; channels from which the Portuguese would have had no pretence for excluding them. But these attempts having proved unsuccessful, and the pope's bull having ceased to be of any effect in this country, the English merchants and navigators resolved to be no longer deterred by the imaginary rights of the Portuguese from directly entering upon what was then reckoned by far the most lucrative and advantageous branch of commerce. Captain Stephens, who performed the voyage in 1582, was the first Englishman who sailed to India by the Cape of Good Hope. The voyage of the famous Sir Francis Drake contributed greatly to diffuse a spirit of naval enterprise, and to render the English better acquainted with the newly opened route to India. But the voyage of the celebrated Mr. Thomas Cavendish was, in the latter respect, the

most important. Cavendish sailed from England in a little squadron, fitted out at his own expense, in July, 1586; and having explored the greater part of the Indian Ocean, as far as the Philippine Islands, and carefully observed the most important and characteristic features of the people and countries which he visited, returned to England, after a prosperous navigation, in September, 1588. Perhaps, however, nothing contributed so much to inspire the English with a desire to embark in the Indian trade, as the captures that were made, about this period, from the Spaniards. A Portuguese East India ship, or carrack, captured by Sir Francis Drake, during his expedition to the coast of Spain, inflamed the cupidity of the merchants by the richness of her cargo, at the same time that the papers found on board gave specific information respecting the traffic in which she had been engaged. A still more important capture, of the same sort, was made in 1593. An armament, fitted out for the East Indies by Sir Walter Raleigh, and commanded by Sir John Borroughs, fell in, near the Azores, with the largest of all the Portuguese carracks, a ship of 1,600 tons burden, carrying 700 men and 36 brass cannon; and, after an obstinate conflict, carried her into Dartmouth. She was the largest vessel that had been seen in England; and her cargo, consisting of gold, spices, calicoes, silks, pearls, drugs, porcelain, ivory, &c., excited the ardour of the English to engage in so opulent a commerce.

In consequence of these and other concurring causes, an association was formed in London, in 1599, for prosecuting the trade to India. The adventurers applied to the queen for a charter of incorporation, and also for power to exclude all other English subjects, who had not obtained a licence from them, from carrying on any species of traffic beyond the Cape of Good Hope or the Straits of Magellan. As exclusive companies were then very generally looked upon as the best instruments for prosecuting most branches of commerce and industry, the adventurers seem to have had little difficulty in obtaining their charter, which was dated the 31st of December, 1600. The corporation was entitled, "The Governor and Company of Merchants of London trading into the East Indies:" the first governor (Thomas Smythe, Esq.) and 24 directors were nominated in the charter; but power was given to the Company to elect a deputy governor, and, in future, to elect their governor and directors, and such other office-bearers as they might think fit to appoint. They were empowered to make by-laws; to inflict punishments, either corporal or pecuniary, provided such punishments were in accordance with the laws of England; to export all sorts of goods free of duty for 4 years; and to export foreign coin, or bullion, to the amount of 30,000*l.* a year, 6,000*l.* of the same being previously coined at the mint; but they were obliged to import, within 6 months after the completion of every voyage, except the first, the same quantity of silver, gold, and foreign coin that they had exported. The duration of the charter was limited to a period of 15 years; but with and under the condition that, if it were not found for the public advantage, it might be cancelled at any time upon 2 years' notice being given. Such was the origin of the British East India Company,—the most celebrated commercial association either of ancient or modern times, and which has now extended its sway over the whole of the Mogul empire.

It might have been expected that, after the charter was obtained, considerable eagerness would have been manifested to engage in the trade. But such was not the case. Notwithstanding the earnest calls and threats of the directors, many of the adventurers could not be induced to come forward to pay their proportion of the charges incident to the fitting out of the first expedition. And as the directors seem either to have wanted power to enforce their resolutions, or thought it better not to exercise it, they formed a subordinate association, consisting of such members of the Company as were really willing to defray the cost of the voyage, and to bear all the risks and losses attending it, on condition of their having the exclusive right to whatever profits might arise from it. And it was by such subordinate associations that the trade was conducted during the first 13 years of the Company's existence.

The first expedition to India, the cost of which amounted, ships and cargoes included, to 69,091*l.*, consisted of 5 ships, the largest being 600 and the smaller 130 tons burden. The goods put on board were principally bullion, iron, tin, broad cloths, cutlery, glass, &c. The chief command was intrusted to Captain James Lancaster, who had already been in India. They set sail from Torbay on the 13th of February, 1601. Being very imperfectly acquainted with the seas and countries they were to visit, they did not arrive at their destination, Acheen in Sumatra, till the 5th of June, 1602. But though tedious, the voyage was, on the whole, uncommonly prosperous. Lancaster entered into commercial treaties with the kings of Acheen and Bantam; and having taken on board a valuable cargo of pepper and other produce, he was fortunate enough, in his way home, to fall in with and capture, in concert with a Dutch vessel, a Portuguese carrack of 900 tons burden, richly laden. Lancaster returned to the Downs on the 11th of September, 1603. — (*Modern Universal History*, vol. x. p. 16.; *Macpherson's Commerce of the European Powers with India*, p. 81.)

But notwithstanding the favourable result of this voyage, the expeditions fitted out in the years immediately following, though sometimes consisting of larger ships, were not, at an average, materially increased. In 1612, Captain Best obtained from the court at Delhi several considerable privileges; and, amongst others, that of establishing a factory at Surat; which city was, henceforth, looked upon as the principal British station in the west of India, till the acquisition of Bombay.

In establishing factories in India, the English only followed the example of the Portuguese and Dutch. It was contended, that they were necessary to serve as *dépôts* for the goods collected in the country for exportation to Europe, as well as for those imported into India, in the event of their not meeting with a ready market on the arrival of the ships. Such establishments, it was admitted, are not required in civilised countries; but the peculiar and unsettled state of India was said to render them indispensable there. Whatever weight may be attached to this statement, it is obvious that factories formed for such purposes could hardly fail of speedily degenerating into a species of forts. The security of the valuable property deposited in them, furnished a specious pretext for putting them in a condition to withstand an attack, while the agents, clerks, warehousemen, &c. formed a sort of garrison. Possessing such strong holds, the Europeans were early emboldened to act in a manner quite inconsistent with their character as merchants; and but a very short time elapsed before they began to form schemes for monopolising the commerce of particular districts, and acquiring territorial dominion.

Though the Company met with several heavy losses during the earlier part of their traffic with India, from shipwrecks and other unforeseen accidents, and still more from the hostility of the Dutch, yet, on the whole, the trade was decidedly profitable. There can, however, be little doubt, that their gains, at this early period, have been very much exaggerated. During the first 13 years, they are said to have amounted to 132 per cent. But then it should be borne in mind, as Mr. Grant has justly stated, that the voyages were seldom accomplished in less than 30 months, and sometimes extended to 3 or 4 years: and it should further be remarked, that on the arrival of the ships at home, the cargoes were disposed of at long credits of 18 months or 2 years; and that it was frequently even 6 or 7 years before the concerns of a single voyage were finally adjusted. — (*Sketch of the History of the Company*, p. 13.) When these circumstances are taken into view, it will immediately be seen that the Company's profits were not, really, by any means so great as has been represented. It may not, however, be uninteresting to remark, that the principal complaint that was then made against the Company did not proceed so much on the circumstance of its charter excluding the public from any share in an advantageous traffic, as in its authorising the Company to export gold and silver of the value of 30,000*l.* a year. It is true that the charter stipulated that the Company should import an equal quantity of gold and silver within 6 months of the termination of every voyage: but the enemies of the Company contended that this condition was not complied with; and that it was, besides, highly injurious to the public interest, and *contrary to all principle*, to allow gold and silver to be sent out of the kingdom. The merchants and others interested in the support of the Company could not controvert the reasoning of their opponents, without openly impugning the ancient policy of absolutely preventing the exportation of the precious metals. They did not, however, venture to contend, if the idea really occurred to them, that the exportation of bullion to the East was advantageous, on the broad ground of the commodities purchased by it being of greater value in England. But they contended that the exportation of bullion to India was advantageous, because the commodities thence imported were chiefly re-exported to other countries from which a much greater quantity of bullion was obtained than had been required to pay for them in India. Mr. Thomas Mun, a director of the East India Company, and the ablest of its early advocates, ingeniously compares the operations of the merchant in conducting a trade carried on by the exportation of gold and silver to the seed time and harvest of agriculture. "If we only behold," says he, "the actions of the husbandman in the seed time, when he casteth away much good corn into the ground, we shall account him rather a madman than a husbandman. But when we consider his labours in the harvest, which is the end of his endeavours, we find the worth and plentiful increase of his actions." — (*Treasure by Foreign Trade*, p. 50. ed. 1664.)

We may here remark, that what has been called the *mercantile system* of political economy, or that system which measures the progress of a country in the career of wealth by the supposed balance of payments in its favour, or by the estimated excess of the value of its exports over that of its imports, appears to have originated in the excuses now set up for the exportation of bullion. Previously to this epoch, the policy of prohibiting the exportation of bullion had been universally admitted; but it now began to be pretty generally allowed, that its exportation might be productive of advantage, provided it occasioned the subsequent exportation of a greater amount of raw or manufactured products to countries whence bullion was obtained for them. This, when compared with the previously existing prejudice — for it hardly deserves the name of

system — which wholly interdicted the exportation of gold and silver, must be allowed to be a considerable step in the progress to sounder opinions. The maxim, *ce n'est que le premier pas qui coûte*, was strikingly verified on this occasion. The advocates of the East India Company began gradually to assume a higher tone, and, at length, boldly contended that bullion was nothing but a commodity, and that its exportation ought to be rendered as free as that of any thing else. Nor were these opinions confined to the partners of the East India Company. They were gradually communicated to others; and many eminent merchants were taught to look with suspicion on several of the previously received dogmas with respect to commerce, and were, in consequence, led to acquire more correct and comprehensive views. The new ideas ultimately made their way into the House of Commons; and, in 1663, the statutes prohibiting the exportation of foreign coin and bullion were repealed, and full liberty given to the East India Company and to private traders to export them in unlimited quantities.

But the objection to the East India Company, or rather the East India trade, on the ground of its causing the exportation of gold and silver, admitted of a more direct and conclusive, if not a more ingenious reply. How compendious soever the ancient intercourse with India by the Red Sea and the Mediterranean, it was unavoidably attended with a good deal of expense. The productions of the remote parts of Asia, brought to Ceylon, or the ports on the Malabar coast, by the natives, were there put on board the ships which arrived from the Arabic gulf. At Berenice they were landed, and carried by camels 250 miles to the banks of the Nile. They were there again embarked, and conveyed down the river to Alexandria, whence they were despatched to different markets. The addition to the price of goods by such a multiplicity of operations must have been considerable; more especially as the price charged on each operation was fixed by monopolists, subject to no competition or control. Pliny says, that the cost of the Arabian and Indian products brought to Rome when he flourished (A. D. 70.), was increased a hundred fold by the expenses of transit—(*Hist. Nat. lib. vi. c. 23.*); but there can be little or no doubt that this is to be regarded as a rhetorical exaggeration.—(See *anté*, p. 18.) There are good grounds for thinking that the less bulky sorts of Eastern products, such as silk, spices, balsams, precious stones, &c., which were those principally made use of at Rome, might, supposing there were no political obstacles in the way, be conveyed from most parts of India to the ports on the Mediterranean by way of Egypt, at a decidedly cheaper rate than they could be conveyed to them by the Cape of Good Hope.

But at the period when the latter route to India began to be frequented, Syria, Egypt, &c. were occupied by Turks and Mamelukes; barbarians who despised commerce and navigation, and were, at the same time, extremely jealous of strangers, especially of Christians or infidels. The price of the commodities obtained through the intervention of such persons was necessarily very much enhanced; and the discovery of the route by the Cape of Good Hope was, consequently, of the utmost importance; for, by putting an end to the monopoly enjoyed by the Turks and Mamelukes, it introduced, for the first time, something like competition into the Indian trade, and enabled the western parts of Europe to obtain supplies of Indian products for about a third part of what they had previously cost. Mr. Mun, in a tract published in 1621, estimates the quantity of Indian commodities imported into Europe, and their cost when bought in Aleppo and in India, as follows:—

Cost of Indian commodities consumed in Europe when bought in Aleppo (or Alexandria).		£	s.	d.
6,000,000 lbs. pepper cost, with charges, &c. at Aleppo, 2s. per lb.	- - - - -	600,000	0	0
450,000 lbs. cloves, at 4s. 9d.	- - - - -	106,875	10	0
150,000 lbs. mace, at 4s. 9d.	- - - - -	35,625	0	0
400,000 lbs. nutmegs, at 2s. 4d.	- - - - -	46,666	2	4
350,000 lbs. indigo, at 4s. 4d.	- - - - -	75,833	6	8
1,000,000 lbs. Persian raw silk, at 12s.	- - - - -	600,000	0	0
		£ 1,465,000	19	0

But the same quantities of the same commodities cost, when bought in the East Indies, according to Mr. Mun, as follows:—

		£	s.	d.
6,000,000 lbs. pepper, at 2½d. per lb.	- - - - -	62,500	0	0
450,000 lbs. cloves, at 9d.	- - - - -	16,875	0	0
150,000 lbs. mace, at 8d.	- - - - -	5,000	0	0
400,000 lbs. nutmegs, at 4d.	- - - - -	6,666	13	4
350,000 lbs. indigo, at 1s. 2d.	- - - - -	20,416	12	4
1,000,000 lbs. raw silk, at 8s.	- - - - -	400,000	0	0
		£ 511,458	5	8

Which being deducted from the former, leaves a balance of 953,542*l.* 13*s.* 4*d.* And supposing that the statements made by Mr. Mun are correct, and that allowance is made for the difference between the freight from Aleppo and India, the result would indicate the saving which the discovery of the route by the Cape of Good Hope occasioned in

the purchase of the above-mentioned articles. — (*A Discourse of Trade from England to the East Indies*, by T. M., original ed. p. 10. This tract, which is very scarce, is reprinted in Purchas's Pilgrims.)

In the same publication (p. 37.), Mr. Mun informs us that, from the beginning of the Company's trade to July, 1620, they had sent 79 ships to India; of which 34 had come home safely and richly laden, 4 had been worn out by long service in India, 2 had been lost in careening, 6 had been lost by the perils of the sea, and 12 had been captured by the Dutch. Mr. Mun further states, that the exports to India, since the formation of the Company, had amounted to 840,376*l.*; that the produce brought from India had cost 356,288*l.*, and had produced here the enormous sum of 1,914,600*l.*; that the quarrels with the Dutch had occasioned a loss of 84,088*l.*; and that the stock of the Company, in ships, goods in India, &c., amounted to 400,000*l.*

The hostility of the Dutch, to which Mr. Mun has here alluded, was long a very formidable obstacle to the Company's success. The Dutch early endeavoured to obtain the exclusive possession of the spice trade, and were not at all scrupulous about the means by which they attempted to bring about this their favourite object. The English, on their part, naturally exerted themselves to obtain a share of so valuable a commerce; and as neither party was disposed to abandon its views and pretensions, the most violent animosities grew up between them. In this state of things, it would be ridiculous to suppose that unjustifiable acts were not committed by the one party as well as the other; though the worst act of the English appears venial, when compared with the conduct of the Dutch in the massacre at Amboyna, in 1622. While, however, the Dutch Company was vigorously supported by the government at home, the English Company met with no efficient assistance from the feeble and vacillating policy of James and Charles. The Dutch either despised their remonstrances, or defeated them by an apparent compliance; so that no real reparation was obtained for the outrages they had committed. During the civil war, Indian affairs were necessarily lost sight of; and the Dutch continued, until the ascendancy of the republican party had been established, to reign triumphant in the East, where the English commerce was nearly annihilated.

But notwithstanding their depressed condition, the Company's servants in India laid the foundation, during the period in question, of the settlements at Madras and in Bengal. Permission to build Fort St. George was obtained from the native authorities in 1640. In 1658, Madras was raised to the station of a presidency. In 1645, the Company began to establish factories in Bengal; the principal of which was at Hooghly. These were, for a lengthened period, subordinate to the presidency at Madras.

No sooner, however, had the civil wars terminated, than the arms and councils of Cromwell retrieved the situation of our affairs in India. The war which broke out between the long parliament and the Dutch, in 1652, was eminently injurious to the latter. In the treaty of peace, concluded in 1654, it was stipulated that indemnification should be made by the Dutch for the losses and injuries sustained by the English merchants and factors in India. The 27th article bears, "that the Lords, the states-general of the United Provinces, shall take care that justice be done upon those who were partakers or accomplices in the massacre of the English at Amboyna, as the republic of England is pleased to term that fact, provided any of them be living." A commission was at the same time appointed, conformably to another article of the treaty, to inquire into the reciprocal claims which the subjects of the contracting parties had upon each other for losses sustained in India, Brazil, &c.; and, upon their decision, the Dutch paid the sum of 85,000*l.* to the East India Company, and 3,615*l.* to the heirs or executors of the sufferers at Amboyna. — (*Bruce's Annals*, vol. i. p. 489.)

The charter under which the East India Company prosecuted their exclusive trade to India, being merely a grant from the Crown, and not ratified by any act of parliament, was understood by the merchants to be at an end when Charles I. was deposed. They were confirmed in this view of the matter, from the circumstance of Charles having himself granted, in 1635, a charter to Sir William Courten and others, authorising them to trade with those parts of India with which the Company had not established any regular intercourse. The reasons alleged in justification of this measure, by the Crown, were, that "the East India Company had neglected to establish fortified factories, or seats of trade, to which the king's subjects could resort with safety; that they had consulted their own interests only, without any regard to the king's revenue; and, in general, that they had broken the condition on which their charter and exclusive privileges had been granted to them." — (*Rym. Fœdera*, vol. xx. p. 146.)

Courten's association, for the foundation of which such satisfactory reasons had been assigned, continued to trade with India during the remainder of Charles's reign; and no sooner had the arms of the Commonwealth forced the Dutch to desist from their depredations, and to make reparation for the injuries they had inflicted on the English in India, than private adventurers engaged in great numbers in the Indian trade, and carried it on with a zeal, economy, and success, that monopoly can never expect to rival. It is

stated in a little work, entitled *Britannia Languens*, published in 1680, the author of which has evidently been a well-informed and intelligent person, that during the years 1653, 1654, 1655, and 1656, when the trade to India was open, the private traders imported East India commodities in such large quantities, and sold them at such reduced prices, that they not only fully supplied the British markets, but had even come into successful competition with the Dutch in the market of Amsterdam, "and very much sunk the actions (shares) of the Dutch East India Company." — (p. 132.) This circumstance naturally excited the greatest apprehensions on the part of the Dutch Company; for, besides the danger that they now ran of being deprived, by the active competition of the English merchants, of a considerable part of the trade which they had previously enjoyed, they could hardly expect that, if the trade were thrown open in England, the monopoly would be allowed to continue in Holland. A striking proof of what is now stated is to be found in a letter in the third volume of *Thurlow's State Papers*, dated at the Hague, the 15th of January, 1654, where it is said, that "the merchants of Amsterdam have advice that the Lord Protector intends to dissolve the East India Company at London, and to declare the navigation and commerce of the East Indies free and open; which doth cause great jealousy at Amsterdam, as a thing that will very much prejudice the East India Company in Holland."

Feeling that it was impossible to contend with the private adventurers under a system of fair competition, the moment the treaty with the Dutch had been concluded, the Company began to solicit a renewal of their charter; but in this they were not only opposed by the free traders, but by a part of themselves. To understand how this happened, it may be proper to mention that Courten's association, the origin of which has been already noticed, had begun, in 1648, to found a colony at Assuda, an island near Madagascar. The Company, alarmed at this project, applied to the council of state to prevent its being carried into effect; and the council, without entering on the question of either party's rights, recommended to them to form a union; which was accordingly effected in 1649. But the union was, for a considerable time, rather nominal than real; and when the Dutch war had been put an end to, most of those holders of the Company's stock who had belonged to Courten's association joined in petitioning the council of state that the trade might in future be carried on, not by a joint stock, but by a *regulated* company; so that each individual engaging in it might be allowed to employ his own stock, servants, and shipping, in whatever way he might conceive most for his own advantage. — (*Petition of Adventurers*, 17th of Nov. 1656; *Bruce's Annals*, vol. i. p. 518.)

This proposal was obviously most reasonable. The Company had always founded their claim to a monopoly of the trade on the alleged ground of its being necessary to maintain forts, factories, and ships of war in India; and that as this was not done by government, it could only be done by a Company. But, by forming the traders with India into a regulated company, they might have been subjected to whatever rules were considered most advisable; and such special duties might have been laid on the commodities they exported and imported, as would have sufficed to defray the public expenses required for carrying on the trade, at the same time that the inestimable advantages of free competition would have been secured; each individual trader being left at liberty to conduct his enterprises, subject only to a few general regulations, in his own way and for his own advantage. — (See COMPANIES.)

But notwithstanding the efforts of the petitioners, and the success that was clearly proved to have attended the operations of the private traders, the Company succeeded in obtaining a renewal of their charter from Cromwell in 1657. Charles II. confirmed this charter in 1661; and at the same time conferred on them the power of making peace or war with any power or people *not of the Christian religion*; of establishing fortifications, garrisons, and colonies; of exporting ammunition and stores to their settlements duty free; of seizing and sending to England such British subjects as should be found trading to India without their leave; and of exercising civil and criminal jurisdiction in their settlements, according to the laws of England. Still, however, as this charter was not fully confirmed by any act of parliament, it did not prevent traders, or interlopers as they were termed, from appearing within the limits of the Company's territories. The energy of private commerce, which, to use the words of Mr. Orme, "sees its drift with eagles' eyes," formed associations at the risk of trying the consequence at law, being safe at the outset, and during the voyage, since the Company were not authorised to stop or seize the ships of those who thus attempted to come into competition with them. Hence their monopoly was by no means complete; and it was not till after the Revolution, and when a free system of government had been established at home, that, by a singular contradiction, the authority of parliament was interposed to enable the Company wholly to engross the trade with the East.

In addition to the losses arising from this source, the Company's trade suffered severely, during the reign of Charles II., from the hostilities that were then waged with the Dutch, and from the confusion and disorders caused by contests among the native

princes; but in 1668, the Company obtained a very valuable acquisition in the island of Bombay. Charles II. acquired this island as a part of the marriage portion of his wife, Catharine of Portugal; and it was now made over to the Company, on condition of their not selling or alienating it to any persons whatever, except such as were subjects of the British crown. They were allowed to legislate for their new possession; but it was enjoined that their laws should be consonant to reason, and "as near as might be" agreeable to the practice of England. They were authorised to maintain their dominion by force of arms; and the natives of Bombay were declared to have the same liberties as natural born subjects. The Company's western presidency was soon after transferred from Surat to Bombay.

In 1664, the French East India Company was formed; and 10 years afterwards they laid the foundation of their settlement at Pondicherry.

But the reign of Charles II. is chiefly memorable in the Company's annals, from its being the era of the commencement of the tea trade. The first notice of tea in the Company's records is found in a despatch, addressed to their agent at Bantam, dated 24th of January, 1667-8, in which he is desired to send home 100 lbs. of tea, "the best he can get." — (*Bruce's Annals*, vol. ii. p. 210.) Such was the late and feeble beginning of the tea trade; a branch of commerce that has long been of vast importance to the British nation; and without which, it is more than probable that the East India Company would long since have ceased to exist, at least as a mercantile body.

In 1677, the Company obtained a fresh renewal of their charter; receiving at the same time an indemnity for all past misuse of their privileges, and authority to establish a mint at Bombay.

During the greater part of the reigns of Charles II. and James II., the Company's affairs at home were principally managed by the celebrated Sir Josiah Child, the ablest commercial writer of the time; and in India, by his brother Sir John Child. In 1681, Sir Josiah published an apology for the Company, under the signature of ΦΙΛΟΠΑΤΡΙΣ — "A Treatise wherein is demonstrated that the East India Trade is the most National of all Foreign Trades:" in which, besides endeavouring to vindicate the Company from the objections that had been made against it, he gives an account of its state at the time. From this account it appears that the Company consisted of 536 partners; that they had from 35 to 36 ships, of from 775 to 100 tons, employed in the trade between England and India, and from port to port in India — (p. 23.); that the custom duties upon the trade amounted to about 60,000*l.* a year; and that the value of the exports, "in lead, tin, cloth, and stuffs, and other commodities of the production and manufacture of England," amounted to about 60,000*l.* or 70,000*l.* a year. Sir Josiah seems to have been struck, as he well might, by the inconsiderable amount of the trade; and he therefore dwells on the advantages of which it was indirectly productive, in enabling us to obtain supplies of raw silk, pepper, &c. at a much lower price than they would otherwise have fetched. But this, though true, proved nothing in favour of the Company; it being an admitted fact, that those articles were furnished at a still lower price by the interlopers or private traders.

Sir Josiah Child was one of the first who projected the formation of a territorial empire in India. But the expedition fitted out in 1686, in the view of accomplishing this purpose, proved unsuccessful; and the Company were glad to accept peace on the terms offered by the Mogul. Sir John Child, having died during the course of these transactions, was succeeded in the principal management of the Company's affairs in India by Mr. Vaux. On the appointment of the latter, Sir Josiah Child, to whom he owed his advancement, exhorted him to act with vigour, and to carry whatever instructions he might receive from home into immediate effect. Mr. Vaux returned for answer that he should endeavour to acquit himself with integrity and justice, and that he would make the laws of his country the rule of his conduct. Sir Josiah Child's answer to this letter is curious: — "He told Mr. Vaux roundly that he expected his orders were to be his rules, and not the laws of England, which were a heap of nonsense, compiled by a few ignorant country gentlemen, who hardly knew how to make laws for the good government of their own private families, much less for the regulating of companies and foreign commerce." — (*Hamilton's New Account of the East Indies*, vol. i. p. 232.)

During the latter part of the reign of Charles II., and that of his successor, the number of private adventurers, or interlopers, in the Indian trade, increased in an unusual degree. The Company vigorously exerted themselves in defence of what they conceived to be their rights; and the question with respect to the validity of the powers conferred on them by their charter was at length brought to issue, by a prosecution carried on at their instance against Mr. Thomas Sandys, for trading to the East Indies without their licence. Judgment was given in favour of the Company in 1685. But this decision was ascribed to corrupt influence; and instead of allaying, only served to increase the clamour against them. The meeting of the Convention Parliament gave the Company's

opponents hopes of a successful issue to their efforts; and had they been united, they might probably have succeeded. Their opinions were, however, divided — part being for throwing the trade open, and part for the formation of a new company on a more liberal footing. The latter being formed into a body, and acting in unison, the struggle against the Company was chiefly carried on by them. The proceedings that took place on this occasion are amongst the most disgraceful in the history of the country. The most open and unblushing corruption was practised by all parties. — “*It was, in fact, a trial which side should bribe the highest; public authority inclining to one or other as the irresistible force of gold directed.*” — (*Modern Universal History*, vol. x. p. 127.) Government appears, on the whole, to have been favourable to the Company; and they obtained a fresh charter from the Crown in 1693. But in the following year the trade was virtually laid open by a vote of the House of Commons, “that all the subjects of England had an equal right to trade to the East Indies, unless prohibited by act of parliament.” Matters continued on this footing till 1698. The pecuniary difficulties in which government was then involved, induced them to apply to the Company for a loan of 2,000,000*l.* for which they offered 8 per cent. interest. The Company offered to advance 700,000*l.* at 4 per cent.; but the credit of government was at the time so low, that they preferred accepting an offer from the associated merchants, who had previously opposed the Company, of the 2,000,000*l.* at 8 per cent., on condition of their being formed into a new and exclusive company. While this project was in agitation, the advocates of free trade were not idle, but exerted themselves to show that, instead of establishing a new Company, the old one ought to be abolished. But however conclusive and unanswerable, their arguments, having no adventitious recommendations in their favour, failed of making any impression. The new Company was established by authority of the legislature; and as the charter of the old Company was not yet expired, the novel spectacle was exhibited of two legally constituted bodies, each claiming an exclusive right to the trade of the same possessions!

Notwithstanding all the pretensions set up by those who had obtained the new charter during their struggle with the old Company, it was immediately seen that they were as anxious as the latter to suppress every thing like free trade. They had not, it was obvious, been actuated by any enlarged views, but merely by a wish to grasp at the monopoly, which they believed would redound to their own individual interest. The public, in consequence, became equally disgusted with both parties; or if there were any difference, it is probable that the new Company was looked upon with the greatest aversion, inasmuch as we are naturally more exasperated by what we conceive to be duplicity and bad faith, than by fair undisguised hostility.

At first the mutual hatred of the rival associations knew no bounds. But they were not long in perceiving that such conduct would infallibly end in their ruin; and that, while one was labouring to destroy the other, the friends of free trade might step in and procure the dissolution of both. In consequence, they became gradually reconciled; and in 1702, having adjusted their differences, they resolved to form themselves into one company, entitled, *The United Company of Merchants of England trading to the East Indies.*

The authority of parliament was soon after interposed to give effect to this agreement.

The United Company engaged to advance 1,200,000*l.* to government without interest, which, as a previous advance had been made of 2,000,000*l.* at 8 per cent., made the total sum due to them by the public 3,200,000*l.*, bearing interest at 5 per cent.; and government agreed to ratify the terms of their agreement, and to extend the charter to the 25th of March, 1726, with 3 years' notice.

While those important matters were transacting at home, the Company had acquired some additional possessions in India. In 1692, the Bengal agency was transferred from Hooghly to Calcutta. In 1698, the Company acquired a grant from one of the grandsons of Aurengzebe, of Calcutta and 2 adjoining villages; with leave to exercise judiciary powers over the inhabitants, and to erect fortifications. These were soon after constructed, and received, in compliment to William III., then king of England, the name of Fort William. The agency at Bengal, which had hitherto been subsidiary only, was now raised to the rank of a presidency.

The vigorous competition that had been carried on for some years before the coalition of the old and new Companies, between them and the private traders, had occasioned a great additional importation of Indian silks, piece goods, and other products, and a great reduction of their price. These circumstances occasioned the most vehement complaints amongst the home manufacturers, who resorted to the arguments invariably made use of on such occasions by those who wish to exclude foreign competition; affirming that manufactured India goods had been largely substituted for those of England; that the English manufacturers had been reduced to the cruel necessity either of selling nothing, or of selling their commodities at such a price as left them no profit; that great numbers of their workmen had been thrown out of employment; and last of all, that

Indian goods were not bought by British goods, but by gold and silver, the exportation of which had caused the general impoverishment of the kingdom ! The merchants and others interested in the India trade could not, as had previously happened to them in the controversy with respect to the exportation of bullion, meet these statements without attacking the principles on which they rested, and maintaining, in opposition to them, that it was for the advantage of every people to buy the products they wanted in the cheapest market. This just and sound principle was, in consequence, enforced in several petitions presented to parliament by the importers of Indian goods ; and it was also enforced in several able publications that appeared at the time. But these arguments, how unanswerable soever they may now appear, had then but little influence ; and in 1701, an act was passed, prohibiting the importation of Indian manufactured goods for home consumption.

For some years after the re-establishment of the Company, it continued to prosecute its efforts to consolidate and extend its commerce. But the unsettled state of the Mogul empire, coupled with the determination of the Company to establish factories in every convenient situation, exposed their affairs to perpetual vicissitudes. In 1715, it was resolved to send an embassy to Delhi, to solicit from Furucksur, an unworthy descendant of Aurengzebe, an extension and confirmation of the Company's territory and privileges. Address, accident, and the proper application of *presents*, conspired to ensure the success of the embassy. The grants or patents solicited by the Company were issued in 1717. They were in all 34. The substance of the privileges they conferred was, that English vessels wrecked on the coasts of the empire should be exempt from plunder ; that the annual payment of a stipulated sum to the government of Surat should free the English trade at that port from all duties and exactions ; that those villages contiguous to Madras formerly granted and afterwards refused by the government of Arcot, should be restored to the Company ; that the island of Diu, near the port of Masulipatam, should belong to the Company, paying for it a fixed rent ; that in Bengal, all persons, whether European or native, indebted or accountable to the Company, should be delivered up to the presidency on demand ; that goods of export or import, belonging to the English, might, under a *dustuck* or passport from the president of Calcutta, be conveyed duty free through the Bengal provinces ; and that the English should be at liberty to purchase the lordship of 37 towns contiguous to Calcutta, and in fact commanding both banks of the river for 10 miles south of that city. — (*Grant's Sketch of the Hist. of the East India Company*, p. 128.)

The important privileges thus granted, were long regarded as constituting the great charter of the English in India. Some of them, however, were not fully conceded ; but were withheld or modified by the influence of the emperor's lieutenants, or soubahdars.

In 1717, the Company found themselves in danger from a new competitor. In the course of that year some ships appeared in India, fitted out by private adventurers from Ostend. Their success encouraged others to engage in the same line ; and in 1722, the adventurers were formed into a company under a charter from his Imperial Majesty. The Dutch and English Companies, who had so long been hostile to each other, at once laid aside their animosities, and joined heartily in an attempt to crush their new competitors. Remonstrances being found ineffectual, force was resorted to ; and the vessels of the Ostend Company were captured, under the most frivolous pretences, in the open seas and on the coasts of Brazil. The British and Dutch governments abetted the selfish spirit of hostility displayed by their respective Companies. And the emperor was, in the end, glad to purchase the support of Great Britain and Holland to the pragmatic sanction, by the sacrifice of the Company at Ostend.

Though the Company's trade had increased, it was still inconsiderable ; and it is very difficult, indeed, when one examines the accounts that have from time to time been published of the Company's mercantile affairs, to imagine how the idea ever came to be entertained that their commerce was of any considerable, much less paramount, importance. At an average of the 10 years ending with 1724, the total value of the British manufactures and other products annually exported to India amounted to only 92,410*l.* 12*s.* 6*d.* The average value of the bullion annually exported during the same period, amounted to 548,102*l.* 11*s.* 0*d.* ; making the total annual average exports 640,512*l.* 3*s.* 10*d.* ; — a truly pitiful sum, when we consider the wealth, population, and industry of the countries between which the Company's commerce was carried on ; and affording by its smallness a strong presumptive proof of the effect of the monopoly in preventing the growth of the trade.

In 1730, though there were 3 years still unexpired of the Company's charter, a vigorous effort was made by the merchants of London, Bristol, and Liverpool, to prevent its renewal. It has been said that the gains of the Company, had they been exactly known, would not have excited any very envious feelings on the part of the merchants ; but being concealed, they were exaggerated ; and the boasts of the Company as to the importance of their trade contributed to spread the belief that their profits were enormous,

and consequently stimulated the exertions of their opponents. Supposing, however, that the real state of the case had been known, there was still enough to justify the utmost exertions on the part of the merchants: for the limited profits made by the Company, notwithstanding their monopoly, were entirely owing to the misconduct of their agents, which they had vainly endeavoured to restrain; and to the waste inseparable from such unwieldy establishments.

The merchants, on this occasion, followed the example that had been set by the petitioners for free trade in 1656. They offered, in the first place, to advance the 3,200,000*l.* lent by the Company to the public, on more favourable terms. And in the second place, they proposed that the subscribers to this loan should be formed into a *regulated* company, for opening the trade, under the most favourable circumstances, to all classes of their countrymen.

It was not intended that the Company should trade upon a joint stock, and in their corporate capacity, but that every individual who pleased should trade in the way of private adventure. The Company were to have the charge of erecting and maintaining the forts and establishments abroad; and for this, and for other expenses attending what was called the enlargement and preservation of the trade, it was proposed that they should receive a duty of 1 per cent. upon all exports to India, and of 5 per cent. upon all imports from it. For ensuring obedience to this and other regulations, it was to be enacted, that no one should trade to India without licence from the Company. And it was proposed that 31 years, with 3 years' notice, should be granted as the duration of their peculiar privilege.

"It appears from this," says Mr. Mill, "that the end which was proposed to be answered, by incorporating such a company, was the preservation and erection of the forts, buildings, and other fixed establishments, required for the trade of India. This Company promised to supply that demand which has always been held forth as peculiar to the India trade, as the grand exigency which, distinguishing the traffic with India from all other branches of trade, rendered monopoly advantageous in that peculiar case, how much soever it might be injurious in others. While it provided for this real or pretended want, it left the trade open to all the advantages of private enterprise, private vigilance, private skill, and private economy,—the virtues by which individuals thrive and nations prosper. And it gave the proposed company an interest in the careful discharge of its duty, by making its profits increase in exact proportion with the increase of the trade, and, of course, with the facilities and accommodation by which the trade was promoted.

"Three petitions were presented to the House of Commons in behalf of the proposed company, by the merchants of London, Bristol, and Liverpool. It was urged, that the proposed company would, through the competition of which it would be productive, cause a great extension of the trade; that it would produce a larger exportation of our own produce and manufactures to India, and reduce the price of all Indian commodities to the people at home; that new channels of traffic would be opened in Asia and America, as well as in Europe; that the duties of customs and excise would be increased; and that the waste and extravagance caused by the monopoly would be entirely avoided."—(*Mill's India*, vol. iii. p. 37.)

But these arguments did not prevail. The Company magnified the importance of their trade; and contended, that it would be unwise to risk advantages already realised, for the sake of those that were prospective and contingent. They alleged that, if the trade to India were thrown open, the price of goods in India would be so much enhanced by the competition of different traders, and their price in England so much diminished, that the freedom of the trade would certainly end in the ruin of all who had been foolish enough to adventure in it. To enlarge on the fallacy of these statements would be worse than superfluous. It is obvious that nothing whatever could have been risked, and that a great deal would have been gained, by opening the trade in the way that was proposed. And if it were really true that the trade to India ought to be subjected to a monopoly, lest the traders by their competition should ruin each other, it would follow that the trade to America—and not that only, but every branch both of the foreign and home trade of the empire—should be surrendered to exclusive companies. But such as the Company's arguments were, they seemed satisfactory to parliament. They, however, consented to reduce the interest on the debt due to them by the public from 5 to 4 per cent., and contributed a sum of 200,000*l.* for the public service. On these conditions it was agreed to extend their exclusive privileges to Lady-day, 1766, with the customary addition of 3 years' notice.

For about 15 years from this period, the Company's affairs went on without any very prominent changes. But notwithstanding the increased importation of tea, the consumption of which now began rapidly to extend, their trade continued to be comparatively insignificant. At an average of the 8 years ending with 1741, the value of the British goods and products of all sorts, exported by the Company to India and China,

amounted to only 157,944*l.* 4*s.* 7*d.* a year! And during the 7 years ending with 1748, they amounted to only 188,176*l.* 16*s.* 4*d.* And when it is borne in mind that these exports included the military stores of all sorts, forwarded to the Company's settlements in India and at St. Helena, the amount of which was, at all times, very considerable, it does appear exceedingly doubtful whether the Company really exported, during the entire period from 1730 to 1748, 150,000*l.* worth of British produce as a legitimate mercantile adventure! Their trade, such as it was, was entirely carried on by shipments of bullion; and even its annual average export, during the 7 years ending with 1748, only amounted to 548,711*l.* 19*s.* 2*d.* It would seem, indeed, that the Company had derived no perceptible advantage from the important concessions obtained from the Mogul emperor, in 1717. But the true conclusion is, not that these concessions were of little value, but that the deadening influence of monopoly had so paralysed the Company, that they were unable to turn them to account; and that, though without competitors, and with opulent kingdoms for their customers, their commerce was hardly greater than that carried on by some single merchants.

In 1732, the Company were obliged to reduce their dividend from 8 to 7 per cent., at which rate it continued till 1744.

The opposition the Company had experienced from the merchants, when the question as to the renewal of their charter was agitated, in 1730, made them very desirous to obtain the next renewal in as quiet a manner as possible. They therefore proposed, in 1743, when 23 years of their charter were yet unexpired, to lend 1,000,000*l.* to government, at 3 per cent., provided their exclusive privileges were extended to 1780, with the usual notice. And as none were expecting such an application, or prepared to oppose it, the consent of government was obtained without difficulty.

But the period was now come, when the mercantile character of the East India Company,—if, indeed, it could with propriety, be, at any time, said to belong to them,—was to be eclipsed by their achievements as a military power, and the magnitude of their conquests. For about two centuries after the European powers began their intercourse with India, the Mogul princes were regarded as amongst the most opulent and powerful of monarchs. Though of a foreign lineage—being descended from the famous Tamerlane, or Timur Bee, who overran India in 1400—and of a different religion from the great body of their subjects, their dominion was firmly established in every part of their extensive empire. The administration of the different provinces was committed to officers, denominated soubahdars, or nabobs, intrusted with powers, in their respective governments, similar to those enjoyed by the Roman prætors. So long as the emperors retained any considerable portion of the vigour and bravery of their hardy ancestors, the different parts of the government were held in due subordination, and the soubahdars yielded a ready obedience to the orders from Delhi. But the emperors were gradually debauched by the apparently prosperous condition of their affairs. Instead of being educated in the council or the camp, the heirs of almost unbounded power were brought up in the slothful luxury of the seraglio; ignorant of public affairs; benumbed by indolence; depraved by the flattery of women, of eunuchs, and of slaves; their minds contracted with their enjoyments; their inclinations were vitiated by their habits; and their government grew as vicious, as corrupt, and as worthless as themselves. When the famous Kouli Khan, the usurper of the Persian throne, invaded India, the effeminate successor of Tamerlane and Aurengzebe was too unprepared to oppose, and too dastardly to think of avenging the attack. This was the signal for the dismemberment of the monarchy. No sooner had the invader withdrawn, than he soubahdars either openly threw off their allegiance to the emperor, or paid only species of nominal or mock deference to his orders. The independence of the soubahdars was very soon followed by wars amongst themselves; and, being well aware of the superiority of European troops and tactics, they anxiously courted the alliance and support of the French and English East India Companies. These bodies, having espoused different sides, according as their interests or prejudices dictated, began very soon to turn the quarrels of the soubahdars to their own account. Instead of being contented, as hitherto, with the possession of factories and trading towns, they aspired to the dominion of provinces; and the struggle soon came to be, not which of the native princes should prevail, but whether the English or the French should become the umpires of India.

But these transactions are altogether foreign to the subject of this work; nor could any intelligible account of them be given without entering into lengthened statements. We shall only, therefore, observe that the affairs of the French were ably conducted by La Bourdonnais, Dupleix, and Lally, officers of distinguished merit, and not less celebrated for their great actions than for the base ingratitude of which they were the victims. But though victory seemed at first to incline to the French and their allies, the English affairs were effectually retrieved by the extraordinary talents and address of a single individual;—Colonel (afterwards Lord) Clive was equally brave, cautious, and enterprising;

not scrupulous in the use of means; fertile in expedients; endowed with wonderful sagacity and resolution; and capable of turning even the most apparently adverse circumstances to advantage. Having succeeded in humbling the French power in the vicinity of Madras, Clive landed at Calcutta in 1757, in order to chastise the soubahdar, Surajah ul Dowlah, who had a short while before attacked the English factory at that place, and inhumanly shut up 146 Englishmen in a prison, where, owing to the excessive heat and want of water, 123 perished in a single night. Clive had only 700 European troops and 1,400 Sepoys with him when he landed; but with these, and 570 sailors furnished by the fleet, he did not hesitate to attack the immense army commanded by the soubahdar, and totally defeated him in the famous battle of Plassey. This victory threw the whole provinces of Bengal, Bahar, and Orissa, into our hands; and they were finally confirmed to us by the treaty negotiated in 1765.

Opinion has been long divided as to the policy of our military operations in India; and it has been strenuously contended, that we ought never to have extended our conquests beyond the limits of Bengal. The legislature seems to have taken this view of the matter; the House of Commons having resolved, in 1782, "that to pursue schemes of conquest and extent of dominion in India are measures repugnant to the wish, the honour, and the policy of this nation." But others have argued, and apparently on pretty good grounds, that, having gone thus far, we were compelled to advance. The native powers, trembling at the increase of British dominion, endeavoured, when too late, to make head against the growing evil. In this view they entered into combinations and wars against the English; and the latter having been uniformly victorious, their empire necessarily went on increasing, till all the native powers have been swallowed up in its vast extent.

The magnitude of the acquisitions made by Lord Clive powerfully excited the attention of the British public. Their value was prodigiously exaggerated; and it was generally admitted that the Company had no legal claim to enjoy, during the whole period of their charter, all the advantages resulting from conquests, to which the fleets and armies of the state had largely contributed. In 1767, the subject was taken up by the House of Commons; and a committee was appointed to investigate the whole circumstances of the case, and to calculate the entire expenditure incurred by the public on the Company's account. During the agitation of this matter, the right of the Company to the new conquests was totally denied by several members. In the end, however, the question was compromised by the Company agreeing to pay 400,000*l.* a year for 2 years; and in 1769, this agreement, including the yearly payment, was further extended for 5 years more. The Company, at the same time, increased their dividend, which had been fixed by the former agreement at 10, to 12½ per cent.

But the Company's anticipations of increased revenue proved entirely visionary. The rapidity of their conquests in India, the distance of the controlling authority at home, and the abuses in the government of the native princes, to whom the Company had succeeded, conspired to foster a strong spirit of peculation among their servants. Abuses of every sort were multiplied to a frightful extent. The English, having obtained, or rather enforced, an exemption from those heavy transit duties to which the native traders were subject, engrossed the whole internal trade of the country. They even went so far as to decide what quantity of goods each manufacturer should deliver, and what he should receive for them. It is due to the directors to say, that they exerted themselves to repress these abuses. But their resolutions were neither carried into effect by their servants in India, nor sanctioned by the proprietors at home; so that the abuses, instead of being repressed, went on acquiring fresh strength and virulence. The resources of the country were rapidly impaired; and while many of the Company's servants returned to Europe with immense fortunes, the Company itself was involved in debt and difficulties; and so far from being able to pay the stipulated sum of 400,000*l.* a year to government, was compelled to apply, in 1772, to the Treasury for a loan!

In this crisis of their affairs, government interposed, and a considerable change was made in the constitution of the Company. The dividend was restricted to 6 per cent., till the sum of 1,400,000*l.* advanced to them by the public, should be paid. It was further enacted, that the court of directors should be elected for 4 years, 6 members annually, but none to hold their seats for more than 4 years at a time; that no person was to vote at the courts of proprietors who had not possessed his stock for 12 months; and that the amount of stock required to qualify for a vote should be increased from 500*l.* to 1,000*l.* The jurisdiction of the Mayor's Court at Calcutta was in future confined to small mercantile cases; and, in lieu of it, a new court was appointed, consisting of a chief justice and 3 principal judges appointed by the Crown. A superiority was also given to Bengal over the other presidencies, Mr. Warren Hastings being named in the act as governor-general of India. The governor-general, councillors, and judges, were prohibited from having any concern whatever in trade; and no person residing in the Company's settlements was allowed to take more than 12 per cent. per

annum for money. Though strenuously opposed, these measures were carried by a large majority.

At this period (1773) the total number of proprietors of East India stock, with their qualifications as they stood in the Company's book, were as follows:—

	Proprietors.	Stocks.		
		£	s.	d.
Englishmen, possessing 1,000 <i>l.</i> stock and upwards	- 487	1,018,398	19	11
Foreigners, possessing 1,000 <i>l.</i> stock and upwards	- 325	890,940	17	0
Englishmen, possessing 500 <i>l.</i> stock and upwards	- 1,246	634,464	1	8
Foreigners, possessing 500 <i>l.</i> stock and upwards	- 95	50,226	0	0
Total	- -	2,153	£2,594,029	18 7

Notwithstanding the vast extension of the Company's territories, their trade continued to be apparently insignificant. During the 3 years ending with 1773, the value of the entire exports of British produce and manufactures, including military stores exported by the Company to India and China, amounted to 1,469,411*l.*, being at the rate of 489,803*l.* a year; the annual exports of bullion during the same period being only 84,933*l.*! During the same 3 years, 23 ships sailed annually for India. The truth, indeed, seems to be, that, but for the increased consumption of tea in Great Britain, the Company would have entirely ceased to carry on any branch of trade with the East; and the monopoly would have excluded us as effectually from the markets of India and China as if the trade had reverted to its ancient channels, and the route by the Cape of Good Hope been relinquished.

In 1781, the exclusive privileges of the Company were extended to 1791, with 3 years' notice; the dividend on the Company's stock was fixed at 8 per cent.; three fourths of their surplus revenues, after paying the dividend, and the sum of 400,000*l.* payable to government, was to be applied to the public service, and the remaining fourth to the Company's own use.

In 1780, the value of British produce and manufactures exported by the Company to India and China amounted to only 386,152*l.*; the bullion exported during the same year was 15,014*l.* The total value of the exports during the same year was 12,648,616*l.*; showing that the East India trade formed only *one thirty-second* part of the entire foreign trade of the empire!

The administration of Mr. Hastings was one continued scene of war, negotiation, and intrigue. The state of the country, instead of being improved, became worse; so much so, that in a council minute by Marquis Cornwallis, dated the 18th of September, 1789, it is distinctly stated, "*that one third of the Company's territory is now a jungle for wild beasts.*" Some abuses in the conduct of their servants were, indeed, rectified; but, notwithstanding, the nett revenue of Bengal, Bahar, and Orissa, which, in 1772, had amounted to 2,126,766*l.*, declined, in 1785, to 2,072,963*l.* This exhaustion of the country, and the expenses incurred in the war with Hyder Ally and France, involved the Company in fresh difficulties. And being unable to meet them, they were obliged, in 1783, to present a petition to parliament, setting forth their inability to pay the stipulated sum of 400,000*l.* a year to the public, and praying to be excused from that payment, and to be supported by a loan of 900,000*l.*

All parties seemed now to be convinced that some further changes in the constitution of the Company had become indispensable. In this crisis, Mr. Fox brought forward his famous India Bill; the grand object of which was to abolish the courts of directors and proprietors, and to vest the government of India in the hands of 7 commissioners appointed by parliament. The coalition between Lord North and Mr. Fox had rendered the ministry exceedingly unpopular; and advantage was taken of the circumstance to raise an extraordinary clamour against the bill. The East India Company stigmatised it as an invasion of their chartered rights; though it is obvious, that, from their inability to carry into effect the stipulations under which those rights were conceded to them, they necessarily reverted to the public; and it was as open to parliament to legislate upon them as upon any other question. The political opponents of the government represented the proposal for vesting the nomination of commissioners in the legislature, as a daring invasion of the prerogative of the Crown, and an insidious attempt of the minister to render himself all-powerful, by adding the patronage of India to that already in his possession. The bill was, however, carried through the House of Commons; but, in consequence of the ferment it had excited, and the avowed opposition of his Majesty, it was thrown out in the House of Lords. This event proved fatal to the coalition ministry. A new one was formed, with Mr. Pitt at its head; and parliament being soon after dissolved, the new minister acquired a decisive majority in both Houses. When thus secure of parliamentary support, Mr. Pitt brought forward his India Bill, which was successfully carried through all its stages. By this

bill a Board of Control was erected, consisting of 6 members of the privy council, who were "to check, superintend, and control all acts, operations, and concerns, which in anywise relate to the civil or military government, or revenues, of the territories and possessions of the East India Company." All communications to or from India, touching any of the above matters, were to be submitted to this Board; the directors being ordered to yield obedience to its commands, and to alter or amend all instructions sent to India as directed by it. A secret committee of 3 directors was formed, with which the Board of Control might transact any business it did not choose to submit to the court of directors. Persons returning from India were to be obliged, under very severe penalties, to declare the amount of their fortunes; and a tribunal was appointed for the trial of all individuals accused of misconduct in India, consisting of a judge from each of the Courts of King's Bench, Common Pleas, and Exchequer; 5 members of the House of Lords, and 7 members of the House of Commons; the last being chosen by lot at the commencement of each session. The superintendence of all commercial matters continued, as formerly, in the hands of the directors.

During the administration of Marquis Cornwallis, who succeeded Mr. Hastings, Tippoo Saib, the son of Hyder Ally, was stripped of nearly half his dominions; the Company's territorial revenue was, in consequence, greatly increased; at the same time that the permanent settlement was carried into effect in Bengal, and other important changes accomplished. Opinion has been long divided as to the influence of these changes. On the whole, however, we are inclined to think that they have been decidedly advantageous. Lord Cornwallis was, beyond all question, a sincere friend to the people of India; and laboured earnestly, if not always successfully, to promote their interests, which he well knew were identified with those of the British nation.

During the 3 years ending with 1793, the value of the Company's exports of British produce and manufactures fluctuated from 928,783*l.* to 1,031,262*l.* But this increase is wholly to be ascribed to the reduction of the duty on tea in 1784, and the vast increase that, consequently, took place in its consumption. — (See article *TEA*.) Had the consumption of tea continued stationary, there appear no grounds for thinking that the Company's exports in 1793 would have been greater than in 1780; unless an increase had taken place in the quantity of military stores exported.

In 1793, the Company's charter was prolonged till the 1st of March, 1814. In the act for this purpose, a species of provision was made for opening the trade to India to private individuals. All his Majesty's subjects, residing in any part of his European dominions, were allowed to export to India any article of the produce or manufacture of the British dominions, except military stores, ammunition, masts, spars, cordage, pitch, tar, and copper; and the Company's civil servants in India, and the free merchants resident there, were allowed to ship, on their own account and risk, all kinds of Indian goods, except calicoes, dimities, muslins, and other piece goods. But neither the merchants in England, nor the Company's servants or merchants in India, were allowed to export or import except in Company's ships. And in order to insure such conveyance, it was enacted, that the Company should annually appropriate 3,000 tons of shipping for the use of private traders; it being stipulated that they were to pay, in time of peace, 5*l.* outwards, and 15*l.* homewards, for every ton occupied by them in the Company's ships; and that this freight might be raised in time of war, with the approbation of the Board of Control.

It might have been, and, indeed, most probably was, foreseen that very few British merchants or manufacturers would be inclined to avail themselves of the privilege of sending out goods in Company's ships; or of engaging in a trade fettered on all sides by the jealousy of powerful monopolists, and where, consequently, their superior judgment and economy would have availed almost nothing. As far, therefore, as they were concerned, the relaxation was more apparent than real, and did not produce any useful results.* It was, however, made use of to a considerable extent by private merchants in India; and also by the Company's servants returning from India, many of whom invested a part, and some the whole, of their fortune, in produce fit for the European markets.

The financial difficulties of the East India Company led to the revolution which took place in its government in 1784. But, notwithstanding the superintendence of the Board of Control, its finances have continued nearly in the same unprosperous state as before. We have been favoured, from time to time, with the most dazzling accounts of revenue that was to be immediately derived from India; and numberless acts of parliament have been passed for the appropriation of surpluses that never had any existence

* In his letter to the East India Company, dated the 21st of March, 1812, Lord Melville says: "It will not be denied that the facilities granted by that act (the act of 1793) have not been satisfactory, at least to the merchants either of this country or of India. They have been the source of constant dispute, and they have even entailed a heavy expense upon the Company without affording to the public any adequate benefit from such a sacrifice." — (*Papers published by E. I. Comp.* 1813, p. 84.)

except in the imagination of their framers. The proceedings that took place at the renewal of the charter, in 1793, afford a striking example of this. Lord Cornwallis had then concluded the war with Tippoo Saib, which had stripped him of half his dominions: the perpetual settlement, from which so many benefits were expected to be derived, had been adopted in Bengal; and the Company's receipts had been increased, in consequence of accessions to their territory, and subsidies from native princes, &c., to upwards of eight millions sterling a year, which, it was calculated, would afford a future annual surplus, after every description of charge had been deducted, of 1,240,000*l*. Mr. Dundas (afterwards Lord Melville), then president of the Board of Control, availed himself of these favourable appearances, to give the most flattering representation of the Company's affairs. There could, he said, be no question as to the permanent and regular increase of the Company's surplus revenue: he assured the House that the estimates had all been framed with the greatest care; that the Company's possessions were in a state of prosperity till then unknown in India; that the abuses, which had formerly insinuated themselves into some departments of the government, had been rooted out; and that the period was at length arrived, when India was to pour her golden treasures into the lap of England! Parliament participated in these brilliant anticipations, and in the act prolonging the charter it was enacted, 1st, That 500,000*l*. a year of the surplus revenue should be set aside for reducing the Company's debt in India to 2,000,000*l*.; 2dly, That 500,000*l*. a year should be paid into the exchequer, to be appropriated for the public service as parliament should think fit to order; 3dly, When the India debt was reduced to 2,000,000*l*., and the bond debt to 1,500,000*l*., one sixth part of the surplus was to be applied to augment the dividends, and the other five sixths were to be paid into the Bank, in the name of the commissioners of the national debt, to be accumulated as a *guarantee fund*, until it amounted to 12,000,000*l*.; and when it reached that sum, the dividends upon it were to be applied to make up the dividends on the capital stock of the Company to 10 per cent., if, at any time, the funds appropriated to that purpose should prove deficient, &c.

Not one of these anticipations has been realised! Instead of being diminished, the Company's debts began immediately to increase. In 1795, they were authorised to add to the amount of their floating debt. In 1796, a new device to obtain money was fallen upon. Mr. Dundas represented that as all competition had been destroyed in consequence of the war, the Company's commerce had been greatly increased, and that their mercantile capital had become insufficient for the extent of their transactions. In consequence of this representation, leave was given to the Company to add *two millions* to their capital stock by creating 20,000 new shares; but as these shares sold at the rate of 173*l*. each, they produced 3,460,000*l*. In 1797, the Company issued additional bonds to the extent of 1,417,000*l*.; and, notwithstanding all this, Mr. Dundas stated in the House of Commons, on the 13th of March, 1799, that there had been a deficit in the previous year of 1,319,000*l*.

During the administration of the Marquis Wellesley, which began in 1797-8 and terminated in 1805-6, the British empire in India was augmented by the conquest of Seringapatam and the whole territories of Tippoo Saib, the cession of large tracts by the Mahratta chiefs, the capture of Delhi, the ancient seat of the Mogul empire, and various other important acquisitions; so that the revenue, which had amounted to 8,059,000*l*. in 1797, was increased to 15,403,000*l*. in 1805. But the expenses of government, and the interest of the debt, increased in a still greater proportion than the revenue; having amounted, in 1805, to 17,672,000*l*., leaving a deficit of 2,269,000*l*. In the following year the revenue fell off nearly 1,000,000*l*., while the expenses continued nearly the same. And there was, at an average, a continued excess of expenditure, including commercial charges, and a contraction of fresh debt, down to 1811-12.

Notwithstanding the vast additions made to their territories, the Company's commerce with them continued to be very inconsiderable. During the 5 years ending with 1811, the exports to India by the Company, exclusive of those made on account of individuals in their ships, were as under:—

1807	-	-	-	952,416	1810	-	-	-	1,010,815
1808	-	-	-	919,544	1811	-	-	-	1,033,816
1809	-	-	-	866,153					

The exports by the private trade, and the *privilege* trade, that is, the commanders and officers of the Company's ships, during the above-mentioned years, were about as large. During the 5 years ending with 1807-8, the annual average imports into India by British private traders, only, amounted to 305,496*l*. — (*Papers published by the East India Company in 1813*, 4to. p. 56.)

The Company's exports include the value of the military stores sent from Great Britain to India. The ships employed in the trade to *India and China*, during the same 5 years, varied from 44 to 53, and their burden from 36,671 to 45,342 tons.

For some years previously to the termination of the Company's charter in 1813, the conviction had been gaining ground among all classes, that the trade to the East was capable of being very greatly extended; and that it was solely owing to the want of enterprise and competition, occasioned by its being subjected to a monopoly, that it was confined within such narrow limits. Very great efforts were, consequently, made by the manufacturing and commercial interests to have the monopoly set aside, and the trade to the East thrown open. The Company vigorously resisted these pretensions; and had interest enough to procure a prolongation of the privilege of carrying on an exclusive trade to China to the 10th of April, 1831, with 3 years' notice; the government of India being continued in their hands for the same period. Fortunately, however, the trade to India was opened, under certain conditions, to the public. The principal of these conditions were, that private individuals should trade, directly only, with the presidencies of Calcutta, Madras, and Bombay, and the port of Penang; that the vessels fitted out by them should not be under 350 tons burden; and that they should abstain, unless permitted by the Company, or the Board of Control, from engaging in the carrying trade of India, or in the trade between India and China. And yet, in despite of these disadvantages, such is the energy of individual enterprise as compared with monopoly, that the private traders gained an almost immediate ascendancy over the East India Company, and in a very short time more than *trebled* our trade with India!

In the Report of the committee of the House of Lords on the foreign trade of the country, printed in May, 1821, it is stated, that "the greatly increased consumption of British goods in the East, since the commencement of the free trade, cannot be accounted for by the demand of European residents, the number of whom does not materially vary; and it appears to have been much the greatest in articles calculated for the general use of the natives. That of the cotton manufactures of this country alone is stated, since the first opening of the trade, to have been augmented from *four to five* fold (it is now augmented from *fifty to sixty* fold). The value of the merchandise exported from Great Britain to India, which amounted, in 1814, to 870,177*l.*, amounted *, in 1819, to 3,052,741*l.*; and although the market appears then to have been so far overstocked as to occasion a diminution of nearly one half in the exports of the following year, that diminution appears to have taken place more in the articles intended for the consumption of Europeans than of natives; and the trade is now stated to the committee, by the best informed persons, to be reviving. When the amount of population, and the extent of the country over which the consumption of these articles is spread, are considered, it is obvious that any facility which can, consistently with the political interests and security of the Company's dominions, be given to the private trader, for the distribution of his exports, by increasing the number of ports at which he may have the option of touching in pursuit of a market, cannot fail to promote a more ready and extensive demand."

Besides the restraints imposed by the act of 1813 on the proceedings of the free traders†, they frequently experienced very great loss and inconvenience from the commercial speculations of the East India Company. The latter have had commercial residents, with large establishments of servants, some of them intended for coercive purposes, stationed in all the considerable towns; and the Marquis Wellesley has stated, "that the intimation of a wish from the Company's resident is always received as a command by the native manufacturers and producers." It was obviously impossible for a private trader to come fairly into competition with persons possessing such authority, and who were often instructed to make their purchases on any terms. Mr. Tucker, now deputy chairman of the Company, states, in his useful work on Indian finance, that the Company's investments (purchases) in India during the last 10 years may in some instances be said to have been forced; meaning by this, that the goods exported by them from India have sometimes been compulsorily obtained from the natives, and sometimes bought at a higher price than they would have brought in a market frequented only by regular merchants. But the truth is, that it was not in the nature of things that the Company's purchases could be fairly made; the natives could not deal with their servants as they would have dealt with private individuals; and it would be absurd to suppose that agents authorised to buy on account of government, and to draw on the public treasury for the means of payment, should generally evince the prudence and discretion of individuals directly responsible in their own private fortunes for their transactions. The interference of such persons would, under any circumstances, have rendered the East India trade peculiarly hazardous. But their influence in this respect was materially aggravated by the irregularity of their appearances. No individual, not belonging to the court of directors, could foresee whether the Company's agents would be in the market at all; or, if there, to what extent

* This is the amount of the Company's exports only, and the sum is not quite accurate, see *post*.

† These restraints were a good deal modified by the 3 Geo. 4. c. 80., passed in pursuance of the recommendation of the committee quoted above.

they would either purchase or sell. So capricious were their proceedings, that in some years they have laid out 700,000*l.* on indigo, while in others they have not laid out a single shilling; and so with other things. A fluctuating demand of this sort necessarily occasioned great and sudden variations of price, and was injurious alike to the producers and the private merchants. Mr. Mackenzie, late secretary to the government of Bengal, set the mischievous influence of the circumstances now alluded to in the clearest point of view, in his masterly evidence before the select committee of 1832 on the affairs of India; and he further showed, that it was not possible, by any sort of contrivance, to obviate the inconveniences complained of, and that they would unavoidably continue till the Company ceased to have any thing to do with commerce.

But besides being injurious to the private trader, and to the public generally, both in India and England, this trade was of no advantage to the East India Company. How, indeed, could it be otherwise? A company that maintained armies and retained tea, that carried a sword in the one hand and a ledger in the other, was a contradiction; and, had she traded with success, would have been a prodigy. It was impossible for her to pay that attention to details that is indispensable to the carrying on of commerce with advantage. She may have gained something by her monopoly of the tea trade, though even that is very questionable; but it is admitted on all hands, that she has lost heavily by her trade to India.* When, therefore, the question as to the renewal of the charter came to be discussed in 1832 and 1833, the Company had no reasonable objection to urge against their being deprived of the privilege of trading. And the act 3 & 4 Will. 4. c. 85., for continuing the charter till 1854, has *terminated the Company's commercial character*; by enacting, that the Company's trade to China is to cease on the 22d of April, 1834 †, and that the Company is, as soon as possible after that date, to dispose of their stocks on hand, and close their commercial business.

We congratulate our readers on this consummation. The trade to India, China, and the East generally, is now, for the first time, opened to free and unfettered mercantile enterprise. What has been effected since the opening of the trade to India in 1814, notwithstanding the many drawbacks under which it has laboured, is an earnest of what may be anticipated from the new arrangements. We have no doubt that it will be found that the commerce between the Eastern and Western worlds is as yet only in its infancy; and that it is destined, now that the incubus of monopoly is wholly removed, to attain to a magnitude and importance of which we can form no definite idea.

II. EAST INDIA COMPANY (CONSTITUTION OF).

Under the new act, the functions of the East India Company are wholly political. She is to continue to govern India, with the concurrence and under the supervision of the Board of Control, nearly on the plan laid down in Mr. Pitt's act, till the 30th of April, 1854. All the real and personal property belonging to the Company on the 22d of April, 1834, is vested in the Crown, and is to be held or managed by the Company in trust for the same, subject of course to all claims, debts, contracts, &c. already in existence, or that may hereafter be brought into existence by competent authority. The Company's debts and liabilities are all charged on India. The dividend, which is to continue at 10½ per cent., is to be paid in England out of the revenues of India; and provision is made for the establishment of a *security fund* for its discharge. The dividend may be redeemed by parliament, on payment of 200*l.* for 100*l.* stock, any time after April, 1874; but it is provided, in the event of the Company being deprived of the government of India in 1854, that they may claim redemption of the dividend any time thereafter upon 3 years' notice. — (3 & 4 Will. 4. c. 85.)

Company's Stock — forms a capital of 6,000,000*l.*, into which all persons, natives or foreigners, males or females, bodies politic or corporate (the Governor and Company of the Bank of England only excepted), are at liberty to purchase, without limitation of amount. Since 1793, the dividends have been 10½ per cent., to which they are limited by the late act.

General Courts. — The proprietors in general court assembled are empowered to enact by-laws, and in other respects are competent to the complete investigation, regulation, and control of every branch of the Company's concerns; but, for the more prompt despatch of business, the executive detail is vested in a court of directors. A general court is required to be held once in the months of March, June, September, and December, in each year. No one can be present at a general court unless possessed of 500*l.* stock; nor can any person vote upon the determination of any question, who has not been in possession of 1,000*l.* stock for the preceding 12 months, unless such stock have been obtained by bequest or marriage. Persons possessed of 1,000*l.* stock are empowered to give a single vote; 3,000*l.* are a qualification for two votes; 6,000*l.* for three votes; and 10,000*l.* and upwards for four votes. There were 2,663 proprietors on the Company's books in 1825; of these, 1,494 were qualified to give single votes; 392, two votes; 69, three votes; and 48, four votes. Upon any special occasion, 9 proprietors, duly qualified by

* It is needless now to enter upon the controversy as to the origin of the Company's debt. — (See former edition of this work, p. 567.) It is probable that those who contend that this debt is *wholly attributable* to the Company's commercial operations, may have somewhat exaggerated their injurious influence. But we do not think that there is any room for doubting, notwithstanding the enormous prices charged on tea, that, for these many years past, the Company's trade has been, on the whole, productive of nothing but loss.

† For the new regulations as to the China trade, see CANTON.

the possession of 1,000*l.* stock, may, by a requisition in writing to the court of directors, call a general court; which the directors are required to summon within 10 days, or, in default, the proprietors may call such court by notice affixed upon the Royal Exchange. In all such courts the questions are decided by a majority of voices; in case of an equality, the determination must be by the treasurer drawing a lot. Nine proprietors may, by a requisition in writing, demand a ballot upon any question, which shall not be taken within 24 hours after the breaking up of the general court.

Court of Directors.—The court of directors is composed of 24 members, chosen from among the proprietors, each of whom must be possessed of 2,000*l.* stock; nor can any director, after being chosen, act longer than while he continues to hold stock. Of these, 6 are chosen on the second Wednesday in April in each year, to serve for 4 years, in the room of 6 who have completed such service. After an interval of 12 months, those who had gone out by rotation are eligible to be re-elected for the ensuing 4 years. Formerly, no person who had been in the Company's civil or military service in India was eligible to be elected a director until he had been a resident in England 2 years after quitting the service; but this condition no longer exists; and all civil or military servants of the Company in India, supposing they are otherwise eligible, may be chosen directors immediately on their return to England, provided they have no unsettled accounts with the Company; if so, they are ineligible for 2 years after their return, unless their accounts be sooner settled. — (3 & 4 Will. 4. c. 85. § 28.) The directors choose annually, from amongst themselves, a chairman and a deputy chairman. They are required by by-laws to meet once in every week at least; but they frequently meet oftener, as occasion requires. Not less than 13 can form a court. Their determinations are guided by a majority; in case of an equality, the question must be decided by the drawing of a lot by the treasurer; upon all questions of importance, the sense of the court is taken by ballot. The Company's officers, both at home and abroad, receive their appointments immediately from the court; to whom they are responsible for the due and faithful discharge of the trust reposed in them. The patronage is, nevertheless, so arranged, as that each member of the court separately participates therein.

Secret Committee.—The principal powers of the court of directors are vested in a secret committee, forming a sort of cabinet or privy council. All communications of a confidential or delicate nature between the Board of Control and the Company are submitted, in the first instance at least, to the consideration of this committee; and the directions of the Board, as to political affairs, may be transmitted direct to India, through the committee, without being seen by the other directors. The secret committee is appointed by the court of directors, and its members are sworn to secrecy.

III. EAST INDIES (STATE OF SOCIETY IN, GROWING DEMAND FOR ENGLISH GOODS, TRADE, COLONISATION, ETC.).

1. *Distinction of Castes in India. Inaccuracy of the Representations as to the Inhabitants being unalterably attached to ancient Customs and Practices.*—We have taken occasion, in the preceding sketch of the history of the East India Company, repeatedly to notice the small extent of the trade carried on by its agency. It has been contended, however, that this is to be ascribed, not to the deadening influence of monopoly, but to the peculiar state of the people of India. A notion has long been prevalent in this quarter of the world, that the Hindoos are a race unsusceptible of change or improvement of any sort; that every man is brought up to the profession of his father, and can engage in none else; and that, owing to the simplicity and unalterableness of their habits, they never can be consumers, at least to any considerable extent, of foreign commodities. "What is now in India, has always been there, and is likely still to continue." — (*Robertson's Disquisition*, p. 202.) The Hindoos of this day are said to be the same as the Hindoos of the age of Alexander the Great. The description of them given by Arrian has been quoted as applying to their actual situation. It is affirmed that they have neither improved nor retrograded; and we are referred to India as to a country in which the institutions and manners that prevailed 3,000 years ago may still be found in their pristine purity! The President de Goguet lays it down distinctly, in his learned and invaluable work on the origin of laws, arts, and sciences, that in India "every trade is confined to a particular caste, and can be exercised only by those whose parents professed it." — (*Origin of Laws, &c.* Eng. trans. vol. iii. p. 24.) Dr. Robertson says, that "the station of every Hindoo is unalterably fixed; his destiny is irrevocable; and the walk of life is marked out, from which he must never deviate." — (*Disquisition on India*, p. 199.) The same opinions are maintained by later authorities. Dr. Tennant says, that "the whole Indian community is divided into 4 great classes; and each class is stationed between certain walls of separation, which are impassable by the purest virtue, and most conspicuous merit." — (Quoted by *Mr. Rickards*, p. 6.) This unalterable destiny of individuals has been repeatedly assumed in the despatches and official papers put forth by the East India Company; and has been referred to on all occasions by them and their servants, as a proof that the depressed and miserable condition of the natives is not owing to misgovernment, or to the weight of the burdens laid upon them; and that it is in vain to think of materially improving their condition, or of making them acquainted with new arts, or giving them new habits, so long as the institution of castes, and the prejudices to which it has given rise preserve their ascendancy unimpaired.

But notwithstanding the universal currency which the opinions now referred to have obtained, and the high authority by which they are supported, they are, in all the most essential respects, entirely without foundation! The books and codes of the Hindoos themselves, and the minute and careful observations that have recently been made on Indian society, have shown that the influence ascribed to the institution of castes by the ancients, and by the more early modern travellers, has been prodigiously exaggerated. In the first part of his excellent work on India, Mr. Rickards has established, partly by references to the authoritative books of the Hindoos, and partly by his own observations,

and those of Mr. Colebrook, Dr. Heber, and other high authorities, that the vast majority of the Hindoo population may, and, in fact, does engage in all sorts of employments. Mr. Rickards has further shown, that there is nothing in the structure of Indian society to oppose any serious obstacle to the introduction of new arts, or the spread of improvement; and that the causes of the poverty and misery of the people must be sought for in other circumstances than the institution of castes, and the nature of Hindoo superstition.

The early division of the population into the 4 great classes of priests (Brahmins), soldiers (Chhatryas), husbandmen and artificers (Vaisyas), and slaves (Sudras), was maintained only for a very short period. The Hindoo traditions record that a partial intermixture of these classes took place at a very remote epoch; and the mixed brood thence arising were divided into a vast variety of new tribes, or castes, to whom, speaking generally, no employments are forbidden.

"The employments," says Mr. Rickards, "allowed to these mixed and impure castes, may be said to be every description of handicraft, and occupation, for which the wants of human society have created a demand. Though many seem to take their names from their ordinary trade or profession, and some have duties assigned them too low, and disgusting, for any others to perform, but from the direct necessity; yet no employment, generally speaking, is forbidden to the mixed and impure tribes, excepting three of the prescribed duties of the sacerdotal class; viz. teaching the *Vedas*, officiating at a sacrifice, and receiving presents from a pure-handed giver; which three are exclusively *Brahminical*."

Mr. Colebrook, who is acknowledged on all hands to be one of the very highest authorities, as to all that respects Indian affairs, has a paper in the fifth volume of the *Asiatic Researches*, on the subject of castes. In this paper, Mr. Colebrook states that the *Jatimuda*, a Hindoo work, enumerates *forty-two* mixed classes springing from the intercourse of a man of inferior class with a woman of a superior class, or in the *inverse* order of the classes. Now, if we add to these the number that must have sprung from intermixture in the *direct* order of the classes, and the hosts further arising from the continued intermixture of the mixed tribes amongst themselves, we shall not certainly be disposed to dissent from Mr. Colebrook's conclusion, "that the subdivisions of these classes have further multiplied distinctions to an *endless variety*."

Mr. Colebrook has given the following distinct and accurate account of the professions and employments of the several classes at the present day. It forms a curious commentary on the "irrevocable destiny" of Dr. Robertson, and the "impassable walls" of Dr. Tennant.

"A *Brahman*, unable to subsist by his duties, may live by the duty of a soldier; if he cannot get a subsistence by either of these employments, he may apply to tillage and attendance on cattle, or gain a competence by traffic, avoiding certain commodities. A *Chhatrya* in distress, may subsist by all these means; but he must not have recourse to the highest functions. In seasons of distress, a further latitude is given. The practice of medicine, and other learned professions, painting, and other arts, work for wages, menial service, alms, and usury, are among the modes of subsistence allowed both to the *Brahman* and *Chhatrya*. A *Vaisya*, unable to subsist by his own duties, may descend to the servile acts of a *Sudra*; and a *Sudra*, not finding employment by waiting on men of the higher classes, may subsist by handicrafts; principally following those mechanical operations, as joinery and masonry, and practical arts, as painting and writing, by which he may serve men of superior classes; and although a man of a lower class is in general restricted from the acts of a higher class, the *Sudra* is expressly permitted to become a trader, or a husbandman.

"Besides the particular occupation assigned to each of the mixed classes, they have the alternative of following that profession, which regularly belongs to the class from which they derive their origin on the mother's side; those at least have such an option, who are born in the direct order of the classes. The mixed classes are also permitted to subsist by any of the duties of a *Sudra*, that is, by menial service, by handicrafts, by commerce, and agriculture. Hence it appears, that ALMOST EVERY OCCUPATION, THOUGH REGULARLY IT BE THE PROFESSION OF A PARTICULAR CLASS, IS OPEN TO MOST OTHER CLASSES; and that the limitations, far from being rigorous, do in fact reserve only the peculiar profession of the *Brahman*, which consists in teaching the *Veda*, and officiating at religious ceremonies."

"We have thus," says Mr. Rickards, by whom this passage has been quoted, "the highest existing authority for utterly rejecting the doctrine of the whole Hindoo community 'being divided into four castes;' and of their peculiar prerogatives being guarded inviolate by 'impassable walls of separation.' It is also clear that the intermixture of castes had taken place, to an indefinite extent, at the time when the *Dharma Sastra* was composed, which Sir William Jones computes to be about 800 years B. C.; for the mixed classes are specified in this work, and it also refers, in many places, to past times, and to events which a course of time only could have brought about. The origin of the intermixture is therefore lost in the remotest and obscurest antiquity; and having been carried on through a long course of ages, a heterogeneous mass is every where presented to us, in these latter times, without a single example in any particular state, or kingdom, or separate portion of the Hindoo community, of that quadruple division of castes, which has been so confidently insisted upon.

"I have myself seen carpenters of five or six different castes, and as many different bricklayers, employed on the same building. The same diversity of castes may be observed among the craftsmen in dockyards, and all other great works; and those, who have resided for any time in the principal commercial cities of India, must be sensible, that every increasing demand for labour, in all its different branches and varieties of old and new arts, has been speedily and effectually supplied, in spite of the tremendous institution of castes; which we are taught to believe forms so impassable an obstruction to the advancement of Indian industry."

2. *Growing Demand for English Goods.* — It is difficult to suppose that the directors of the East India Company should not have been early aware of the fallacy of the opinions as to the fixedness of Indian habits. So far, however, as we know, they have not, in this instance, evinced any acquaintance with the discoveries of their servants. On the contrary, in all the discussions that took place with respect to the opening of the trade in 1814, the Company invariably contended that no increase of trade to India

could be expected. In a letter of the chairman and deputy chairman to the Right Honourable Robert Dundas, dated 13th of January, 1809, it is stated, that the small demand for foreign commodities in India "results from the nature of the Indian people, their climate, and their usages. The articles of first necessity their own country furnishes more abundantly and more cheaply than it is possible for Europe to supply them. The labour of the great body of the common people only enables them to subsist on rice, and to wear a slight covering of cotton cloth; they, therefore, *can purchase none of the superfluities we offer them.* The comparatively few in better circumstances, restricted, like the rest, by numerous religious and civil customs, of which all are remarkably tenacious, find few of our commodities to their taste; and their climate, so dissimilar to ours, renders many of them unsuitable to their use; so that a commerce between them and us cannot proceed far upon the principle of supplying mutual wants. Hence, except woollens, in a very limited degree, for mantles in the cold season, and metals, on a scale also very limited, to be worked up by their own artisans for the few utensils they need, hardly any of our staple commodities find a vent among the Indians; the other exports which Europe sends to India being chiefly consumed by the European population there, and some of the descendants of the early Portuguese settlers, all of whom, taken collectively, form but a small body, in view to any question of national commerce."—(*Papers published by authority of the East India Company, 1813, p. 21.*)

The volume from which we have made this extract contains a variety of passages to the same effect. So confident, indeed, were the Company that they had carried the trade to India to the utmost extent of which it was capable, that it is expressly stated, in resolutions passed in a general court held at the India House, on the 26th of January, 1813, "that no large or sudden addition can be made to the amount of British exports to India or China;" that the Company had suffered a loss in attempting to extend this branch of their trade; that the warehouses at home were glutted with Indian commodities for which there was no demand; and that to open the outports to the trade would be no other than "a ruinous transfer of it into new channels, to the destruction of immense and costly establishments, and the beggary of many thousands of industrious individuals."

Luckily, however, these representations were unable to prevent the opening of the trade, and the result has sufficiently demonstrated their fallacy. The enterprise and exertion of individuals has vastly increased our exports to India—to that very country which the Company had so confidently pronounced was, and would necessarily continue to be, incapable of affording any additional outlet for our peculiar products!

The commercial accounts for 1812 and 1813 were unfortunately destroyed by the fire at the Custom-house. The trade to India was opened on the 10th of April, 1814; and in that year the declared or real value of the products exported from Great Britain to the countries eastward of the Cape of Good Hope, excepting China, by the East India Company, was 826,558*l.*, and by the private traders, 1,048,132*l.* In 1817, the Company's exports had declined to 638,382*l.*, while those of the private traders had increased to 2,750,333*l.*; and in 1828, the former had sunk to only 488,601*l.*, while the latter had increased to 3,979,072*l.*, being more than double the total exports to India, as well by the Company as by private traders, in 1814!

The Company have stated, and no doubt truly, that they have lost a very large sum in attempting to extend the demand for British woollens in India and China, which, notwithstanding, continues very limited. But in their efforts to force the sale of woollens, they seem to have entirely forgotten that we had attained to great excellency in the manufacture of cotton stuffs, the article principally made use of as clothing in Hindostan; and that, notwithstanding the cheapness of labour in India, the advantage we derived from our superior machinery might enable us to offer cotton stuffs to the natives at a lower price than they could afford to manufacture them for. No sooner, however, had the trade been opened to private adventurers, than this channel of enterprise was explored; and the result has been, that, instead of bringing cottons from India to England, the former has become *one of the best and most extensive markets for the cottons of the latter.* We question, indeed, whether, in the whole history of commerce, another equally striking example can be produced of the powerful influence of competition in opening new and almost boundless fields for the successful prosecution of commercial enterprise.

In 1814, the first year of the free trade to India, the exports of cotton amounted to 817,000 yards, of which only about 170,000 yards, valued at 17,778*l.*, were exported by the Company! The progress of the trade will be seen in the following statement:—

Account specifying the Quantities of the printed and plain Cotton Stuffs, the declared Value of all Sorts of manufactured Cotton Goods, the Quantity of Cotton Twist or Yarn, and the declared Value of the same, exported from the United Kingdom, to all Parts of the East, except China, each Year from 1814.

Years.	Cotton Manufactures.			Cotton Twist.	
	Printed.	Plain.	Declared Value.*	Twist.	Declared Value.

1831	14,569,583	35,012,953	1,419,995	6,541,853	483,762
1832	18,291,650	39,276,511	1,531,393	4,295,427	309,719

The East India Company contributed nothing whatever to this extraordinary increase of the cotton trade; their exports not having been so large in any one year as in 1814, when they only amounted to the inconsiderable sum already mentioned.

The demand for several other articles of British manufacture has recently increased, though not in the same unprecedented manner as cotton, with considerable rapidity. Notwithstanding all that has been said as to the immutability of Hindoo habits, the fact is not to be denied, that a taste for European products and customs is rapidly spreading itself over India. And the fair presumption is, that it will continue to gain ground according as education is more diffused, and as the natives become better acquainted with our language, arts, and habits. The authenticity of Dr. Heber's statements cannot be called in question; and there are many passages in different parts of his Journal that might be quoted in corroboration of what has now been stated. Our limits, however, will only permit us to make a very few extracts.

"Nor have the religious prejudices, and the unchangeableness of the Hindoo habits, been less exaggerated. Some of the best informed of their nation, with whom I have conversed, assure me, that half their most remarkable customs of civil and domestic life are borrowed from their Mohammedan conquerors; and at present there is an obvious and increasing disposition to imitate the English in every thing; which has already led to very remarkable changes, and will, probably, to still more important. The wealthy natives now all affect to have their houses decorated with Corinthian pillars, and filled with English furniture; they drive the best horses and the most dashing carriages in Calcutta; many of them speak English fluently, and are tolerably read in English literature; and the children of one of our friends I saw one day dressed in jackets and trowsers, with round hats, shoes, and stockings. In the Bengalee newspapers, of which there are two or three, politics are canvassed with a bias, as I am told, inclined to Whiggism; and one of their leading men gave a great dinner, not long since, in honour of the Spanish revolution: among the lower orders the same feeling shows itself more beneficially in a growing neglect of caste."—(Vol. ii. p. 306.)

"To say that the Hindoos or Mussulmans are deficient in any essential feature of a civilised people, is an assertion which I can scarcely suppose to be made by any who have lived with them; their manners are at least as pleasing and courteous as those in the corresponding stations of life among ourselves; their houses are larger, and, according to their wants and climate, to the full as convenient as ours; their architecture is at least as elegant; nor is it true that in the mechanic arts they are inferior to the general run of European nations. Where they fall short of us, which is chiefly in agricultural implements, and the mechanics of common life,) they are not, so far as I have understood of Italy and the south of France, surpassed in any degree by the people of those countries. Their goldsmiths and weavers produce as beautiful fabrics as our own; and it is so far from true that they are obstinately wedded to their old patterns, that they show an anxiety to imitate our models, and do imitate them very successfully. The ships built by native artists at Bombay are notoriously as good as any which sail from London or Liverpool. The carriages and gigs which they supply at Calcutta are as handsome, though not as durable, as those of Long Acre. In the little town of Monghyr, 200 miles from Calcutta, I had pistols, double-barrelled guns, and different pieces of cabinet work, brought down to my boat for sale, which in outward form (for I know no further) nobody but perhaps Mr. ——— could be told to be of Hindoo origin; and at Delhi, in the shop of a wealthy native jeweller, I found brooches, ear-rings, snuff-boxes, &c. of the latest models (so far as I am a judge), and ornamented with French devices and mottoes."—(Vol. ii. p. 382.)

As Bishop Heber penetrated into the interior of India, he found the same taste as in Calcutta, for European articles and for luxuries, to prevail every where among the natives. Of Benares, he writes as follows:—

"But what surprised me still more, as I penetrated further into it, were the large, lofty, and handsome dwelling-houses, the beauty and apparent richness of the goods exposed in the bazaars, and the evident hum of business. Benares is in fact a very industrious and wealthy, as well as a very holy city. It is the great mart where the shawls of the north, the diamonds of the south, and the muslins of Dacca and the eastern provinces centre; and it has very considerable silk, cotton, and fine woollen manufactories of its own; while English hardware, swords, shields, and spears, from Lucknow and Monghyr, and those European luxuries and elegancies which are daily becoming more popular in India, circulate from hence through Bundelcund, Goruckpoor, Nepal, and other tracts which are removed from the main artery of the Ganges."—(Vol. i. p. 289.)

* Including lace, hosiery, and small wares.

Proceeding still further into the interior of the country, and when at Nusseerabad, distant above 1,000 miles from Calcutta, the bishop continues his *Journal* in the same strain; viz.

"European articles are, at Nusseerabad *, as might be expected, very dear; the shops are kept by a Greek and two Parsees from Bombay: they had in their list all the usual items of a Calcutta warehouse. English cotton cloths, both white and printed, are to be met with commonly in wear among the people of the country, and may, I learned to my surprise, be bought best and cheapest, as well as all kinds of hardware, crockery, writing-desks, &c., at Pallee, a large town and celebrated mart in Marwar, on the edge of the desert, several days' journey west of Joudpoor, where, till very lately, no European was known to have penetrated."—(Vol. ii. p. 36.)

As to the character of the Hindoos, their capacity, and even anxious desire for improvement, the bishop's testimony is equally clear and decided; and as this is a point of pre-eminent importance, the reader's attention is requested to the following statements:—

"In the schools which have been lately established in this part of the empire, of which there are at present 9 established by the Church Missionary, and 11 by the Christian Knowledge Societies, some very unexpected facts have occurred. As all direct attempts to convert the children are disclaimed, the parents send them without scruple. But it is no less strange than true, that there is no objection made to the use of the Old and New Testament as a class-book; that so long as the teachers do not urge them to eat what will make them lose their caste, or to be baptised, or to curse their country's gods, they readily consent to every thing else; and not only Mussulmans, but Brahmins, stand by with perfect coolness, and listen sometimes with apparent interest and pleasure, while the scholars, by the road side, are reading the stories of the creation and of Jesus Christ."—(Vol. ii. p. 290.)

"Hearing all I had heard of the prejudices of the Hindoos and Mussulmans, I certainly did not at all expect to find that the common people would, not only without objection, but with the greatest thankfulness, send their children to schools on Bell's system; and they seem to be fully sensible of the advantages conferred by writing, arithmetic, and, above all, by a knowledge of English. There are now in Calcutta, and the surrounding villages, 20 boys' schools, containing 60 to 120 each; and 23 girls', each of 25 or 30."—(Vol. ii. p. 300.)

"In the same holy city (Benares) I visited another college, founded lately by a wealthy Hindoo banker, and intrusted by him to the management of the Church Missionary Society, in which, besides a grammatical knowledge of the Hindoostanee language, as well as Persian and Arabic, the senior boys could pass a good examination in English grammar, in Hume's History of England, Joyce's Scientific Dialogues, the use of the globes, and the principal facts and moral precepts of the Gospel; most of them writing beautifully in the Persian, and very tolerably in the English character, and excelling most boys I have met with in the accuracy and readiness of their arithmetic."—(Vol. ii. p. 288.)

"The different nations which I have seen in India, (for it is a great mistake to suppose that all India is peopled by a single race, or that there is not as great a disparity between the inhabitants of Guzerat, Bengal, the Doab, and the Deccan, both in language, manners, and physiognomy, as between any four nations in Europe,) have, of course, in a greater or less degree, the vices which must be expected to attend on arbitrary government, a demoralising and absurd religion, and in all the independent states, and in some of the districts which are partially subject to the British a laxity of law, and an almost universal prevalence of intestine feuds and habits of plunder. The general character, however, has much which is extremely pleasing to me; they are brave, courteous, intelligent, and most eager after knowledge and improvement, with a remarkable talent for the sciences of geometry, astronomy, &c., as well as for the arts of painting and sculpture. In all these points they have had great difficulties to struggle with, both from the want of models, instruments, and elementary instruction; the indispotion, or rather the horror, entertained, till lately, by many among their European masters, for giving them instruction of any kind; and now from the real difficulty which exists of translating works of science into languages which have no corresponding terms."—(Vol. ii. p. 409.)

Even if our space permitted, it would be unnecessary to add to these extracts. The facts and circumstances now mentioned, must, we think, satisfy every one that there is nothing in the nature of Indian society, in the institution of castes as at present existing, or in the habits and customs of the natives, to hinder them from advancing in the career of civilisation, commerce, and wealth. "It may safely be asserted," says Mr. Hamilton, "that with so vast an extent of fertile soil, peopled by so many millions of tractable and industrious inhabitants, Hindostan is capable of supplying the whole world with any species of tropical merchandise; the production, in fact, being only limited by the demand."

3. *Trade with India.*—The principal obstacle in the way of extending the commerce with India does not consist in any indispotion on the part of the natives to purchase our commodities, but in the difficulty under which they are placed of furnishing equivalents for them. This, however, is rather a factitious than a real difficulty. It results more from the discriminating duties laid on several articles of Indian produce, than from their being, in any respect, unsuitable for our markets. Instead of admitting all the articles raised in the different dependencies of the empire for home consumption on the same terms, we have been accustomed to give a marked preference to those raised in the West Indies. We confess, however, that we are wholly unable to discover any grounds on which to vindicate such preference. The protection which every just government is bound to afford to all classes of its subjects, cannot vary with the varying degrees of latitude and longitude under which they happen to live. And as no one denies that the inhabitants of Bengal are, as well as those of Demerara or Jamaica, liege subjects of the British crown, it does seem quite at variance with every fair principle, to treat them worse than the West Indians, by imposing higher duties on their produce when brought to our markets.

The following Tables give a comprehensive view of the trade with India since the relaxation of the monopoly in 1814, and particularly during the 3 years ending with 1832:—

* Nusseerabad, near Ajmere, in the heart of the Rajepoot country.

An Account of the Value of the Imports and Exports between Great Britain and all Places Eastward of the Cape of Good Hope (excepting China); distinguishing the Private Trade from that of the East India Company, in each Year, from 1814 to the Latest Period to which the same can be made up.

Years.	Value of Imports into Great Britain, from all Places Eastward of the Cape of Good Hope (except China), according to the Prices at the East India Company's Sales in the respective Years.			Value of Exports from Great Britain to all Places Eastward of the Cape of Good Hope (except China), according to the Declarations of the Exporters.

The preference in favour of West Indian commodities was within these 5 years much greater than at present; but the following statement shows that it is still very considerable: —

An Account of Articles imported from British Possessions East of the Cape of Good Hope, on which a higher Customs Duty is charged on Import into the United Kingdom, than is charged on the same Articles imported from British Possessions in any other Parts of the World: showing, in Three parallel Columns, the Different Rates and the Excess of Duty on each Article; also, the Amount of Duty levied on each of these Articles in the Year 1832, and the Quantity on which the same was levied.

Articles.	Rates of Duty charged.			Quantity charged with Duty in the Year 1832.		Amount of Duty received in the Year 1832.	
	On Importations from Brit. Possessions within the Limits of the E. I. Co.'s Charter, except the Mauritius.	On Importations from other British Possessions.	Excess of Duty charged on Importations within the Limits of the E. I. Co.'s Charter.	Imported from British Possessions within the Limits of the E. I. Co.'s Charter.	Imported from other British Possessions, and charged with a lower Rate of Duty.	On Importations from British Possessions within the Limits of the Company's Charter.	On Importations from other British Possessions, and charged with a lower Rate of Duty.
Coffee -	9d. per lb.	6d. per lb., if the produce of and imported from the Mauritius or any British possession in America - 2d. per cwt. if do.	5d. per lb.	Lbs. 1,955,744	Lbs. 20,996,837	L. s. d. 73,227 18 0	L. s. d. 524,920 18 6

Tobacco *	3s. per lb.	2s. 9d. per lb.	3d. per lb.	-	-	-	-

Under the new regulations as to residence in India (*see post*), Englishmen will be allowed to employ themselves in the raising of sugar, as they have hitherto been allowed to employ themselves in the raising of indigo; but, unless the duty be equalised, this concession will be of little importance, at least in so far as respects sugar. An equalisation is, however, imperiously required, as well in justice to India as in the view of promoting the interests of the British public; and should it take place, we have little doubt that the growth of sugar in India will be very greatly extended, and that it will become an article of great commercial value.

The regulations as to the importation of coffee from India are as objectionable as can well be imagined. Why should the coffee of Malabar and Ceylon pay 3d. per lb. more duty than that of the Mauritius? A distinction of this sort is an outrage upon common sense, and an insult to India. Foreign coffee may be imported from any port of British India at 9d. per lb.; but if it be imported from a foreign port it pays 1s. Hence, if a British ship take on board coffee at Mocha, Manilla, or Java, she is obliged to call in her way home at Bombay or Singapore; and must there unload and then reload her cargo! Such a regulation requires no lengthened commentary; it is enough to remark that its existence is a disgrace to a civilised nation.

Besides being unfairly assessed, the duties on several most important articles of East India produce are signally oppressive in their amount. Arrack, for example, which may be bought in bond here for about 3s. a gallon, is loaded with a duty of 15s. It is almost unnecessary to add that this duty is perfectly unproductive; its only effect is to exclude a valuable article from the market; to deprive the public of a gratification they

* Quantity of tobacco brought from the East too trifling to deserve mention.

might otherwise enjoy, and the government of a considerable amount of revenue. The duty on pepper is also most extravagantly high; being no less than 1s. on an article that sells from about 3d. to 4½d. Considering the degree in which the demand for pepper is checked by this anti-consumption impost, we believe we may safely affirm that its reduction to 3d. or 4d. would be productive of an increase of revenue.

However, it is but fair to add that a very material deduction has been made from the duties charged on several articles of East India produce since the publication of the former edition of this work. It is to be hoped that the good effects of which these reductions cannot fail to be productive may speedily lead to others. The following account will no doubt receive the attentive consideration of the reader:—

Account showing the Prices in Bond in London of the different Articles of East India Produce, on the 1st of November, 1833; the present Duty on such Articles, and the Rate per Cent. of the Duty on the Price. A Column is added, showing the Duties in 1831 that have since been modified.

Goods.	Prices, 1st of November, 1833.		Per	Duties, 1st of November, 1833.	Duty. Rate per Cent.		Duties, 1st of January, 1831.

N. B.—We are indebted for this valuable Table to Mr. Begbie, secretary to the East India Association.

There is another grievance affecting the East India trade, which calls loudly for redress. Goods from America, the West Indies, or any where except the East Indies, may be conveyed from one warehousing port to another without payment of the duties. But with East India goods a different rule has been established. There are only about a dozen ports in the empire in which East India goods may be received and warehoused; and whenever it becomes necessary to remove these goods to any other place, not privileged to receive India goods, the whole duties have to be paid; so that if a merchant found it expedient to ship 1,000*l.* worth of pepper from London, Hull, or any other privileged port, to Newcastle, Plymouth, Aberdeen, or any non-privileged port, he would, before he could make such shipment, have to advance about 4,000*l.* of duty! This is a most oppressive regulation. There is not, and there never was, any good reason for prohibiting East India goods from being removed, under bond, from one port to another where other goods are allowed to be bonded. Many considerable advantages would result from permitting this to be done. It would distribute East India goods more equally over the country; and country dealers would be able to lay in and keep up sufficient stocks with a far less outlay of capital than at present. Such a measure, coupled, as it ought to be, with an adequate reduction of the duties, would materially extend the comforts of all classes at home.

4. *Colonisation of India.* — Hitherto very considerable obstacles have been thrown in the way of Europeans establishing themselves in India, and particularly of their acquiring or holding land. This policy was dictated by various considerations; partly by a wish to prevent the extrusion of the natives from the soil, which it was supposed would be eagerly bought up by Europeans, and partly by the fear lest the latter, when scattered over the country, and released from any effectual control, should offend the prejudices of the natives, and get embroiled with them. Now, however, it seems to be the general opinion of those best acquainted with India that but little danger is to be apprehended from these circumstances; that the few Europeans established in it as indigo planters, &c. have contributed very materially to its improvement; and that the increase and diffusion of the English population, and their permanent settlement in the country, are at once the most likely means of spreading a knowledge of our arts and sciences, and of widening and strengthening the foundations of our ascendancy. It is obvious, indeed, that the duration of our power in India must depend on a very uncertain tenure, unless we take root, as it were, in the soil, and a considerable portion of the population be attached to us by the ties of kindred, and of common interests and sympathies. In this respect we ought to imitate the Roman in preference to the Lacedemonian or Athenian policy. *Quid aliud exitio Lacedemoniis Atheniensibus fuit, quanquam armis pollerent, nisi quod victis pro alienigenis arcebant?* Looking, however, at the density of population in India, the low rate of wages, the nature of the climate, and other similar circumstances, it seems very doubtful whether it will ever become the resort of any considerable number of English settlers; at least of such a number as would be sufficient, within any reasonable period, to form any thing like a powerful native English interest. But to whatever extent it may be carried, it promises to be highly advantageous. "We need not, I imagine," says the present Governor-General of India, Lord William Bentinck, "use any laboured argument to prove that it would be infinitely advantageous for India to borrow largely in arts and knowledge from England. The legislature has expressly declared the truth; its acknowledgment has been implied in the daily acts and professions of government, and in all the efforts of humane individuals and societies for the education of the people. Nor will it, I conceive, be doubted, that the diffusion of useful knowledge, and its application to the arts and business of life, must be comparatively tardy, unless we add to precept the example of Europeans, mingling familiarly with the natives in the course of their profession, and practically demonstrating, by daily recurring evidence, the nature and the value of the principles we desire to inculcate, and of the plans we seek to have adopted. It seems to be almost equally plain, that independently of their influencing the native community in this way, various and important national advantages will result from there being a considerable body of our countrymen, and their descendants, settled in the country. To question it, is to deny the superiority which has gained us the dominion of India: it is to doubt whether national character has any effect on national wealth, strength, and good government: it is to shut our eyes to all the perils and difficulties of our situation: it is to hold as nothing community of language, sentiment and interest, between the government and the governed: it is to disregard the evidence afforded by every corner of the globe in which the British flag is hoisted: it is to tell our merchants and our manufacturers, that the habits of a people go for nothing in creating a market, and that enterprise, skill, and capital, and the credit which creates capital, are of no avail in the production of commodities."

The existing regulations as to the residence of Englishmen in India are embodied in the act 3 & 4 Will. 4. c. 85., and are as follows: —

Authority for his Majesty's Subjects to reside in certain Parts of India. — It shall be lawful for any natural-born subjects of his Majesty to proceed by sea to any port or place having a Custom-house establishment within the same, and to reside thereat, or to proceed to reside in or pass through any part of such of the said territories as were under the government of the said Company on the 1st day of January, 1800, and in any part of the countries ceded by the nabob of the Carnatic, of the province of Cuttack, and of the settlements of Singapore and Malacca, without any licence whatever; provided that all subjects of his Majesty not natives of the said territories shall, on their arrival in any part of the same from any port or place not within said territories, make known in writing their names, places of destination, and objects of pursuit in India, to the chief officer of the customs or other officer authorised for that purpose at such port or place as aforesaid. — § 81.

Subjects of his Majesty not to reside in certain Parts of India without Licence. — It shall not be lawful for any subject of his Majesty, except the servants of the said Company and others now lawfully authorised to reside in the said territories, to enter the same by land, or to proceed to or reside in such parts of the said territories as are not herein-before in that behalf mentioned, without licence first obtained from the commissioners of the board of control, or the court of directors, or the governor-general, or a governor of any of the said presidencies: provided, that no licence given to any natural-born subject of his Majesty to reside in parts of the territories not open to all such subjects shall be determined or revoked unless in accordance with the terms of some express clause of revocation or determination in such licence contained. — § 82.

The Governor-General with previous Consent of Directors, may declare other Places open. — It shall be lawful for the governor-general in council, with the previous consent and approbation of the said court of directors, to declare any place or places whatever within the said territories open to all his Majesty's natural-born subjects, and it shall be thenceforth lawful for any of his Majesty's natural-born subjects to proceed to, or reside in, or pass through any place or places declared open without any licence whatever. — § 83.

Laws against illicit Residence to be made. — The governor-general shall and is required to make laws or regulations providing for the prevention or punishment of the illicit entrance into or residence in the said territories of persons not authorised to enter or reside therein. — § 84.

Laws and Regulations to be made for Protection of Natives. — And whereas the removal of restrictions on the intercourse of Europeans with the said territories will render it necessary to provide against any mischiefs or dangers that may arise therefrom, it is enacted, that the governor-general shall and is required, by laws or regulations, to provide with all convenient speed for the protection of the natives of the said territories from insult and outrage in their persons, religions, or opinions. — § 85.

Lands within the Indian Territories may be purchased. — It shall be lawful for any natural-born subject of his Majesty authorised to reside in the said territories to acquire and hold lands, or any right, interest, or profit in or out of lands, for any term of years, in such part or parts of the said territories as he shall be so authorised to reside in: provided always, that nothing herein contained shall be taken to prevent the governor-general in council from enabling, by any laws or regulations, or otherwise, any subjects of his Majesty to acquire or hold any lands, or rights, interests, or profits in or out of lands, in any part of the said territories, and for any estates or terms whatever. — § 86.

No Disabilities in respect of Religion, Colour, or Place of Birth. — No native of the said territories, nor any natural-born subject of his Majesty resident therein, shall, by reason only of his religion, place of birth, descent, colour, or any of them, be disabled from holding any place, office, or employment under the said company. — § 87.

IV. EAST INDIES, (EXTENT, POPULATION, MILITARY FORCE, REVENUE, ETC. OF BRITISH).

1. *Extent, Population, &c. of British Dominions in Hindostan, and of the Tributary and Independent States.* — We copy the following Table from the second edition of Mr. Hamilton's *Gazetteer*. It must, however, be regarded as an approximation only, inasmuch as no means exist of coming at correct conclusions; but the talents of the writer, and his perfect acquaintance with the subject, warrant the belief that it is as accurate as it can be made with the present imperfect means of information.

Table of the relative Area and Population of the Modern States of Hindostan.

	British Square Miles.	Population.
Bengal, Bahar, and Benares	162,500	39,000,000
Additions in Hindostan since A. D. 1765	148,000	18,000,000
Gurwal, Kumoan, and the tract between the Sutulje and Jumna	18,000	500,000
Total under the Bengal Presidency	328,000	57,500,000
Under the Madras Presidency	154,000	15,000,000
Under the Bombay Presidency	11,000	2,500,000
Territories in the Deccan, &c. acquired since 1815, consisting of the Peishwa's dominions, &c., and since mostly attached to the Bombay Presidency	60,000	8,000,000
Total under the British government	553,000	83,000,000
<i>British Allies and Tributaries.</i>		
The Nizam	96,000	10,000,000
The Nagpoor Raja	70,000	3,000,000
The King of Oude	20,000	3,000,000
The Gulicowar	18,000	2,000,000
Kotah, 6,500; Boondce, 2,500; Bopaul, 5,000	14,000	1,500,000
The Mysore Raja	27,000	3,000,000
The Satara Raja	14,000	1,500,000
Travancore, 6,000; Cochin, 2,000	8,000	1,000,000
Under the Rajas of Joudpour, Jeypoor, Odeypoor, Bicanere, Jesselnere, and other Rajpoot chiefs, Holcar, Ameer Khan, the Row of Cutch, Bhurtpour, Macherry, and numerous other petty chiefs, Seiks, Gonds, Bheels, Coolies, and Cattie, all comprehended within the line of British protection	283,000	15,000,000
Total under the British government and its allies	1,103,000	123,000,000

Table of the relative Area and Population — *continued*.

	British Square Miles.	Population.
Brought up - -	1,103,000	123,000,000
<i>Independent States.</i>		
The Nepaul Raja - -	53,000	2,000,000
The Lahore Raja (Runjeet Singh) - -	50,000	3,000,000
The Ameers of Sind - -	24,000	1,000,000
The dominions of Sindia - -	40,000	4,000,000
The Cabul sovereign east of the Indus - -	10,000	1,000,000
Grand total of Hindostan - -	1,280,000	134,000,000

India beyond the Ganges. — British Acquisitions in 1824 and 1825.

	British Square Miles.	Population.
Countries south of Rangoon, consisting of half the province of Martaban, and the provinces of Tavoy, Ye, Tenasserim, and the Mergui Isles - -	12,000	51,000
The province of Arracan - -	11,000	100,000
Countries from which the Burmese have been expelled, consisting of Assam and the adjacent petty states, occupying a space of about - -	54,000	150,000
Total - -	77,000	301,000

In 1805, according to official returns transmitted, the total number of British-born subjects in Hindostan was 31,000. Of these, 22,000 were in the army as officers and privates; the civil officers of government of all descriptions were about 2,000; the free merchants and mariners who resided in India under covenant, about 5,000; the officers and practitioners in the courts of justice, 300; the remaining 1,700 consisted of adventurers who had smuggled themselves out in various capacities. Since the date above mentioned, no detailed reports have been published: but there is reason to believe that even now the total number of British subjects in Hindostan does not exceed 40,000; the removal of the restrictions on the commercial intercourse having, contrary to expectation, added very few to the previous number.

The army required for the protection of these extensive provinces, and for the retaining them under due subordination, although it presents a formidable grand total, probably does not amount to a fifth part of the number maintained by the Mogul sovereigns and their functionaries, when their empire was in its zenith; yet, even under the ablest of the emperors, commotions in some quarter of their ill-subdued territories were unceasing. The British system in India has always been to keep the troops in a constant state of preparation for war; but never to enter into unprovoked hostilities, or engage in any contests except those rendered necessary by the principle of self-defence. At present, with the exception of the Russian, the British military force is probably the largest standing army in the world. In 1796, it amounted to 55,000. In 1830, the latest period for which we have a detailed statement, it consisted of infantry 170,062, cavalry 19,539, artillery 17,385, engineers 1,084, with pioneers, invalids, &c., making a grand total of 223,476 men. Of these, 187,068 were natives, and 37,376 Europeans; the latter being divided between the King's and the Company's services in the proportion of 20,292 to the former, and 17,084 to the latter. The total expenditure on account of the Indian army during the same year amounted to 9,461,953*l*. It may, perhaps, be worth while remarking, that the war department in Prussia, which has one of the most efficient armies in Europe, cost, in 1829, 22,165,000 rix-dollars, or 3,324,000*l*, being little more than the third of the cost of the British Indian army! Recently, however, very great efforts have been made to economise in this department. The army has been reduced to about 190,000 men, and some of the former allowances have been discontinued.

A good deal of rather conflicting evidence was given before the late select committee on the state of the Indian army. On the whole, it would seem to be decidedly superior, in respect of discipline and efficiency, to any native army ever organised in India. But many very intelligent officers doubt whether it could make any effectual opposition to European troops, to whom, generally speaking, the sepoys are inferior both in physical strength and moral energy. Some of the witnesses seem to think that the Indian army has recently been a good deal deteriorated.

The army is distributed throughout Hindostan under the orders of the supreme government, promulgated through its political agents. Commencing from the great stations in the Doab of the Ganges, at Ajmeer is one corps; another at Neemutch; a third at Mow; all supplied from the Bengal army. These are succeeded by the Gujerat subsidiary forces, the field corps at Mulligaum, and the Poonah division, furnished chiefly by the Bombay army. The circle is further continued by the field force in the southern Mahratta country; the Hyderabad and Nagpoor subsidiaries, composed

of Madras troops; and the detachments from the Bengal establishment, forming the Nerbudda and Saugur divisions, from whence the cordon terminates in Bundelcund. Such is the general outline, liable, of course, to temporary modifications, and occasional change in the selection of stations. At present, with the exception of a tract 35 miles broad on each side of Aseerghur, there is an unbroken line of communication through the British territory from Bombay to Calcutta.

In direct and authoritative control, the dominion of the British government extends much further than that possessed by any prior dynasty, whether Patan or Mogul; yet the latter, so long as they abstained from persecution, had nothing to apprehend from the religion of the Hindoos; and history proves that the commotions which agitated the Mohammedan monarchies chiefly arose from their own internal dissensions and national disputes. Neither does it appear that any prior conquerors ever employed disciplined corps of their own countrymen in defence of their own sovereignty, although they had to contend with one very numerous tribe — the Hindoo; while the British, more advantageously situated, have two to put in motion against each other, and in process of time may raise up a third. Each foreign invader certainly favoured his own countrymen; but it was by bestowing on them places and high appointments, which excited envy, without essentially strengthening his domination. Besides, therefore, total abstinence from persecution, the British government, in a powerful corps entirely European, and totally distinguished from the natives by colour, language, and manners, possesses a solidity and consistence much beyond any of the prior Mohammedan dynasties. — (*Hamilton's East India Gazetteer*, 2d ed. vol. i. pp. 656—659.)

2. *Revenue and Expenditure of the East India Company.* — The far greater part of the revenue of India is at present, and has always been, derived from the soil. The land has been held by its immediate cultivators generally in small portions, with a perpetual and transferable title; but they have been under the obligation of making an annual payment to government of a certain portion of the produce of their farms, which might be increased or diminished at the pleasure of the sovereign; and which has, in almost all cases, been so large, as seldom to leave the cultivators more than a bare subsistence. Under the Mohammedan government, the *gross* produce of the soil was divided into equal or nearly equal shares, between the ryots, or cultivators, and the government. We regret we are not able to say that the British government has made any material deductions from this enormous assessment. Its oppressiveness, more than any thing else, has prevented our ascendancy in India; and the comparative tranquillity and good order we have introduced, from having the beneficial effects that might have been anticipated. The cultivators throughout Hindostan are proverbially poor; and till the amount of the assessment they are at present subject to be effectually reduced, they cannot be otherwise than wretched. They are commonly obliged to borrow money to buy their seed and carry on their operations, at a high interest, on a species of mortgage over the ensuing crop. Their only object is to get subsistence — to be able to exist in the same obscure poverty as their forefathers. If they succeed in this, they are satisfied. Mr. Colebrooke, whose authority on all that relates to India is so deservedly high, mentions that the quantity of land occupied by each ryot, or cultivator, in Bengal is commonly about 6 acres, and rarely amounts to 24; and it is obvious that the abstraction of half the produce raised on such patches can leave their occupiers nothing more than the barest subsistence for themselves and their families. Indeed, Mr. Colebrooke tells us that the condition of ryots subject to this tax is generally inferior to that of a hired labourer, who receives the miserable pittance of 2 annas, or about 3 pence, a day of wages.

Besides the land revenue *, a considerable revenue is derived in India from the monopolies of salt and opium, the sale of spirituous liquors, land and sea customs, post-office, &c. Of these monopolies, the first is, in all respects, decidedly the most objectionable. Few things, indeed, would do more to promote the improvement of India, than the total abolition of this monopoly. An open trade in salt, with moderate duties, would, there can be no doubt, be productive of the greatest advantage to the public, and of a large increase of revenue to government. The opium monopoly, though less objectionable than the last, is, notwithstanding, very oppressive. It interferes with the industry of the inhabitants; those who are engaged in the cultivation of opium being obliged to sell their produce at prices arbitrarily fixed by the Company's agents. It would be worse than useless to waste the reader's time, by pointing out in detail the mischievous effects of such a system; they are too obvious not to arrest the attention of every one. The produce of these and the other branches of Indian taxation is specified in the subjoined Table, which we have carefully compiled from the official accounts.

* For an account of the land revenue of India, of the various modes in which it is assessed, and its influence on the condition of the inhabitants, we beg to refer to Mr. Rickards's work on India. The various important and difficult questions with respect to Indian taxation are there treated with great learning and sagacity, and placed in the most luminous point of view.

Account of the Territorial Revenues of the East India Company during the Official Year 1827-28.

The territorial revenues at the disposal of the East India Company have, for a lengthened period, equalled those of the most powerful monarchies. At present they are greater than those of either Russia or Austria, being inferior only to those of Great Britain and France! Still, however, the Company's financial situation is the very reverse of prosperous. Vast as their revenue has been, their expenditure appears, in most instances, to have been still larger; and at this moment their debts exceed 60,000,000! The Company have given the following statement of their affairs, which

is applicable, as respects India, to the 1st of May, 1831; and as respects England, to the 1st of May, 1832:—

Total territorial and political debts abroad and at home	£	61,197,782
Ditto, credits, ditto		29,579,523
Balance deficient in the territorial and political branch		31,618,259
Total commercial debts abroad and at home	£	1,928,494
Ditto, credits, ditto		21,617,149
Balance in favour in the commercial branch		19,718,655
Balance deficient		11,899,604
Add the amount of the Company's home bond debt		3,442,854
Total balance deficient, including the home bond debt	£	15,442,458

Of the credits placed to account of the Company, arrears of revenue, &c. form an important item; but of these it is most probable a considerable portion will never be realised. In a statement laid by the East India Company before parliament, and printed in the former edition of this work (p. 511.), intended to represent the situation of the Company's affairs on the 1st of January, 1831, their assets were said to exceed their debts and liabilities by about 3,000,000*l*. The wide difference between that account and the one given above, is principally owing to the Company having struck out of the latter a sum of 10,870,000*l*. expended by them on account of fortifications, buildings, &c. erected in India, which they took credit for in the former.

The statement now given renders it abundantly obvious, that the recent arrangements with the Company have been quite as beneficial to it as, we doubt not, they will prove to the public. All the territorial and other property made over to the Crown will certainly be far short of meeting the claims upon it.

The following account shows the balance between the revenue and expenditure of our Indian dominions, from 1809-10 to 1830-31:—

An Account of the Total annual Revenues and Charges of the British Possessions in India under the East India Company, from 1809-10 to 1830-31: showing also the Nett Charge of Bencoolen, Prince of Wales Island, and St. Helena; the Interest paid on account of Debts in India; and the Amount of Territorial Charges paid in England. — (Abstracted from the *Parl. Papers*, No. 22. Sess. 1830, and No. 306. Sess. 1833.)

However much this account of the financial concerns of our Eastern empire may be at variance with the exaggerated ideas entertained respecting it, as well by a large proportion of the people of England as by foreigners, it will excite no surprise in the mind of any one who has ever reflected on the subject. It is due, indeed, to the directors, to state, that though they have occasionally acted on erroneous principles, they have always exerted themselves to enforce economy in every branch of their expenditure, and to impose and collect their revenues in the best and cheapest manner. But though they have succeeded in repressing many abuses, it would be idle to suppose that they should ever entirely succeed in rooting them out. How can it be imagined, that strangers sent to India, conscious that they are armed with all the strength of government, placed under

no real responsibility, exempted from the salutary influence of public opinion, fearing no exposure through the medium of the press, and anxious only to accumulate a fortune, should not occasionally abuse their authority? or that they should manage the complicated and difficult affairs of a vast empire, inhabited by a race of people of whose language, manners, and habits, they are almost wholly ignorant, with that prudence, economy, and vigilance, without which it were idle to expect that any great surplus revenue could ever be realised?

EBONY (Ger. *Ebenholz*; Du. *Ebbenhout*; Fr. *Ébène*; It. *Ebano*; Rus. *Ebeno-woederevo*; Lat. *Ebenus*), a species of wood brought principally from the East. It is exceedingly hard and heavy, of great durability, susceptible of a very fine polish, and on that account used in mosaic and other inlaid work. There are many species of ebony. The best is that which is jet black, free from veins and rind, very compact, astrigent, and of an acrid pungent taste. This species, (denominated by botanists *Diospyrus Ebenus*), is found principally in Madagascar, the Mauritius, and Ceylon. The centre only of the tree is said to be valuable. In 1826, 2,002,783 lbs. of ebony, of the estimated value of 9,017*l.* 7*s.* 6*d.* were exported from the Mauritius. Besides the black, there are red, green, and yellow ebony; but the latter are not so much esteemed as the former. Cabinet-makers are in the habit of substituting pear-tree and other woods dyed black, in the place of genuine ebony; these, however, want its polish and lustre, though they hold glue better. The price of ebony varies, in the London market, from 5*l.* to 20*l.* a ton. The quantities imported are but inconsiderable.

EEL (*Anguilla muræna* of Linnaeus), a fish, the appearance of which is too well known to require any description. It is a native of almost all the waters of Europe, frequenting not only rivers but stagnant pools. Eels are, in many places, extremely abundant, particularly in Holland and Jutland. Several ponds are appropriated in England to the raising of eels; and considerable numbers are taken in the Thames and other rivers. But by far the largest portion of the eels used in England are furnished by Holland. Indeed, very few except Dutch eels are ever seen in London; and even Hampton and Richmond are principally supplied by them. The trade is carried on by two Dutch companies, who employ in it several small vessels, by means of which the market is regularly and amply provided for. A cargo of eels is supposed to average from 15,000 to 20,000 lbs. weight, and is charged with a duty on importation of 1*l.* 1*s.* 3*d.* In 1832, this duty produced 940*l.* 10*s.*, showing that 72 cargoes had been imported that year. — (*Report on Channel Fisheries*, p. 93. &c.)

EGGS (Fr. *Œufs*; Lat. *Ova*), are too well known to require to be described. They differ in size, colour, taste, &c. according to the different species of birds that lay them. The eggs of hens are those most commonly used as food; and form an article of very considerable importance in a commercial point of view. Vast quantities are brought from the country to London and other great towns. Since the peace they have also been very largely imported from the Continent. At this moment, indeed, the trade in eggs forms a considerable branch of our commerce with France, and affords constant employment for a number of small vessels!

Account of the Number of Eggs imported since 1826, specifying the Countries whence they were brought, and the Revenue accruing thereon.

Countries from which imported.	1826.	1827.	1828.	1829.	1830.	1831.	1832.

It appears from this official statement, that the eggs imported from France amount to about 55,000,000 a year; and supposing them to cost, at an average, 4*d.* a dozen, it follows that the people of the metropolis and Brighton (for it is into them that they are almost all imported) pay the French about 76,388*l.* a year for eggs; and supposing that the freight, importers' and retailers' profit, duty, &c. raise their price to the consumer to 10*d.* a dozen, their total cost will be 190,972*l.*

EJOO. See GOMUTI.

ELEMI, a resin obtained from the *Amyris elemifera*, a tree growing in different parts of America, Turkey, &c. It is obtained by wounding the bark in dry weather, the juice being left to thicken in the sun. It is of a pale yellow colour, semi-transparent; at

first softish, but it hardens by keeping. Its taste is slightly bitter and warm. Its smell, which is, at first, strong and fragrant, gradually diminishes. It used to be imported in long roundish cakes, wrapped in flag leaves, but it is now usually imported in mats and chests. — (*Thomson's Chemistry*.)

ELEPHANTS' TEETH. See IVORY.

ELM (*Ulmus*), a forest tree common in Great Britain, of which there are several varieties. It attains to a great size, and lives to a great age: its trunk is often rugged and crooked, and it is of slow growth. The colour of the heart-wood of elm is generally darker than that of oak, and of a redder brown. The sap-wood is of a yellowish or brownish white, with pores inclined to red. It is in general porous, and cross-grained, sometimes coarse-grained, and has no larger septa. It has a peculiar odour. It twists and warps much in drying, and shrinks very much both in length and breadth. It is difficult to work, but is not liable to split, and bears the driving of bolts and nails better than any other timber. In Scotland, chairs and other articles of household furniture are frequently made of elm wood; but in England, where the wood is inferior, it is chiefly used in the manufacture of coffins, casks, pumps, pipes, &c. It is appropriated to these purposes because of its great durability in water, which also occasions its extensive use as piles and planking for wet foundations. The naves of wheels are frequently made of elm; those of the heavy wagons and drays of London are made of oak, which supports a heavier weight, but does not hold the spokes so firmly. Elm is said to bear transplanting better than any other large tree. — (*Tredgold's Principles of Carpentry*, pp. 201—203. &c.)

ELSINEUR, or HELSINGOR, a town in Zealand, about 22 miles north of Copenhagen, in lat. $56^{\circ} 2' 17''$ N., lon. $12^{\circ} 38' 2''$ E. Population about 7,000. Adjacent to Elsinour is the castle of Cronborg, which commands the entrance to the Baltic by the Sound. All merchant ships passing to and from the Baltic are obliged, under the reservations mentioned below, to salute Cronborg Castle by lowering their sails when abreast of the same; and no ship, unless she belong to Sweden, is allowed to pass the Sound without clearing out at Elsinour, and paying toll, according to the provisions in the treaties to that effect negotiated with Denmark by the different European powers. The first treaty with England having reference to this subject is dated in 1450. The Sound duties had their origin in an agreement between the King of Denmark on the one part, and the Hanse Towns on the other, by which the former undertook to construct light-houses, landmarks, &c. along the Cattegat, and the latter to pay duty for the same. The duties have since been varied at different periods. Ships of war are exempted from the payment of duties. Most maritime nations have consuls resident at Elsinour. The following plan of the Sound is taken from the Admiralty Chart, compiled from Danish authorities. — (See opposite page.)

Ordinance respecting lowering in the Sound. — This ceremony being attended with much inconvenience in unfavourable weather, his Danish Majesty issued, in 1829, the following ordinance:—

1. All ships sailing through the Sound, whether they come from the north or south, must salute Cronborg Castle, by lowering their sails so soon as the northernmost church in Elsinour begins to be concealed behind the castle. The lowering must not commence before the church goes in behind the castle, and must continue till the church opens itself without the castle again, or for the full space of 5 minutes. Every person neglecting this duty must expect to be compelled, by cannon-shot, to the same, and to be fined for contumacy.

N. B. — When a ship lowers her sails on her first entrance into the marks, and keeps them lowered 5 minutes, though not come out of the marks, it is considered sufficient.

2. The sails to be lowered are as follow:—Ships carrying top-gallant sails, standing or flying, must lower the top-gallant sails entirely down on the cap: ships having only one top-gallant sail, and, at the same time, the fore-top-sail, they must be lowered half-mast down: ships having no top-gallant sails must lower both the top-sails on half-mast: all other ships, be they galliots, smacks, ketches, brigantines, or of what denomination soever, carrying only flying top-sails, must lower the top-sails entirely down; but those having no standing or flying top-sails, or which have all their reefs in their top-sails, are exempt from lowering.

3. When ships cruise through the Sound with a contrary wind, or when (with a scant wind or small breeze) the current is so strong against them that it would set them astern, if they lowered their sails, then it shall be made known to them, by hoisting the colours at the castle, that no salute is required, and that they may make the best of their way without striking their sails.

4. When any vessel has been fired at, then the master or mate, with two of the ship's crew, must go on shore, and make declaration, on oath, before the Court of Inquest, why they have not lowered in the time or in the manner prescribed. If it be deposed that lowering was performed in due time and manner, then the master will be free from paying for the shot fired at him; on the contrary, he must then pay for each shot fired at him from the castle, 5 rixdollars 20 stivers current; and 1 ducat for each shot from the guard-ship's boat when in pursuit of the ship. If the master of a vessel should sail away without acquitting himself, when it is proved who the master or ship was, the fine will be demanded of the person who clears him at the Custom-house.

In stormy weather, when a ship cannot come to anchor in Elsinour roads without danger, or if she be leaky, or going to repair or deliver; in such cases, going to Copenhagen is not considered a fraud. But it is in all cases indispensable that the ship's papers should be sent to Elsinour as soon as possible, that she may be cleared.

References to Plan. — A, Castle and light of Cronborg; B, Elsinour; C, Helsingborg in Sweden; D, the bank called the Lappen; E, the bank called the Disken. The soundings are in fathoms.

Pilotage, &c. — When ships come into Elsinør roads, or lie wind-bound near the Lappen, watermen come on board to inquire if the master will be carried ashore to clear; and in rough weather it is always best to make use of their services, their boats being generally very safe. The Danish authorities have published a Table of rates, being the highest charge that can be made by the boatmen upon such occasions; but captains may bargain with them for as much less as they please. Most ships passing the Sound take on board pilots, the signal for one being a flag at the fore-topmast-head. Those bound for the Baltic take a pilot at Elsinør, who either carries the ship to Copenhagen, or Dræge, a small town on the south-east extremity of the island of Amack, where she is clear of the grounds. Those leaving the Baltic take a pilot from Dræge, who carries the ship to Elsinør. Sometimes, when the wind is fresh from the E. and S.E., it is impossible for a ship bound for Copenhagen or the Baltic to double the point of Cronborg; and in that case an Elsinør pilot is sometimes employed to moor the ship in the channel towards Kull Point on the Swedish shore, in lat. $56^{\circ} 18' 3''$ N., lon. $12^{\circ} 26'$ E. This contingency is, however, less likely to happen in future, as we understand the Danish government have recently hired a steam tug for the special purpose of bringing ships, in adverse weather, round Cronborg Point. The pilots are regularly licensed, so that, by employing them, the captain's responsibility is at an end. Their charges are fixed by authority, and depend on the ship's draught of water. We subjoin a copy of the tariff applicable to pilots taken on board at Elsinør to carry ships to Dræge, Copenhagen, or Kull Point, with the sums both in silver and in Rigsbank paper dollars.

Pilotage from the 1st of April to the 30th of September.

N. B. — When a pilot is taken on board at Dragoe to carry a ship to Elsineur, the charge is the same as that given under the first head of the above column. — (*Archives du Commerce*, tome iii. p. 145.)

The *Monies*, *Weights*, and *Measures* of Elsineur are the same as those of Copenhagen (which see), except that the rixdollar is divided into 4 *orts* instead of 6 *marcs*: thus, 24 skillings make 1 *ort*; and 4 *orts* 1 rixdollar.

In paying toll, however, at the passage of the Sound, the monies are distinguished into three different values; namely, specie, crown, and current.

Specie money is that in which the duties of the Sound were fixed in 1701.

Crown money was the ancient currency of Denmark, in which the toll is sometimes reckoned.

Current money is the actual currency of the country.

The proportion between these denominations is as follows: —

Eight specie rixdollars = 9 crown rixdollars; 16 crown rixdollars = 17 current rixdollars; therefore to reduce specie money into crown money, add one eighth; and for the reverse operation, subtract one ninth.

To reduce crown money into current money, add one sixteenth; and for the reverse operation, subtract one seventeenth.

Hence, also, 128 specie rixdollars are worth 144 crown rixdollars, or 153 current rixdollars; and therefore specie money is 12½ per cent. better than crown money, and 19½ per cent. better than current money.

Houses in the Baltic charge the Sound duties in the invoices, and have their own agents at Elsineur, to clear all the merchandise shipped by them. If this be not the case, the merchants at Elsineur then draw upon the owners or agents where the goods are directed or addressed.

Weights. — A shipboard from the Baltic, of 10 stone, is calculated as 300 lbs. Danish; a Russian berkowitz, as 300 lbs.; a pud, as 30 lbs. Danish; a centner from the Baltic, as 110 lbs.; and a cwt. English, as 112 lbs. Danish.

Corn Measure of different Places reduced to Danish Lasts, for paying the Sound Dues.

1 cent. of 28 muids French salt, from Rochelle	—	7 muids from Cadix, Lisbon, &c.	—	12
1 cent. from Bordeaux	—	400 Dutch marts (measures)	—	7
13 raders from Dunkirk	—	1 English chaldron, 2 weights, 2 tons, or 80 bushels	—	1

Liquid Measure. — A tonneau of French wine is considered as 4 oxhofts, or 24 ankers.

A pipe of Spanish or Portuguese wine, as 2 oxhofts.

30 Spanish arrobas, or 25 Portuguese almudes, as a regular pipe.

30 Spanish arrobas, or 48 pots of oil, as a regular both (pipe); a hoghead of brandy, as 6 ankers; a tierce, as 4 ankers; an anker, 5 vells, or 40 Danish pots.

Duties payable at the Sound on the principal Articles commonly passing through.

Memorandum respecting the Mode of preventing certain Overcharges of Sound Duties on Goods shipped for the Baltic.

There have been many complaints of the Sound duty being overrated on goods which, as they are not noticed in the tariff, are chargeable *ad valorem*, (1 per cent. in the case of the English, Dutch, and Swedes; 1½ per cent. in the case of other nations;) this charge being solely regulated by the value expressed in the cockets, the only documents by which the Custom-house officers at the Sound are governed. This originates in the shippers of goods finding it expedient occasionally to give a nominal value to merchandise not liable to an export duty in England, far exceeding the real value, in order to provide for a further shipment of the same species of goods in the same vessel (which entry can alone be considered as expressive of the intention to ship goods to that extent). It is, therefore, suggested to the shippers of merchandise for the Baltic, that, besides the above-mentioned nominal value, they should cause the *real value of the goods actually shipped* to be inserted on the reverse of the cocket, as there is every reason to believe that this real value will then become the criterion by which the Sound duty will be calculated. For instance, supposing a cocket to run thus—

“Know ye that Parkinson and Co. have entered British cottons, value 10,000*l.* sterling, to be shipped per the Newland, Francis Hunter, master, for St. Petersburg :”

The indorsement should be—

“P. l. a. 10. Ten bales cambrics, value 4,794*l.* 5*s.* sterling, shipped on board the Newland, Francis Hunter, for Petersburg.”

(Signed by) PARKINSON and Co.

(Or by the signing Custom-house officer) N. N

The Sound duty will then properly be charged not on 10,000*l.*, but on 4,794*l.* 5*s.* Should, however, the latter entry be wanting, the first sum will be the only criterion by which to calculate the Sound duty; and in case of overcharge, no restitution need be hoped for. —(*Rordanz, European Commerce.*)

NAVIGATION OF THE BALTIC.

The statements in this Table for the years 1777, 1780, 1783, and 1789, are taken from the valuable work entitled *Voyage de Deux François au Nord de l'Europe* (tom. i. p. 30.); the other years are taken from the returns sent by the British consul at Elsinour, printed in various parliamentary papers. We have seen no two returns of the shipping that pass the Sound that quite agree, though the differences are not very material. The above account, though in many respects most interesting, is defective, inasmuch as it does not give the tonnage as well as the number of the ships. Since 1831, however, the British consul has sent returns of the shipping; and it is not improbable that the Danish authorities may be able to supply this desideratum for a lengthened period. The falling off in the amount of British shipping in 1832 was wholly owing to the alarm caused by the prevalence of cholera, and other evanescent causes—We subjoin an

Account of the British Shipping employed in the Baltic Trade through the Sound in 1832; exhibiting the Number of Vessels sent out, the Number of Voyages performed by them, and their Tonnage, as ascertained by the Consul at Elsinore. — (*Papers published by Board of Trade*, vol. ii. p. 53.)

To what Ports belonging.	Number of Ships sent out.	Tonnage.	Number of Voyages performed.	Aggregate Tonnage.

There were lost in the Baltic, in 1832, 14 British ships, of the burden of 2,897 tons; and 8 British ships, of the burden of 1,823 tons, were detained in it by the frost at the close of the year, and obliged to winter in its various ports.

EMBARGO, an order issued by the government of a country to prevent the sailing of ships.

EMERALD (Fr. *Émeraude*; Ger. *Smaragd*; It. *Smeraldo*; Lat. *Smaragdus*; Sp. *Esmeralda*), a precious stone in high estimation. It is distinguished from all other gems by its peculiar *emerald green* lustre, varying in intensity from the palest possible tinge to a full and deep colour, than which, as Pliny has truly stated, nothing can be more beautiful and pleasing; *nullius coloris aspectus jucundior est*. It emulates, he continues, if it do not surpass, the verdure of the spring; and the eye, satiated by the dazzling glare of the more brilliant gems, or wearied by intense application, is refreshed and strengthened by the quiet enlivening green of the emerald. In Pliny's time, the best came from Seythia. Those met with in modern times do not often exceed the size of a walnut. Some of a much larger size, and perfect, have been found, but they are extremely rare. Nero used one as an eye-glass in surveying the combats of the gladiators. Hitherto it has always been found crystallised. Specific gravity from 2·6 to 2·77. — (*Plin. Hist. Nat. lib. xxxvii. cap. 5*; *Thomson's Chemistry*.)

"For the last two centuries and more, the only country known to yield emeralds is Peru, where they occur in Santa Fé, and in the valley of Tunca. Several large stones have appeared in Europe: about 2 years ago I cut one, exceeding 2 ounces in weight, for the Emperor of Morocco, but it was full of imperfections. The largest specimen known is an hexagonal crystal, nearly 6 inches long, and above 2 in diameter. This gem, however small, is so rarely seen perfect, that 'an emerald without a flaw' has passed into a proverb. A fine stone of 4 carats may be valued at 30*l.* or 50*l.*, or even more if very pure. Inferior stones of 1 or 2 carats are sold at from 4*s.* to 7*l.s.* per carat; and if smaller and defective, at 1*l.s.* or 15*s.* per carat. Fine emeralds are rare, and in such demand, that a particular suit has been known to have passed into the possession of a series of purchasers, and to have made the tour of Europe in the course of half a century." — (*Mace on Diamonds*, 2d ed. p. 104.)

EMERY (Fr. *Emeril*, *Eméri*; Ger. *Smirgel*; It. *Smeriglio*, *Smeregio*; Sp. *Esmeril*; Rus. *Nashduk*; Lat. *Smāris*), a mineral brought to Britain from the isle of Naxos, where it exists in large quantities. It occurs also in Germany, Italy, and Spain. It is always in shapeless masses, and mixed with other minerals. Colour intermediate between greyish black and bluish grey. Specific gravity about 4. Lustre glistening and adamantine. Emery is extensively used in the polishing of hard bodies. Its fine powder is obtained by trituration. — (*Thomson's Chemistry*.)

ENGROSSING, is "the buying up of corn and other dead victuals, with intent to sell them again." — (*Blackstone*, book iv. cap. 12.) We have shown in another article, how absurd it is to suppose that this practice should have any injurious influence — (*antè*, p. 410.). But, for a long time, most scarcities that occurred were either entirely ascribed to the influence of engrossers and forestallers — (see **FORESTALLING**) — or, at least, were supposed to be materially aggravated by their proceedings. In consequence, however, of the prevalence of more just and enlarged views upon such subjects, the statutes that had been made for the suppression and punishment of engrossing, forestalling, &c. were repealed in 1772. — (See *antè*, p. 403.) But notwithstanding this repeal, engrossing continues to be an indictable offence, punishable at common law by fine and imprisonment; though it is not at all likely, were an attempt made, that any jury would now be found ignorant or prejudiced enough to convict any one on such a charge.

ENTRY, BILL OF. See **IMPORTATION**.

ERMINE (Ger. *Hermelin*; Fr. *Hermine*, *Ermine*; Rus. *Gornostai*), a species of weasel (*Mustela candida* Lin.), abundant in all cold countries, particularly Russia, Norway, Lapland, &c., and producing a most valuable species of fur. In summer, the ermine is of a brown colour, and is called the *stoat*. It is in winter only that the fur has that beautiful snowy whiteness and consistence so much admired. — (See **FURS**.)

ESPARTO, a species of rush, the *Stipa tenacissima* of botanists. It is found in the southern provinces of Spain; and is particularly abundant on all the sterile, uncultivated, and mountainous districts of Valencia. — Beckmann (*Hist. of Invent.* vol. ii. p. 288. Eng. ed.) supposes, apparently with good reason, that the *stipa tenacissima* is the plant described by Pliny under the name of *Sparta*, who ascribes its application to useful purposes to the Carthaginians — (*Hist. Nat. lib. xix. c. 2.*). It is still used for the same

purposes as in antiquity, being manufactured into cordage, shoes, matting, baskets, nets, mattresses, sacks, &c. Cables made of esparto are said to be excellent; being light, they float on the surface of the water, and are not, therefore, so liable as hempen cables to be cut or injured by a foul bottom. They are exclusively made use of in the Spanish navy. Esparto is largely consumed in the manufacture of *alpergates*. These are light shoes worn by the Valencian peasantry, having platted soles made either of esparto or hemp, but principally of the former. They are extremely cheap and commodious in hot climates; and besides being in extensive demand at home, used to be exported in immense quantities to both Indies; but since the emancipation of Spanish America, this trade has greatly fallen off. The Spanish peasantry have attained to wonderful dexterity in the manufacture of esparto. "After having soaked the rush in water, the women and children, without either wheel or spindle, contrive to twist two threads at the same time. This they do by rubbing them between the palms of their hands, in the same manner as a shoemaker forms a thread upon his knees, with this difference, that one motion gives the twist to each thread, and, at the same time, unites them. To keep the threads asunder, the thumb of the right hand is interposed between them; and when that is wanted for other purposes, the left thumb supplies its place. Two threads being thus twisted into one of the bigness of a large crow-quill, 46 yards are sold for little more than $\frac{1}{4}d.$, the materials being worth about $\frac{1}{3}$ th part of the price." — (*Townsend's Travels in Spain*, vol. iii. p. 177., see also p. 129.; *Fischer's Picture of Valencia*, Eng. ed. p. 92. and p. 57. &c.)

ESTRICH OR **ESTRIDGE** (Fr. *Duvet d'autruche*; It. *Penna matta di strozzo*; Sp. *Plumazo de avestruz*; Lat. *Struthionum plumæ molliores*), is the fine soft down which lies immediately under the feathers of the ostrich. The finest is used as a substitute for beaver in the manufacture of hats, and the coarser or stronger sort is employed in the fabrication of a stuff which resembles fine woollen cloth. Estridge is brought from the Levant, Italy, and other parts of the Mediterranean.

EUPHORBIIUM (Ger. *Euphorbiagummi*; Lat. *Euphorbium*; Fr. *Euphorbe*; Arab. *Akal-nafzah*), the produce of a perennial plant, a native of Africa, and of many parts of India, &c. It is a concrete gum resin; is inodorous; when first chewed has little taste, but it soon gives a very acrid burning impression to the tongue, palate, and throat, which is very permanent, and almost insupportable. It is imported in serons containing from 100 to 150 lbs. It is in small, hollow, forked pieces, often mixed with seeds and other impurities. — (*Thomson's Dispensatory*.)

EXCHANGE. In commerce, this term is generally used to designate that species of mercantile transactions, by which the debts of individuals residing at a distance from their creditors are cancelled without the transmission of money.

Among cities or countries having any considerable intercourse together, the debts mutually due by each other approach, for the most part, near to an equality. There are at all times, for example, a considerable number of persons in London indebted to Hamburgh; but, speaking generally, there are about an equal number of persons in London to whom Hamburgh is indebted. And hence, when A. of London has a payment to make to B. of Hamburgh, he does not remit an equivalent sum of money to the latter; but he goes into the market and buys a *bill* upon Hamburgh, that is, he buys an order from C. of London addressed to his debtor D. of Hamburgh, requesting him to pay the amount to A. or his order. A., having indorsed this bill or order, sends it to B., who receives payment from his neighbour D. The convenience of all parties is consulted by a transaction of this sort. The debts due by A. to B., and by D. to C., are extinguished without the intervention of any money. A. of London pays C. of ditto, and D. of Hamburgh pays B. of ditto. The debtor in one place is substituted for the debtor in another; and a postage or two, and the stamp for the bill, form the whole expenses. All risk of loss is obviated.

A bill of exchange may, therefore, be defined to be an order addressed to some person residing at a distance, directing him to pay a certain specified sum to the person in whose favour the bill is drawn, or his order. In mercantile phraseology, the person who draws a bill is termed the *drawer*; the person in whose favour it is drawn, the *remitter*; the person on whom it is drawn, the *drawee*; and after he has accepted, the *acceptor*. Those persons into whose hands the bill may have passed previously to its being paid, are, from their writing their names on the back, termed *indorsers*; and the person in whose possession the bill is at any given period, is termed the *holder* or *possessor*.

The negotiation of *inland* bills of exchange, or of those drawn in one part of Great Britain and Ireland on another, is entirely in the hands of bankers, and is conducted in the manner already explained. — (See *antè*, p. 65.) Bills drawn by the merchants of one country upon another are termed *foreign* bills of exchange, and it is to their negotiation that the following remarks principally apply.

I. Par of Exchange. — The *par* of the currency of any two countries means, among merchants, the equivalency of a certain amount of the currency of the one in the currency

of the other, *supposing the currencies of both to be of the precise weight and purity fixed by their respective mints.* Thus, according to the mint regulations of Great Britain and France, 1*l.* sterling is equal to 25 fr. 20 cent., which is said to be the par between London and Paris. And the exchange between the two countries is said to be at par when bills are negotiated on this footing; that is, for example, when a bill for 100*l.* drawn in London is worth 2,520 fr. in Paris, and conversely. When 1*l.* in London buys a bill on Paris for more than 25 fr. 20 cent., the exchange is said to be in favour of London and against Paris; and when, on the other hand, 1*l.* in London will not buy a bill on Paris for 25 fr. 20 cent., the exchange is against London and in favour of Paris. — (See Table of the par of exchange at the end of this article.)

11. *Circumstances which determine the Course of Exchange.* — The exchange is affected, or made to diverge from par, by two classes of circumstances: *first*, by any discrepancy between the actual weight or fineness of the coins, or of the bullion for which the substitutes used in their place will exchange, and their weight or fineness as fixed by the mint regulations; and, *secondly*, by any sudden increase or diminution of the bills drawn in one country upon another.

1. It is but seldom that the coins of any country correspond exactly with their mint standard; and when they diverge from it, an allowance corresponding to the difference between the actual value of the coins, and their mint value, must be made in determining the *real* par. Thus, if, while the coins of Great Britain corresponded with the mint standard in weight and purity, those of France were either 10 per cent. worse or debased below the standard of her mint, the exchange, it is obvious, would be at *real* par when it was *nominally* 10 per cent. against Paris, or when a bill payable in London for 100*l.* was worth in Paris 2,772 fr. instead of 2,520 fr. In estimating the real course of exchange between any 2 or more places, it is always necessary to attend carefully to this circumstance; that is, to examine whether their currencies be all of the standard weight and purity, and if not, how much they differ from it. When the coins circulating in a country are either so worn or rubbed as to have sunk considerably below their mint standard, or when paper money is depreciated from excess or want of credit, the exchange is at real par only when it is against such country to the extent to which its coins are worn or its paper depreciated. When this circumstance is taken into account, it will be found that the exchange during the latter years of the war, though apparently very much against this country, was really in our favour. The depression was nominal only; being occasioned by the great depreciation of the paper currency in which bills were paid.

2. Variations in the actual course of exchange, or in the price of bills, arising from circumstances affecting the currency of either of two countries trading together, are *nominal* only: such as are *real* grow out of circumstances affecting their trade.

When two countries trade together, and each buys of the other commodities of precisely the same value, their debts and credits will be equal, and, of course, the *real* exchange will be at par. The *bills* drawn by the one will be exactly equivalent to those drawn by the other, and their respective claims will be adjusted without requiring the transfer of bullion or any other valuable produce. But it very rarely happens that the debts reciprocally due by any two countries are equal. There is almost always a balance owing on the one side or the other; and this balance must affect the exchange. If the debts due by London to Paris exceeded those due by Paris to London, the competition in the London market for bills on Paris would, because of the comparatively great amount of payments our merchants had to make in Paris, be greater than the competition in Paris for bills on London; and, consequently, the real exchange would be in favour of Paris and against London.

The cost of conveying bullion from one country to another forms the limit within which the rise and fall of the *real* exchange between them must be confined. If 1 per cent. sufficed to cover the expense and risk attending the transmission of money from London to Paris, it would be indifferent to a London merchant whether he paid 1 per cent. premium for a bill of exchange on Paris, or remitted money direct to that city. If the premium were less than 1 per cent., it would clearly be his interest to make his payments by bills in preference to remittances: and that it could not exceed 1 per cent. is obvious; for every one would prefer remitting money, to buying a bill at a greater premium than sufficed to cover the expense of a money remittance. If, owing to the breaking out of hostilities between the two countries, or to any other cause, the cost of remitting money from London to Paris were increased, the fluctuations of the *real* exchange between them *might* also be increased. For the limits within which such fluctuations *may* range, correspond in all cases with the cost of making remittances in cash.

Fluctuations in the *nominal* exchange, that is, in the value of the currencies of countries trading together, have no effect on foreign trade. When the currency is depreciated, the premium which the exporter of commodities derives from the sale of the bill drawn on his correspondent abroad, is only equivalent to the increase in the price of the goods exported, occasioned by this depreciation. But when the premium

on a foreign bill is a consequence, not of a fall in the value of money, but of a deficiency in the supply of bills, there is no rise of prices; and in these circumstances the unfavourable exchange operates as a stimulus to exportation. As soon as the *real* exchange diverges from *par*, the mere inspection of a price current is no longer sufficient to regulate the operations of the merchant. If it be unfavourable, the premium which the exporter will receive on the sale of his bill must be included in the estimate of the profit he is likely to derive from the transaction. The greater that premium, the less will be the difference of prices necessary to induce him to export. And hence an unfavourable *real* exchange has an effect exactly the same with what would be produced by granting a bounty on exportation equal to the premium on foreign bills.

But for the same reason that an unfavourable *real* exchange increases exportation, it proportionally diminishes importation. When the exchange is really unfavourable, the price of commodities imported from abroad must be so much lower than their price at home, as not merely to afford, exclusive of expenses, the ordinary profit of stock on their sale, but also to compensate for the premium which the importer must pay for a foreign bill, if he remit one to his correspondent, or for the discount, added to the invoice price, if his correspondent draw upon him. A less quantity of foreign goods will, therefore, suit our market when the *real* exchange is unfavourable; and fewer payments having to be made abroad, the competition for foreign bills will be diminished, and the *real* exchange rendered proportionally favourable. In the same way, it is easy to see that a favourable *real* exchange must operate as a *duty* on exportation, and as a *bounty* on importation.

It is thus that fluctuations in the *real* exchange have a necessary tendency to correct themselves. They can never, for any considerable period, *exceed* the expense of transmitting bullion from the debtor to the creditor country. But the exchange cannot continue either permanently favourable or unfavourable to this extent. When favourable, it corrects itself by restricting exportation and facilitating importation; and when unfavourable, it produces the same effect by giving an unusual stimulus to exportation, and by throwing obstacles in the way of importation. The true *PAR* forms the centre of these oscillations; and although the thousand circumstances which are daily and hourly affecting the state of debt and credit, prevent the ordinary course of exchange from being almost ever precisely at *par*, its fluctuations, whether on the one side or the other, are confined within certain limits, and have a constant tendency to disappear.

This natural tendency which the exchange has to correct itself, is powerfully assisted by the operations of the bill-merchants.

England, for example, might owe a large excess of debt to Amsterdam, yet, as the aggregate amount of the debts *due* by a commercial country is generally balanced by the amount of those which it has to receive, the deficiency of bills on Amsterdam in London would most probably be compensated by a proportional redundancy of those on some other place. Now, it is the business of the merchants who deal in bills, in the same way as of those who deal in bullion or any other commodity, to buy them where they are cheapest, and to sell them where they are dearest. They would, therefore, buy up the bills drawn by other countries on Amsterdam, and dispose of them in London; and by so doing, would prevent any great fall in the price of bills on Amsterdam in those countries in which the supply exceeded the demand, and any great rise in Great Britain and those countries in which the supply happened to be deficient. In the trade between Italy and this country, the bills drawn on Great Britain amount almost invariably to a greater sum than those drawn on Italy. The bill-merchants, however, by buying up the excess of the Italian bills on London, and selling them in Holland, and other countries indebted to England, prevent the *real* exchange from ever becoming very much depressed.

III. *Negotiation of Bills of Exchange.* — Bills of exchange are either made payable at *sight*, at a certain specified time *after sight* or *after date*, or at *usance*, which is the usual term allowed by the custom or law of the place where the bill is payable. Generally, however, a few days are allowed for payment beyond the term when the bill becomes due, which are denominated *days of grace*, and which vary in different countries. In Great Britain and Ireland, *three* days' grace are allowed for all bills except those payable at sight, which must be paid as soon as presented. The following is a statement of the *usance* and days of grace for bills drawn upon some of the principal commercial cities: —

[*m.d. m.s. d.d. d.s. d.a.* respectively denote *months after date, months after sight, days after date, days after sight, days after acceptance.*]

London on	Usance.	Days of Grace.	London on	Usance.	Days of Grace.	London on	Usance.	Days of Grace.
Amsterdam	1 m.d.	6	Geneva	30 d.d.	5	Vienna †	14 d.a.	3

Barcelona	60 d.d.	14						

In the dating of bills, the new style is now used in every country in Europe, with the exception of Russia.

In London, bills of exchange are bought and sold by brokers, who go round to the principal merchants and discover whether they are buyers or sellers of bills. A few of the brokers of most influence, after ascertaining the state of the relative supply and demand for bills, suggest a price at which the greater part of the transactions of the day are settled, with such deviations as particular bills, from their being in very high or low credit, may be subject to. The price fixed by the brokers is that which is published in Wettenhall's List; but the first houses generally negotiate their bills on $\frac{1}{2}$, 1, $1\frac{1}{2}$, and 2 per cent. better terms than those quoted. In London and other great commercial cities, a class of middlemen speculate largely on the rise and fall of the exchange; buying bills when they expect a rise, and selling them when a fall is anticipated.

It is usual, in drawing foreign bills of exchange, to draw them in sets, or duplicates, lest the first should be lost or miscarry. When bills are drawn in sets, each must contain a condition that it shall be payable only while the others remain unpaid: thus, the first is payable only, "second and third unpaid;" the second, "first and third being unpaid," and the third, "first and second unpaid."

All bills of exchange must be drawn upon stamps as under:—

Inland Bills and Notes.—Not exceeding Two Months after Date, or Sixty Days after Sight.

Promissory notes from 2l. to 100l. inclusive are not to be drawn payable to bearer on demand (excepting bankers' re-issuable notes, which require a different stamp).—But notes for any sum exceeding 100l. may be drawn either payable to bearer on demand, or otherwise.—(See *ante*, p. 69.)

Foreign Bills of Exchange.—Foreign bill, drawn in but payable out of Great Britain, if drawn singly the same duty as an inland bill.

Foreign bills of exchange, drawn in sets, for every bill of each set, if the sum does not exceed 100l.	s.	d.	Exceeding 500l. and not exceeding 1,000l.	s.	d.

No one acquainted with the fundamental rules of arithmetic can have any difficulty whatever in estimating how much a sum of money in one country is worth in another, according to the state of the exchange at the time. The common arithmetical books abound in examples of such computations. But in conducting the business of exchange, a direct remittance is not always preferred. When a merchant in London, for example, means to discharge a debt due by him in Paris, it is his business to ascertain not only the state of the direct exchange between London and Paris, and, consequently, the sum which he must pay in London for a bill on Paris equivalent to his debt, but also the state of the exchange between London and Hamburg, Hamburg and Paris, &c.; for it frequently happens that it may be more advantageous for him to buy a bill on Hamburg, Amsterdam, or Lisbon, and to direct his agent to invest the proceeds in a bill on Paris, rather than remit directly to the latter. This is termed the *ARBITRATION* of exchange. An example or two will suffice to show the principle on which it is conducted.

Thus, if the exchange between London and Amsterdam be 35s. Flemish (old coinage) per pound sterling, and between Paris and Amsterdam 1s. 6d. Flemish per franc, then, in order to ascertain whether a direct or indirect remittance to Paris would be most advantageous, we must calculate what would be the value

* In France, no days of grace are allowed on bills payable *à vue*.

† In Austria, bills payable at sight, or on demand, or at less than 7 days after sight or date, are not allowed any days of grace.

of the franc in English money if the remittance were made through Holland; for if it be less than that resulting from the direct exchange, it will obviously be the preferable mode of remitting. This is determined by stating, as 35s. Flem. the Amsterdam currency in a pound sterling: 1s 6d. Flem. (Amsterdam currency in a franc): 1l. : 10d. the proportional, or *arbitrated* value of the franc. — Hence, if the English money, or bill of exchange, to pay a debt in Paris, were remitted by Amsterdam, it would require 10d. to discharge a debt of a franc; or 1l. to discharge a debt of 24 francs: and, therefore, if the exchange between London and Paris were at 24, it would be indifferent to the English merchant whether he remitted directly to Paris, or indirectly *via* Amsterdam; but if the exchange between London and Paris were *above* 24, then a direct remittance would be preferable; while, if, on the other hand, the direct exchange were less than 24, the indirect remittance ought as plainly to be preferred.

“Suppose,” to borrow an example from Dr. Kelly (*Universal Cambist*, vol. ii. p. 137.), “the exchange of London and Lisbon to be at 8*d.* per milree, and that of Lisbon on Madrid 500 rees per dollar, the arbitrated price between London and Madrid is 3*d.* sterling per dollar; for as 1,000 rees : 63*d.* : : 500 rees : 4*d.* But if the direct exchange of London on Madrid be 35*d.* sterling per dollar, then London, by remitting directly to Madrid, must pay 35*d.* for every dollar; whereas, by remitting through Lisbon, he will pay only 3*d.*; it is, therefore, the interest of London to remit indirectly to Madrid through Lisbon. On the other hand, if London draws directly on Madrid, he will receive 35*d.* sterling per dollar; whereas, by drawing indirectly through Lisbon, he would receive only 3*d.*; it is, therefore, the interest of London to draw directly on Madrid. Hence the following rules:—

“1. Where the certain price is given, draw through the place which produces the lowest arbitrated price, and remit through that which produces the highest.

“2. Where the uncertain price is given, draw through that place which produces the highest arbitrated price, and remit through that which produces the lowest.”

In compound arbitration, or when more than 3 places are concerned, then, in order to find how much a remittance passing through them all will amount to in the last place, or, which is the same thing, to find the arbitrated price between the first and the last, we have only to repeat the different statements in the same manner as in the foregoing examples.

Thus, if the exchange between London and Amsterdam be 35s. Flem. for 1*l.* sterling; between Amsterdam and Lisbon 4*d.* Flem. for 1 old crusade; and between Lisbon and Paris 480 rees for 3 francs: what is the arbitrated price between London and Paris?

In the first place, as 35s. Flem. : 1*l.* : : 4*d.* Flem. : 2s. sterling = 1 old crusade.

Second, as 1 old crusade, or 400 rees : 2s. sterling : : 480 rees : 2s. 4*d.* sterling = 3 francs.

Third, as 2s. 4*d.* sterling : 3 francs : : 1*l.* sterling : 25 francs, the arbitrated price of the pound sterling between London and Paris.

This operation may be abridged as follows:—

1 <i>l.</i> sterling	=	1 <i>l.</i> sterling.
3 <i>½</i> shillings Flem.	=	35s. Flemish.
1 old crusade	=	1 old crusade.
480 rees	=	400 rees.
	=	3 francs.
Hence $\frac{35 \times 400 \times 3}{480 \times 3\frac{1}{2}} = \frac{4,200}{168} = 25 \text{ francs.}$		

This abridged operation evidently consists in arranging the terms so that those which would form the divisors in continued statements in the Rule of Three are multiplied together for a common divisor, and the other terms for a common dividend. The ordinary arithmetical books abound with examples of such operations.

The following account of the manner in which a very large transaction was actually conducted by indirect remittances, will sufficiently illustrate the principles we have been endeavouring to explain.

In 1804, Spain was bound to pay to France a large subsidy; and, in order to do this, three distinct methods presented themselves:—

1. To send dollars to Paris by land.
2. To remit bills of exchange directly to Paris.
3. To authorise Paris to draw directly on Spain.

The first of these methods was tried, but it was found too slow and expensive; and the second and third plans were considered likely to turn the exchange against Spain. The following method by the indirect, or circular exchange, was, therefore, adopted.

A merchant, or *banquier*, at Paris, was appointed to manage the operation, which he thus conducted:—He chose London, Amsterdam, Hamburgh, Cadiz, Madrid, and Paris, as the principal hinges on which the operation was to turn; and he engaged correspondents in each of these cities to support the circulation. Madrid and Cadiz were the places in Spain from whence remittances were to be made; and dollars were, of course, to be sent to where they bore the highest price, for which bills were to be procured on Paris, or on any other places that might be deemed more advantageous.

The principle being thus established, it only remained to regulate the extent of the operation, so as not to issue too much paper on Spain, and to give the circulation as much support as possible from real business. With this view, London was chosen as a place to which the operation might be chiefly directed, as the price of dollars was then high in England; a circumstance which rendered the proportional exchange advantageous to Spain.

The business was commenced at Paris, where the negotiation of drafts issued on Hamburgh and Amsterdam served to answer the immediate demands of the state; and orders were transmitted to these places to draw for the reimbursements on London, Madrid, or Cadiz, according as the course of exchange was most favourable. The proceedings were all conducted with judgment, and attended with complete success. At the commencement of the operation, the course of exchange of Cadiz on London was 3*d.*; but, by the plan adopted, Spain got 3*d.*, or above 8 per cent. by the remittance of dollars to London, and considerable advantages were also gained by the circulation of bills through the several places on the Continent. — (*Kelly's Cambist*, vol. ii. p. 168.; *Dubost's Elements of Commerce*, 2d ed. p. 218.)

LAW OF BILLS OF EXCHANGE.

The chief legal privileges appertaining to bills are, first, that though only a simple contract, yet they are always presumed to have been originally given for a good and valuable consideration; and, secondly, they are assignable to a third person not named in the bill or party to the contract, so as to vest in the assignee a right of action, in his own name; which right of action, no release by the drawer to the acceptor, nor set-off or cross demand due from the former to the latter, can affect.

All persons, whether merchants or not, being legally qualified to contract, may be parties to a bill. But no action can be supported against a person incapable of binding himself, on a bill drawn, indorsed, or accepted by such incapacitated person; at the same time the bill is good against all other competent parties thereto.

Bills may be drawn, accepted, or indorsed by the party's agent or attorney verbally authorised for the purpose. When a person has such authority, he must either write the name of his principal, or state in writing that he draws, &c. as agent: thus, “per procuration, for A. B.”

Where one of several partners accepts a bill drawn on the firm, for himself and partners, or in his own name only, such acceptance binds the partnership if it concern the trade. But the acceptance of one of several partners on behalf of himself and partners, will not bind the others, if it concern the acceptor

only in a separate and distinct interest; and the holder of the bill, at the time he becomes so, was aware of that circumstance. If, however, he be a *bona fide* holder for a sufficient consideration, and had no such knowledge at the time he first became possessed of the bill, no subsequently acquired knowledge of the misconduct of the partner in giving such security will prevent him from recovering on such bills against all the partners.

Although no precise form of words is required to constitute a bill of exchange or promissory note, yet it is necessary that it should be *payable at all events*, and not depend on any contingency; and that it be made for the payment of money only, and not for payment of money and performance of some other act, as the delivery of a horse, or the like.

If, however, the event on which the payment is to depend must inevitably happen, it is of no importance how long the payment may be in suspense; so a bill is negotiable and valid if drawn payable 6 weeks after the death of the drawer's father, or payable to an infant when he shall become of age.

Any material alteration of a bill after it has been drawn, accepted, or indorsed, such as the date, sum, or time of payment, will invalidate it: but the mere correction of a mistake, as by inserting the words "or order," will have no such effect.

The negotiability of a bill depends on the insertion of sufficient operative words of transfer; such as by making it payable to A. or order, or to A. or bearer, or to bearer generally.

Although a bill is presumed to have been originally drawn upon a good and valuable consideration, yet in certain cases a want of sufficient consideration may be insisted on in defence to an action on a bill. Certain considerations have been made illegal by statute; as for signing a bankrupt's certificate, for money won at gaming, or for money lent on a usurious contract. But with respect to gaming, it is held, that a bill founded on a gambling transaction is good in the hands of a *bona fide* holder; and by 58 Geo. 3. c. 93. a bill or note in the hands of an innocent holder, although originally founded on a usurious contract, is not invalid.

In general, if a bill is fair and legal in its origin, a subsequent illegal contract or consideration on the indorsement thereof will not invalidate it in the hands of a *bona fide* holder.

A bill cannot be given in evidence in a court of justice, unless it be duly stamped, not only with a stamp of the proper value, but also of the proper denomination.

Acceptance of a Bill.—An acceptance is an engagement to pay a bill according to the tenor of the acceptance, which may be either *absolute* or *qualified*. An *absolute* acceptance is an engagement to pay a bill according to its request, which is done by the drawee writing "Accepted" on the bill, and subscribing his name, or writing "Accepted" only; or merely subscribing his name at the bottom or across the bill. A *qualified* acceptance is when a bill is accepted conditionally; as when goods conveyed to the drawee are sold, or when a navy bill is paid, or other future event which does not bind the acceptor till the contingency has happened.

An acceptance may be also partial; as to pay 100*l.* instead of 150*l.*, or to pay at a different time or place from that required by the bill. But in all cases of a conditional or partial acceptance, the holder should, if he mean to resort to the other parties to the bill in default of payment, give notice to them of such partial or conditional acceptance.

In all cases of presenting a bill for acceptance, it is necessary to present the bill at the house where the drawee lives, or where it is made payable. By 1 & 2 Geo. 4. c. 78., all bills accepted payable at a banker's or other place are to be deemed a general acceptance; but if they are accepted payable at a banker's "only, and not otherwise or elsewhere," it is a qualified acceptance, and the acceptor is not liable to pay the bill, except in default of payment when such payment shall have been first demanded at the banker's. The drawee is entitled to keep the bill 24 hours when presented for acceptance. The acceptance of an inland bill must be *in writing on the face of the bill*, or, if there be more parts than one, on one of such parts; nothing short of this constitutes a valid acceptance.

If a bill is made payable a certain time *after sight*, it must, in order to fix the time when it is to be paid, be presented for acceptance, and the date of the acceptance should appear thus: "Accepted, July 1st, 1831."

Due diligence is the only thing to be considered in presenting any description of bill for acceptance; and such diligence is a question depending on the situation of the parties, the distance at which they live, and the facility of communication between them.

When the drawee refuses to accept, any third party, after protesting, may accept for the honour of the bill generally, or for the drawee, or for the indorser; in which case the acceptance is called an acceptance *supra protest*.

The drawers and indorsers are discharged from liability, unless due notice of non-acceptance when presented for acceptance, or non-payment at the time the bill becomes due, is given. These notices must be given with all due diligence to all the parties to whom the holder means to resort for payment. Generally, in both foreign and inland bills, notice is given next day to the immediate indorser, and such indorser is allowed a day, when he should give fresh notice to the parties who are liable to him.

Notice may be sent by the post, however near the residence of the parties may be to each other; and though the letter containing such notice should miscarry, yet it will be sufficient; but the letter containing the notice should be delivered at the General Post-office, or at a receiving-house appointed by that office, not to the bellman in the street. In all cases of notice, notice to one of several parties is held to be notice to all; and if one of several drawers be also the acceptor, it is not necessary to give notice to the other drawers.

Upon the non-acceptance or non-payment of a bill, the holder, or a public notary for him, should protest it; that is, draw up a notice of the refusal to accept or pay the bill, and the declaration of the holder against sustaining loss thereby. Inland bills need not be protested; in practice they are usually only noted for non-acceptance; but this, without the protest, is wholly futile, and adds nothing whatever to the evidence of the holder, while it entails a useless expense on those liable to pay.

Indorsement of Bills.—An indorsement is the act by which the holder of a negotiable instrument transfers his right to another person, termed the indorsee. It is usually made on the back of a bill, and must be in writing; but the law has not prescribed any set form of words as necessary to the ceremony, and in general the mere signature of the indorser is sufficient.

All bills payable to order or to bearer for *it*, and upwards are negotiable by indorsement; and the transfer of them for a good consideration, before they are payable, gives a right of action against all the precedent parties on the bill, if the bills in themselves are valid; but a transfer after they are due will only place the holder in the situation of the person from whom he takes them.

Bills may be transferred either by delivery only, or by indorsement and delivery: bills payable to order are transferred by the latter mode only; but bills payable to bearer may be transferred by either mode. On a transfer by delivery, the person making it ceases to be a party to the bill; but on a transfer by indorsement, he is to all intents and purposes chargeable as a new drawer.

A bill originally transferable may be restrained by restrictive words; for the payee or indorsee, having the absolute property in the bill, may, by express words, restrict its currency, by indorsing it "Payable to A. B. only," or "to A. B. for his use," or any other words clearly demonstrating his intention to make a restrictive and limited indorsement. Such special indorsement precludes the person in whose favour it is made from making a transfer, so as to give a right of action against the special indorser, or any of the precedent parties to the bill.

In taking bills to account or discount, it is important well to examine all special indorsements. Lord Tenterden decided that a person who discounts a bill indorsed "Pay to A. B. or order *for my use*," discounts it subject to the risk of having to pay the money to the special indorser, who so limited the ap-

plication for my use ; thus a party may be liable to pay the amount of the bill twice over, unless he previously ascertains that the payment has been made conformably to the import of the indorsement.

After the payment of part, a bill may be indorsed over for the residue.

Presentment for Payment. — The holder of a bill must be careful to present it for payment at the time when due, or the drawer and indorsers will be exonerated from their liability ; even the bankruptcy, insolvency, or death of the acceptor will not excuse a neglect to make presentment to the assignees or executor ; nor will the insufficiency of a bill in any respect constitute an excuse for non-presentment : the presentment should be made at a reasonable time of the day when the bill is due ; and if by the known custom of any trade or place bills are payable only within particular hours, a presentment must be within those hours. If a bill has a qualified acceptance, the presentment should be at the place mentioned in such qualified acceptance, or all the parties will be discharged from their obligations.

If a bill fall due on Sunday, Good Friday, Christmas Day, or any public fast or thanksgiving day, the presentment must be on the day preceding these holidays. By 7 & 8 Geo. 4. c. 15., if a bill or note be payable on the day preceding these holidays, notice of the dishonour may be given the day following the holiday ; and if Christmas Day fall on Monday, notice may be given on Tuesday.

Bills, however, payable at usance, or at a certain time after date or sight, or after demand, ought not to be presented for payment precisely at the expiration of the time mentioned in the bills, but at the expiration of what are termed *days of grace*. The days of grace allowed vary in different countries, and ought always to be computed according to the usage of the place where the bill is due. — (See *anté*, p. 561.) At Hanburgh, and in France, the day on which the bill falls due makes one of the days of grace ; but no where else.

On bills payable on demand, or when no time of payment is expressed, no days of grace are allowed ; but they are payable instantly on presentment. On bank post bills no days of grace are claimed ; but on a bill payable at sight the usual days of grace are allowed from the sight or demand.

Payment of a bill should be made only to the holder ; and it may be refused unless the bill be produced and delivered up. On payment, a receipt should be written on the back ; and when a part is paid, the same should be acknowledged upon the bill, or the party paying may be liable to pay the amount a second time to a *bona fide* indorser.

Promissory Notes and Checks. — The chief distinction between promissory notes and bills of exchange is, that the former are a direct engagement by the drawer to pay them according to their tenor, without the intervention of a third party as a drawee or acceptor. Promissory notes may be drawn payable on demand to a person named therein, or to order, or to bearer generally. They are assignable and indorsable ; and in all respects so nearly assimilated to bills by 3 & 4 Ann. c. 9., that the laws which have been stated as bearing upon the latter, may be generally understood as applicable to the former. In *Edis v. Bury* it has been decided, in case an instrument is drawn so equivocally as to render it uncertain whether it be a bill of exchange or promissory note, the holder may treat it as either against the drawer.

Promissory notes, bills, drafts, or undertakings in writing, being made negotiable or transferable, for a less sum than 20s., are void, and persons uttering such are subject to a penalty not exceeding 20*l.*, recoverable before a justice of peace.

The issue of any promissory note payable to bearer on demand for a less sum than 5*l.* by the Bank of England, or any licensed English banker, is prohibited ; and by 9 Geo. 4. c. 65. it is provided, that no corporation or person shall utter or negotiate, in England, any such note which has been made or issued in Scotland, Ireland, or elsewhere, under a penalty not exceeding 20*l.* nor less than 5*l.* But this does not extend to any draft or order on bankers for the use of the drawer.

Promissory notes for any sum exceeding 10*l.* may be drawn payable to bearer on demand or otherwise ; but notes from 2*l.* to 100*l.* inclusive are not to be drawn payable to bearer on demand, except bankers' re-issuable notes, which require a different stamp.

A check or draft is as negotiable as a bill of exchange, and vests in the assignee the same right of action against the assignor. As to the presentation of checks, &c., see CHECK.

Any person making, accepting, or paying any bill, draft, order, of promissory note, not duly stamped, is liable to a penalty of 50*l.* ; for post-dating them, 100*l.* ; and for not truly specifying the place where unstamped drafts are issued, 100*l.* ; and any person knowingly receiving such unstamped draft, 20*l.* ; and the banker knowingly paying it, 100*l.* ; besides not being allowed such sum in account.

Before concluding this article on mercantile paper, it may not be improper to introduce one or two cautions with regard to acceptances, and accommodation paper, and proceedings in case of the loss of bills.

First, A man should not put his name as acceptor to a bill of exchange without well considering whether he has the means of paying the same when due, as otherwise he may be liable not only to the costs of the action against himself, but also to the costs of the actions against the other parties to the bill : the shrewd tradesman is generally anxious to get the acceptance of his debtor at a short date, well knowing that it not only fixes the amount of the debt, but it is more speedily recoverable by legal procedure than a book debt.

Secondly, Traders who wish to support their respectability, and desire to succeed in business, should be cautious in resorting to the destructive system of cross-accommodation acceptances : it seldom ends well, and usually excites suspicion as to the integrity of the parties ; it being an expedient often adopted by swindlers to defraud the public. Independent of the expense in stamps and discounts, and frequently in noting, interest, and law expenses, the danger attending such accommodation is sufficient to deter from the practice. Suppose, for instance, A. and B. mutually accommodate each other to the amount of 1,000*l.*, the acceptances being in the hands of third persons : both A. and B. are liable to such third persons to the extent of 2,000*l.* each ; and should A. by any unforeseen occurrence be suddenly rendered unable to meet his acceptances, the holders of the whole, as well the acceptances of A. as the acceptances of B. will resort to B. for payment ; and it may so happen, that although B. could have provided for his own share of the accommodation paper, he may be unable to provide for the whole, and may thus become insolvent.

Thirdly, In case of the loss of a bill, the 9 & 10 Will. 3. c. 17. provides, that if any inland bill be lost or missing within the time limited for its payment, the drawer shall, on sufficient security given to indemnify him if such bill be found again, give another bill of the same tenor with the first.

Lastly, It is of great importance to bankers and others taking bills and notes, that they should have some knowledge of the parties from whom they receive them ; otherwise, if the instrument turn out to have been lost or fraudulently obtained, they may, without equivalent, be deprived of their security, on an action by the owner to recover possession. Lord Tenterden decided, " if a person take a bill, note, or any other kind of security, under circumstances which ought to excite suspicion in the mind of any reasonable man acquainted with the ordinary affairs of life, and which ought to put him on his guard to make the necessary inquiries, and he do not, then he loses the right of maintaining possession of the instrument against the rightful owner." — (*Guildhall*, Oct. 25. 1826.)

I. Table containing the VALUE OF THE MONIES OF ACCOUNT of different Places (expressed in Pence and Decimals of Pence), according to the Mint Price both of Gold and Silver in England; that is, 3*l.* 17*s.* 10½*d.* per oz. for Gold, and 5*s.* 2*d.* per oz. for Silver. — (*Kelly's Cambist*, vol. ii. p. 149.)

II. An Account of the Course of Exchange, London, 17th of December, 1832, with some Explanatory Statements.

Course of Exchange.	Explanatory Statements.
Amsterdam, 3 ms. - 12 2½	that is, London receives 12 florins 2½ stivers for 1 <i>l.</i>
Antwerp - 12 4½	receives 12 ditto 4½ ditto for 1 <i>l.</i>
Hamburgh, mcs. bco. - 13 10½	receives 13 marcs 10½ schillings banco for 1 <i>l.</i>
Paris, 3 ms. - 25 40	receives 25 francs 40 cent. for 1 <i>l.</i>
Frankfort - 150½	receives 150½ batzen for 1 <i>l.</i>
Petersburgh, p. rou. 3 us. - 10	gives 10 pence sterl. for 1 roublebank money.
Vienna, eff. Flo. 2 ms. - 9 54	receives 9 florins 54 creutzers for 1 <i>l.</i>
Madrid, 3 ms. - 36½	gives 36½ pence sterling for 1 dollar.
Leghorn - 48½	gives 48½ ditto for 1 pezza of 8 reals.
Genoa - 25 55	receives 25 lire Italiane 55 cent. for 1 <i>l.</i>
Venice, p. 6 Aust. livr. - 47½	receives 47½ lire piccoli for 1 <i>l.</i>
Naples - 40½	gives 40½ pence sterl. for 1 ducato di regno.
Lisbon, 30 days' sight - 52	gives 52 ditto for 1 milree.
Rio Janeiro, ditto - 36	gives 36 ditto for 1 ditto.

III. Par of Exchange between England and the following Places, viz. Amsterdam, Hamburgh, Paris, Madrid, Lisbon, Leghorn, Genoa, Naples, and Venice; the same being computed from the intrinsic Value of their principal Coins, by comparing Gold with Gold, and Silver with Silver, according to their Mint Regulations, and to Assays made at the London and Paris Mints. — (Presented by Dr. Kelly to the Committee of the House of Lords, on the Expediency of the Bank's resuming Cash Payments.)

EXCHEQUER BILLS. See FUNDS.

EXPECTATION, of life. See INSURANCE.

EXPORTATION, in commerce, the act of sending or carrying commodities from one country to another. — (See IMPORTATION AND EXPORTATION.)

EXCISE, the name given to the duties or taxes laid on such articles as are produced and consumed at home. Customs duties are those laid on commodities when imported into or exported from a country.

Excise duties were introduced into England by the Long Parliament in 1643; being then laid on the makers and venders of ale, beer, cider, and perry. The royalists soon after followed the example of the republicans; both sides declaring that the excise should be continued no longer than the termination of the war. But it was found too productive a source of revenue to be again relinquished; and when the nation had been accustomed to it for a few years, the parliament declared, in 1649, that the "impost of excise was the most easy and indifferent levy that could be laid upon the people." It was placed on a new footing at the Restoration; and notwithstanding Mr. Justice Blackstone says, that "from its first original to the present time its very name has been odious to the people of England" — (*Com. book i. c. 3.*), — it has continued progressively to gain ground; and is at this moment imposed on a variety of most important articles, and furnishes nearly half the entire public revenue of the kingdom.

The prejudice in the public mind to which Blackstone has alluded, against the excise duties, seems to depend more on the regulations connected with their imposition, than on the oppressive extent to which they have sometimes been carried. The facilities of smuggling, and the frauds that might be committed upon the revenue, unless a very strict watch were kept, have led to the enactment of several rather severe regulations. The officers have been empowered to enter and search the houses of such individuals as deal in excisable commodities at any time of the day, and in most instances also of the night. And the proceedings in cases of transgression are of such a nature, that persons may be convicted in heavy penalties, by the summary judgment of 2 commissioners of excise, or 2 justices of the peace, without the intervention of a jury.

For the more easily levying the revenue of excise, England and Wales are divided into about 56 collections, some of which are called by the names of particular counties, others by the names of great towns; where one county is divided into several collections, or where a collection comprehends the contiguous parts of several counties. Every such collection is subdivided into several districts, within which there is a supervisor; and each district is again subdivided into out-rides and foot-walks, within each of which there is a gauger or surveying officer.

Accounts are given of the different duties and regulations affecting the articles subject to the excise laws, under these articles. We shall, therefore, content ourselves at present with giving, from the parliamentary returns,

* The currency of Genoa has consisted, since 1826, of *Live Italiane* of exactly the same weight and fineness as francs; so that the par of exchange with Genoa is now the same as with Paris.

The total charges for collecting the excise revenue in Ireland during the year 1832 amounted to 189,338*l.* 16*s.* 3½*d.*

The laws with respect to the general management of the excise were consolidated by the 7 & 8 Geo. 4. c. 53, from which the following particulars are selected:—

Commissioners.—Four commissioners constitute a Board. They are to be subject, in all things relating to their peculiar duty, to the orders of the Treasury. They may appoint collectors and other subordinate officers, and give them such salaries and allowances as the Treasury shall direct: but they are not allowed to increase the number of inferior officers without the permission and approval of the Treasury. No member of the House of Commons can be a commissioner of excise.

Officers of Excise.—No officer of excise is to vote or interfere at any election of a member of parliament, under pain of forfeiting 500*l.*, and being rendered incapable of ever holding any office or place of trust under his Majesty.

No person holding any office of excise is to deal in any sort of goods subject to the excise laws.

Any person bribing or offering to bribe any officer of excise shall forfeit 500*l.*; and every officer accepting such bribe, or doing, conniving at, or permitting any act or thing whereby any of the provisions of the excise laws may be evaded or broken, shall forfeit 500*l.*, and be declared incapable of ever after serving his Majesty in any capacity whatever. But if any of the parties to such illegal transactions shall inform against the other, before any proceedings thereupon shall have been instituted, he shall be indemnified against the penalties and disabilities imposed for such offences.

Duties and Powers of Officers.—It is lawful for any officer to enter any building or other place, used for carrying on any trade subject to the excise, either by night or by day (but if by night, in the presence of a constable or peace officer), to inspect the same, &c. And upon an officer making oath that he has cause to suspect that goods forfeited under the excise acts are deposited in any private house or place, 2 commissioners of excise, or 1 justice of the peace, may grant warrant to the officer to enter such house or place, (if in the night, in the presence of a constable,) to search for and seize such forfeited goods.

Specimen Books may be left by the officers on the premises of persons subject to the excise laws; and any one who shall remove or deface such books shall be liable to a penalty of 200*l.*

Removing Goods to avoid Duty.—Goods fraudulently removed or secreted, in order to avoid the duty, to be forfeited; and every person assisting in such removal shall forfeit and lose treble the value of such goods, or 100*l.*, at the discretion of the commissioners.

Obstructing Officers. — All persons who shall oppose, molest, &c. any officer of excise in the execution of his duty, shall respectively, for every such offence, forfeit 200*l*.

Officers violently resisted in making any seizure may oppose force to force; and in the event of their wounding, maiming, or killing any person, when so opposed, they shall be admitted to bail, and may plead the general issue.

Justices, mayors, bailiffs, constables, &c. are required to assist excise officers; and any constable, or peace officer, who, on notice and request, declines going with an excise officer, is to forfeit 20*l*. for every such offence.

Claimants of Goods seized. — No claim shall be entered for goods seized, except in the real names of the proprietors of such goods. Claimants are bound with 2 sureties in a penalty of 100*l*. to pay the expenses of claim; and in default thereof the goods are to be condemned.

Proceedings in Courts of Law. — All penalties under the excise laws may be sued for and recovered in the Courts of Exchequer at Westminster, Edinburgh, or Dublin respectively, according as the offence may have taken place in England, Scotland, or Ireland; provided that the proceedings in the courts commence within 3 years after the commission of the offence.

Informations for the recovery of penalties against the excise laws in London may be heard and adjudged by any 3 or more of the commissioners of excise; and in other places such informations may be exhibited before 1 or more justices of the peace, and may be heard and adjudged by any 2 or more such justices.

Mitigation of Penalties. — Justices are authorised, if they shall see cause, except when there is a special provision to the contrary, to mitigate any penalty incurred for any offence committed against the excise laws to one fourth part thereof; but it is lawful for the commissioners of excise, when they see cause, further to mitigate, or entirely remit, such penalty.

Distribution of Penalties. — All penalties and forfeitures incurred under the excise acts are to be distributed, half to his Majesty, and half to the officer or person who shall discover, inform, or sue for the penalty. On proof being made of any officer acting collusively in making a seizure, the commissioners may direct his share to be forfeited.

Oaths and Affirmations. — Persons wilfully taking or making any false oath or affirmation as to any matter connected with the excise laws shall, upon being convicted of such offence, suffer the pains and penalties incident to wilful and corrupt perjury; and those procuring or suborning such persons to swear or affirm falsely shall, upon conviction, be liable to the pains and penalties incident to subornation of perjury.

Actions against Excise Officers. — No writ, summons, or process, shall be sued out or served upon, nor shall any action be brought, raised, or prosecuted, against any officer of excise for any thing done under any of the excise laws, until after the expiration of 1 calendar month next after notice in writing has been delivered to such officer, specifying the cause of such action, and the name and place of abode of the person in whose name it is to be brought. No action shall lie against any excise officer for any thing done under the excise laws, unless it be brought within 3 months after the cause of action shall have arisen. If judgment be given against the plaintiff, and in favour of the defendant, the latter shall, in every such action, have treble costs awarded to him.

Forging Certificates, &c. — By the 41 Geo. 3. c. 91. it is enacted, that if any one shall forge, counterfeit, or knowingly give any forged certificate required to be granted by any officer of excise, he shall be guilty of felony, and being convicted, shall be transported for 7 years.

All individuals carrying on any business subjected to the control of the excise, must take out licences renewable annually on the 5th of July. — (See LICENCES.)

All such individuals are also obliged to make entries of every building, place, vessel, or utensil, as the case may be, in the name of the real owner, with the officer of excise in whose survey such building, place, &c. shall be situated. Individuals found employed in unentered excise manufactories are severally liable in a penalty of 30*l*. for the first offence; and in the event of any such offender refusing or neglecting to pay such penalty, he is to be committed to the house of correction or other prison for 3 calendar months, to be kept to hard labour, and not to be liberated until the fine of 30*l*. has been paid, or the term of 3 months has expired; and if found guilty of a second offence, the fine is to be 60*l*.; and in the event of its not being paid, the imprisonment is to be for 6 months. — (7 & 8 Geo. 4. c. 53. § 33.)

Permits are usually necessary for the removal of excisable commodities. — (See PERMITS.)

EXPORTS, the articles exported, or sent beyond seas. — (See IMPORTS AND EXPORTS.)

F.

FACTOR, an agent employed by some one individual or individuals, to transact business on his or their account. He is not generally resident in the same place as his principal, but, usually, in a foreign country. He is authorised, either by letter of attorney or otherwise, to receive, buy, and sell goods and merchandise; and, generally, to transact all sorts of business on account of his employers, under such limitations and conditions as the latter may choose to impose. A very large proportion of the foreign trade of this and most other countries is now carried on by means of factors or agents.

Factors and brokers are, in some respects, nearly identical, but in others they are radically different. "A factor," said Mr. Justice Holroyd, in a late case, "differs materially from a broker. The former is a person to whom goods are sent or consigned; and he has not only the possession, but, in consequence of its being usual to advance money upon them, has also a special property in them, and a general lien upon them. When, therefore, he sells in his own name, it is within the scope of his authority; and it may be right, therefore, that the principal should be bound by the consequences of such sale. But the case of a broker is different: he has not the possession of the goods, and so the vendor cannot be deceived by the circumstance; and, besides, the employing a person to sell goods as a broker does not authorise him to sell in his own name. If, therefore, he sells in his own name, he acts beyond the scope of his authority; and his principal is not bound."

A factor is usually paid by a percentage or commission on the goods he sells or buys. If he act under what is called a *del credere* commission, that is, if he guarantee the price

of the goods sold on account of his principal, he receives an additional percentage to indemnify him for this additional responsibility. In cases of this sort the factor stands in the vendee's place, and must answer to the principal for the value of the goods sold. But where the factor undertakes no responsibility, and intimates that he acts only on account of another, it is clearly established that he is not liable in the event of the vendee's failing.

The sound maxim, that the principal is responsible for the acts of his agent, prevails universally in courts of law and equity. In order to bind the principal, it is necessary only that third parties should deal *bonâ fide* with the agent, and that the conduct of the latter should be conformable to the common usage and mode of dealing. Thus, a factor may sell goods upon credit, that being in the ordinary course of conducting mercantile affairs: but a stock broker, though acting *bonâ fide*, and with a view to the benefit of his principal, cannot sell stock upon credit, *unless he have special instructions to that effect*; that being contrary to the usual course of business.

A sale by a factor creates a contract between the owner and buyer; and this rule holds even in cases where the factor acts upon a *del credere* commission. Hence, if a factor sell goods, and the owner give notice to the buyer to pay the price to him, and not to the factor, the buyer will not be justified in afterwards paying the factor, and the owner may bring his action against the buyer for the price, unless the factor has a lien thereon. But if no such notice be given, a payment to the individual selling is quite sufficient.

If a factor buy goods on account of his principal, where he is accustomed so to do, the contract of the factor binds the principal to a performance of the bargain; and the principal is the person to be sued for non-performance. But it is ruled, that if a factor enter into a charterparty of allfreightment with the master of a ship, the contract obliges him only, unless he lade the vessel with his principal's goods, in which case the principal and lading become liable, and not the factor. Where a factor, who is authorised to sell goods in his own name, makes the buyer debtor to himself; then, though he be not answerable to the principal for the debt, if the money be not paid, yet he has a right to receive it, if it be paid, and his receipt is a sufficient discharge; the factor may, in such a case, enforce the payment by action, and the buyer cannot defend himself by alleging that the principal was indebted to him in more than the amount.

"Where a factor," said Lord Mansfield, "dealing for a principal, but concealing that principal, delivers goods in his own name, the person contracting with him has a right to consider him, to all intents and purposes, as the principal; and though the real principal may appear, and bring an action on that contract against the purchaser of the goods, yet that purchaser may set off any claim he may have against the factor, in answer to the demand of the principal."

Merchants employing the same factor run the joint risk of his actions, although they are strangers to each other: thus, if different merchants remit to a factor different bales of goods, and the factor sell them as a single lot to an individual who is to pay one moiety of the price down and the other at 6 months' end; if the buyer fail before the second payment, each merchant must bear a proportional share of the loss, and be content to accept his dividend of the money advanced. — (*Beaues, Lex Merc.*)

A factor employed, without his knowledge, in negotiating an illegal or fraudulent transaction, has an action against his principal. On this ground it was decided, that a merchant who had consigned counterfeit jewels to his factor, representing them to be genuine, should make full compensation to the factor for the injury done to him by being concerned in such a transaction, as well as to the persons to whom the jewels had been sold.

The office of a factor or agent being one of very great trust and responsibility, those who undertake it are bound, both legally and morally, to conduct themselves with the utmost fidelity and circumspection. A factor should take the greatest care of his principal's goods in his hands: he should be punctual in advising him as to his transactions on his behalf, in sales, purchases, freights, and, more particularly, bills of exchange: he should deviate as seldom as possible from the terms, and never from the *spirit and tenor*, of the orders he receives as to the sale of commodities: in the execution of a commission for purchasing goods, he should endeavour to conform as closely as practicable to his instructions as to the quality or kind of goods: if he give more for them than he is authorised, they may be thrown on his hands; but he is bound to buy them for as much less as he possibly can. After the goods are bought, he must dispose of them according to order. If he send them to a different place from that to which he was directed, they will be at his risk, unless the principal, on getting advice of the transaction, consent to acknowledge it.*

* "Whoever," says Dr. Paley, "undertakes another man's business, makes it his own; that is, promises to employ upon it the same care, attention, and diligence, that he would do if it were actually his own; for he knows that the business was committed to him with that expectation. And he promises nothing more than this. Therefore, an agent is not obliged to wait, inquire, solicit, ride about the country,

A factor who sells a commodity under the price he is ordered, may be obliged to make good the difference, unless the commodity be of a perishable nature and not in a condition longer to be kept. And if he purchase goods for another at a fixed rate, and their price having afterwards risen, he fraudulently takes them to himself, and sends them somewhere else, in order to secure an advantage, he will be found, by the custom of merchants, liable in damages to his principal.

If a factor, in conformity with a merchant's orders, buy with his money, or on his credit, a commodity he is directed to purchase, and, without giving advice of the transaction, sells it again at a profit, appropriating that profit to himself, the merchant may recover it from him, and have him amerced for fraud.

If a factor buy, conformably to his instructions, goods of which he is robbed, or which suffer some unavoidable injury, he is discharged, and the loss falls on the principal. But if the goods be stolen from the factor, he will not be so easily discharged; for the fact of their having been abstracted by *stealth*, and not by *violence*, raises a strong presumption that he had not taken that reasonable care of them which was incumbent upon him. If, however, he can prove that the goods were lodged in a place of security, and that he had not been guilty of positive negligence, nor exercised less care towards them than towards his own property, he will not be held responsible even for a theft committed by his servants. — (*Jones on Bailments*, 2d ed. p. 76.; *Chitty on Commercial Law*, vol. iii. p. 368.)

If a factor, having money in his hands belonging to his principal, neglect to insure a ship and goods, according to order, he must, in the event of the ship miscarrying, make good the damage; and if he make any composition with the insurers after insurance, without orders to that effect, he is answerable for the whole insurance. A principal, at the end of a very long letter, directed his agent thus: "Observe the premium on this value is also to be insured." But the agent, not noticing this sentence, neglected to insure the premium; and, being sued, was held liable for the omission.

If goods are remitted to a factor, and he make a false entry of them at the Custom-house, or land them without entry, and they are, in consequence, seized or forfeited, he is bound to make good the damage to his principal: but if the factor make his entry according to invoice or letters of advice, and these proving erroneous, the goods are seized, he is discharged.

It is now a settled point, that a factor has a lien on goods consigned to him, not only for incidental charges, but as an item of mutual account for the balance due to him so long as he remains in possession. If he be surety in a bond for his principal, he has a lien on the goods sold by him on account of such principal, to the amount of the sum he is bound for.

It being the general rule of law "that property does not change while *in transitu*," or in the hands of a carrier, a consignment made before the bankruptcy of a consignor, but not arriving till after, remains the property of the consignor, except, indeed, where the delivery is made by the order and upon the account of the consignee, and is a complete alienation from the consignor. In the case, therefore, of a consignment to a factor, the property remains the consignor's, and passes into the hands of his assignees. When a factor has a lien on goods, he has a right to the price, though received after the bankruptcy.

Where general or unlimited orders are given to a factor, he is left to buy and sell on the best conditions he can. And if detriment arise to a principal from the proceedings of a factor acting under such authority, he has no redress, unless he can show that he acted fraudulently or with *gross negligence*.

A factor or broker acting against the interest of his principal cannot even receive his

toil, or study, whilst there remains a possibility of benefiting his employer. If he exert as much activity, and use such caution, as the value of the business in his judgment deserves; that is, as he would have thought sufficient if the same interest of his own had been at stake; he has discharged his duty, although it should afterwards turn out, that by more activity, and longer perseverance, he might have concluded the business with greater advantage." — (*Moral and Pol. Phil.* c. 12.)

There seems to be a good deal of laxity in this statement. It is necessary to distinguish between those who, in executing a commission, render their services for the particular occasion only, without hire, and those who undertake it in the course of business, making a regular charge for their trouble. If the former bestow on it that ordinary degree of care and attention which the *generality of mankind* bestow on similar affairs of their own, it is all, perhaps, that can be expected; but the latter will be justly censurable, if they do not execute their engagements on account of others with that care and diligence which a "provident and attentive father of a family" uses in his own private concerns. It is their duty to exert themselves proportionally to the exigency of the affair in hand; and neither to do any thing, how minute soever, by which their employers may sustain damage, nor omit any thing, however inconsiderable, which the nature of the act requires. Perhaps the best general rule on the subject is, to suppose a factor or agent bound to exert that degree of care and vigilance that may be reasonably expected of him by others. At all events, it is clear he is not to be regulated by his own notions of the "value of the business." A man may neglect business of his own, or not think it worth attending to; but he is not, therefore, to be excused for neglecting any similar business he has undertaken to transact for others. — (There are some very good observations on this subject in *Sir William Jones's Essay on Bailments*, 2d ed. p. 53. and *passim*.)

commission. If he pay money on account of his principal, without being authorised, he cannot recover it back.

An agent cannot delegate his rights to another so as to bind the principal, unless expressly authorised to nominate a sub-agent.

(For further information as to the general powers and liabilities of factors and agents, see *Beaues's Lex Mercatoria*, art. *Factors, Supercargoes, &c.*; *Chitty's Commercial Law*, vol. iii. c. 3.; *Woolrych on Commercial Law*, pp. 317—329. &c. See also the article *BROKERS.*)

The law with respect to the effect of the transactions of factors or agents on third parties was placed on its present footing by the act 6 Geo. 4. c. 94. Under the law that previously obtained, it was held, that a factor, as such, had no authority to *pledge*, but only to *sell* the goods of his principal; and it was repeatedly decided that a principal might recover back goods on which a *bonâ fide* advance of money had been made by a third party, without his being bound to repay such advance; and notwithstanding this third party was wholly ignorant that the individual pledging the goods held them as a mere factor or agent. It used also to be held, that *bonâ fide* purchasers of goods from factors or agents not vested with the power of sale, might be made liable to pay the price of the goods a second time to the real owner.

The extreme hardship and injurious influence of such regulations is obvious. It is the business of a principal to satisfy himself as to the conduct and character of the factor or agent he employs; and if he make a false estimate of them, it is more equitable, surely, that he should be the sufferer, than those who have no means of knowing any thing of the matter. The injustice of the law in question, and the injury it did to the commerce of the country, had frequently excited attention; and was very ably set forth by Lord Liverpool, in his speech in the House of Lords, on moving the second reading of the new bill.

"Those of their Lordships who were acquainted with commercial transactions, would know that money was frequently advanced on goods, without its being possible for the person advancing the money to have any further acquaintance with the transactions, than that the factor was in actual possession of the goods. It then became a question, putting fraud out of view, if the factor became a bankrupt, or in any other way failed to execute his engagements, whether the loss should fall on the principal who had consigned these goods, or on the *pledgee* who had advanced money on them. It had been of late ruled, that if the factor were intrusted only to dispose of the property, the loss must fall on the *pledgee*. He meant to contend, that this was contrary to equity, and contrary to analogy; that it was disapproved of by high authority, and was contrary to the law in every country of the world, except this, and the United States of America, which had drawn their law from this country. It was contrary to equity, he thought, that the *pledgee*, who had advanced his money without any fraud, but on the *bonâ fide* possession of the goods, should suffer. He had placed no confidence, but the principal who had appointed the factor had placed confidence. He could limit him in his operations as he pleased—he could give him any kind of instructions—he might qualify his power—he was bound to take precautions before placing confidence; and he was in all respects more liable to suffer from his faults than the *pledgee*. The latter knew nothing of the power of the factor, he saw only the goods, and advanced his money on what was a sufficient security for repayment. On every principle of natural equity, therefore, the loss ought to fall, not on the *pledgee*, but on the principal. He knew that this view was connected with one very important question—that of possession and title; but it was not possible for transactions to go on, unless the possession was admitted as the title to the goods. If this were an indifferent question, or a question involving only a few cases, he would not have called on their Lordships to legislate on this subject; but all the commercial interests of the country were connected with it. And he might say he believed that two thirds of the whole commerce of the country was carried on by consigning goods to a factor, and leaving it to his discretion to dispose of them to the greatest advantage, sending them to market when he pleased, and raising money on them when he could not send them to market. Bills of exchange, Exchequer bills, and money bills of every description, were subject to this rule. If a person consigned Exchequer bills to a second person, and he parted with them, the third party who obtained them was held to have a right to them. Commercial proceedings were of as much importance as money proceedings, and he could not see why they should not receive the same security. It might be asked, perhaps, when this was felt to be so great an evil, why it was not altered before; but it seemed to be one of those things which had grown up gradually, and which did much mischief before they became extensively known. The first decision, he believed, which established the law as it now stood, was delivered in 1742; and he knew that Lord Chief Justice Gibbs had said, he could not explain the origin of that decision. He supposed it might have been dictated by some fraud. That decision, the Lord Chief Justice maintained, was at variance with the best interests of commerce, and had grown out of circumstances he could not explain. From the time of the first decision, the decisions had not been numerous, till of late years. He did not doubt but the judges had decided according to the law as it was established by these precedents; but in doing that, they had expressed their regret that these precedents had been established. [Here his Lordship read an extract from opinions delivered by the late Lord Chief Justice Ellenborough, and a late judge, Mr. Le Blanc, expressing their regret, in deciding cases according to these precedents, that they had been established.] He inferred from these opinions, that these judges, though they had felt themselves obliged to decide in this way, supposed that the law was contrary to the general analogy of our laws, and to the principles of justice. He then came to the last consideration, the law of this country being in this respect different from the law of all other countries, except the law of the United States of America. In all other countries, the law was recognised to be what he wished to establish it by the bill before their Lordships. When there was no evidence of fraud, it was held, that the man, advancing money on goods held by a factor, should not suffer for his faults, but that the person who confided in the factor must be the sufferer. This was also the law in Scotland. He had understood, too, that the evils of the law were felt in America, and that means had been taken for bringing it before the congress, with a view to assimilate the law of America to the law of other countries. If the question were examined by the principles of equity, by analogy with other cases, by the authority of those who decided in our courts, or by the practice of other countries, it would be found that the reasons were strong in favour of the bill. It was of great importance in commercial transactions, that our law should be like the laws of other countries. It was not the same with the laws relative to real property—to our local law, if he might so call it; but when the bill was founded on equity and analogy, he thought it was an additional reason in its favour, that it assimilated our commercial law to the commercial law of other countries. He did not know if he had made himself under-

stood, or if he had sufficiently explained the object of the bill; but the measure was founded in justice, and he hoped to have their Lordships' consent to it." The noble Earl concluded by moving the second reading of the bill.

By the new law, all persons intrusted with and in possession of goods are supposed, unless the contrary be made distinctly to appear, to be their *owners*, so far, at least, that they may pledge them or sell them to third parties. The following are the principal clauses of this important act, 6 Geo. 4. c. 94.

Factors or Agents having Goods or Merchandise in their Possession, shall be deemed to be the true Owners.—Any person intrusted, for the purpose of consignment or of sale, with any goods, wares, or merchandise, and who shall have shipped such in his own name, and any person in whose name any goods, wares, or merchandise shall be shipped by any other person, shall be deemed to be the true owner, so far as to entitle the consignee to a lien thereon in respect of any money or negotiable security advanced by such consignee for the use of the person in whose name such goods, wares, or merchandise shall be shipped, or in respect of any money or negotiable security received by him to the use of such consignee, in like manner as if such person was the true owner; provided such consignee shall not have notice by the bill of lading, or otherwise, before the time of any advance of such money or negotiable security, or of such receipt of money or negotiable security, in respect of which such lien is claimed, that such person so shipping in his own name, or in whose name any goods, wares, or merchandise shall be shipped by any person, is not the actual and *bona fide* owner, any law, usage, or custom to the contrary thereof notwithstanding: provided also, that the person in whose name such goods, wares, or merchandise are so shipped shall be taken, for the purposes of this act, to have been intrusted therewith for the purpose of consignment or of sale, unless the contrary thereof shall be made to appear by bill of discovery, or be made to appear in evidence by any person disputing such fact. — § 1.

Persons in Possession of Bills of Lading to be the Owners, so far as to make valid Contracts.—From and after the 1st of October, 1826, any person intrusted with any bill of lading, India warrant, dock warrant, warehouse keeper's certificate, wharfinger's certificate, warrant or order for delivery of goods, shall be deemed to be the true owner, so far as to give validity to any contract or agreement thereafter to be entered into by such person so intrusted, with any person, body politic or corporate, for the sale of the said goods, wares, and merchandise, or for the deposit or pledge thereof as a security for any money or negotiable instrument advanced or given by such person, body politic or corporate, upon the faith of such documents; provided such person, body politic or corporate, shall not have notice, by such documents or otherwise, that such person so intrusted is not the actual and *bona fide* owner. — § 2.

No Person to acquire a Security upon Goods in the Hands of an Agent for an antecedent Debt, beyond the Amount of the Agent's Interest in the Goods.—In case any person, body politic or corporate, shall, after this act, accept any such goods, in deposit or pledge, from any such person so intrusted, without notice as aforesaid, as a security for any debt or demand due from such person so intrusted, to such person, body politic or corporate, before the time of such deposit, then such person, body politic or corporate, so accepting such goods in deposit or pledge, shall acquire no further interest in the said goods, or any such document, than was possessed, or might have been enforced, by the said person so intrusted, at the time of such deposit or pledge; but such person, body politic or corporate, so accepting such goods in deposit or pledge, shall acquire, possess, and enforce such right, title, or interest as might have been enforced by such person so intrusted. — § 3.

Persons may contract with known Agents in the ordinary Course of Business, or out of that Course, if within the Agent's Authority.—From and after the 1st of October, 1826, it shall be lawful for any person, body politic or corporate, to contract with any agent, intrusted with any goods, or to whom the same may be consigned, for the purchase of such goods, and to receive the same of and pay for the same to such agent; and such contract and payment shall be binding upon the owner, notwithstanding such person, body politic or corporate, shall have notice that the person making and entering into such contract, or on whose behalf such contract is made, is an agent; provided such contract and payment be made in the usual course of business, and that such person, body politic or corporate, shall not have notice that such agent is not authorised to sell the said goods, or to receive the said purchase money. — § 4.

Persons may accept and take Goods in Pledge from known Agents.—From and after the passing of this act, it shall be lawful for any person, body politic or corporate, to accept any such goods, or any such document as aforesaid, in deposit or pledge from any factor or agent, notwithstanding such person, body politic or corporate, shall have notice that the person making such deposit or pledge is a factor or agent; but then and in that case such person, body politic or corporate, shall acquire no further interest in the said goods, or any such document, than was possessed or might have been enforced by the said factor or agent, at the time of such deposit or pledge; but such person, body politic or corporate, shall acquire, possess, and enforce such right, title, or interest as was possessed and might have been enforced by such factor or agent. — § 5.

Right of the true Owner to follow his Goods while in the Hands of his Agent or of his Assignee in case of Bankruptcy.—Nothing herein contained shall be deemed to deprive the true owner or proprietor of such goods from demanding and recovering the same from his factor or agent, before the same shall have been so sold, deposited, or pledged, or from the assignees of such factor or agent, in the event of his, her, or their bankruptcy; nor to prevent such owner or proprietor from demanding or recovering of and from any persons, bodies politic or corporate, the price agreed to be paid for the purchase of such goods, subject to any right of set-off on the part of such persons, bodies politic or corporate, against such factor or agent; nor [nor] to prevent such owner or proprietor from demanding or recovering of and from such persons, bodies politic or corporate, such goods, so deposited or pledged, upon repayment of the money, or on restoration of the negotiable instrument so advanced or given on the security of such goods, by such persons, bodies politic or corporate, to such factor or agent; and upon payment of such further sum, or on restoration of such other negotiable instrument (if any) as may have been advanced or given by such factor or agent, to such owner or proprietor, or on payment of a sum equal to the amount of such instrument; nor to prevent the said owner or proprietor from recovering of and from such persons, bodies politic or corporate, any balance remaining in their hands, as the produce of the sale of such goods, after deducting thereout the amount of the money or negotiable instrument so advanced or given upon the security thereof: provided always, that in case of the bankruptcy of any such factor or agent, the owner or proprietor of the goods so pledged and redeemed shall be held to have discharged *pro tanto* the debt due by them to the estate of such bankrupt. — § 6.

Agents fraudulently pledging the Goods of their Principals.—The 7 & 8 Geo. 4. c. 29. § 51. enacts, "That if any factor or agent intrusted, for the purpose of sale, with any goods or merchandise, or intrusted with any bill of lading, warehouse keeper's or wharfinger's certificate, or warrant or order for the delivery of goods or merchandise, shall, for his own benefit, and in violation of good faith, deposit or pledge any such goods or merchandise, or any of the said documents, as a security for any money or negotiable instrument borrowed or received by such factor or agent, at or before the time of making such deposit or pledge, or intended to be thereafter borrowed or received, every such offender shall be guilty of a misdemeanor, and, being convicted thereof, shall be liable, at the discretion of the court, to be transported beyond the seas for any term not exceeding 14 years, nor less than 7 years, or to suffer such other punishment by fine or imprisonment, or by both, as the court shall award; but no such factor or agent shall be liable to any prosecution for depositing or pledging any such goods or merchandise, or any of the said documents, in case the same shall not be made a security for, or subject to the payment of, any greater

sum of money than the amount which, at the time of such deposit or pledge, was justly due and owing to such factor or agent from his principal, together with the amount of any bill or bills of exchange drawn by or on account of such principal, and accepted by such factor or agent."

This provision does not extend to partners not being privy to the offence; nor does it take away any remedy at law or equity which any party aggrieved by any offence might have been entitled to against such offender. And no one shall be liable to be convicted by any evidence whatever as an offender against this act, in respect of any act done by him, if he shall, at any time previously to his being indicted for such offence, have disclosed such acts, on oath, in consequence of any compulsory process of any court of law or equity, in any action, suit, &c. which shall have been *bona fide* instituted by any party aggrieved, or if he shall have disclosed the same in any examination or deposition before any commissioners of bankrupt. — § 52.

FACTORAGE, OR COMMISSION, the allowance given to factors by the merchants and manufacturers, &c. who employ them: it is a percentage on the goods they purchase or sell on account of their principals; and varies in different countries, and as it refers to different articles. It is customary for factors, as observed in the previous article, to insure the debts due to those for whom they sell for an additional, or *del credere*, commission, generally averaging from $1\frac{1}{2}$ to 2 per cent. Factorage or commission is also frequently charged at a certain rate per cask, or other package, measure, or weight, especially when the factor is only employed to receive or deliver: this commission is usually fixed by special agreement between the merchant and factor.

FACTORAGE, BROKERAGE, AND COMMISSION TABLE.

FACTORY, a place where merchants and factors reside, to negotiate business for themselves and their correspondents on commission. We have factories in China, Turkey, Portugal, Russia, &c.

FAIRS AND MARKETS. These institutions are very closely allied. A fair, as the term is now generally understood, is only a greater species of market recurring at more distant intervals. Both are appropriated to the sale of 1 or more species of goods, the hiring of servants, or labourers, &c. : but fairs are, in most cases, attended by a greater concourse of people, for whose amusement various exhibitions are got up.

1. *Origin of Fairs.* — Institutions of this sort are peculiarly serviceable in the earlier stages of society, and in rude and inland countries. The number of shops, and the commodities in them, are then either comparatively limited, or they are but little frequented by dealers; so that it is for the advantage of all, that fairs should be established, and merchants induced to attend them. For this purpose various privileges have been annexed to fairs, and numerous facilities afforded to the disposal of property in them. To give them a greater degree of solemnity, they were originally, both in the ancient and modern world, associated with religious festivals. In most places, indeed, they are still held on the same day with the wake or feast of the saint to whom the church is dedicated; and till the practice was prohibited, it was customary, in England, to hold them in churchyards! — (*Jacob's Law Dict.* art. *Fair*.) But since the growth of towns, and the opportunities afforded for the disposal and purchase of all sorts of produce at the weekly or monthly markets held in them, the utility of fairs, in this country, at least, has very much diminished; they have, also, lost much of their ancient splendour; and, though some of them are still well attended, and of real use, a good number might be advantageously suppressed.

But it is far otherwise in inland countries, where the facilities for carrying on commercial transactions are comparatively circumscribed. There it is of the utmost importance, that certain convenient places and specified periods should be appointed for the bringing together of commodities and dealers. This is not only the readiest and best means of promoting commerce, but also of softening national antipathies, and diffusing a knowledge of the products, arts, and customs of other countries.

2. *Establishment of English Fairs.* — No fair can be holden without grant from the Crown, or a prescription which supposes such grant. And before a patent is granted, it is usual to have a writ of *ad quod damnum* executed and returned, that it may not be issued to the prejudice of a similar establishment already existing. The grant usually contains a clause that it shall not be to the hurt of another fair or market; but this clause, if omitted, will be implied in law: for if the franchise occasion damage either to the king or a subject, in this or any other respect, it will be revoked; and a person, whose ancient title is prejudiced, is entitled to have a *scire facias* in the king's name to repeal the letters patent. If his Majesty grant power to hold a fair or market in a particular place, the lieges can resort to no other, even though it be inconvenient. But if no place be appointed, the grantees may keep the fair or market where they please, or rather, where they can most conveniently.

3. *Times of holding Fairs and Markets.* — These are either determined by the letters patent appointing the fair or market, or by usage. The statute 2 Edw. 3. c. 15. enacts, that the duration of the fair shall be declared at its commencement, and that it shall not be continued beyond the specified time. By statute 5 Edw. 3. c. 5., any merchant selling goods after the stipulated time is to forfeit double the value of the goods sold.

4. *Effect of Sales in Fairs and Markets.* — A *bonâ fide* sale made in a fair or open market, in general, transfers the complete property of the thing sold to the vendee; so that, however vicious or illegal the title of the vendor may be, the vendee's is good against every one except the king. But the sale, in order to come within this rule, must take place *on the market day, and at the place assigned for the market*. The city of London is said to be a market overt every day of the week except Sunday; every shop being a market overt for such things as the shopkeeper professes to deal in. The property of goods may, however, be changed, and effectually transferred to the buyer, by a *bonâ fide* sale in a shop out of London, whether the shopkeeper be the vendor or vendee, if the goods are of the kind in which he trades. A wharf in London is not within the custom, and is not a market overt for articles brought there. But a sale in a market will not be binding, if it be such as carries with it a presumption of fraud: as, for example, if it take place in a back room, or secret place; if the sale be covinous, and intended to defraud the real owner; or if the buyer know that the vendor is not the real owner of the goods, &c. It is very difficult to transfer the property of horses, even when they are sold in an open market, without the consent of the real owner. — (See *Horses*.)

5. *Court of Pié Poudre.* — To every fair or market there is incident, even without any express words in the grant, a court of *pié poudre*, in allusion to the dusty feet of the suitors. The steward or mayor may preside. It has cognizance of all questions as to contracts made in the market, respecting goods *bought and delivered there*, &c. Formerly *pié poudre* courts were held at every considerable fair; but they are now entirely laid aside.

6. *Clerk of the Market.* — Owners and governors of fairs are to take care that every thing be sold according to just weights and measures. And for that and other purposes they may appoint a clerk of the fair or market, who is to mark and allow all such weights, &c.; charging 1*d.* for sealing and marking a bushel, $\frac{3}{4}$ *d.* for marking a half bushel or peck, and $\frac{1}{4}$ *d.* for marking a gallon, pottle, quart, pint, &c., under penalty of 5*l.* — (22 *Cha.* 2. c. 8.)

7. *Tolls.* — Being a matter of private benefit to the owners of fairs or markets, and not incident to them, tolls are not exigible unless specially granted in the patent: but the king may by a new grant authorise a reasonable toll to be taken. If the toll granted be excessive, the patent will be void. It is a general rule, unless changed by a contrary custom obtaining time out of mind, that no toll be paid for any thing brought to a fair or market, before the same is sold, and that it shall then be *paid by the buyer*.

The owner of a house next to a fair or market is not allowed to open his shop during such fair or market, without paying *stallage* (toll for having a stall); on the ground that if he take the benefit of the market, he ought to pay the duties thereon. This regulation has been a good deal complained of.

The owners of fairs and markets are required by statute (2 & 3 *Ph.* and *M.* c. 7.) to appoint a person in a special open place to take the toll. The most important part of this person's duty has reference to his entering the horses sold with three distinguishing marks, and the names, &c. of those who buy and sell them. — (See *Horses*.)

An action lies against any one who refuses to pay the customary toll.

(For further information as to British fairs and markets, see *Chitty on Commercial Law*, vol. ii. c. 9.)

The 3 *Geo.* 4. c. 55, enacts, that at all fairs held within 10 miles of Temple Bar, business and amusements of all kinds shall cease at 11 o'clock in the evening, and not re-commence before 6 o'clock in the morning, under a penalty of 40*s.* to be paid by any master, mistress, or other person, having the care or management of any house, shop, room, booth, standing, tent, caravan or wagon, where any breach of this enactment shall have been committed. Power is also given by the same act to any 2 justices of the peace, within their respective jurisdictions, to put a stop to any fair which is held without charter, prescription, or lawful authority.

8. *Principal British Fairs.* — Among these may be specified Stourbridge, in Worcester-shire. Bristol has two considerable fairs, one in March, and one in September. Exeter December fair, for cattle, horses, and most sorts of commodities. Weyhill fair, in Hampshire (October 10.), has, probably, the greatest display of sheep of any fair in the kingdom. Bartholomew fair, in London, used to be of considerable importance, but is now appropriated only to shows of wild beasts, and such like exhibitions, and might be suppressed with advantage. St. Faith's, near Norwich (October 17.), is the principal English fair for Scotch cattle. They are sold to the graziers and feeders of Norfolk, Suffolk, Essex, &c., by whom they are fattened for the London markets, where they are met with in great abundance. But besides those sold at St. Faith's, large numbers or Scotch cattle are disposed of at Market Harborough, Carlisle, Ormskirk, and other places. Ipswich has two considerable fairs: one in August, for lambs; and one in September, for butter and cheese: it is reckoned that above 100,000 lambs are annually sold at the former. Woodborough-hill, in Dorset, for west country manufactures, as kerseys, druggets, &c. Woodstock October fair, for cheese. Northampton and Nottingham have each several large fairs, for horses, cattle, cheese, &c. The August fair of Horneastle, in Lincolnshire, is the largest horse fair in the kingdom, many thousand horses being exhibited for sale during its continuance: it is resorted to by crowds of dealers from all parts of Great Britain, by several from the Continent, and sometimes even from North America. Howden, in Yorkshire, has, also, a very large horse fair, particularly for Yorkshire hunters. Devizes, in Wiltshire, has several large fairs for sheep and cattle. There is usually a large display of cheese at the Gloucester April fair. A guild, or jubilee, commencing the last week of August, is held every twentieth year at Preston, in Lancashire; the last was held in 1822, and was well attended. The October fair of Market Harborough, Leicestershire, lasts 9 days, and a great deal of business is usually done in cattle, cheese, &c. Woodbridge Lady-day fair is celebrated for the show of Suffolk horses. Falkirk fair, or tryst, is one of the most important in Scotland, for the sale of cattle and sheep. The October fair of Ballinasloe, in the county Galway, is famous for the display of cattle and sheep; by far the largest proportion of these animals raised for sale in Connaught being disposed of at it. The sheep are generally from 3 to 4, the heifers from 3 to 4, and the bullocks from 4 to 5 years of age. They are mostly lean; and are kept for a year in Leinster before they are fit for the Dublin or Liverpool markets. It would seem that the number of cattle and sheep disposed of at Ballinasloe is rather declining; a result ascribable to the increase of cultivation caused by the great augmentation of population, and the continued subdivision of the land.

We subjoin an

Account of the Number of Sheep and Cattle, sold and unsold, at the October Fairs of Ballinasloe, from the Year 1820 to the Year 1832, both inclusive. — (*Agricultural Report of 1832*, p. 349.)

Years.	Sheep sold.	Sheep unsold.	Total.	Cattle sold.	Cattle unsold.	Total.
1820	59,915	20,833	80,748	4,501	4,001	8,505
1821	72,851	10,566	83,400	6,062	1,222	7,284
1822	71,718	13,459	85,177	5,322	3,695	9,017
1823	75,681	20,315	95,999	6,588	4,321	10,909
1824	77,118	6,786	84,231	9,038	1,417	10,505
1825	72,777	17,688	90,465	8,012	2,254	10,266
1826	57,808	36,597	94,405	4,295	5,841	8,210

1830	66,871	14,611	81,485	5,894	1,363	7,457
1831	57,940	5,399	61,539	6,192	1,321	7,515
1832	58,055	62,948	6,101	556	6,657	

9. *Principal French Fairs.* — Among these may be specified the fairs of St. Germain, Lyons, Rheims, Chartres, Rouen, Bordeaux, Troyes, and Bayonne; but they are said to be, for the most part, much fallen off. This, however, does not appear to be the case with the fair held at Beaucaille, in the department of the Gard, in July. It is said that there were from 70,000 to 80,000 persons at the fair of 1833, and that the business done exceeded 160,000,000 fr., or 6,400,000*l.*! These statements are not, however, official, and are, most probably, exaggerated; and it is admitted, that the last was the greatest fair that has been held for these many years past. — (*Archives du Commerce*, tom. iii. pp. 236—245.)

10. *German Fairs.* — The principal German, or rather European, fairs, are those of Frankfort on the Maine, Frankfort on the Oder, and Leipsic. The concourse of merchants, and the business done at these fairs, is generally very great. They are copiously supplied with the cotton stuffs, twist, cloths, and hardware of England; the silks and jewellery of France; the printed cottons of Switzerland and Austria; the raw, manufactured, and literary products of Germany; the furs of the North; Turkey carpets; Cachemere shawls, &c.; and there, also, are to be found merchants of all countries, those of Ispahan negotiating with those of Montreal for the purchase of furs; and Georgians and Servians supplying themselves with the cottons of Manchester and the jewellery of Paris. There, in fact, are met the representatives, as it were, of every people in the world, labouring, though without intending it, to promote each other's interest, and to extend and strengthen those ties that bind together the great family of the human race.

The fairs at Frankfort on the Maine should begin, the first on Easter Tuesday, and the second on the Monday nearest to the 8th of September. Their duration is limited to 3 weeks, but they usually begin from 8 to 15 days before their legal commencement. Accounts are kept in rixdollars: 1 rixdollar of account = $1\frac{1}{2}$ florin, or $4\frac{1}{2}$ copsticks, or $22\frac{1}{2}$ batzen. The rixdollar = 3*s.* 1*8d.*; so that the par of exchange is 141 batzen per 1*l.* sterling. 100 lbs. common Frankfort weight = 103 lbs. avoirdupois. The foot = 11.27 English inches.

The fairs at Frankfort on the Oder are 3 in number: viz. *Reminiscere*, in February or March; *St. Margaret*, in July; and *St. Martin*, in November. They ought, strictly speaking, to terminate in 8 days, but they usually extend to 15. The Prussian government gives every facility to those who attend these fairs. Accounts are kept in Prussian money, that is, in rixdollars of 2*s.* 11*¼d.* 100 lbs. Prussian = 103 lbs. avoirdupois. The foot = 12.356 English inches.

The fairs of Leipsic are still more celebrated than those of either Frankfort. They are held thrice a year, — on the 1st of January, at Easter, and at Michaelmas. The first is the least important. Above 20,000 dealers are said to have been present at the Easter fair in 1832, and above 13,000 at that of Michaelmas. The Easter and Michaelmas fairs are famous, particularly the former, for the vast number of new publications usually offered for sale. They are attended by all the principal booksellers of Germany, and by many from the adjoining countries, who adjust their accounts, learn the state of the trade in all parts of the world, and endeavour to form new connections. Most German publishers have agents in Leipsic; which is to the literature of Germany, what London is to that of Great Britain. As many as 4,000 new publications have been in a single Leipsic catalogue! The fairs ought to close in 8 days, but they usually continue for about 3 weeks. No days of grace are allowed. The holder of a bill must demand payment on the day it becomes due; and, if not paid, he must have it protested on that very day, and returned by the first opportunity. If he neglect any of these regulations, he loses all right of recourse upon the drawer and indorsers. Money of account at Leipsic same as at Frankfort on the Maine. 100 lbs. Leipsic = 103 lbs. avoirdupois. The foot = 11.11 English inches. — (*Kelly's Cambist; Manuel de Nellenbrecher; Archives du Commerce*, tom. ii. p. 27., &c.)

Dr. Bright gives, in his *Travels in Hungary* (pp. 201—223.), an interesting account of the fairs held at Debretzin and Pesth. The latter has become the grand centre of Hungarian commerce; most part of which is conducted at its fairs.

11. *Italian Fairs*.—Of these, the most celebrated is that of Sinigaglia, a small but handsome town of the Papal dominions, on the Misa, near its confluence with the Adriatic. The fair commences on the 14th of July, and should terminate on the last day of that month, but it usually continues 5 or 6 days longer. The duties on goods brought to the fair are extremely moderate, and every thing is done to promote the convenience of those frequenting it. All sorts of cotton and woollen goods, lace, iron and steel, hardware, jewellery, brandy and liqueurs, raw and refined sugar, dried fish, cacao, coffee, spices, &c. are brought here by the English, French, Austrians, Americans, Swiss, &c. These are exchanged for the various raw and manufactured products of Italy and the Levant; consisting, among others, of raw, thrown, and wrought silks; oil, fruits, cheese, alum, soda, sumach, sulphur, &c. The value of the imports for the fair of 1832 was estimated at about 2,000,000*l*. Accounts are kept in scudi of 20 soldi; the scudo = 4*s*. 4*d*. very nearly. 100 lbs. Sinigaglia = 73 $\frac{3}{4}$ lbs. avoirdupois. The ell or braccio measures 25 $\frac{33}{100}$ English inches. — (*Manuel de Nelkenbrecher; Archives du Commerce*, tom. ii. p. 38.)

12. *Russian Fairs*.—These are numerous, and many of them well attended. The most important is held at Nishnei-Novgorod. This city is situated at the confluence of the Oka with the Wolga, in lat. 56° 16' N., lon. 44 18' E. It is the great emporium of the internal trade of Russia; communicating by an inland navigation with the Baltic, the Black Sea, and the Caspian. The fair was formerly held at Makarief, 84 versts distant. It generally lasts from 6 weeks to 2 months, and is well known all over the east of Europe. The bazaars erected for the accommodation of those who attend this fair, form, according to Dr. Lyall, the finest establishment of the kind in the world. The sale of iron and iron articles is said usually to amount to above 10,000,000 roubles; the furs to 36,000,000; the images to 1,300,000. Captain Cochrane is of opinion, that "the fair, in point of value, is second to none in Europe; the business done being estimated at nearly 200,000,000 roubles." The stationary population of the place amounts to from 15,000 to 16,000; but during the fair it is said to amount to 120,000 or 150,000; among whom may be seen Chinese, Persians, Circassians, Armenians, Tatars, Bucharians, Jews, "and a specimen of almost every European nation." — (See *Modern Traveller*, art. *Russia*, p. 305.) We suspect, however, that these statements are very far beyond the mark. It is stated in the *Archives du Commerce* (tom. i. p. 173.), that the total value of the merchandise disposed of at the fair of Nishnei-Novgorod, in 1832, amounted to 123,200,000 roubles. Theatrical exhibitions, shows of wild beasts, and other Bartholomew fair amusements, add to the attractions of the scene.

Another celebrated Russian fair is held, in the month of December, at Kiachta, in Mongolia, on the Chinese frontier, in lat. 50° 20' N., lon. uncertain, but about 105° E. The town is small, the population not exceeding 4,000 or 5,000; but by far the largest part of the commerce between the Russian and Chinese empires is transacted at its fair, and it is also the centre of the political intercourse between them. The commodities brought by the Russians consist principally of furs, sheep and lamb skins, Russian and German broad cloths, Russia leather, coarse linens, worsted stuffs, cattle, &c., with, for the most part, bullion. These they exchange with the Chinese for tea, raw and manufactured silk, nankeens, porcelain, sugar candy, rhubarb, tobacco, musk, &c. The quantity of tea, using the word in the sense in which it is understood here, purchased at the Kiachta fairs by the Russians, amounts, at an average, to about 60,000 boxes a year, that is, to about 4,200,000 lbs.; the greater part being the fine species of black tea called pekoe. But, exclusive of this, the Russians buy large quantities of a coarser species of tea, called break or Tartar tea, which, though not thought worth the trouble of putting into packages, is largely consumed by the nomadic Tartars and Siberians. According to the official accounts published by the Russian Custom-house, the total value of the exports by way of Kiachta, in 1831, amounted to 4,655,536 roubles, and that of the imports to 6,775,858 ditto. The Russian trade is in the hands of a comparatively small number of merchants, some of whom are very rich; that of the Chinese is much more diffused. Commodities may be conveyed from Kiachta to European Russia either by land or by water. In the former case, the journey takes a year; in the latter, it takes 3 years, or rather 3 very short summers; the rivers being for the most part of the year frozen over. — (*Schnitzler, Statistique Générale de l'Empire de la Russie*, p. 143.; *private communications from Captain Gordon, who visited Kiachta in 1819; Official Statement of the Trade of the Russian Empire in 1831, &c.*)

13. *Eastern Fairs*.—The most important fair in the Eastern world is that held at Mecca, during the resort of pilgrims in the month of Dhalhajja. It used to be frequented by many thousands of individuals of all ranks and orders, brought together from the remotest corners of the Mohammedan world; and though the numbers attending it have declined of late years, the concourse is still very great. — (See CARAVAN.)

Hurdwar, in Hindostan, in lat. 29° 57' N., lon. 78° 2' E., 117 miles N.E. from Delhi, is famous from its being one of the principal places of Hindoo pilgrimage, and the greatest

fair in India. The town, which is but inconsiderable, is situated on the Ganges, at the point where that sacred stream issues from the mountains. The pilgrimage and fair are held together at the vernal equinox; and Europeans, nowise addicted to exaggeration, who have been repeatedly present on these occasions, estimate that from 200,000 to 300,000 strangers are then assembled in the town and its vicinity. But every twelfth year is reckoned peculiarly holy; and then it is supposed that from 1,000,000 to 1,500,000, and even 2,000,000 pilgrims and dealers are congregated together from all parts of India and the countries to the north. In 1819, which happened to be a twelfth year, when the auspicious moment for bathing in the Ganges was announced to the impatient devotees, the rush was so tremendous that no fewer than 430 persons were either trampled to death under foot, or drowned in the river! The foreigners resorting to Hurdwar fair for commercial purposes only, consist principally of natives of Nepaul, the Punjab, and Peshwaur, with Afghans, Usbeck Tartars, &c. They import vast numbers of horses, cattle, and camels; Persian dried fruits, shawls, drugs, &c.: the returns are made in cotton piece goods, indigo, sugar, spices, and other tropical productions. The merchants never mention the price of their goods, but conduct the bargain by touching the different joints of their fingers, to hinder the bystanders gaining any information. During the Mahratta sway, a kind of poll-tax and duties on cattle were levied; but all is now free, without impost or molestation of any sort. Owing, also, to the precautions adopted by the British government, the most perfect order is preserved; much to the surprise and satisfaction of the natives; for, antecedent to our occupation of the country, the fairs usually ended in disorder and bloodshed. — (*Private information, and the excellent account of Hurdwar in Hamilton's Gazetteer.*)

The fairs of Portobello, Vera Cruz, and Acapulco, once so famous, are now totally deserted; that of the Havannah is also much fallen off.

FATHOM, a measure of length, 6 feet, chiefly used for measuring the length of cordage, and the depth of water and mines.

FEATHERS, BED-FEATHERS (Fr. *Plumes, Plumes à lit*; Ger. *Federn, Bettfedern*; Du. *Bedveern, Pluimen*; It. *Piume*; Sp. *Plumas*), make a considerable article of commerce; particularly those of the ostrich, heron, swan, peacock, goose, and other poultry; for plumes, ornaments of the head, filling of beds, quilts, &c. The coarsest part of the ostrich plumage is generally denominated *hair*, to which it bears a resemblance, and is used in the manufacture of hats. Many parts of Great Britain supply feathers for beds, and an inferior sort is brought from Ireland. Eider down is imported from the north of Europe; the ducks that supply it being inhabitants of Greenland, Iceland, and Norway. The eider duck breeds in the islands on the west of Scotland, but not in sufficient numbers to form a profitable branch of trade to the inhabitants. Hudson's Bay furnishes very fine feathers. The down of the swan is brought from Dantzic, as well as large quantities of superior feathers.

The bed-feathers imported in 1828 amounted to 3,103 cwt., yielding 6,826*l.* 12*s.* of duty. The duty on ostrich feathers during the same year produced 962*l.* 8*s.* 9*d.*

FIDDLES, OR VIOLINS (Ger. *Violinen, Geigen*; Du. *Vioolen*; Fr. *Violons*; It. *Violini*; Sp. *Violines*; Rus. *Skripitzi*), musical instruments, too well known to need any particular description. The finest-toned violins are those made in Italy; they are usually called Cremonas, from the name of the town where they were formerly manufactured in the highest perfection: 50 or 60 guineas have not unfrequently been given for a Cremona violin.

FIGS (Ger. *Feigen*; Du. *Vygen*; Fr. *Figues*; It. *Fichi*; Sp. *Higos*; Lat. *Fici, Carica*; Arab. *Teen*), the fruit of the fig tree (*Ficus carica*), a native of Asia, but early introduced into Europe. It flourishes in Turkey, Greece, France, Spain, Italy, and Northern Africa, and even sometimes ripens its fruit in the open air in this country. Figs, when ripe, are, for the most part, dried in ovens to preserve them; and then packed very closely in the small chests and baskets in which we import them. The best come from Turkey; those of Kalamata, in the Morea, are said to be the most luscious. — (*Thomson's Dispensatory.*)

Dried figs form a very considerable article of commerce in Provence, Italy, and Spain; besides affording, as in the East, a principal article of sustenance for the population. In Spain, figs are chiefly exported from Andalusia and Valencia; but they are more or less abundant in every province. In the northern parts of France there are many fig gardens, particularly at Argenteuil.

Figs belong to that class of articles, the duties on which might be reduced, not only without any loss, but with very great advantage to the revenue. They are extensively used at the tables of the opulent; and would, there is no doubt, be much used by the middle classes, were their price lower. The importation, even with the present duty of 21*s.* 6*d.*, is about 20,000 cwt.; and as this duty is full 100 per cent. upon their price in bond, it may be fairly concluded, that were it reduced to 8*s.* or 10*s.* a cwt., the quantity imported would very soon be trebled, or more.

No abatement of duty is made on account of any damage received by figs.

FILE, FILES (Da. *File*; Du. *Tylen*; Fr. *Limes*; Ger. *Feilen*; It. *Lime*), an instrument of iron or forged steel, cut in little furrows, used to polish or smooth metals, timber, and other hard bodies.

FIR. See **PINE**.

FIRE-ARMS. Under this designation is comprised all sorts of guns, fowling-pieces, blunderbusses, pistols, &c. The manufacture of these weapons is of considerable importance; employing at all times, but especially during war, a large number of persons.

In consequence of the frequent occurrence of accidents from the bursting of insufficient barrels, the legislature has most properly interfered, not to regulate their manufacture, but to prevent all persons from using or selling barrels that have not been regularly proved in a public proof-house. The first act for this purpose was passed in 1813; but it was soon after superseded by a fuller and more complete one, the 55 Geo. 3. c. 59. This statute imposes a fine of 20*l.* on any person *using*, in any of the progressive stages of its manufacture, any barrel not duly proved; on any person *delivering* the same, except through a proof-house; and on any person *receiving*, for the purpose of making guns, &c. any barrels which have not passed through a proof-house. These penalties to be levied on conviction before 2 justices; with like penalties, to be similarly levied, on persons counterfeiting the *proof-marks*.

FIRE-WORKS. By 9 & 10 Will. 3., all sorts of fire-works are declared to be a common nuisance; and the *making, causing to be made, giving, selling, or offering* for sale, any squibs, rockets, serpents, or *other fire-works*, or any cases or implements for making the same, is made subject to a penalty of 5*l.*, to be recovered on conviction before a justice of the peace. Casting or firing any such fire-works, or permitting the same to be cast or fired, *from any house or place*, and casting or firing the same *into any house, shop, street, highway, or river*, is subjected to a penalty of 20*s.*, to be recovered in like manner; and if not immediately paid, the party to be imprisoned and kept to hard labour for any time not exceeding a month. But the statute provides, that it shall be lawful for the master, lieutenant, or commissioners of his Majesty's ordnance, or those authorised by them, to give orders for making any fire-works, to be used according to such orders.

FIRKIN, a measure of capacity, equal to 9 ale gallons, or 7½ Imperial gallons, or 2,538 cubic inches. — (See **WEIGHTS AND MEASURES**.)

FIRLOT, a dry measure used in Scotland. The Linlithgow wheat firlo is to the Imperial bushel as .998 to 1; and the Linlithgow barley firlo is to the Imperial bushel as 1.456 is to 1. — (See **WEIGHTS AND MEASURES**.)

FISH (Ger. *Fische*; Du. *Visschen*; Da. and Sw. *Fisk*; Fr. *Poissons*; It. *Pesci*; Sp. *Pescados*; Port. *Peixes*; Rus. *Rybi*; Pol. *Rybi*; Lat. *Pisces*), a term used in natural history to denote every variety of animal inhabiting seas, rivers, lakes, ponds, &c. that cannot exist for any considerable time out of the water. But in a commercial point of view, those fishes only are referred to, that are caught by man, and used either as food or for some other useful purpose. Of these, herring, salmon, cod, pilchard, mackerel, turbot, lobster, oyster, whale, &c. are among the most important. — (See the different articles under these titles.)

The supply of fish in the seas round Britain is most abundant, or rather quite inexhaustible. "The coasts of Great Britain," says Sir John Borroughs, "doe yield such a continued sea harvest of gain and benefit to all those that with diligence doe labour in the same, that no time or season of the yeare passeth away without some apparent meanes of profitable employment, especially to such as apply themselves to fishing; which, from the beginning of the year unto the latter end, continueth upon some part or other upon our coastes; and these in such infinite shoales and multitudes of fishes are offered to the takers, as may justly move admiration, not only to strangers, but to those that daily are employed amongst them." — "That this harvest," says Mr. Barrow, "ripe for gathering at all seasons of the year — without the labour of tillage, without expense of seed or manure, without the payment of rent or taxes — is inexhaustible, the extraordinary fecundity of the most valuable kinds of fish would alone afford abundant proof. To enumerate the thousands, and even millions of eggs, which are impregnated in the herring, the cod, the ling, and indeed in almost the whole of the esculent fish, would give but an inadequate idea of the prodigious multitudes in which they flock to our shores; the shoals themselves must be seen, in order to convey to the mind any just notion of their aggregate mass." — (For an account of the shoals of herrings, see **HERRING**.)

But, notwithstanding these statements, there has been, for these some years past, a growing complaint of a scarcity of such fish as breed in the Channel; and it is affirmed, in the report of the Commons' committee of 1833, on the Channel fisheries, that the fact of such scarcity existing has been completely established. The committee ascribe it to various causes, but principally to the destruction of the spawn or brood of fish, by fishing with trawl or drag nets with small meshes, near the shore, during the breeding season; a practice prohibited by several statutes, which seem, however, to have fallen into disuse. The committee represent the fishermen as being generally in a very depressed state, and that the business is, for the most part, very unprofitable. We believe that this is the fact; but we do not know any period when the same might not have

been said with quite as much truth as at present. Smith has remarked, that from the age of Theocritus downwards, fishermen have been proverbially poor — (*Wealth of Nations*, vol. i. p. 167.); and a library might be filled with the acts, reports, plans, tracts, &c. that have been printed in this country during the last 2 centuries, containing regulations, schemes, suggestions, &c. for the improvement of fisheries and fishermen. But it is not too much to say, that not one of these well meant endeavours, notwithstanding the enormous expense incurred in carrying some of them into effect, has been productive of any material advantage; and we see no reason to think that the suggestions of the late committee, supposing they were to be acted upon, would have any better success.

The injury done to the breeding grounds might, perhaps, be obviated; but besides this, the committee lay much stress on the encroachments of the French and other foreign fishermen, and on the licence given to import foreign-caught turbot, &c. duty free! We confess, it appears to us quite visionary to suppose that these circumstances can have much influence. Our fishermen, living upon the very shores of the bays to which the French are said to resort, have advantages on their side sufficient, surely, to insure them a superiority, without the forcible expulsion, supposing that could be accomplished, of their foreign competitors. A man who does not succeed in a business carried on at his own door so well as one who resides 100 miles off, must look for the cause in his want of skill or industry; and should seek rather to improve himself than to discard his rival. The proposition for excluding turbot, &c. of foreign catch, is one that ought not to be listened to for a single moment. Such exclusion could not be of the slightest advantage to the British fishermen, unless it occasioned a rise in the price of the fish; and we need not say, that if the legislature be to interfere at all in the matter, its interference ought to have for its object the lowering, not the raising of prices.

All that it is possible to do for the fishery, by relieving it from tithes and other burdens, and facilitating the disposal of the fish in the markets of this and other countries, ought to be done; but except in so far as its interests may be promoted in this way, and, perhaps, by some new regulations for preserving the brood, we do not see what more is to be done by legislative interference. It will be seen, in our articles on the herring and whale fisheries, that the bounty system was attended with vast expense, without leading to any useful result.

Except in London and a few sea-port towns, the consumption of fish in England is not great. The price in the metropolis, though it has been a good deal reduced of late years, is still very high. This has been pretty generally believed to be in no small degree owing to the salesmen of Billingsgate market being able, in a great measure, to regulate both the supply of the article and its price. The late committee, however, declare, that though they have not minutely examined the subject, it does not appear that any improper monopoly or injurious regulations subsist either in the mode of supplying the market, or in the sale of the fish. Had any such existed, the recent establishment of the Hungerford market would have tended materially to counteract their influence.

Mr. Barrow, in a valuable article on the fisheries, in the *Supplement to the Encyclopædia Britannica*, has estimated the value of the entire annual produce of the foreign and domestic fisheries of Great Britain at 8,300,000*l*. But it is admitted by every one who knows any thing of the subject, that this estimate is very greatly exaggerated. We doubt much, whether the entire value of the fisheries can be reckoned so high as 3,500,000.

Regulations as to Importation. — Fresh fish, British taken, and imported in British ships; and fresh turbot and lobsters, however taken or imported; may be landed in the United Kingdom without report, entry, or warrant. — (3 & 4 Will. 4. c. 52. § 2.)

Fresh fish of every kind, of British taking, and imported in British ships; and fresh lobsters and turbot, however taken, or in whatever ships imported; and cured fish of every kind, of British taking and curing, imported in British ships; shall be imported *free of all duties*, and shall not be deemed to be included in any charge of duty imposed by any act hereafter to be made on the importation of goods generally; provided that before any *cured fish* shall be entered free of duty, as being of such taking and curing, the master of the ship importing the same shall make and subscribe a declaration before the collector or comptroller, that such fish was actually caught, taken in British ships, and cured, wholly by his Majesty's subjects. — § 44.

Fish of foreign taking or curing, or in foreign vessels, except turbot and lobsters, stockfish, live eels, anchovies, sturgeon, botargo, and caviare, prohibited to be imported on pain of forfeiture. — § 58.

FLAX (Ger. *Flachs*; Du. *Vlaseh*; Fr. *Lin*; It. and Sp. *Lino*; Rus. *Len*, *Lon*; Pol. *Len*; Lat. *Linum*), an important plant (*Linum usitatissimum*) that has been cultivated from the earliest ages in Great Britain and many other countries; its fibres being manufactured into thread, and its seed crushed for oil. Generally, however, we have been in the habit of importing a large proportion of our supplies. The premiums given by the legislature to force the cultivation of flax, have had very little effect; the fact being, as Mr. Loudon has stated, that its culture is found to be, on the whole, less profitable than that of corn. When allowed to ripen its seed, it is one of the most severe crops.

The principal sorts of flax imported into this country are, Petersburg, Narva, Riga,

Revel, Pernau, Liebau, Memel, Oberland, and Dutch flax. The Petersburg and Narva flax are nearly of the same quality, the latter being but little inferior to the former. Both sorts come to us in bundles of 12, 9, and 6 heads. The Riga flax seems to deserve the preference of any imported from the Baltic. It is the growth of the provinces of Marienburg, Druania, Thiesenhausen, and Lithuania.

The best Marienburg is called simply Marienburg (M), or Marienburg clean; the second quality, cut (GM); and the third, *risten dreyband* (RD); of the three other provinces, the first quality bears the name of *rakitzer*; — as *Druania rakitzer* (DR), *Thiesenhausen rakitzer* (TR), and *Lithuania rakitzer* (LR). The cut flax of these three provinces is the second quality; and to the third quality belong the *badstüb* and *badstüb cut* (B and BG); the *paternoster* (PN); and *hafs three band* (HD). *Badstüb* and *paternoster* are the refuse of the *rakitzer* flax, and the *three band* again the refuse of the former sorts, and consequently very ordinary. The Revel and Pernau consists of Marienburg, cut, *risten*, *hafs three band*, and *three band*. The Liebau and Memel growths are distinguished by the denomination of *four* and *three band*. These two sorts, as well as the Oberland flax, come from Königsberg, Elbing, &c., and are little esteemed in the British markets.

Flanders or Dutch flax is well dressed, and of the finest quality.

Flax is extensively cultivated in Egypt. Of late years, some of the Italian ports which used to be supplied from Russia, have been fully supplied on lower terms from Alexandria.

The *Phormium tenax*, or New Zealand flax, is said to exceed every other species in strength of fibre and whiteness; qualities which (if it really possess them in the degree stated) must make it peculiarly well fitted for being made into canvass and cordage. It has been obtained within these few years at second hand from Sydney and Van Diemen's Land; the imports from them having amounted, in 1831, to 15,725 cwt. Attempts are now making, but with what success remains to be seen, to raise it in this country.

When flax is brought to the principal Russian ports whence it is shipped, it is classified according to its qualities, and made up in bundles by sworn inspectors (*bruckers*) appointed by government for the assortment of that and all other merchandise. These functionaries are said to perform their task with laudable impartiality and exactness. A ticket is attached to every bundle of assorted flax, containing the names of the inspector and owner, the sort of flax, and the period when it was selected or inspected. — (See HEMP.) Good flax should be of a fine bright colour, well separated from the tow, codilla, or coarser portion of the plant; and of a long, fine, and strong fibre. In purchasing flax, it is usual to employ agents wholly devoted to this peculiar business.

Of 936,411 cwt. of flax and tow imported into Great Britain in 1831, 623,256 cwt. were brought from Russia; 128,231 cwt. from the Netherlands; 101,729 cwt. from Prussia; 55,324 cwt. from France; 1,415 cwt. from Italy; 15,275 cwt. from New South Wales, &c. Almost the whole of this quantity was retained for home consumption. The duty was recently reduced, and is now only 1*d.* a cwt.

Flax, the produce or manufacture of Europe, not to be imported for home consumption, except in British ships, or in ships of the country of which it is the produce, or of the country from which it is imported, on pain of forfeiture of the goods and 100*l.* by the master of the ship. — (3 & 4 Will. 4. c. 54.)

We subjoin an account of the charges on the importation of the different sorts of flax from Petersburg and Riga.

Charges at Petersburg on 12 Head Flax, per ton.		
Cirea, 16 bobbins = 63 poods = 1 ton.		
Duty, 540 cop. per hercovitz	-	51 2
Quarantine duty, 1 per cent.	-	0 51
Additional duty, 10 per cent.	-	3 40
	R. 57	76
Custom-house charges, 4 per cent.	-	1 51
Receiving and weighing, 40 cop. per bobbin	-	6 40
Bracking, 1 roub. per hercovitz	-	6 50
Binding, 75 cop. per ditto	-	4 72
Lighterage and attendance to Cronstadt, 8 roub. per 60 poods	-	8 40
Mats	-	8 0
Brokerage, 60 cop. per ton	-	0 60
Fixed charges	R. 75	69
Brokerage, $\frac{1}{2}$ per cent.		
Commission and extra charges, 5 per cent.		
Stamp, $\frac{1}{2}$ per cent.		
Brokerage on bills, $\frac{1}{2}$ per cent.		
are charges varying according to the price paid.		
Riga flax is bought at so much per shippound. $6\frac{1}{2}$ shippound = 1 ton.		
The charges of importation are the same, or nearly so, as on Petersburg flax.		

Charges here, per ton, taking the price at 45 <i>l.</i>		
	<i>l.</i>	<i>s. d.</i>
Insurance, 12 <i>s.</i> 6 <i>d.</i> per cent. and policy, during the summer, for best risks	0	6 9
Sound dues	0	5 6
Freight, say 52 <i>s.</i> 6 <i>d.</i> per ton in full	2	12 6
Customs	0	1 8
Landing charges	1	11 0
Discount, $\frac{3}{4}$ per cent. (being sold at 9 months' credit)	1	13 9
Brokerage, $\frac{1}{2}$ per cent.	0	4 6
	<i>l.</i> 5	15 8
Loss by tare, 2 per cent.	0	18 0
	<i>l.</i> 6	13 8

9 Head Flax.		
26 bobbins = 63 poods = 1 ton.		
Fixed charges, at Petersburg amount to	Rou. cop.	80 35
The other charges, same as on 12 head; the charges of import may be called the same as on 12 head also, the difference being only on the value; which makes the insurance, discount, and brokerage, of less amount. The increase of fixed charges at Petersburg is owing to the larger number of bobbins to the ton.		
6 Head Flax.		
47 bobbins = 63 poods = 1 ton.		
Fixed charges, per ton	Rou. cop.	21 52
Other charges, vide <i>supra</i> .		

FLAX-SEED, or LINSEED (Fr. *Lin*, *Graine de Lin*; Ger. *Leinsaat*; Du. *Lynzaad*; It. *Linsene*; Sp. *Linaza*; Port. *Linaca*; Pol. *Siemie*, *Iniane*; Rus. *Senja lenjanoe*; Lat. *Linum semen*), the seed of flax. It contains a great deal of oil, which it yields by expression; and is cultivated either that it may be used in sowing, or sent to the crushing mills to be converted into oil.

As the quality of the crop depends much on the seed employed, a good deal of care is requisite in selecting the best. Generally speaking, it should be chosen of a bright, brownish colour, oily to the feel, heavy, and quite fresh. Dutch seed is in the highest

estimation for sowing ; it not only ripens sooner than any other that is imported, but produces larger crops, and of the quality that best suits our principal manufactures. American seed produces fine flax, but the produce is not so large as from Dutch seed. British flax-seed is sometimes used instead of Dutch ; but the risk of the crop misgiving is so much greater, " that those only who are ignorant of the consequences, or who are compelled from necessity, are chargeable with this act of ill-judged parsimony."— (*Lou-don's Ency. of Agriculture*.) Crushing seed is principally imported from Russia, but considerable quantities are also brought from Italy and Egypt. Of 2,759,103 bushels of linseed imported in 1831, 2,210,702 were brought from Russia, 172,099 from Prussia, 106,294 from the United States, 105,448 from Italy, 98,847 from Egypt, 53,738 from the Netherlands, &c. The duty is 1s. a quarter ; and the price, in December, 1833, varied from 45s. to 54s. a quarter.

FLOTSAM, JETSAM, AND LAGAN. In order to constitute a legal wreck, the goods must come to land. If they continue at sea, the law distinguishes them by the foregoing uncouth and barbarous appellations: *flotsam* is when the goods continue swimming on the surface of the waves; *jetsam* is when they are sunk under the surface of the water; and *lagan* is when they are sunk, but tied to a cork or buoy to be found again.— (*Blackstone*, book i. c. 8.) Foreign liquors, brought or coming into Great Britain or Ireland, as derelict, flotsam, &c., are to pay the same duties and receive the same drawbacks as similar liquors regularly imported.

FLOUR (Ger. *Feines mehl*, *Semmelmehl*; Du. *Bloem*; Fr. *Fleur de farine*; It. *Fiore*; Sp. *Flor*), the meal of wheat corn, finely ground and sifted. There are three qualities of flour, denominated *first*, *seconds*, and *thirds*, of which the first is the purest.— (See CORN LAWS AND CORN TRADE.)

FOOT, a measure of length, consisting of 12 inches.— (See WEIGHTS AND MEASURES.)

FORESTALLING, the buying or contracting for any cattle, provision, or merchandise, on its way to the market, or dissuading persons from buying their goods there, or persuading them to raise the price, or spreading any false rumour with intent to enhance the value of any article. Several statutes had from time to time been passed, prohibiting forestalling under severe penalties. But as more enlarged views upon such subjects began to prevail, the impolicy of these statutes became obvious. They were consequently repealed in 1772. But forestalling is still punishable at common law by fine and imprisonment. It is doubtful, however, whether any jury would now convict an individual accused of such practices.— (*Wealth of Nations*, vol. ii. p. 409.)

FRANKINCENSE. See ROSIN.

FREIGHT, the sum paid by the merchant or other person hiring a ship, or part of a ship, for the use of such ship or part, during a specified voyage or for a specified time.

The freight is most commonly fixed by the charterparty — (see CHARTERPARTY) — or bill of lading — (see BILL OF LADING); but in the absence of any formal stipulations on the subject, it would be due according to the custom or usage of trade.

In the case of a charterparty, if the stipulated payment be a gross sum for an entire ship, or an entire part of a ship, for the whole voyage, the gross sum will be payable although the merchant has not fully laden the ship. And if a certain sum be stipulated for every ton, or other portion of the ship's capacity, for the whole voyage, the payment must be according to the number of tons, &c. which the ship is proved capable of containing, without regard to the quantity actually put on board by the merchant. On the other hand, if the merchant have stipulated to pay a certain sum per cask or bale of goods, the payment must be, in the first place, according to the number of casks and bales shipped and delivered; and if he have further covenanted to furnish a complete lading, or a specific number of casks or bales, and failed to do so, he must make good the loss which the owners have sustained by his failure.

If an entire ship be hired, and the burden thereof be expressed in the charterparty, and the merchant bind himself to pay a certain sum for every ton, &c. of goods which he shall lade on board, but does not bind himself to furnish a complete lading, the owners can only demand payment for the quantity of goods actually shipped. But if the merchant agree to load a full and complete cargo, though the ship be described as of less burden than she really is, the merchant must load a full cargo, according to the *real burden* of the ship, and he will be liable for freight according to what ought to be loaded.

The delivery of goods at the place of destination is in general necessary to entitle the owner to freight; but with respect to living animals, whether men or cattle, which may frequently die during the voyage, without any fault or neglect of the persons belonging to the ship, it is ruled, that if there be no express agreement whether the freight is to be paid for the lading, or for the transporting them, freight shall be paid as well for the dead as for the living: if the agreement be to pay freight for the *lading*, then death certainly cannot deprive the owners of the freight; but if the agreement be to pay freight

for *transporting* them, then no freight is due for those that die on the voyage, because is to them the contract is not performed. These distinctions have been made in the civil law, and have been adopted into the modern systems of maritime law.

Freight is most frequently contracted to be paid either by the whole voyage, or by the month, or other time. In the former case the owners take upon themselves the chance of the voyage being long or short: but in the latter the risk of the duration falls upon the merchant; and if no time be fixed for the commencement of the computation, it will begin from the day on which the ship breaks ground and commences her voyage, and will continue during the whole course of the voyage, and during all unavoidable delays *not occasioned by the act or neglect of the owners or master*, or by such circumstances as occasion a suspension of the contract for a particular period. Thus, the freight will be payable for the time consumed in necessary repairs during a voyage, provided it do not appear that the ship was insufficient at the outset, or that there was any improper delay in repairing her.

In the absence of an express contract to the contrary, the entire freight is not earned until the whole cargo be ready for delivery, or has been delivered to the consignee according to the contract for its conveyance.

If a consignee receive goods in pursuance of the usual bill of lading, by which it is expressed that he is to pay the freight, he, by such receipt, makes himself debtor for the freight, and may be sued for it. But a person who is only an agent for the consignee, and who is known to the master to be acting in that character, does not make himself personally answerable for the freight by receiving the goods, although he also enters them in his own name at the Custom-house.

In some cases freight is to be paid, or rather an equivalent recompence made to the owners, although the goods have not been delivered at the place of destination, and though the contract for conveyance be not strictly performed. Thus, if part of the cargo be thrown overboard for the necessary preservation of the ship and the remainder of the goods, and the ship afterwards reach the place of destination, the value of this part is to be answered to the merchant by way of general average, and the value of the freight thereof allowed to the owner. So, if the master be compelled by necessity to sell a part of the cargo for victuals or repairs, the owners must pay to the merchant the price which the goods would have fetched *at the place of destination*; and, therefore, are allowed to charge the merchant with the money that would have been due if they had been conveyed thither.

When goods are deteriorated during a voyage, the merchant is entitled to a compensation, provided the deterioration has proceeded from the fault or neglect of the master or mariners; and of course he is not answerable for the freight, unless he accept the goods, except by way of deduction from the amount of the compensation. On the other hand, if the deterioration has proceeded from a principle of decay naturally inherent in the commodity itself, whether active in every situation, or in the confinement and closeness of a ship, or from the perils of the sea, or the act of God, the merchant must bear the loss and pay the freight; for the master and owners are in no fault, nor does their contract contain any insurance or warranty against such an event. In our West India trade, the freight of sugar and molasses is usually regulated by the weight of the casks at the port of delivery here, which, in fact, is in every instance less than the weight at the time of the shipment; and, therefore, the loss of freight occasioned by the leakage necessarily falls upon the owners of the ship by the nature of the contract.

Different opinions have been entertained by Valin, Pothier, and other great authorities as to maritime law, with respect to the expediency of allowing the merchant to abandon his goods for freight in the event of their being damaged. This question has not been judicially decided in this country. "The only point," says Lord Tenterden, "intended to be proposed by me as doubtful, is the right to abandon for freight alone at the port of destination: and in point of practice, I have been informed that this right is never claimed in this country."—(*Law of Shipping*, part iii. c. 7.)

Freight being the return made for the conveyance of goods or passengers to a particular destination, no claim arises for its payment in the event of a total loss; and it is laid down by Lord Mansfield, that "in case of a total loss with salvage, the merchant may either take the part saved, or abandon."—(*Abbott*, part iii. c. 7.) But after the merchant has made his election, he must abide by it.

It often happens that a ship is hired by a charterparty to sail from one port to another, and thence back to the first—as, for example, from London to Leghorn, and from Leghorn back to London—at a certain sum to be paid for every month or other period of the duration of the employment. Upon such a contract, *if the whole be one entire voyage*, and the ship sail in safety to Leghorn, and there deliver the goods of the merchant, and take others on board to be brought to London, but happen to be lost in her return thither, nothing is due for freight, although the merchant has had the benefit of the voyage to Leghorn: but, *if the outward and homeward voyages be distinct*, freight will be

due for the proportion of the time employed in the outward voyage. "If," said Lord Mansfield, in a case of this sort, "there be *one entire voyage out and in*, and the ship be at any way on the homeward voyage, no freight is due; no wages are due, because the whole profit is lost; and by express agreement the parties may make the outward and homeward voyage one. Nothing is more common than two voyages: *wherever there are two voyages, and one is performed*, and the ship is lost on the homeward voyage, freight is due for the first."—(*K. B. Trin. Term, 16 Geo. 3.*)

It frequently happens that the master or owner fails to complete his contract, either by not delivering the whole goods to the consignee or owner, or by delivering them at a place short of their original destination; in these cases, if the owner or consignee of the goods derive any benefit from their conveyance, he is liable to the payment of freight according to the proportion of the voyage performed, or *pro rata itineris peracti*: and though contracts of this nature be frequently entire and indivisible, and the master or owner of the ship cannot, from their nature, sue thereon, and recover a rateable freight, or *pro rata itineris*; yet he may do so upon a fresh implied contract, for as much as he deserves to have, unless there be an express clause in the original charterparty or contract to the contrary. A fresh implied contract is inferred from the owner's or consignee's acceptance of the goods. Many difficulties have, indeed, arisen in deciding as to what shall amount to an acceptance: it is not, however, necessary actually to receive the goods; acceptance may be made by the express or implied directions, and with the consent, of the owner or consignee of the goods, but not otherwise.

It sometimes happens that the owner of the ship, who is originally entitled to the freight, sells or otherwise disposes of his interest in the ship; where a chartered ship is sold *before* the voyage, the vendee, and not the vendor or party to whom he afterwards assigns the charterparty, is entitled to the freight. But where a ship has been sold *during* the voyage, the owner, with whom a covenant to pay freight has been made, is entitled to the freight, and not the vendee. A mortgagee who does not take possession, is not entitled to the freight.

The time and manner of paying freight are frequently regulated by express stipulations in a charterparty, or other written contract; and when that is the case, they must be respected; but if there be no express stipulation contrary to or inconsistent with the right of *lien*, the goods remain as a security till the freight is paid; for the master is not bound to deliver them, or any part of them, without payment of the freight and other charges in respect thereof. But the master cannot detain the cargo on board the vessel till these payments be made, as the merchant would, in that case, have no opportunity of examining the condition of the goods. In England, the practice is, when the master is doubtful of payment, to send such goods as are not required to be landed at any particular wharf, to a public wharf, ordering the wharfinger not to part with them till the freight and other charges are paid. No right of lien for freight can exist, unless the freight be earned; if the freighter or a stranger prevent the freight from becoming due, the ship owner or master's remedy is by action of damages.

(For further information and details with respect to this subject, see the art. *CHARTER-PARTY*, in this Dictionary; *Abbott* (Lord Tenterden) *on the Law of Shipping*, part iii. c. 7.; *Chitty's Commercial Law*, vol. iii. c. 9.; *Molloy de Jure Maritimo*, book ii. c. 4., &c.)

FRUIT (Ger. *Obst, Früchte*; Du. *Ooft*; Fr. *Fruit*; It. *Frutta, Frutte*; Sp. *Fruta*; Rus. *Ovoshchsch*; Lat. *Fructum*). This appellation is bestowed by commercial men upon those species of fruit, such as oranges, lemons, almonds, raisins, currants, apples, &c., which constitute articles of importation from foreign countries.

FULLERS' EARTH (Ger. *Wulkererde*; Du. *Volluarde*; Fr. *Terre à foulon*; It. *Terra da purgatori*; Sp. *Tierra de batan*; Rus. *Schiffernaia*; Lat. *Terra fullonum*), a species of clay, of a greenish white, greenish grey, olive and oil green, and sometimes spotted colour. It is usually opaque, very soft, and feels greasy. It is used by fullers to take grease out of cloth before they apply the soap. The best is found in Buckinghamshire and Surrey. When good, it has a greenish white, or greenish grey colour, falls into powder in water, appears to melt on the tongue like butter, communicates a milky hue to water, and deposits very little sand when mixed with boiling water. The remarkable detergent property on woollen cloth depends on the alumina, which should be at least one fifth of the whole, but not much more than one fourth, lest it become too tenacious.—(*Thomson's Chemistry*; *Jameson's Mineralogy*.) Malcolm, in his *Survey of Surrey*, published in 1809, says that he took considerable pains in endeavouring to ascertain the consumption of fullers' earth, and that he found it to be about 6,300 tons a year for the entire kingdom, of which about 4,000 tons were furnished by Surrey.

FUNDS (PUBLIC), the name given to the public funded debt due by government.

The practice of borrowing money in order to defray a part of the war expenditure began, in this country, in the reign of William III. In the infancy of the practice, it was customary to borrow upon the security of some tax, or portion of a tax, set apart as a fund for discharging the principal and interest of the sum borrowed. This discharge

was, however, very rarely effected. The public exigencies still continuing, the loans were, in most cases, either continued, or the taxes were again mortgaged for fresh ones. At length the practice of borrowing for a fixed period, or, as it is commonly termed, upon *terminable* annuities, was almost entirely abandoned, and most loans were made upon *interminable* annuities, or until such time as it might be convenient for government to pay off the principal.

In the beginning of the funding system, the term fund meant the taxes or funds appropriated to the discharge of the principal and interest of loans; those who held government securities, and sold them to others, selling, of course, a corresponding claim upon some fund. But after the debt began to grow large, and the practice of borrowing upon interminable annuities had been introduced, the meaning attached to the term fund was gradually changed; and instead of signifying the security upon which loans were advanced, it has, for a long time, signified the principal of the loans themselves.

Owing partly, perhaps, to the scarcity of disposable capital at the time, but far more to the supposed insecurity of the Revolutionary establishment, the rate of interest paid by government in the early part of the funding system was, comparatively, high. But as the country became richer, and the confidence of the public in the stability of government was increased, ministers were enabled to take measures for reducing the interest, first in 1716, and again in 1749.

During the reigns of William III. and Anne, the interest stipulated for loans was very various. But in the reign of George II. a different practice was adopted. Instead of varying the interest upon the loan according to the state of the money market at the time, the rate of interest was generally fixed at *three or three and a half* per cent.; the necessary variation being made in the principal funded. Thus, suppose government were anxious to borrow, that they preferred borrowing in a 3 per cent. stock, and that they could not negotiate a loan for less than $4\frac{1}{2}$ per cent.; they effected their object by giving the lender, in return for every 100*l.* advanced, 150*l.* 3 per cent. stock; that is, they bound the country to pay him or his assignees 4*l.* 10*s.* a year in all time to come, or, otherwise, to extinguish the debt by a payment of 150*l.* In consequence of the prevalence of this practice, the principal of the debt now existing amounts to nearly *two fifths* more than the sum actually advanced by the lenders.

Some advantages are, however, derivable, or supposed to be derivable, from this system. It renders the management of the debt, and its transfer, more simple and commodious than it would have been, had it consisted of a great number of funds bearing different rates of interest: and it is contended, that the greater field for speculation afforded to the dealers in stocks bearing a low rate of interest, has enabled government to borrow, by funding additional capitals, for a considerably less payment on account of interest than would have been necessary had no such increase of capital been made.

Were this a proper place for entering upon such discussions, it would be easy to show that the advantages now referred to are really of very trifling importance; and that the method of funding by an increase of capital has been a most improvident one, and most injurious to the public interests. But it would be quite foreign from the objects of this work to enter into any examination of such questions; our readers will, however, find them fully investigated in an article in the 93d No. of the *Edinburgh Review*. Here we have merely to consider funded property, or government securities, as transferable or marketable commodities. The following is an account of the progress of the national debt of Great Britain, from the Revolution to the present time:—

	Principal.	Interest.
	£	£
Debt at the Revolution in 1689	664,263	59,855
Excess of debt contracted during the reign of William III. above debt paid off	15,730,439	1,271,087
Debt at the accession of Queen Anne in 1702	16,394,702	1,310,942
Debt contracted during Queen Anne's reign	37,750,661	2,040,416
Debt at the accession of George I. in 1714	54,145,363	3,351,358
Debt paid off during the reign of George I. above debt contracted	2,053,125	1,133,807
Debt at the accession of George II. in 1727	52,092,238	2,217,551
Debt contracted from the accession of George II. till the peace of Paris in 1763, 3 years after the accession of George III.	86,773,192	2,634,500
Debt in 1763	138,865,430	4,852,051
Paid during peace	10,281,795	380,480
Debt at the commencement of the American war in 1775	128,583,635	4,471,571
Debt contracted during the American war	121,267,903	4,980,401
Debt at the conclusion of the American war in 1784	249,851,628	9,451,772
Paid during peace, from 1784 to 1793	10,501,380	243,277
Debt at the commencement of the French war in 1793	239,350,148	9,208,495
Debt contracted during the French war	608,932,329	24,645,971
Total funded and unfunded debt, 5th of January, 1817, when the English and Irish Exchequers were consolidated	848,282,477	33,854,466

An Account of the Public Funded and Unfunded Debt of Great Britain and Ireland, and the Charge thereon, on the 5th of January, 1833. —
(*Finance Accounts for 1832, pp. 140-141. &c.*)

* Exclusive of 34,521. 7s. 10d., the annual charge on capitals and long annuities, standing in the names of the national debt commissioners, on account of stock unclaimed 10 years or upwards, and of unclaimed dividends; and also on account of donations and bequests.
The act 10 Geo. 4. c. 27. (abolishing the sinking fund) enacts, that the sum thenceforth annually applicable to the reduction of the national debt, shall consist of the actual surplus revenue beyond the expenditure. In 1832, this surplus amounted to 614,758. 18s. 8d.

Since 1817, a deduction has been made of about *sixty* millions from the principal of the debt, and about *five* millions from the annual charge on its account. This diminution has been principally effected by taking advantage of the fall in the rate of interest since the peace, and offering to pay off the holders of different stocks, unless they consented to accept a reduced payment; and had it not been for the highly objectionable practice, already adverted to, of funding large capitals at a low rate of interest, the saving in this way might have been incomparably larger. — (See Table on opposite page.)

We shall now subjoin some account of the different funds or stocks forming the public debt.

I. FUNDS BEARING INTEREST AT THREE PER CENT.

1. *South Sea Debt and Annuities.* — This portion of the debt, amounting, on the 5th of January, 1833, to 10,144,584*l.*, is all that now remains of the capital of the once famous, or rather infamous, South Sea Company. The Company has, for a considerable time past, ceased to have any thing to do with trade: so that the functions of the directors are wholly restricted to the transfer of the Company's stock, and the payment of the dividends on it; both of which operations are performed at the South Sea House, and not at the Bank. The dividends on the old South Sea annuities are payable on the 5th of April and 10th of October; the dividends on the rest of the Company's stock are payable on the 5th of January and 5th of July.

2. *Debt due to the Bank of England.* — This consists of the sum of 14,686,800*l.* lent by the Bank to the public at 3 per cent.; dividends payable on the 5th of April and 10th of October. This must not be confounded with the Bank capital of 14,553,000*l.*, on which the stockholders divide. The dividend on the latter has been 8 per cent. since 1823. — (See *antè*, p. 81.)

3. *Bank Annuities created in 1726.* — The civil list settled upon George I. was 700,000*l.* a year; but having fallen into arrear, this stock was created for the purpose of cancelling Exchequer bills that had been issued to defray the arrear. "The capital is irredeemable; and being small, in comparison with the other public funds, and a stock in which little is done on speculation, the price is generally at least 1 per cent. lower than the 3 per cent. consols." — (Cohen's edit. of *Fairman on the Funds*, p. 40.)

4. *Three per Cent. Consols, or Consolidated Annuities.* — This stock forms by much the largest portion of the public debt. It had its origin in 1751, when an act was passed, consolidating (hence the name) several separate stocks bearing an interest of 3 per cent. into one general stock. At the period when the consolidation took place, the principal of the funds blended together amounted to 9,137,821*l.*; but by the funding of additional loans, and parts of loans, in this stock, it amounted, on the 5th of January, 1833, to the immense sum of 347,458,931*l.*!

The consolidated annuities are distinguished from the 3 per cent. reduced annuities, by the circumstance of the interest upon them never having been varied, and by the dividends becoming due at different periods. This stock is, from its magnitude, and the proportionally great number of its holders, the soonest affected by all those circumstances which tend to elevate or depress the price of funded property. And, on this account, it is the stock which speculators and jobbers most commonly select for their operations. Dividends payable on the 5th of January and 5th of July.

5. *Three per Cent. Reduced Annuities.* — This fund was established in 1757. It consisted, as the name implies, of several funds which had previously been borrowed at a higher rate of interest; but, by an act passed in 1749, it was declared that such holders of the funds in question as did not choose to accept in future of a reduced interest of 3 per cent. should be paid off; — an alternative which comparatively few embraced. The debts that were thus reduced and consolidated, amounted, at the establishment of the fund, to 17,571,574*l.* By the addition of new loans, they now amount to 123,029,913*l.* Dividends payable on the 5th of April and 10th of October.

II. FUNDS BEARING MORE THAN THREE PER CENT. INTEREST.

1. *Annuities at 3½ per Cent., 1818.* — This stock was formed in 1818, partly by a subscription of 3 per cent. consolidated and 3 per cent. reduced annuities, and partly by a subscription of Exchequer bills. It was made redeemable at par any time after the 5th of April, 1829, upon 6 months' notice being given. Dividends payable on the 5th of April and 10th of October. The capital of this stock amounts to 12,350,802*l.*

2. *Reduced 3½ per Cent. Annuities.* — This stock was created in 1824, by the transfer of a stock bearing interest at 4 per cent. (Old 4 per cents.) It is redeemable at pleasure. Dividends payable 5th of April and 10th of October. Amount, on the 5th of January, 1833, 63,453,821*l.*

3. *New 3½ per Cent. Annuities.* — This stock was formed by the act 11 Geo. 4. c. 12., out of the stock known by the name of "New 4 per cents.," amounting on the 5th of January, 1830, to 144,331,212*l.* The holders of this 4 per cent. stock had their option,

either to subscribe it into the new $3\frac{1}{2}$ per cent. annuities, or into a new 5 per cent. stock, at the rate of 100*l.* 4 per cents. for 70*l.* 5 per cents. Dissentients to be paid off. Only 467,713*l.* new 5 per cent. stock was created under this arrangement. The sum required to pay dissentients was 2,610,000*l.* The new $3\frac{1}{2}$ per cent. stock that was thus created, amounted, on the 5th of January, 1833, to 137,613,820*l.* Dividends payable 5th of January and 5th of July.

4. *Four per Cent. Annuities, created 1826.* — By virtue of the act 7 Geo. 4. c. 39. 3,000,000 of Exchequer bills were funded, at the rate of 107*l.* 4 per cent. annuities for every 100*l.* bills. In 1829 (10 Geo. 4. c. 31.), 3 additional millions of Exchequer bills were funded in this stock, at the rate of 101*l.* 10s. stock for every 100*l.* bills. Dividends payable 5th of April and 10th of October. Amount, 5th of January, 1833, 10,796,340*l.* A considerable sum has been transferred from this stock for the purchase of annuities under the 10 Geo. 4. c. 24.

5. *New 5 per Cent.* — Amount, 5th of January, 1833, 462,737*l.* — (See above, 3. *New $3\frac{1}{2}$ per Cent. Annuities.*)

III. ANNUITIES.

1. *Long Annuities.* — These annuities were created at different periods, but they all expire together in 1860. They were chiefly granted by way of premiums or douceurs to the subscribers to loans. Payable on the 5th of April and 10th of October.

2. *Annuities per 4 Geo. 4. c. 22.* — This annuity is payable to the Bank of England, and is commonly known by the name of the “Dead weight” annuity — (see *antè*, p. 80.). It expires in 1867. It is equivalent to a perpetual annuity of 470,319*l.* 10s.

3. *Annuities per 48 Geo. 3. and 10 Geo. 4. c. 24.* — These acts authorised the commissioners for the reduction of the national debt, to grant annuities for terms of years, and life annuities; accepting in payment either money or stock according to rates specified in Tables to be approved by the Lords of the Treasury. No annuities are granted on the life of any *nominee* under 15 years of age, nor in any case not approved by the commissioners. Annuities for terms of years not granted for any period less than *ten* years. These annuities are transferable, but not in parts or shares. Those for terms of years, payable 5th of January and 5th of July; and those for lives, 5th of April and 10th of October.

The annuities for terms of years granted under the above acts, amounted, on the 10th of October, 1830, to 772,758*l.*, being equal to a perpetual annuity of 491,058*l.* The life annuities amounted, at the same period, to 666,411*l.*, being equal to a perpetual annuity of 236,071*l.* — (*Parl. Paper*, No. 174. Sess. 1831.)

Irish Debt. — It seems unnecessary to enter into any details with respect to the public debt of Ireland. The various descriptions of stock of which it consists, and their amount, are specified above. The dividends on the Irish debt are paid at the Bank of Ireland; and in order to accommodate the public, stock may be transferred, at the pleasure of the holders, from Ireland to Great Britain, and from the latter to the former.

Exchequer Bills, are bills of credit issued by authority of parliament. They are for various sums, and bear interest (at present at the rate of $1\frac{1}{2}$ per diem, per 100*l.*) according to the usual rate at the time. The advances of the Bank to government are made upon Exchequer bills; and the daily transactions between the Bank and government are principally carried on through their intervention. Notice of the time at which outstanding Exchequer bills are to be paid off is given by public advertisement. Bankers prefer vesting in Exchequer bills to any other species of stock, even though the interest be for the most part comparatively low; because the capital may be received at the Treasury at the rate originally paid for it, the holders being exempted from any risk of fluctuation. Exchequer bills were first issued in 1696, and have been annually issued ever since. The amount outstanding, and *unprovided for*, on the 5th of January, 1833, was 27,278,000*l.*

India Stock and India Bonds, are always quoted in the lists of the prices of the public funds. The stock on which the East India Company divide is 6,000,000*l.*; the dividend on which has been, since 1793, $10\frac{1}{2}$ per cent.; and is to remain at that rate during the continuance of the charter. India bonds are generally for 100*l.* each; and bear at present $2\frac{1}{2}$ per cent. interest, payable 31st of March and 30th of September. In selling them, the interest due down to the day of sale is, with the premium, added to the amount of the bills; the total being the sum to be paid by the purchaser. The premium, which is, consequently, the only variable part of the price, is influenced by the circumstances which influence the price of stocks generally, — the number of bonds in circulation, &c.

The price of stocks is influenced by a variety of circumstances. Whatever tends to shake or to increase the public confidence in the stability of government, tends, at the same time, to lower or increase the price of stocks. They are also affected by the state of the revenue; and, more than all, by the facility of obtaining supplies of disposable capital, and the interest which may be realised upon loans to responsible persons.

From 1730 till the rebellion of 1745, the 3 per cents. were never under 89, and were once, in June, 1737, as high as 107. During the rebellion they sunk to 76; but in 1749 rose again to 100. In the interval between the peace of Paris, in 1763, and the breaking out of the American war, they averaged from 80 to 90; but towards the close of the war they sunk to 54. In 1792, they were, at one time, as high as 96. In 1797, the prospects of the country, owing to the successes of the French, the mutiny in the fleet, and other adverse circumstances, were by no means favourable; and, in consequence, the price of 3 per cents. sunk, on the 20th of September, on the intelligence transpiring of an attempt to negotiate with the French republic having failed, to 47 $\frac{3}{8}$, being the lowest price to which they have ever fallen.

Prices of 3 per Cent. Consols, in February and August, each Year since 1820. — (*Report of Bank Committee.*)

Years.	Price of Consols.	Years.	Price of Consols.

India stock, dividend 10 $\frac{1}{2}$ per cent. - - -	-	-	-	-	-	-

Agreements for the sale of stock are generally made at the Stock Exchange, which is frequented by a set of middlemen called *jobbers*, whose business is to accommodate the buyers and sellers of stock with the exact sums they want. A *jobber* is generally possessed of considerable property in the funds; and he declares a price at which he will either sell or buy. Thus, he declares he is ready to buy 3 per cent. consols at 85 $\frac{1}{2}$, or to sell at 85 $\frac{5}{8}$; so that, in this way, a person willing to buy or sell any sum, however small, has never any difficulty in finding an individual with whom to deal. The *jobber's* profit is generally $\frac{1}{8}$ per cent., for which he transacts both a sale and a purchase. He frequently confines himself entirely to this sort of business, and engages in no other description of stock speculation.

We borrow the following details from Dr. Hamilton's valuable work on the National Debt: —

"A bargain for the sale of stock, being agreed on, is carried into execution at the Transfer Office, at the Bank, or the South Sea House. For this purpose the seller makes out a note in writing, which contains the name and designation of the seller and purchaser, and the sum and description of the stock to be transferred. He delivers this to the proper clerk; and then fills up a receipt, a printed form of which, with blanks, is obtained at the office. The clerk in the mean time examines the seller's accounts, and if he find him possessed of the stock proposed to be sold, he makes out the transfer. This is signed in the books by the seller, who delivers the receipt to the clerk; and upon the purchaser's signing his acceptance in the book, the clerk signs the receipt as witness. It is then delivered to the purchaser upon payment of the money, and thus the business is completed.

"This business is generally transacted by brokers, who derive their authority from their employers by powers of attorney. Forms of these are obtained at the respective offices. Some authorise the broker to

* The letters of the alphabet are placed round the room, and the seller must apply to the clerk who has his station under the initial of his name. In all the offices, there are supervising clerks who join in witnessing the transfer.

sell, others to accept a purchase, and others to receive the dividends. Some comprehend all these objects, and the two last are generally united. Powers of attorney authorising to sell must be deposited in the proper office for examination one day before selling : a stockholder acting personally, after granting a letter of attorney, revokes it by implication.

"The person in whose name the stock is invested when the books are shut, previous to the payment of the dividends, receives the dividend for the half year preceding ; and, therefore, a purchaser during the currency of the half year has the benefit of the interest on stock he buys, from the last term of payment to the day of transfer. The price of stock, therefore, rises gradually, *cæteris paribus*, from term to term ; and when the dividend is paid, it undergoes a fall equal thereto. Thus, the 3 per cent. consols should be higher than the 3 per cent. reduced by $\frac{1}{2}$ per cent. from the 5th of April to the 5th of July, and from the 10th of October to the 5th of January ; and should be as much lower from the 5th of January to the 5th of March, and from the 5th of July to the 10th of October ; and this is nearly the case. Accidental circumstances may occasion a slight deviation.

"The dividends on the different stocks being payable at different terms, it is in the power of the stockholders to invest their property in such a manner as to draw their income quarterly.

"The business of speculating in the stocks is founded on the variation of the price of stock, which it probably tends in some measure to support. It consists in buying or selling stock according to the views entertained, by those who engage in this business, of the probability of the value rising or falling.

"This business is partly conducted by persons who have property in the funds. But a practice also prevails among those who have no such property, of contracting for the sale of stock on a future day at a price agreed on. For example, A. may agree to sell B. 10,000*l.* of 3 per cent. stock, to be transferred in 20 days, for 6,000*l.* A. has, in fact, no such stock ; but if the price on the day appointed for the transfer be only 58, he may purchase as much as will enable him to fulfil his bargain for 5,800*l.*, and thus gain 200*l.* by the transaction : on the other hand, if the price of that stock should rise to 62, he will lose 200*l.* The business is generally settled without any actual purchase of stock, or transfer ; A. paying to B. or receiving from him the difference between the price of stock on the day of settlement, and the price agreed on.

"This practice, which amounts to nothing else than a wager concerning the price of stock, is not sanctioned by law ; yet it is carried on to a great extent : and as neither party can be compelled by law to implement these bargains, their sense of honour, and the disgrace attending a breach of contract, are the principles by which the business is supported. In the language of the Stock Exchange, the buyer is called a *Bull*, and the seller a *Bear*, and the person who refuses to pay his loss is called a *Lame Duck* ; and the names of these defaulters are exhibited in the Stock Exchange, where they dare not appear afterwards.

"These bargains are usually made for certain days fixed by a committee of the Stock Exchange, called *settling days*, of which there are about 8 in the year ; viz. one in each of the months of January, February, April, May, July, August, October, and November ; and they are always on Tuesday, Wednesday, Thursday, or Friday, being the days on which the commissioners for the reduction of the national debt make purchases. The settling days in January and July are always the first days of the opening of the Bank books for public transfer ; and these days are notified at the Bank when the consols are shut to prepare for the dividend. The price at which stock is sold to be transferred on the next settling day, is called the *price on account*. Sometimes, instead of closing the account on the settling day, the stock is carried on to a future day, on such terms as the parties agree on. This is called a *continuation*.

"All the business, however, which is done in the stocks *for time*, is not of a gambling nature. In a place of so extensive commerce as London, opulent merchants, who possess property in the funds, and are unwilling to part with it, have frequently occasion to raise money for a short time. Their resource in this case is to sell for money, and buy for account ; and although the money raised in this manner costs more than the legal interest, it affords an important accommodation, and it may be rendered strictly legal and recoverable."—(Third ed. pp. 314–317.)

It would be foreign to the object of this work to enter upon any examination of the comparative advantages and disadvantages of the funding system. Perhaps, on the whole, the latter preponderate ; though it is not to be denied that the former are very considerable. The purchase of funded property affords a ready method of investment ; and as neither the Bank of England, nor any of the London private banks, allows interest upon deposits, it is plain that, were it not for the facilities given by the funds, individuals unable to employ their savings in some branch of business, would derive no advantage from them, unless they resorted to the hazardous expedient of lending upon private credit. In Scotland, where the public and private banks are universally in the habit of allowing interest upon deposits, the advantages of funded investments are not quite so obvious, though probably as great ; for it may be doubted whether the banks could afford interest, or whether, indeed, they could be conducted at all, without the aid of the funds.

The subjoined account of the number of dividend warrants issued in the half year ending with the 5th of January, 1833, is a very important document. The large number (87,176) of holders of sums not producing above 5*l.* of half-yearly dividend, is principally to be ascribed to the circumstances already mentioned as peculiar to the banking system of the metropolis ; and there can be little doubt that their number would be materially diminished, were the Scotch system adopted in its stead. It is evident from this account, that the number of persons having a direct interest in the funds is much greater than it represents. The dividends upon the funded property belonging to the Equitable and other insurance companies, the different banking companies, &c. are paid upon single warrants, as if they were due to so many private individuals ; whereas they are, really, paid to these individuals only because they act as factors or trustees for a vast number more. It is consequently quite absurd to pretend, as is sometimes done, that any interference with funded property would affect only 280,000 individuals out of a population of 25,000,000. Any attack upon the dividends would really be destructive, not merely of the interests of those to whom dividend warrants are issued, but of *all* who depend upon them : it would destroy our whole system of insurance and banking, and overspread the country with bankruptcy and ruin. Not only, therefore, is every proposal for an invasion of the property of the fundholders bottomed on injustice and robbery, but it would, were it acted upon, be little less ruinous to the community than to the peculiar class intended to be plundered.

An Account of the Total Number of Persons to whom a Half Year's Dividend was due at the last Half-yearly Payment thereof, on each Description of Public Stock, and on each Description of Terminable Annuities; distinguishing the Number respectively of those whose Dividends for the Half Year did not exceed 5*l*., 10*l*., 50*l*., 100*l*., 200*l*., 300*l*., 500*l*., 1,000*l*., 2,000*l*., 3,000*l*., 4,000*l*., 5,000*l*., and the Number of those whose Dividends exceed 5,000*l*.; distinguishing also, in those above 1,000*l*., the Dividends due to any Public Company, or to more than a single Name.—(*Part. Paper*, No. 202. Sess. 1833.)

* Dividends payable 10th of October.

† Dividends payable on 5th of January.

The following Table has been calculated, in order to show in which of the public funds money may be invested, so as to yield the greatest interest. It gives the prices, differing by 1 per cent. from 50 to 93 for 3 per cents. &c., at which they all must be, to yield the same interest; so that, supposing the 3 per cents. to be at 80, a sum invested in them, or in the 3½ per cents., will yield the same interest, provided the latter be at 93½: if the 3½ per cents. be below this sum, it will of course be more advantageous, in so far at least as interest is concerned, to invest in them than in the 3 per cents.; while, if they be above 93½, it will be less advantageous.

To get the true value of the different funds at any particular period, in order to compare them accurately together, it is necessary to deduct from each the amount of interest accruing upon it from the payment of the last dividend. — (For further details, see *ante*, p. 82. and p. 188.)

Table showing the Prices the different Funds must be at to produce an equal Interest; and also the annual Interest produced by 100*l*. Sterling invested at any of those Prices.

FURS, in commerce, the skins of different animals, covered, for the most part, with thick fine hair, the inner side being converted by a peculiar process into a sort of leather. Furs, previously to their undergoing this process, are denominated *peltry*.

Beaver fur, from its extensive use in the hat manufacture, is a very important commercial article. That made use of in this country is almost entirely brought from North America. It is gradually becoming scarcer and dearer, being now obtainable only in

considerable quantities from the most northerly and inaccessible districts. The fur of the middle-aged or young animal, called *cub beaver*, is most esteemed. It is the finest, most glossy, and takes the best dye. Fitch, or the fur of the fitchet or polecat, is principally imported from Germany: it is soft and warm, but the unpleasant smell which adheres to it depresses its value. Marten and mink (a diminutive species of otter) are principally imported from the United States and Canada. The fur of the musquash or muskrat (a diminutive species of beaver) is imported in vast quantities from our possessions in North America; which also supply us with considerable quantities of otter skins. Nutria skins are principally brought from Buenos Ayres. The more valuable furs, as ermine, sable, &c., come principally from Russia.

FUR TRADE. We are indebted for the following details with respect to the fur trade to one of the most extensive and intelligent fur merchants of London.

"Though practically engaged in the fur trade, I fear I shall be able to say little with regard to it not already known to you; but were I to write on the subject, I should divide the trade into 2, or rather 3 classes.

"1. The 1st class would comprise articles of necessity; among which I should principally number an immense variety of lamb skins, varying so widely from each other in size, quality, colour, and value, that, to most persons, they would appear as the produce of so many different species of animals. These lamb skins are produced in all parts of the globe, and are every where consumed; but they form, in particular, an essential part of the dress of thousands among the lower classes in Russia, Poland, East Prussia, Hungary, Bohemia, and Saxony. In Russia and other cold climates, the skins of various other animals may be considered as articles of actual necessity.

"2. The 2d class would in a measure form part of the first, as it also comprises furs which through habit and fashion have now become articles of necessity. I should here enumerate all those different skins commonly called *hutting furs*. Few who are not acquainted with this branch of the fur trade can form an idea of its extent. It spreads, of course, over all parts of the globe where hats are worn, and requires very superior judgment and considerable capital to conduct it successfully. The furs now used for hat making are beaver, musquash, otter, nutria, hare, and rabbit; but each of these may be subdivided into 20 different sorts or classes.

"Nutria, or nutria, is comparatively a new article. It began first to be imported in large quantities about 1810, from the Spanish possessions in South America. — (See NUTRIA.) The skin is used for different purposes, being either dressed as a peltry, or cut (shorn) as a hatting fur; and if well manufactured and prepared, it bears some resemblance to beaver fur, and is used for similar purposes.

"3. Under the 3d and last class I should bring all those furs, which, though continually sold, and used in immense quantities, must still be considered mere articles of fashion, as their value varies according to the whims and fancies of different nations. There are, however, exceptions among these; and many furs may be considered as standard articles, since they are always used, though their price is much influenced by changes of fashion.

"This class comprises an endless variety of furs, as under it may be brought the skins of most animals in existence; almost all of them appearing occasionally in the trade.

"Furs being entirely the produce of nature, which can neither be cultivated nor increased, their value is not influenced by fashion alone, but depends materially on the larger or smaller supplies received. The weather has great influence on the quality and quantity of furs imported from all quarters of the globe; and this circumstance renders the fur trade more difficult, perhaps, and precarious than any other. The quality, and consequently the price, of many furs will differ every year. It would be completely impossible to state the value of the different articles of furs, the trade being the most fluctuating imaginable. I have often seen the same article rise and fall 100, 200, and 300 per cent. in the course of a twelvemonth; nay, in several instances, in the space of 1 month only.

"Among the furs which always rank very high (though, like all the rest, they change in value), may be specified the Siberian sable, and the black and silver fox. These articles are at all times comparatively very scarce, and command high prices.

"The chief supplies of peltries are received from Russia (particularly the Asiatic part of that empire), and from North America. But many other countries produce very beautiful and useful furs; and though we are most indebted to Asia and America, Europe furnishes a very considerable quantity. Africa and Australia are of little importance to the fur trade, as, from their situation, they furnish but few articles, and consume still less. From the former we draw leopard and tiger skins (the most beautiful of the latter species), while the *only* production of the latter is the kangaroo; this, however, is never used as a fur being chiefly consumed by leather dressers and tanners for the sake of its pelt.

"Besides numerous private traders, there are several fur companies of very old standing, who in various countries do a great amount of business. Among these, the Hudson's Bay Company (in London) deserves to be mentioned first, not only from the extent of their business, but because it is one of the oldest chartered companies in England.

"The American Fur Company (in New York) stands next. They chiefly trade to London, whither they send the produce of the United States and other parts of North America.

"The 3d company is the Russian American (in Moscow). They trade to the Russian possessions on the western coast of North America, whence they draw their supplies, which are chiefly consumed in Russia.

"The 4th and last company of any consequence is the Danish Greenland Company (in Copenhagen). They do but a very limited business; exposing their goods for sale once a year in Copenhagen.

"The principal consumption of the furs which I should bring under the head of the 3d class, is in China, Turkey, and Russia, and among the more civilised countries of Europe, particularly in England. Germany consumes a considerable quantity. The consumption of America is comparatively little. In Africa, none but the Egyptians wear fur. In Australia, none is consumed.

"Hutting furs are used throughout Europe (with the exception of Turkey and Greece), and in America; but by far the principal trade in these articles is carried on in London and New York.

"Most of the companies sell their goods by public sale, and the principal fur fairs are held at Kiachta (on the borders of China); Nishnei Novgorod, between Moscow and Casan, in Russia; and twice a year at Leipsic. — See FAIRS.)

"It is a remarkable feature of the fur trade, that almost every country or town which produces and exports furs, imports and consumes the fur of some other place, frequently the most distant. It is but seldom that an article is consumed in the country where it is produced, though that country may consume furs to a very great extent."

The following details with respect to the North American fur trade may not be uninteresting: —

This trade was first practised by the early French settlers at Quebec and Montreal; and consisted then, as now, in bartering fire-arms, ammunition, cloth, spirits, and other articles

in demand among the Indians, for beaver and other skins. In 1670, Charles II. established the Hudson's Bay Company, to which he assigned the exclusive privilege of trading with the Indians in and about the vast inlet known by the name of Hudson's Bay. The Company founded establishments at Forts Churchill and Albany, Nelson River, and other places on the west coast of the bay. But the trade they carried on, though said to be a profitable one, was of very limited extent; and their conduct on various occasions shows how thoroughly they were "possessed with that spirit of jealousy which prevails in some degree in all knots and societies of men endowed with peculiar privileges." — (*European Settlements*, vol. ii. p. 268.) Mr. Burke has, in the same place, expressed his astonishment that the trade has not been thrown open. But as the Company's charter was never confirmed by any act of parliament, all British subjects are lawfully entitled to trade with those regions; though, from the difficulties attached to the trade, the protection required in carrying it on, and the undisguised hostility which private traders have experienced from the agents of the Company, the latter have been allowed to monopolise it with but little opposition. In 1783-4, the principal traders engaged in the fur trade of Canada formed themselves into an association known by the name of the North-West Company, having their chief establishment at Montreal. This new company prosecuted the trade with great enterprise and very considerable success. The course of their proceedings in their adventurous undertakings has been minutely described by Mr. Mackenzie, one of the agents of the Company, in his *Voyage from Montreal, through the Continent of America*. This gentleman informs us, that some of those engaged in this trade are employed at the astonishing distance of upwards of 4,000 miles north-west of Montreal! A very numerous caravan, if we may so call it, sets out every year for *Le Grand Portage*, on Lake Superior, where they meet those who have wintered in the remoter establishments, from whom they receive the furs collected in the course of the season, and whom they, at the same time, furnish with fresh supplies of the various articles required in the trade. Fort Chepeywan, on the Lake of the Hills, in lon. $110^{\circ} 26' W.$, used to be one of the most distant stations of the servants of the North-West Company; but many of the Indians who traded with the fort came from districts contiguous to, and sometimes even beyond, the Rocky Mountains.

The competition and success of the North-West Company seem to have roused the dormant energies of the Hudson's Bay Company. The conflicting interests and pretensions of the two associations were naturally productive of much jealousy and ill-will. Under the auspices of the late Earl of Selkirk, who was for a considerable period at the head of the Hudson's Bay Company, a colony was projected and founded on the Red River, which runs into Lake Winnipeg. The North-West Company regarded this establishment as an encroachment upon their peculiar rights; and the animosities thence arising led to the most violent proceedings on the part of the servants of both companies. At length, however, the more moderate individuals of each party began to perceive that their interests were not materially different; and the rival companies, wearied and impoverished by their dissensions, ultimately united under the name of the *Hudson's Bay Fur Company*, which at present engrosses most of the fur trade of British America. The most important part of the trade is still carried on from Montreal in the way described by Mr. Mackenzie.

The *North American Fur Company*, the leading directors of which reside in the city of New York, have long enjoyed the principal part of the Indian trade of the great lakes and the Upper Mississippi. But, with the exception of the musk rat, most of the fur-clad animals are exterminated in the vicinity of the lakes. The skins of racoons are of little value; and the beaver is now scarce on this side the Rocky Mountains. The further north the furs are taken, the better is their quality.

According to Mr. Bliss, the number and value of the furs and peltries exported from British America to all parts, in 1831, were —

Of these imports, the beaver, fitch, and marten were mostly retained for home consumption. A large number of bear and otter skins were re-exported to Germany; and no fewer than 592,117 musquash skins were exported, in 1831, to the United States. — (*Parl. Paper*, No. 550. Sess. 1833.)

The imports of ermine are inconsiderable, having only amounted, at an average of 1831 and 1832, to 2,197 skins a year.

The duty on furs produced, in 1832, 34,079*l.*; and that on skins, not being furs, 18,003*l.* 13*s.* 6*d.* China is one of the best markets for furs. The Americans began, with their characteristic activity, to send furs to Canton very soon after their flag had appeared in the Eastern seas in 1784; and they still prosecute the trade to a considerable extent, though it has rapidly declined within the last 3 or 4 years. The Americans procure the furs intended for the China markets, partly from the American Fur Company already alluded to, and partly from Canada; but they have also been in the habit of sending out ships to the north-west coast of America, which, having purchased large quantities of skins from the natives, carry them direct to Canton. Recently, however, this trade has been materially diminished, in consequence, it is said, of the regulations of the Russian government, who do not permit the American traders to cruise so far north as they did formerly.

FUSTIAN (Ger. *Barchent*; Du. *Fustein*; Fr. *Futaine*; It. *Fustagno*, *Frustagno*; Sp. *Fustan*; Rus. *Bumasca*; Pol. *Barchan*), a kind of cotton stuff, weaved or ribbed on one side.

FUSTIC (Ger. *Gelholz*, *Fustick*; Du. *Geelhout*; Fr. *Bois jaune de Brésil*; It. *Legno giallo de Brasilio*; Sp. *Palo del Brasilamarillo*), the wood of a species of mulberry (*Morus tinctoria*), growing in most parts of South America, in the United States, and the West India islands. It is a large and handsome tree; and the timber, though, like most other dye woods, brittle, or at least easily splintered, is hard and strong. It is very extensively used as an ingredient in the dyeing of yellow, and is largely imported for that purpose. Of 6,335 tons of fustic imported into Great Britain in 1831, 1,683 tons were brought from the British West Indies, 1,354 ditto from Cuba and the foreign West Indies, 1,013 ditto from the United States, 990 ditto from Mexico, 510 ditto from Colombia, 705 ditto from Brazil. Fustic from Cuba fetches full 35 per cent. more in the London market than that of Jamaica or Colombia. At present, the price of the former varies from 10*l.* to 12*l.* a ton, while the latter varies from 8*l.* to 9*l.* a ton. The consumption amounts to about 6,000 tons a year.

Zante, or *young fustic*, is really a species of sumach (*Rhus cotinus* Lin.), and is quite distinct from the *morus tinctoria*, or *old fustic*; the latter being a large American tree, while the former is a small European shrub. It grows in Italy and the south of France, but is principally exported from Patras in the Morea. It imparts a beautiful bright yellow dye to cottons, &c., which, when proper mordants are used, is very permanent. It is conveniently stowed amongst a cargo of dry goods, as it may be cut into pieces of any length without injury. Only a small quantity of this species of sumach is imported. Its price fluctuates considerably. In August, 1833, it was worth, in the London market, from 9*l.* to 11*l.* a ton.

G.

GALANGAL (Ger. *Galgant*; Du. and Fr. *Galanga*; Rus. *Kalān*; Lat. *Galanga*; Arab. *Kustalk*; Chin. *Lawdon*), the root of the *galanga*, brought from China and the East Indies in pieces about an inch long, and hardly $\frac{1}{2}$ an inch thick. A larger root of the same kind (*Greater Galangal*), an inch or more in thickness, is to be rejected. It has an aromatic smell, not very grateful; and an unpleasant, bitterish, extremely hot, biting taste. It should be chosen full and plump, of a bright colour, very firm and sound: 12 cwt. are allowed to a ton. — (*Lewis's Mat. Med.*; *Milburn's Orient. Com.*)

GALBANUM (Fr. *Galbanon*; Ger. *Mutterharz*; It. *Galbano*; Lat. *Galbanum*; Arab. *Barzud*), a species of gum resin obtained from a perennial plant (*Galbanum officinale*) growing in Africa, near the Cape of Good Hope, and in Syria and Persia. It is brought to this country from the Levant in cases or chests containing from 100 to 300 lbs. each. The best is in ductile masses, composed of distinct whitish tears agglutinated together by a pale brown or yellowish substance. It is generally much mixed

with stalks, seeds, and other impurities. The separate tears are considered as the best. When the colour is dark brown or blackish, it is to be rejected. It has a strong peculiar odour, and a bitterish, warm, acrid taste. — (*Thomson's Dispensatory*.)

GALLON, a measure of capacity, both for dry and liquid articles, containing 4 quarts. By 5 Geo. 4. c. 74., "the Imperial gallon shall be the standard measure of capacity, and shall contain 10 lbs. avoirdupois weight of distilled water, weighed in air at the temperature of 62° of Fahrenheit's thermometer, the barometer being at 30 inches, or 277·274 cubic inches; and all other measures of capacity to be used, as well for wine, beer, ale, spirits, and all sorts of liquids, as for dry goods, not measured by heaped measure, shall be derived, computed, and ascertained from such gallon; and all measures shall be taken in parts, or multiples, or certain proportions, of the said Imperial standard gallon." The old English gallon, wine measure, contained 231 cubic inches; and the old English gallon, ale measure, contained 282 cubic inches. Hence the Imperial gallon is about $\frac{1}{5}$ larger than the old wine gallon, and about $\frac{1}{10}$ less than the old ale gallon. By the 6 Geo. 4. c. 58. § 6. it is enacted, that from and after the 5th of January, 1826, whenever any gallon measure is mentioned in any act of parliament relative to the excise, it shall be taken and deemed to be a gallon Imperial standard measure. — (See WEIGHTS AND MEASURES.)

GALLS, or GALL-NUTS (Fr. *Galles*, *Noix de galle*; Ger. *Gallapfel*, *Gallus*; It. *Galle*, *Galluze*; Lat. *Gale*; Arab. *Ajis*; Hind. *Majouphal*; Pers. *Mazu*), are excreescences produced by the attacks of a small insect, which deposits its eggs in the tender shoots of a species of oak (*Quercus infectoria* Lin.), abundant in Asia Minor, Syria, Persia, &c. Galls are inodorous, and have a nauseously bitter and astringent taste. They are nearly spherical, and vary in magnitude from the size of a pea to that of a hazel nut. When good, they are of a black or deep olive colour; their surface is tubercular, and almost prickly; they are heavy, brittle, and break with a flinty fracture. They are known in commerce by the names of *white*, *green*, and *blue*. The white galls are those which have not been gathered till after the insect has eaten its way out of the nidus and made its escape. They are not so heavy as the others, are of a lighter colour, and do not fetch so high a price. The green and blue galls are gathered before the insect has escaped; they are heavier and darker than the former, and are said to afford about one third more of colouring matter.

Galls are of great importance in the arts, being very extensively used in dyeing, and in the manufacture of ink, of which they form one of the principal ingredients. They are the most powerful of all the vegetable astringents; and are frequently used with great effect in medicine.

The ancients reckoned the gall-nuts of Syria superior to every other, and they still retain their pre-eminence. They are principally exported from Aleppo, Tripoli, Smyrna, and Saida; those brought from the first come chiefly from Mosul, on the western bank of the Tigris, about ten days' journey from Aleppo. The real Mosul galls are unquestionably the best of any; but all that are gathered in the surrounding country are sold under this name. Those from Caramania are of a very inferior quality. The galls met with in India are carried thither from Persia by Arabian merchants.

It is not unusual to dye the whitish gall-nuts blue, in order to increase their value. The fraud is, however, detected by the deeper blue tinge that is thus imparted to them; and by their being perforated, and lighter than the genuine blue galls.

The price of galls in bond varies in the London market from 6s. to 8s. a cwt. The duty is 5s. a cwt. — (*Rees's Cyclopædia*; *Bancroft on Colours*; *Ainslie's Mat. Indica*, &c.)

GAMBOGE (Fr. *Gomme gutte*; Ger. *Gummigutt*; It. *Gomma gutta*; Lat. *Gummi gutta*, *Cambogia*; Arab. *Ossararcuud*; Siamese and Cambojan, *Rong*), a concrete vegetable juice, or gum resin, the produce of the *Garcinia Cambogia*, a forest tree of the genus which affords the mangosteen, the most exquisite fruit of the East. The districts which yield gamboge lie on the east side of the Gulf of Siam, between the latitudes of 10° and 12° north, comprising a portion of Siam and the kingdom of Camboja, whence its English name. It is obtained by making incisions in the bark of the tree, from which it exudes, and is collected in vessels placed to receive it. In these it assumes a firm consistence; and being formed into orbicular masses, or more frequently cylindrical rolls, it is at once fit for the market. It is of a bright yellow colour, opaque, brittle, breaks vitreous, has no smell, and very little taste. Specific gravity 1·22. When taken internally, it operates as a most violent cathartic. It forms a beautiful yellow pigment; for which purpose it is principally used. The Dutch began to import it about the middle of the seventeenth century. The greater part of the gamboge of commerce first finds its way to Bangkok, the Siamese capital, or to Saigon, the capital of lower Cochinchina; from these it is carried by junks to Singapore, whence it is shipped for Europe. Its price at Singapore varies, according to quality, from 20 to 80 dollars per picul. Dark coloured pieces should be rejected. — (*Crauford's Embassy to Siam*, p. 425; *Thomson's Chemistry*.)

GARNET, GARNETS (Fr. *Grenats*; Ger. *Granaten*, *Granatstein*; It. *Granati*; Lat. *Granati*; Rus. *Granatni Lemen*; Sp. *Granadas*). There are two species of garnet, the precious and the common. The colour of the first is red; and hence the name of the mineral, from its supposed resemblance to the flower of the pomegranate: passes from Cullen-like red, to cherry and brown red; commonly crystallised. External

lustre glistening, internal shining, vitreous; transparent, sometimes only translucent; specific gravity 4.08 to 4.35. The colour of the common garnet is of various shades of brown and green. Different colours often appear in the same mass: translucent; black varieties nearly opaque: specific gravity from 3.66 to 3.75. — (*Thomson's Chemistry.*) The finest varieties come from India, and some good specimens have been received from Greenland. When large and free from flaws, garnets are worth from 2*l.* to 5*l.* or 6*l.*, and even more; but stones of this value are of rare occurrence, and always in demand. — (*Muse on Diamonds*, &c. 2d ed. p. 113.)

GAS COMPANIES, the term usually applied to designate the companies or associations established in most large towns for lighting the streets and houses with gas.

Every one must have remarked that most species of coal, when ignited, give out large quantities of gas, which burns with much brilliancy, yielding a great quantity of light as well as of heat. Dr. Clayton seems to have been the first who attempted, about 1736, to apply this gas to the purposes of artificial illumination; but his experiments were upon a very limited scale, and no further attention was paid to the subject till more than half a century afterwards. At length, however, Mr. Murdoch, of Soho, instituted a series of judicious experiments on the extrication of gas from coal; and, by his ingenuity and sagacity, succeeded in establishing one of the most capital improvements ever made in the arts. Mr. Murdoch found that the gas might be collected in reservoirs, purified, conveyed by pipes to a great distance from the furnace where it was generated; and that it affords, by its slow combustion, when allowed to escape through small orifices, a beautiful and steady light. This great discovery, which places Mr. Murdoch in the first rank among the benefactors of mankind, was first brought into practice at Redruth, in Cornwall. In 1802, it was applied to light Mr. Murdoch's manufactory at Soho; in 1805, it was adopted by Messrs. Philips and Lee, of Manchester, in the lighting of their great cotton mill; and is now employed in the lighting of the streets, theatres, and other public buildings, factories, &c. of all the considerable towns of the empire; and also in most considerable towns of the Continent and America.

Gas light is indebted, for its rapid diffusion, not more to its peculiar softness, clearness, and unvarying intensity, than to its comparative cheapness. According to Dr. Thomson (*Supp. to Encyc. Brit. art. Gas Lights*), if we value the quantity of light given by 1 lb. of tallow in candles at 1*s.*, an equal quantity of light from coal gas will not cost more than 2½*d.*, being less than a fourth part of the cost of the former.

Oil and other substances have been used in furnishing gas for the purpose of illumination, but none of them has answered so well as coal. Most of the oil gas establishments have been abandoned.

The construction of gas works on a large scale, and the carrying of pipes through the streets and into houses, &c., is very expensive, and requires a large outlay of capital. Hence most of the gas lights in the different towns are supplied by joint stock companies. Many of them have turned out to be very profitable concerns.

The subjoined Table contains a statement of the most important particulars connected with the principal gas companies; viz. the number of shares in each, the nominal amount of each share, the sums actually paid up, the market price of shares, the dividend payable on them, &c. — (From the *Share List* of Mr. Charles Edmonds, Broker, of Change Alley, Cornhill, 12th of October, 1833.)

GENEVA (Du. *Genever*; Fr. *Genièvre*; Ger. *Gaud*, *Genever*; It. *Acqua di Ginepro*; Lat. *Juniperi aqua*; Sp. *Agua de Enebro*), a spirit obtained by distillation from grain, rectified, with the addition of juniper berries. The latter give to the spirit that peculiar flavour by which it is distinguished, and are also said to render it diuretic. Geneva is a corruption of *genièvre*, the French term for the juniper berry.

By far the best geneva is made in Holland, where its manufacture is carried on to a very great extent. The distilleries of Schiedam have long been famous, and are at present in a very prosperous condition. Schiedam geneva is made solely of spirit obtained from rye and barley, flavoured with juniper berries. It becomes milder, and acquires, as it gets old, an oily flavour disliked by the Hollanders; hence nearly the whole of the "Schiedam" is exported, principally to the East Indies. There are no fewer than 300 distilleries in Schiedam, 100 in other parts of Holland, and not more than 40 in Belgium. The entire annual produce of the distillery in Holland is estimated at 2,000,000 ankers, or 20,500,000 wine gallons, of which about two thirds are exported. — (*Cloet, Description Géographique des Pays Bas*, p. 92.)

In nothing, perhaps, has the destructive effect of heavy taxation been so strongly exhibited, as in the trade of geneva. It appears from the *Parl. Paper*, No. 248, Sess. 1826, that during the 10 years ending with 1786, when the duty on geneva was about 10s. the wine gallon, the average annual consumption in Great Britain amounted to about 50,362 gallons. But in 1786, Mr. Pitt reduced the duties to 5s. a gallon; and the effect of this wise and politic measure was such, that in the next decennial period the average imports for home consumption amounted to 441,891 gallons! From 1796 to 1816, the duties fluctuated from 7s. 6d. to 14s.; but as the taste for geneva had been formed, and as the duties on other spirits had been increased in about the same proportion, the consumption went on increasing, having been, at an average of the 10 years, as high as 724,551 gallons a year. This was the maximum of consumption. Mr. Vansittart soon after began his inauspicious career, and immediately raised the duty from 14s. to 20s. 8d.; the consequence of this increase being, that in the 10 years ending with 1816, the average consumption amounted to only 272,838 gallons. Since then the duties have continued stationary, being at this moment 22s. 6d. the Imperial gallon, on an article which may be bought in London for 2s. 3d. or 2s. 6d.! The duties on rum and British spirits having been materially reduced during the last 10 years, the consumption of geneva has gone on progressively diminishing, till it now amounts, as appears from the subjoined official statement, to no more than 22,500 gallons; being only one thirty-fourth part of what it amounted to during the 10 years ending with 1816!

In Ireland, the effects of this *fêto de se* system have been more injurious than appears from this Table. During the 4 years ending with 1803, the books of the Irish Custom-house show that there were, at an average, 82,828 gallons of geneva entered for home consumption, producing, at the then duty of 7s. 3½d., 59,923l. a year; whereas, notwithstanding the vast increase of population, the consumption of geneva in Ireland, in 1832, was only 1,102 gallons, and the revenue only 1,577l.

To make any lengthened commentary on such statements would be useless. Our policy, if we may apply this term to so revolting a display of short-sighted rapacity, has had no other effect than to lessen the public revenue and enjoyments of the people, to injure our trade with Holland, and to foster and pro-

more the ruinous and destructive practice of smuggling. The exorbitant duties on geneva, brandy, and tobacco, have led to the formation of the coast guard and the preventive water guard, costing together between 400,000*l.* and 500,000*l.* a year; and yet, notwithstanding this enormous outlay, and notwithstanding the innumerable penalties and punishments to which he is exposed, the trade of the smuggler is not put down, but is, on the contrary, in a peculiarly flourishing condition; and so it will continue, in despite of every thing that can be done for its suppression, till these duties be adequately reduced.

We believe our gin manufacturers have nothing to apprehend from a reduction of the duties on geneva to 1*l.* a gallon. The lower classes, who are the great consumers, prefer English gin to every other stimulant; and now that the duties on juniper berries — (see *BERRIES*) — are reduced, its quality may be materially improved. But nothing would have so much influence in this respect as the admission of geneva at a moderate duty. It would also have the beneficial effect of putting an end to the manufacture of the spurious compounds sold under its name.

The regulations as to the importation, &c. of geneva are similar to those affecting *BRANDY*; which see.

An Account of the Number of Gallons (Imperial Measure) of Geneva entered for Home Consumption in Great Britain and Ireland, the Rates of Duty on the same, and the entire Nett Produce of the Duty, each Year since 1814.

GENOA, a maritime city of Italy, once the capital of the famous republic of that name, now of a province of the kingdom of Sardinia. It is situated at the bottom of the extensive gulf to which it gives its name; the light-house being in lat. 44° 24' 40" N., lon. 8° 52' 55" E. Population 80,000. Genoa is one of the finest cities of Europe. In general, the streets are inconveniently narrow; but some of the principal ones are moderately wide, and consist almost entirely of public buildings, and private palaces erected during the period of her prosperity. Being built on a rising ground, in the form of an amphitheatre, the appearance of the town from the sea is most magnificent, and justifies the epithet given to her of "*la superba*."

Port. — The harbour is semicircular, the diameter being about 1,000 fathoms. It is artificial, being formed by two gigantic moles having opposite directions. That on the east side, called the old mole (*molo vecchio*), projects from the centre of the city W. by S. It is about 260 fathoms in length, and has a battery near its middle. The new mole (*molo nuovo*), on the opposite side of the port, adjoins the southern extremity of the suburb of S. Pierre d'Arena, projecting about 210 fathoms from shore in an E. S. E. direction. The mole heads bear from each other N. E. by E. and S. W. by W. the distance between them, forming the entrance to the harbour, being about 350 fathoms. The light-house is without the port, on the west side, near the extremity of a point of land, and contiguous to the bottom of the new mole. It is a lofty square tower; and as it stands on a high rock, and is painted white, it is visible in clear weather at a great distance. There is also a harbour light at the extremity of the new mole. There is no difficulty in entering the harbour; the ground is clean, and there is plenty of water, particularly on the side next the new mole; care, however, must be taken, in coming from the west, to give the light-house point a good offing. Moderate sized merchantmen commonly anchor inside the old mole, contiguous to the *porto franco*, or bonded warehouses, having a hawser made fast to the mole, and an anchor ahead. Men of war and the largest class of merchantmen may anchor inside the new mole, but they must not come too near the shore. Ships sometimes anchor without the harbour in from 10 to 25 fathoms, the light-house bearing N. $\frac{3}{4}$ W., distant 2 or 3 miles. The S.W. winds occasion a heavy swell but the bottom is clay and holds well. Within the town are two rather shallow basins designed for galleys and small trading vessels. There is also an arsenal.

Money — Accounts were formerly kept at Genoa in lire of 20 soldi, each soldo containing 12 denari; and money was divided into *banco* and *fuori di banco*. But since the 1st of January, 1827, the ancient method of reckoning has ceased, and accounts are now kept in lire Italiane, divided into cents. The weight and fineness of the new coins are precisely the same as those of France: so that the par of exchange = 2478 lire per pound sterling, if estimated in silver; and 2520, if estimated in gold. 6 old lire di banco are equal to 5 new lire very nearly. — (*Manuel de Nellenbrecher*.) Sales of merchandise continue, however, to be, for the most part, made in the old currency. The prices given in a subsequent part of this article are in it.

The Bank of Genoa, or of St. George, was one of the most ancient and celebrated banks of circulation and deposit in Europe. Until 1746, when the bank was pillaged by the Austrians, it was customary to make all bills of exchange drawn upon Genoa payable in *banco*; but since then they have generally been made payable in money *fuori di banco*. In 1800, when the French were besieged in Genoa by the Austrians, they took the treasure of the bank to pay their troops. The establishment has never recovered from this blow; some warehouses, and a part of the town's revenue, were assigned to it, but they yield a very poor dividend. It is no longer used as a place of deposit for money.

Weights and Measures. — The pound is of two sorts; the *peso sottile* = 4,891½ English grains, and the *peso grosso*. The latter is 10 per cent. heavier than the former: hence the cantaro of 100 lbs. *peso sottile* = 6989 lbs. *avoirdupois*; and the cantaro of 100 lbs. *peso grosso* = 7687½ lbs. *avoirdupois*. The latter is

used for weighing bulky commodities; the former is used in the weighing of gold and silver, and of all commodities of small bulk.

Corn is measured by the mina of 8 quartre or 96 gombette; 1 mina = $3\frac{1}{2}$ Winchester bushels nearly. Salt is sold by the mondino of 8 mine.

Of liquid measure, 100 pinte = 1 barilla.

2 barilla = 1 mezzarola = $39\frac{1}{4}$ English wine gallons. The barilla of oil = 17

English gallons.

Of long measures, the palmo = 9.725 English inches. The canna is of 3 sorts: the canna piccola, used by tradesmen and manufacturers, = 9 palme, or 87.5 English inches; the canna grossa, used by merchants, = 12 palmi = 116.7 English inches; and the canna used at the Custom-house = 10 palmi = 97.25 English inches. The braccio = 2½ palmi.

Trade, &c. — Genoa is the *entrepôt* of a large extent of country; and her commerce, though inferior to what it once was, is very considerable, and has latterly been increasing. She is a free port; that is, a port where goods may be warehoused and exported free of duty. The exports consist partly of the raw products of the adjacent country, such as olive oil (an article of great value and importance), rice, fruits, cheese, rags, steel, argol, &c.; partly of the products of her manufacturing industry, such as silks, damasks, and velvets (for the production of which she has been long famous), thrown silk, paper, soap, works in marble, alabaster, coral, &c.; the printed cottons of Switzerland, and the other products of that country and of the western parts of Lombardy, intended for the south of Europe and the Levant; and partly of the various foreign products brought by sea, and placed in *porto franco*. The imports principally consist of cotton and woollen stuffs; cotton wool, mostly from Egypt; corn from the Black Sea, Sicily, and Barbary; sugar, salted fish, spices, coffee, cochineal, indigo, hides, iron, and naval stores from the Baltic; hardware and tin plates from England; wool, tobacco, lead (principally from Spain), wax, &c. Corn, barilla, Gallipoli oil, cotton, valonia, sponge, galls, and other products of the countries adjoining the Black Sea, Sicily, the Levant, &c., may in general be had here, though not in so great abundance as at Leghorn. The various duties and Custom-house fees formerly charged on the transit of goods through Genoa and the Sardinian territories have recently been abolished. This will have a very beneficial influence on the trade of this port, particularly as regards the importation of raw cotton for Switzerland and Milan, as well as of the different descriptions of colonial produce.

Statement of the Principal Articles of Raw Produce exported from Genoa, with their Prices there on the 1st of January, 1833, in *Porto franco* (Bond), in Italian Money, Weights, and Measures, and free on Board in English Money, Weights, and Measures. — (From the *Circular of Grants, Balfour, and Co.*)

Tares. — Those of usage are, — on cotton, 6-lb, tallow, and valonea, 4 per cent.; hemp, 1 per cent.; wood, 116 for 100 lbs.; almonds, wax, and galls, 104 for 100 lbs.; ginger, 142 for 100 lbs.; sugar in loaves, 2 per cent.; raw silk, 1 ounce per lb. Alum, argol, anchovies, barilla, brandy, flour, iron, lead, saltpetre, figs, hides, pepper, juniper berries, pumice stone, rags, rushies, rice, croan of tartar, essences, quicksilver, shumac, steel, and soap, have no tare; for all other articles sold by weight, 106 lbs. are given for every 100 lbs.

The loss of weight on importations from the place of growth, partly arising from difference of tare, varies as follows: —

	Per cent.
Sugar in chests from Rio de Janeiro, losses	1 to 3
bags, ditto	3 — 4
chests from Pernambuco	4 — 6
chests from Bahia	6 — 10
boxes from Havannah and Cuba	4 — 6
muscovado in casks from Cuba and Porto Rico	12 — 15

Importations from other quarters where the tares allowed are on a par with those of Genoa, generally render full weight; Havannah box sugars from the United States render 1 to 2 per cent. more than full weight.

Navigation, &c. — In 1831, there entered the different ports of the Sardinian states, 3,704 ships; but the greater number of these must have been small coasting vessels, as their aggregate burden did not exceed 331,217 tons. If we deduct about a third for Sardinia, by far the largest proportion of the remainder must have entered and cleared out at Genoa. — (*Archives du Commerce*, tom. ii. p. 39.) — In 1832, 84 British ships, of the burden of 13,478 tons, arrived at Genoa. — (*Parl. Paper*, No. 756. Sess. 1833.)

GENTIAN (Ger. *Enzian*; Fr. *Gentiane*; It. *Genziana*; Sp. *Jenciana*; Rus. *Enziar*; Lat. *Gentiana*), the roots of two alpine plants, *Gentiana lutea* and *Gentiana purpurea*, found growing in Switzerland and Austria, the Apennines, the Pyrenees, and in North America. Those brought to this country come from Germany. They are in pieces of various lengths and thickness, twisted, wrinkled on the outside, and covered with a brownish grey cuticle. They have no particular odour; and the taste is intensely bitter, without being nauseous. — (*Thomson's Dispensatory*.)

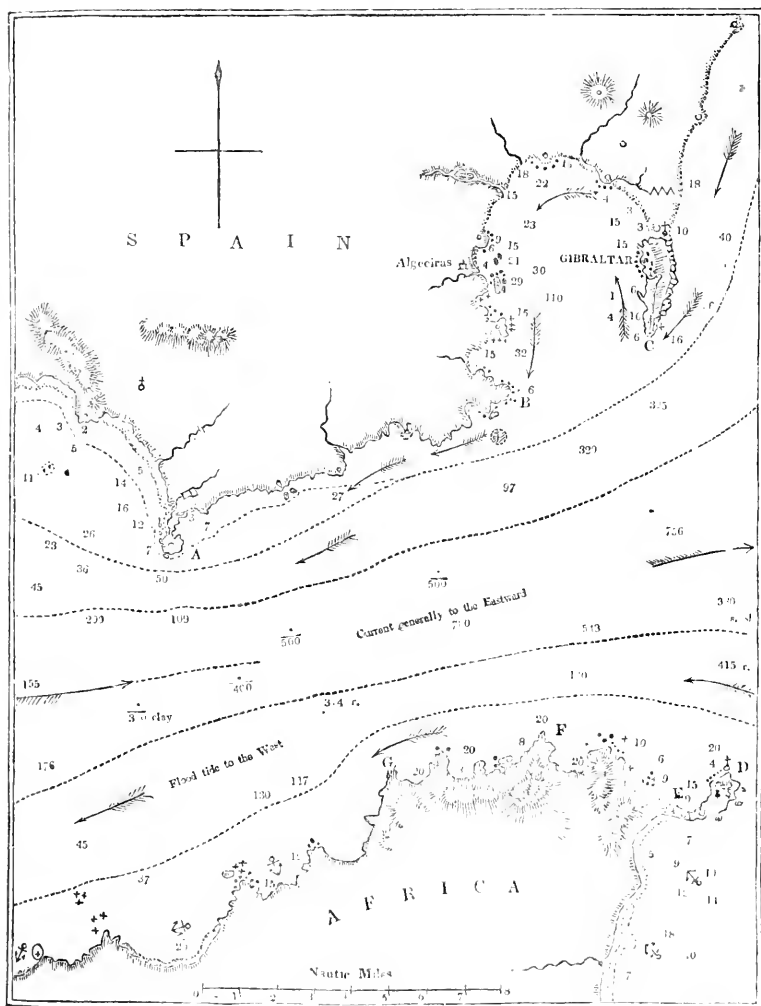

GHEE. See BUTTER.

GIBRALTAR, a famous fortress near the southernmost extremity of Spain, and contiguous to the narrowest part of the strait, to which it gives its name, joining the Atlantic and Mediterranean, in lat. 36° 6' 30" N., lon. 5° 21' 12" W. It is situated on the west side of a rocky mountain or promontory, the *Mons Calpe* of the ancients, projecting into the sea, in a southerly direction, about 3 miles, being from $\frac{1}{2}$ to $\frac{3}{4}$ of a mile in width. The southernmost extremity of the rock is called Europa Point. Its northern side, fronting the isthmus which connects it with Spain, is almost perpendicular, and wholly inaccessible; the east and south sides are so rugged and precipitous, as to render any attack upon them, even if they were not fortified, next to impossible; so that it is only on the west side, fronting the bay, where the rock declines to the sea and the town is built, that it can be attacked with the least chance of success. Here, however, the strength of the fortifications, and the magnitude of the batteries, are such, that the fortress seems to be impregnable, even though attacked by an enemy having the command of the sea. It was taken by the English in 1704, but the fortifications were then very inferior to what they are at present. Towards the end of the American war, it was attacked by a most formidable armament fitted out jointly by Spain and France; but the strength of the place, and the bravery of the garrison, defeated all the efforts of the combined powers. Population about 17,000, exclusive of the troops, which usually amount, in time of peace, to from 3,000 to 4,000.

The bay of Gibraltar is spacious; and, being protected from all the more dangerous winds, affords a convenient station for ships. Two moles have been constructed at a vast expense, for the protection of the shipping. The old mole projects from the north end of the town, N. W. by N., 1,100 feet into the sea; the new mole is $1\frac{1}{2}$ mile more to the south, extending outwards about 700 feet; it has an elbow formed by the shore, and in winter large vessels anchor inside; the farthest out in from 5 to 6 fathoms. The plan on the opposite page gives a better idea of the position of Gibraltar, as well as of the Straits, than could be derived from any description. It is taken from Captain Smyth's beautiful chart of the Mediterranean.

Trade, Political Importance, &c. — Gibraltar is of considerable consequence as a commercial station. Being a free port, subject to no duties and few restrictions, it is a convenient *entrepôt* for the English and other foreign goods destined for the supply of the contiguous Spanish and African provinces. In this respect, however, it has greatly fallen off. This has been owing to a variety of causes: partly, and principally perhaps, to the insecurity and apprehension occasioned by the fear of pestilential diseases, the place never having recovered from the effects of the dreadful contagion by which it was visited in 1804; partly to large quantities of those goods being now kept at Malta and Genoa, that were formerly kept at Gibraltar; and, more recently, to the making of Cadiz a free port. This measure has, however, been revoked; but, notwithstanding, it is not at all probable that Gibraltar will ever again be of much importance as a trading station. In 1831, the declared value of the various articles of British produce and manufacture exported to Gibraltar, was 367,285*l*.; the official value of the foreign and colonial products exported to it during the same year being 121,542*l*. The trade with Gibraltar, or any British dependency in the Mediterranean, may be regulated by an order in council; and any goods imported or exported contrary to such order shall be forfeited, together with the ship importing or exporting the same. — (6 *Geo. 4. c. 114. § 73.*)

* We are not sure that this is the correct reading, the title to the account being drawn up in so slovenly a way, that it is not easy to say whether it means that 84 ships arrived and 84 departed, or that 42 arrived and 42 departed.

References to Plan. — A, point and light-house of Tarifa, in lat. $36^{\circ} 0' 30''$ N., lon. $5^{\circ} 35' 15''$ W. The light-house was erected in 1813, and the light revolves. B, Cabrita Point. C, Europa Point, the extremity of the rock of Gibraltar. D, town and fortress of Ceuta, on the African coast. E, Little Ceuta Bay. F, Point Leona. G, Point Circs. The soundings and the direction of the currents are marked in the chart. Variation in the Straits, 22° S. 17.

The real value of Gibraltar to Great Britain consists in its importance in a military and naval point of view; in its being, in fact, the key of the Mediterranean; and in its affording a convenient and secure station for the outfit, refreshment, repair, and accommodation of our ships of war and merchantmen. The revenue collected in the town amounts to from 20,000*l.* to 40,000*l.*, which is about sufficient to defray the public civil expenditure of the place. The expense annually incurred in Great Britain on account of the garrison, in time of peace, amounts to about 200,000*l.* — a small sum compared with the important political and commercial advantages it is the means of securing.

Money. — The effective or hard dollar = 4*s* 4*d.*; the current dollar being estimated at $\frac{2}{3}$ hard dollars = 2*s* 10*3d.* Reals and quarts of 16th hard and current dollars are the same, being, the former = $4\frac{1}{2}$ *d.*, and the latter = 1*7d.*

Accounts are kept in current dollars '*pesos*', divided into 8 reals of 16 quartos each; 12 reals currency

make a cob or hard dollar, by which goods are bought and sold; and 3 of these reals are considered equal to 5 Spanish reals vellon.

Gibraltar draws on London in effective dollars of 12 reals, and London on Gibraltar in current dollars of 8 reals.

The exchange of Gibraltar on Cadiz, and other cities of Spain, is in hard dollars at a percentage, which varies considerably, and mostly in favour of Gibraltar.

Weights and Measures are those of England, excepting the arroba = 25 lbs. English: grain is sold by the fanega, 5 of which make 1 Winchester quarter; wine is sold by the gallon, 100 of which are equal to 109.4 English wine gallons. — (See *Papers laid before Finance Committee*; *Edinburgh Gazetteer*; *Anglia's Spain* in 1830, vol. ii. p. 169. &c.)

GILD, or GUILD, a company of merchants or manufacturers, whence the halls of such companies are denominated Gild or Guild Halls.

GILL, a measure of capacity. See **WEIGHTS and MEASURES**.

GIN. English geneva, or gin, is made of spirit obtained from oats, barley, or malt, rectified, or redistilled, with the addition of juniper berries, oil of turpentine, &c. All spirits manufactured in England, and most of the Scotch and Irish spirits imported into England, are subjected to the process of rectification. English gin is said to be one of the most wholesome spirits. — (See **SPIRITS**.)

GINGER (Ger. *Inguer*; Du. *Gember*; Fr. *Gingembre*; It. *Zenzero*; Sp. *Jenjibre*, *Ayengibre*; Rus. *Inbir*; Lat. *Zingiber*; Pers. *Zungebeel*; Arab. *Zingebeel*), the roots of a plant (*Amomum Zingiber*), a native of the East Indies and China, but which was early carried to and succeeds very well in the West Indies. After the roots are dug, the best are selected, scraped, washed, and dried in the sun with great care. This is called *white ginger*; while the inferior roots, which are scalded in boiling water before being dried, are denominated *black ginger*. Preserved ginger is made by scalding the green roots, or the roots taken up when they are young and full of sap, till they are tender; then peeling them in cold water, and putting them into a thin syrup, from which they are shifted into the jars in which they come to us, and a rich syrup poured over them. Dried ginger has a pungent aromatic odour, and a hot, biting taste. It is imported in bags, each containing about a cwt. The white brings the highest price, being more pungent and better flavoured. The external characters of goodness in both sorts of dried ginger are, soundness, or the being free from worm holes, heaviness, and firmness; the pieces that are small, light, and soft, or very friable and fibrous, should be rejected. The best preserved ginger is nearly translucent; it should be chosen of a bright yellow colour; rejecting that which is dark-coloured, fibrous, or stringy. — (*Milburn's Orient. Commerce*; *Thomson's Dispensatory*.)

¹ The consumption of ginger is but trifling, not exceeding 5,000 cwt. a year. This is principally to be ascribed to the oppressive duties with which it is burdened, they being no less than 2*l.* 13*s.* a cwt. on foreign ginger, and 1*l.* on that brought from a British possession. The revenue derived from it is about 3,250*l.* a year; a sum which might be doubled by reducing the duties on all descriptions of ginger to 7*s.* a cwt. Of 5,315 cwt. of ginger imported in 1831, 3,531 came from the British West Indies, 849 from the East India Company's possessions and Ceylon, 807 from the Netherlands, and 106 from Western Africa.

GINSENG (Du. *Ginseng*, *Ginsem*; Fr. *Ginseng*; Ger. *Kraftwurz*, *Ginseng*; It. *Ginseng*; Sp. *Jinseng*; Chin. *Fansim*; Tart. *Orhotu*), the root of a small plant (*Panax quinquefolium* Lin.), growing in China, Tartary, and several parts of North America. The latter is what we generally see in England, and is an article of trade to China, which is its only market. Large quantities were formerly exported from this country; but it is now carried direct to China by the Americans. It is sometimes exported crude, and sometimes cured or clarified. Within these few years, it has been discovered in the Himalaya mountains, and small quantities have been thence sent to Canton; but the speculation has not succeeded. It is only about 30 years since it began to be sent from America to China. Previously to the present century, the Chinese drew their supplies from the wilds of Tartary, and the root brought an exorbitant price. Crude ginseng now sells in the Canton market at from 60 to 70 dollars per picul, and prepared at from 70 to 80 dollars. In 1832, there were sent from the United States to China, 407,067 lbs. of ginseng, valued at 99,303 dollars. — (*Private information*.)

GLASS (Ger. and Du. *Glas*; Fr. *Vitre*, *Verre*; It. *Vetro*; Sp. *Vidrio*; Rus. *Steklo*; Lat. *Vitrum*), a transparent, brittle, facitious body. It is formed by mixing together some sort of siliceous earth, as fine sand, or pounded flint, with an alkali, such as soda, potash, or pearlash, and subjecting them to a strong heat. By this means they are melted into a transparent, soft, tenacious mass, that may, when hot, be formed into thin plates, bent and shaped in every possible way. When cool, it becomes brittle, and is denominated glass. Litharge, minium, borax, the black oxide of manganese, &c. are sometimes used in the manufacture of glass, according to the purposes to which it is to be applied.

The kinds of glass, and their ingredients, are stated by Dr. Ure as follows: —

¹ There are 5 distinct kinds of glass at present manufactured: — 1. Flint glass, or glass of lead; 2. Plate glass, or glass of pure soda; 3. Crown glass, the best window glass; 4. Broad glass, a coarse window glass; 5. Bottle, or coarse green glass.

² 1. *Flint Glass*, so named because the siliceous ingredient was originally employed in the form of ground flints. It is now made of the following composition: —

Purified Lynn sand	-	-	100 parts,
Litharge, or red lead	-	-	60 —
Purified pearlsh	-	-	50 —

"To correct the green colour derived from combustible matter, or oxide of iron, a little black oxide of manganese is added, and sometimes nitre and arsenic. The fusion is accomplished usually in about 50 hours.

"2. *Plate Glass*.—Good carbonate of soda, procured by decomposing common salt with pearlsh, is employed as the flux. The proportion of the materials is—

Pure sand	-	35.0
Dry subcarbonate of soda	-	25.5
Pure quicklime	-	1.5
Nitre	-	4.0
Broken plate glass	-	25.0 — 10.0.

About 70 parts of good plate glass may be run off from these materials.

"3. *Crown, or fine Window Glass*.—This is made of sand vitrified by the impure barilla manufactured by incineration

of sea weed on the Scotch and Irish shores. The most approved composition is—

	By Measure.	By Weight.
Fine sand purified	-	5
Best kelp ground	-	11
		200
		350

"4. *Broad Glass*.—This is made of a mixture of soap-boilers' waste, kelp, and sand. The first ingredient consists of lime used for rendering the alkali of the soap-boiler caustic, the insoluble matter of his kelp or borilla, and a quantity of salt and water, all in a pasty state. The proportions necessarily vary. $\frac{1}{2}$ of the waste, $\frac{1}{3}$ of kelp, and $\frac{1}{3}$ of sand, form a pretty good broad glass. They are mixed together, dried, and fritted.

"5. *Bottle Glass* is the coarsest kind. It is made of soapers' waste and river sand, in proportions which practice must determine according to the quantity of the waste; some soap-boilers extracting more saline matter, and others less, from their kelps. Common sand and lime, with a little common clay and sea salt, form a cheap mixture for bottle glass."

1. *Historical Notices with respect to Glass*.—The manufacture of glass is one of the very highest beauty and utility. It is most probable that we are indebted for this wonderful art, as we are for the gift of letters, to the Phœnicians. According to Pliny (*Hist. Nat. lib. xxxvi. c. 26.*), glass had been made for many ages, of sand found near the mouth of the small river Belus in Phœnicia. "The report," says he, "is, that the crew of a merchant ship laden with nitre (fossil alkali) having used some pieces of it to support the kettles placed on the fires they had made on the sand, were surprised to see pieces formed of a translucent substance, or glass. This was a sufficient hint for the manufacture. Ingenuity (*astuta et ingeniosa solertia*) was immediately at work, to improve the process thus happily suggested. Hence the magnetical stone came to be added, from an idea that it contained not only iron, but glass. They also used clear pebbles, shells, and fossil sand. Indian glass is said to be formed of native crystal, and is on that account superior to every other.* Phœnician glass is prepared with light dry wood, to which copper and nitre are added, the last being principally brought from Ophir. It is occasionally tinged with different colours. Sometimes it is brought to the desired shape by being blown, sometimes by being ground on a lathe, and sometimes it is embossed like silver." Sidon, he adds, is famous for this manufacture. It was there that mirrors were first invented. In Pliny's time, glass was made in Italy, of fine sand on the shore between Cumæ and the Lucrine bay.

Glass was manufactured at Rome into various articles of convenience and ornament. Pliny mentions that Nero gave 6,000 sesterces (50,000*l.* according to the ordinary method of reckoning) for two glass cups, each having two handles! These, however, must have been of an immense size and of exquisite workmanship; for glass was then in common use for drinking vessels, and was used even in the form of bottles in which to keep wine. — (*Mart. Epig. lib. ii. 22. 40., and lib. iv. 86.*)

There is no authentic evidence of glass being used in windows previously to the third or fourth century; and then, and for long after, it was used only in churches and other public buildings. In this country, even so late as the latter part of the sixteenth century, glass was very rarely met with. In a survey of Alnwick Castle, made in 1573, it is stated—"And, because throwe extreme winds, the glasse of the windowes of this and other my lord's castles and houses here in the country dooth decay and waste, yt were good the whole leights of everie windowe, at the departure of his lordshippe from lyinge at any of his said castels, and houses, and dowering the tyme of his lordship's absence, or others lyinge in them, were taken doune and lade up in safety: And at sooche time as ather his lordshippe or anie other sholde lye at anie of the said places, the same might then be set uppe of newe, with smale charges, whereas now the decaye thereof shall be verie costlie and chargeable to be repayred." — (*North. Housh. Book, xvii.*) Sir F. M. Eden thinks it probable that glass windows were not introduced into farmhouses in England much before the reign of James I. They are mentioned in a lease in 1615, in a parish in Suffolk. In Scotland, however, as late as 1661, the windows of ordinary country houses were not glazed, and only the upper parts of even those in the king's palaces had glass; the lower ones having two wooden shutters, to open at pleasure, and admit the fresh air. From a passage in Harrison's *Description of England*, it may be inferred that glass was introduced into country houses in the reign of Henry VIII. He says,—"Of old time," (meaning, probably, the beginning of the century,) "our cuntrye houses instead of glasse did use much lattise, and that made either of wicker or fine rifts of oke in checkerwise. I read also that some of the better sort, in and before the time of the Saxons, did make panels of horne instead of glasse, and fix them in wooden calmes (casements); but as horne in windowes is now (1584) quite laid doune in everie place, so our lattises are also growne into disuse, because glasse is

* If this be a correct description of the glass of India in the age of Pliny, it has since fallen off very much; Indian glass being now about the very worst that is made. At present, the Hindoos manufacture a of fragments of broken glass, quartz sand, and impure soda,—an article found native in many parts of India, particularly in the south. The furnaces are so bad that they cannot melt our common bottle glass. — (*Hamilton's Mysore, vol. iii. p. 370.*) The glass of China is much better than that of India, though still very inferior to that of Europe.

come to be so plentiful, and within verie little so good, cheape, if not better than the other." Glass is now introduced into the windows of almost every cottage of Great Britain; and in this cold, damp climate, it ought rather to be considered as a necessary of life, than as the most elegant and useful of conveniences. What Dr. Johnson has said as to glass deserves to be quoted. — "By some fortuitous liquefaction was mankind taught to produce a body at once in a high degree solid and transparent, which might admit the light of the sun, and exclude the violence of the wind; which might extend the sight of the philosopher to new ranges of existence, and charm him at one time with the unbounded extent of the material creation, and at another with the endless subordination of animal life; and, what is yet of more importance, might supply the decays of nature, and succour old age with subsidiary sight. Thus was the first artificer in glass employed, though without his own knowledge or expectation. He was facilitating and prolonging the enjoyment of light, enlarging the avenues of science, and conferring the highest and most lasting pleasures; he was enabling the student to contemplate nature, and the beauty to behold herself." — (*Rambler*, No. 9.)

Venice, for a long time, excelled all Europe in the manufacture of glass, but was subsequently rivalled by France. The manufacture was early introduced into England; but it was not carried on to any extent previously to the 16th century. The first plates for looking-glasses and coach windows were made in 1673, at Lambeth, by Venetian artists under the protection of the Duke of Buckingham. The British Plate Company was incorporated in 1773, when it erected its extensive works at Ravenhead, near St. Helen's, in Lancashire. The manufacture was at first conducted by workmen from France, whence we had previously brought all our plate glass. But that which is now made at Ravenhead, at Liverpool, and London, is equal or superior to any imported from the Continent.

It is difficult to form any precise estimate of the value of the glass annually produced in Great Britain. We believe, however, that it cannot amount to less than 2,000,000*l.*; and that the workmen employed in the different departments of the manufacture exceed 50,000.

2. *Duties on Glass.*—The glass manufacture is subjected to the excise; and it is difficult to say whether the regulations under which the duty is charged, or the duty itself, be most oppressive. The wealth and population of the country have more than doubled since 1790; and we are well convinced that, had the glass manufacture not been interfered with, it would have increased in a still greater ratio. But instead of advancing, it has positively declined; and is actually less at this moment than it was 40 years ago! So extraordinary a result is wholly to be ascribed to the exorbitant excess to which the duties have been carried. Instead, however, of submitting any remarks of our own in vindication of this view of the subject, we shall take the liberty of laying before the reader the following extract from the speech delivered by Mr. Poulett Thomson in the House of Commons, 26th of March, 1830, — a speech which combines, in a degree rarely exhibited, a familiar knowledge of practical details and of sound scientific principles. That the administration of which the Right Hon. Gentleman is a distinguished member, has not yet proposed the repeal of this oppressive tax, is not, we are sure, owing to his colleagues differing in opinion with him as to its impolicy, but is wholly to be ascribed to other causes — to the *res dura et regni novitas* — the difficulty of finding a substitute, and the urgency of the claims for relief advanced by others.

"The gross duty on glass for the year 1828 amounted, in Great Britain (exclusive of Ireland), to 950,163*l.*, and the nett duty to 586,770*l.*; the difference being, either returned, or sacrificed in the collection. And here I would entreat the House to remark, that for the sake of such a sum as 500,000*l.*, a charge of collection on nearly 1,000,000*l.* is incurred. The duty is 6*d.* per pound on flint, but equal to 7*d.* from the mode of its collection; in other words, upwards of 100 per cent.; the glass, when made, selling for 1*s.* to 1*s.* 2*d.* This duty, too, is very much reduced from what it was; and here the House will observe an admirable illustration of the effect of heavy duties on consumption, and consequently on revenue. In 1794, the last year in which the duty was 1*l.* 5*s.* 6*d.* per cwt. for plate and flint, and other kinds in proportion, the quantities paying duty were as follow: —

Flint and Plate.	Broad.	Crown.	Bottle.
Cwt. 67,615	20,607	83,940	227,476

The duties were successively raised to 2*l.* 9*s.*; and at last, by Mr. Vansittart, in pursuit of his favourite theory, in 1813, to 4*l.* 18*s.*! and let us see the result. In 1816, the consumption had declined to

Plate.	Broad.	Crown.	Bottle.
Cwt. 29,600	6,140	55,502	155,595

In 1825, government saw a part of their error, and reduced the duty by one half, still leaving it too high; but mark the effect. In 1828, the last year for which I have the returns, the consumption rose to

Plate.	Broad.	Crown.	Bottle.
Cwt. 68,134	6,956	90,693	234,804

Still, however, only about the same as in 1794. It appears, therefore, that notwithstanding the increase of population and general luxury, the consumption has been kept down by your improvident system, and is actually now less than it was 35 years ago. But here, again, the duty is far from being the greatest evil. Let any one turn to the act: he will find 32 clauses of regulations, penalties, and prohibitions; all vexatious to the manufacturer, and all to be paid for by the public. I have said that the duty on flint glass is 6*d.* per pound; the glass, when made, selling for 1*s.* But the excise officer has the power of imposing the duty, either when the glass is in the pot, 3*d.* per pound, or after it has been turned out, at 6*d.*; the glass, when turned out, gaining 100 per cent. It is found more advantageous to the revenue to exact the duty on glass in the pot, at 3*d.*; and in this way the duty is raised to 7*d.* Nor is this all. The manufacturer is driven by this method into the necessity of producing frequently an article which he does not want. He makes the fine glass from the middle; the coarser from the top and bottom of the pot. He frequently wants only fine glass, and he would re-melt the flux of the coarser parts if he had not paid duty upon it; but of course he is unable to do so. All the glass manufacturers whom I have consulted, agree that the whole cost of the excise to the consumer, besides the duty, which is 100 per cent. is 25 per cent.; and besides, there is great inconvenience and oppression from the frauds that are daily taking place. And observe the effect which is produced upon your trade, both at home and abroad.

"A manufacturer who has lately travelled through France, the Netherlands, and Germany, has assured me that our manufacturers could advantageously cope with foreigners, were it not for the duties

imposed by the government. Labour is as cheap in this country, our ingenuity is greater, and the materials are also as cheap; it is, then, the vexatious onerous duty alone that gives the foreign manufacturer the advantage over the English. But the effect of the duty goes further: it operates to prevent all improvement in the article; because, to improve, experiments must be made; but a man with a duty of 125 per cent. over his head is not very likely to make many experiments. This argument applies especially with respect to colours. A manufacturer has assured me that he has never been able to produce a beautiful red, because the duties have prevented his trying the necessary experiments, without his incurring a great risk or loss. Thus a miserable duty, amounting to only 500,000*l.*, and upon which a charge of 10 per cent. is made for collecting, is allowed to impede our native industry, and to put a stop to all improvement, and be a source of endless oppression and fraud. I really cannot believe that the legislature will resist such an appeal as the manufacturers of this article could make to them, or refuse to relieve them from the gratuitous injury which is inflicted on them."

The following accounts show, better than any reasoning, the injurious influence of the existing duties. — Instead of increasing, as it certainly would have done, had it not been crushed by exorbitant duties, the glass manufacture has gone on progressively declining from the period when Mr. Thomson made the excellent speech now quoted, down to the present day. The falling off in the bottle glass department is particularly striking. The duties being so very high, the necessity of giving drawbacks on the glass exported opens a wide door to every species of fraud. If the duty must be kept up, it ought, at all events, to be reduced a half, and simplified as much as possible. This would materially relieve the manufacture; and would not, we feel confident, occasion the smallest loss of revenue. It is monstrous, indeed, to see destructive duties tenaciously defended on the stale and stupid pretence of their being necessary to the preservation of the revenue, when, in point of fact, there is not a single instance in which they have been reduced, that the revenue has not increased.

I. Account of the Number of Glass-houses respectively employed in the Manufacture of Broad, Crown, Flint, Plate, and common Bottle Glass, in each Year, from 1829 to 1832 inclusive, in the United Kingdom.

Years.	Broad Glass.	Crown.	Flint.	Plate.	Common Bottle Glass.

(Compiled from the *Parl. Papers*, Nos. 364 and 747. Sess. 1833.)

3. *Regulations as to the Manufacture of Glass.* — The excise regulations with respect to glass are numerous, complex, and enforced under heavy penalties. We can notice only a few of the leading regulations. All glass makers must take out a licence, renewable annually, which costs 2*l.* for each glass-house; and they must make entry at the next excise office of all workhouses, furnaces, pots, pot-chambers, annealing ovens, warehouses, &c., under a penalty of 2*0*l.** No pot is to be charged without giving *twelve* hours' previous notice, in writing, of the time of beginning, the weight of metal, and species of glass, on pain of 5*0*l.** If, after notice given and a gauge taken by the officer, any material or preparation be put into any pot, a penalty of 5*0*l.** is incurred; but if the manufacture be of flint glass, the penalty is 20*l.* Manufacturers of flint glass are allowed 5 hours for writing to enlarge their notices after the time specified in their notices. Entries of the quantities made are to be made in beginning, upon oath, and the duties paid monthly in London, and every 6 weeks in the country. Duty upon materials lost or spoiled is allowed for, upon due proof being made of the fact. Officers at all times, by day and night, are to have access to workhouses, &c., to gauge the materials, and mark the pots as they think fit; any attempt to obstruct the officers so employed incurs a penalty of 20*l.*; the counterfeiting, altering, or effacing any marks made by the officers is visited with a penalty of 5*0*l.**; a penalty of 20*l.* being also imposed upon any one procuring or conveying, at its being done. Officers are entitled to take samples, not exceeding 4 ounces in all, out of each pot; paying for them, if demanded, 3*d.* an ounce. The whole of the metal intended to be manufactured into common glass bottles is to be worked within 16 hours next after the same shall be 1 *legun*; and when

the bottles are deposited in the annealing arches, manufacturer, or again, in the presence of the officer, to charge each pot with five-h materials, other than broken glass, not less than 5*0*lbs.** weight; and declarations are to be delivered, in writing, of the number of such bottles, on penalty of 1*0*l.**

Manufacturers of glass bottles are to affix proper marks or staples, with scales and weights, to be approved of, in writing, by the surveyor or supervisor, under a penalty of 5*l.*; if using any false or insufficient scales or weights in the weighing of bottles, it incurs a penalty of 1*0*l.**

Notices are not to be given for drawing out bottles, but only between 8 o'clock in the morning and 6 in the afternoon.

No crown glass, or German sheet glass, or Broad or spread window glass, shall be made of greater thickness, excluding the centre or bullion and the selvage or rim thereof, than one ninth part of an inch, unless notice shall have been given that it was intended to manufacture the metal into plate glass, and the duty on plate glass be paid thereon. — (See the Statutes in *Burn's Justice*, ed. vol. ii. pp. 186–188.)

For an account of the duties on foreign glass imported into Great Britain, and the drawback, &c. allowed upon the exportation of British-made glass, see *TARIFF*.

4. *Exportation of Glass.* — It is enacted by stat. 6 Geo. 4. c. 117, that no flint glass shall be entitled to the drawback on exportation, if it be not of the specific gravity of 3,000, that of water being 1,000; and if it be not worth at least 1*1*d.** a pound for home consumption at the time when it is entered for exportation. All flint glass entered for exportation, of less specific gravity than 3,000, or of less value than 1*1*d.** per pound, is forfeited, and may be seized by any officer of excise. — Sects. 21, 25.

The exporter of glass is to make oath that he believes it to be entirely of British manufacture, and that the duties imposed upon it by law have been paid. Persons wilfully taking a false oath in this matter are liable to the pains and penalties of perjury. — (56 Geo. 3. c. 13, sect. 5.)

Security by bond is to be given (usually for a larger sum and a greater quantity of goods than are intended to be exported), that glass, on the exportation of which a drawback is allowed, shall be shipped within 1 month after the date of such security; but if the commissioner be satisfied that the shipment of the glass within the specified time has been prevented by some unavoidable accident, they may grant further time, not exceeding 3 months, for the shipment thereof. — Sect. 7.

No drawback is to be allowed upon the exportation of used, old, or second hand glass. — Sect. 9.

By stat. 54 Geo. 3. c. 97, sect. 6, it is enacted, that no drawback shall be allowed for any regular panes, squares, or rectangular figures of spread glass or other window glass, any part of which shall consist of or include the bullion or thick centre part of the table from which such panes, squares, or rectangular figures shall have been cut or taken, or any part of the said bullion, unless no side of any such panes, &c. shall measure less than 8 inches; nor shall any drawback be allowed for any lozenge, or any part whereof shall consist of or include the bullion or thick centre part of the table from which such lozenges shall have been taken, or any part of the bullion, unless no side of any such lozenge shall measure less than 8 inches; nor unless the distance between the two obtuse angles of each such lozenge shall measure 8 inches at the least; nor shall any drawback be allowed for any lozenge, or any part of the bullion or thick centre part of the table from which such lozenges shall have been cut or taken, or any part of the bullion, unless the distance between the two obtuse angles of every such lozenge shall measure $\frac{3}{4}$ inches at least; and all window glass, any part whereof shall include or consist of the bullion or thick centre part of the table from which the same shall have been cut or taken, and which shall be of any other shape or of less dimensions than as aforesaid, shall be deemed to be waste glass; and if any person shall knowingly enter or ship for exportation, in order to obtain any drawback, any panes, squares, or rectangular figures or lozenges of spread window glass, commonly known by the name of broad glass, or other window glass, not being spread glass as aforesaid, containing or including the bullion or thick part of the table from which such panes, squares, rectangular figures, or lozenges of spread glass or other window glass respectively, which shall not be of the dimensions in that behalf aforesaid, such person shall, for every package containing any such glass so entered or shipped contrary to this act, forfeit 200*l*. — (54 Geo. 3. c. 97, sect. 6.)

By 52 Geo. 3. c. 7, sect. 6, it is enacted, that no glass whatsoever made in Great Britain, or made in Ireland and imported into Great Britain, shall be packed for exportation on drawback, in any package made with any void space in or between the component parts thereof, but all such glass shall be packed for exportation in casks, boxes, or chests only, and in which the exporter shall, previous to the packing of such glass, therein have cut or sunk a sufficient number of circular cavities, each thereof not less than $\frac{1}{4}$ of an inch, nor more than 1½ inch in diameter, to receive the seal directed to be put on such package, and for the purpose of protecting such seal from being destroyed, defaced, broken, or damaged; and where any such glass shall be packed for exportation in any cask, box, or chest, each such cavity shall be cut and sunk, one part thereof on the edge of the lid or cover, and the other on the side of such box or chest, so that each such seal may be conveniently placed by the proper officer of excise, part on the wood of such lid or cover, and the residue on the wood of the side of each such box or chest; and no drawback shall be allowed for any glass so packed in a cask, box, or chest as aforesaid, nor for any glass packed in any box or chest not having a sufficient number of such cavities: provided that nothing herein shall prohibit the packing of whole or half tables of spread glass, or of crown glass, or any common bottles made of common bottle metal, in any crate or other package whatsoever.

Fraudulent Packing.—By any person shall place any brick, stone, or any other heavy substance, other than flint glass, or plaid glass, or broad glass, or crown glass, in any cask, box, or chest containing flint glass, &c. packing or packed for exportation on drawback, the person so offending shall for each such offence forfeit 200*l*., and all such glass, brick, stone, or other heavy substance contained therein shall be forfeited. — (52 Geo. 3. c. 7, sect. 7.)

Any person altering or defacing any marks on any cask, box, &c. containing glass for exportation, expressing the weight and tare of such cask, &c., or the weight of the glass therein, or the time or place of packing, or the number of the cask, &c., shall for each offence forfeit 200*l*., with the glass. — Sect. 8.

The officers of excise are to brand or mark every cask, box, &c. of glass for exportation with the letters E. G.; and if any cask, &c. of glass so branded be not put on board within 12 months after the branding thereof, or if any cask, &c. so branded be found on land after 12 months from the date when such glass was packed for exportation, the same shall be forfeited. Any person oblitterating, defacing, altering, &c. the aforesaid letters, to forfeit 200*l*. — Sect. 9.

By 56 Geo. 3. c. 108, it is enacted, that no drawback shall be paid for the exportation of any ground or polished plate glass made in Great Britain, unless such glass be exported in rectangular plates of the size of 6 inches in length by 4 inches in breadth at the least, and unless each plate of such glass be free from stains and blisters, and be perfect and fit for immediate use, as and for ground and polished plate glass; and if any person shall pack or ship for exportation on drawback, any plate of plate glass as ground and polished plate glass made in Great Britain, which is not plate glass, or has not been ground and polished, or which shall be foreign glass, or of less dimension or thickness throughout than aforesaid, or shall be stained, or blistered, or imperfect, or not immediately fit for use as ground and polished plate glass, or any other sort of glass with any ground and polished plate glass, the same, and all the glass therewith, shall be forfeited, and the person so offending shall forfeit for each such package 100*l*.

Any person packing for exportation on drawback any unground or unpolished plate glass of less or greater dimensions in thickness and size than as last aforesaid, or any foul, imperfect, or unmerchantable unground or unpolished plate glass, in any package, with or without any other sort of glass, the same, and all the glass therewith, shall be forfeited, and the person so offending shall forfeit for each such package 100*l*. — (56 Geo. 3. c. 108, sect. 4.)

By 17 Geo. 3. c. 59, it is enacted, that if glass shipped for drawback be fraudulently unshipped or reloaded, every person in anywise concerned or assisting in the same shall, over and above all other penalties, forfeit for every such offence 100*l*.; and every person knowingly entering any broken or waste glass for exportation upon a drawback shall, exclusive of all other pains and penalties, forfeit 100*l*. — Sect. 57.

By 6 Geo. 4. c. 117, it is enacted, that every person shipping or intending to ship, or being about to ship, in Ireland, any plate glass, broad glass, or crown glass, or any other glass for drawback, or for the removal thereof to Great Britain, shall give 21 hours' notice of such intention, and of the place of shipping, to the nearest collector or officer of excise; and such collector and officer are required thereupon to attend, and to cause all such glass to be weighed and measured; and in case such glass has not been charged with duty for exportation under the provisions of this act, and is about to be removed to Great Britain, it shall be lawful for such collector or officer, and he is required to charge all such glass with duty at the respective rates of duty made payable by this act on such sort or kind of glass respectively; and upon payment of such duty, it shall be lawful for such collector or officer to grant a certificate of the payment of such duty, to accompany such glass upon such removal, and to be produced at the port of entry in Great Britain; and in case any such glass which shall have been duly charged with the respective duties payable by this act shall be entered for exportation to foreign parts upon drawback, or be sent and removed to Great Britain, it shall be lawful for such collector or officer, upon proof that such duties have been paid, or have been charged and duly secured to be paid, to grant a certificate of the payment of such duty, or a certificate that such duty has been charged and is duly secured to be paid, to accompany such glass upon such exportation to foreign parts or such removal to Great Britain, and to be produced as aforesaid; and if at any time any person shall export or enter for exportation from Ireland, upon drawback, or shall remove or send from Ireland to be brought into Great Britain, or shall bring into Great Britain, any plate glass, broad glass, or crown glass, unaccompanied by such certificate, containing such particulars as aforesaid; or if any person shall refuse to produce such certificate at the port of entry in Great Britain, or shall forge or counterfeit any certificate required in this act, or shall make use of or deliver any false or untrue certificate as or for a certificate required by this act; all such glass respectively shall be forfeited, and may be seized by any officer of excise, and the person so offending shall forfeit 500*l*.; provided always, that if any plate glass, broad glass, crown glass, which shall have been previously sent to Ireland from Great Britain, on drawback, shall at any time afterwards be sent or removed to Great Britain, the rate of duty to be charged thereon as aforesaid shall be equal and according to the rate of drawback now payable thereon respectively when exported to foreign parts. — Sect. 7.

GLOVES (Ger. *Handschuhe*; Fr. *Gants*; It. *Guanti*; Sp. *Guantes*; Rus. *Rukavizii*, *Pertschutshi*, *Golizii*), well known articles of dress used for covering the hands, usually made of leather, but frequently also of cotton, wool, silk, &c. The leather used in the manufacture of gloves is not, properly speaking, tanned, but prepared by a peculiar process that renders it soft and pliable. Some sorts of leather gloves admit of being washed, and others not. Woodstock and Worcester, but particularly the former, are celebrated for the manufacture of leather gloves of a superior quality; in which a great number of women and girls, as well as men, are employed. The produce of the Worcester manufacture has been estimated at about 42,000 dozen pairs of oil leather, or beaver gloves; and 470,000 dozen pairs of kid and lamb-skin gloves; the value of the whole, when finished, being about 575,000*l*. Besides Worcester and Woodstock, London, Yeovil, Ludlow, and Leominster are the principal seats of the leather glove manufacture. Gloves are sometimes sewed by machinery; but this is done only to improve the work by rendering the stitches more correctly equidistant, as it is not cheaper than manual labour. Limerick used to be famous for the manufacture of a sort of ladies' gloves, called chicken gloves. Large quantities of cotton gloves are made at Nottingham and Leicester.

Influence of Repeal of Prohibition of Importation. — The importation of leather gloves and mitts was formerly prohibited, under the severest penalties. This prohibition had the effect, by preventing all competition and emulation with the foreigner, to check improvement, and to render British gloves at once inferior in quality and high in price. This system was, however, permitted to continue till 1825, when the prohibition was repealed, and gloves allowed to be imported on payment of duties, which, though high, are not prohibitory. This measure was vehemently opposed; and many predictions were made of the total ruin of the manufacture; but in this, as in every similar instance, experience has shown that the trade had not been really benefited; but that, on the contrary, it had been injured by the prohibition. The wholesome competition to which the manufacturers now felt themselves, for the first time, exposed, made them exert all their energies; and it is admitted on all hands, that there has been a more rapid improvement in the manufacture during the last half dozen years than in the previous half century. There is still, no doubt, a great deal of complaining of a decay of trade among the leather glove manufacturers; but we are assured that, if there be any real foundation for their complaints, it is ascribable far more to the growing use of home-made cotton gloves than to the importation of foreign leather gloves; and had it not been for the improved fabric, and greater cheapness of British leather gloves, that has grown out of the new system, it is abundantly certain that cotton gloves would have gained still more rapidly on them. In point of fact, however, it does not appear that there has been any falling off in the leather glove trade. On the contrary, the fair inference seems to be that it has materially increased; at all events, there has been a very considerable increase in the number of skins brought from abroad to be used in the manufacture, and consequently in the number of pairs of gloves produced from such skins; and there is no reason for thinking that it is at all different with the other departments.

Leather gloves must be imported in packages, containing each 100 dozen pairs at least, and in vessels of 70 tons burden or upwards, on penalty of forfeiture. — (7 *Geo. 4. c. 43. § 7.*)

Account of the Number of Dozen Pairs of Habit Gloves, Men's Gloves, and Women's Gloves and Mitts, imported into the United Kingdom; the Amount of Duty paid thereon during the Years 1828, 1829, and 1830; and the Rates of Duty.

GOLD (Ger. *Gold*; Du. *Goud*; Da. and Sw. *Guld*; Fr. *Or*; It. and Sp. *Oro*; Port. *Oiro*, *Ouro*; Rus. *Soloto*; Pol. *Zloto*; Lat. *Aurum*; Arab. *Tibr* and *Zeheb*; Sans. *Swarna*; Malay, *Mis*), the most precious of all the metals, seems to have been known from the earliest antiquity. It is of an orange red, or reddish yellow colour, and has no perceptible taste or smell. Its lustre is considerable, yielding only to that of platinum, steel, silver, and mercury. It is rather softer than silver. Its specific gravity is 19.3. No other substance is equal to it in ductility and malleability. It may be beaten out into leaves so thin, that one grain of gold will cover 56 $\frac{3}{4}$ square inches. These leaves are only $\frac{1}{252,000}$ of an inch thick. But the gold leaf with which silver wire is covered has only $\frac{1}{12}$ of that thickness. An ounce of gold upon silver is capable of being extended more than 1,300 miles in length. Its tenacity is considerable, though in this respect it yields to iron, copper, platinum, and silver. From the experiments of Seeckingen, it appears that a gold wire 0.078 inch in diameter, is capable of supporting a weight of 150.07 lbs. avoirdupois without breaking. It melts at 32° of Wedgwood's pyrometer. When melted, it assumes a bright bluish green colour. It expands in the act of fusion, and consequently contracts while becoming solid more than most metals; a circumstance which renders it less proper for casting in moulds. — (*Thomson's Chemistry.*)

For the quantities of gold produced, and the places where it is produced, see PRECIOUS METALS.

GOMUTI, or **EJOO**, a species of palm (*Borassus Gomutus*), growing in the Indian islands. A valuable product is obtained from this palm, resembling *black horse hair*; it is found between the trunk and the branches, at the insertion of the latter, in a matted form, interspersed with long, hard, woody twigs of the same colour. When freed from the latter, it is manufactured by the natives into cordage. Its fibres are stronger and more durable, but less pliant, than those of the cocoa nut, or coir—

(see COIR); and is, therefore, fitter for cables and standing rigging, but less fit for running rigging. The native shipping of the Eastern islands of all kinds are chiefly equipped with cordage of the gomuti; and the largest European shipping in the Indies use cables of it. It undergoes no preparation but that of spinning and twisting; no material similar to our tar or pitch, indispensable to the preservation of hempen cordage, being necessary with a substance that, in a remarkable degree, possesses the quality of resisting alternations of heat and moisture. The gomuti of Amboyna, and the other Spice islands, is the best. That of Java has a coarse ligneous fibre. Gomuti is generally sold in twisted shreds or yarns, often as low as 1 dollar a picul, and seldom more than 2. Were European ingenuity applied to the improvement of this material, there seems little doubt that it might be rendered more extensively useful. — (*Crawford's East. Archip.* vol. iii. p. 425.)

GOOD HOPE, CAPE OF. See CAPE TOWN.

GOTTENBURGH, or, more properly, **GOTHABORG**, on the south-west coast of Sweden, bordering the Cattogat, near the mouth of the river Götha, lat. $57^{\circ} 42' 4''$ N., lon. $11^{\circ} 57' 45''$ E. Population 21,000 *, and increasing. Vessels do not come close to the city, but lie in the river or harbour at a short distance from the shore, goods being conveyed from and to them by lighters that navigate the canals by which the lower part of the town is intersected. The depth of water in the port is 17 feet, and there is no tide, bar, or shallow. A vessel entering the Götha must take a pilot on board, whose duty it is to meet her $\frac{1}{2}$ a league west of Wingo beacon. After Stockholm, Gottenburgh has the most extensive commerce of any town in Sweden. Iron and steel, the former excellent, but the latter inferior to that made in England, form the principal articles of export. They are brought from the rich mines of Wermeland, distant about 200 miles; being conveyed partly by the lake Wener, partly by the Tröllhätta canal — (see CANALS), — and partly by the river Götha. The exports of iron, in 1831, amounted in all to 21,639 tons, of which 15,400 tons were taken by the United States, and 4,511 tons by England. The original cost of iron is supposed to be increased about 5 per cent. by the expense of its conveyance to Gottenburgh; and the shipping charges, inclusive of the export duty, are about 10 per cent. additional. The next great article of export is timber, particularly deals, which are also furnished by Wermeland. Of these, the exports, in 1831, were 52,866 dozen, of which 40,600 dozen went to Great Britain, and the residue to France, Holland, &c. The other articles of export are, linen, sail-cloth, tar, copper, alum, glass, cobalt, manganese, linseed, oak bark, bones, juniper berries, cranberries, rock moss for dyeing, &c. Grain is sometimes imported and sometimes exported. The principal articles of import are sugar, coffee, tobacco, cotton yarn and twist, salt, indigo, and dye woods, South Sea oil, rice, herrings, wine, spices, &c. In 1831, 529 ships, of the burden of 63,075 tons, entered Gottenburgh. Of these, 63 ships, carrying 16,770 tons, were American; and 41 ships, carrying 5,131 tons, British. The rest belonged, for the most part, to Sweden, Norway, and Denmark. About 80 vessels, of the burden of 14,000 tons, belong to the port; but the native shipping is decreasing.

Herring Fishery. — Gottenburgh used, at no distant period, to be one of the principal seats of the herring fishery; but at present this branch of industry is quite extinct, and it has always been very capricious. From 1536 to 1584, great quantities of herrings were taken; from 1588 to 1600, they left the coast; during the next 15 years they were again abundant; but from 1675 to 1747, they entirely disappeared. From 1747 to 1770, they were abundant, 185,614 barrels being taken in 1763, and 151,483 in 1768. From 1786 to 1790, the fishery was very good, from 110,000 to 190,000 barrels being annually exported. In 1804, the export was 79,512 barrels. In 1808 and 1809, fish were very scarce; and in 1812 they entirely disappeared, and have not hitherto returned; so that Gottenburgh, instead of exporting, at present imports considerable supplies of herrings.

The customs duties produced, in 1831, 749,732 dollars banco, or 53,552*l*. Both iron and timber pay duties on exportation, but they are not very heavy.

Custom-house Regulations and Port Charges. — On arriving in port, no person is allowed to board or to leave a vessel till she be in custody of the officers; who, having inspected the in and out papers, send them to the Custom-house. An officer is appointed to superintend the unloading and also the loading. The public charges of all sorts on a Swedish ship and on a foreign ship not privileged, each of 500 tons burden, unloading and loading mixed cargoes at Gottenburgh, would be, on the former 2*l*. 5*s*. 7*d*., on the latter 4*l*. 5*s*. 7*d*.. On a privileged foreign ship the charges are the same as on a Swedish ship.

Warehousing System. — Goods may be bonded for any length of time, on paying $\frac{1}{2}$ per cent. *ad valorem* for the first 2 years, and $\frac{1}{2}$ per cent. annually thereafter. **Commission, Credit, &c.** — The usual rate of commission is 2 per cent. Goods are commonly sold on credit. Raw sugar at 9 months, with 3 months' interest to the seller. Other goods at 3, 4, and 6 months.

Commercial Policy. — But for the perverse policy of its government, the trade of Gottenburgh, and of Sweden in general, would be far greater than it is. Its rich and exhaustless mines and forests furnish an ample supply of equivalents for whatever might be imported into the country; but instead of allowing the energies of the nation to be employed in this safe and natural channel, government has attempted, by a system of prohibitions and heavy duties, to raise, *contre qui contre*, a manufacturing inter-

Banking, &c. — There are no public or private banking establishments at Gottenburgh for the issue of notes; but the national bank has two offices here which advance limited sums of money, at 3 per cent. on the security of goods, and in discount of bills. Some of the English insurance companies have agents here, who do a good deal of business.

Sea Stores, Water, &c. — These may be had here of excellent quality and cheap. Beef 1*d*. per *lb*., best rye bread 2*d*. per *lb*., and butter 6*d*. per *lb*.

Freight to London, in 1832, from 10*s*. a ton; deals, per Pete slurgh standard hundred, 3*l*. 10*s*.

Money, Weights, Measures, &c. same as at Stockholm, which see.

In compiling this article, we have made use of the *Comand's Answer*, dated 19th of January, 1833; *Cott's Travels in the North of Europe*, vol. iv. pp. 297–275; *Odly's European Commerce*, p. 511; and some valuable private communications.

* This is the population as given in the *Weimar Almanac* for 1832; according to the Consul's report it is under 18,000.

est, and to make Sweden independent of foreigners! In consequence, a good many cotton and woollen mills have been established in different parts of the country. It would, however, be absurd to imagine that they should ever be able to furnish products at so cheap a rate as they may be imported for from this and other countries, enjoying superior facilities for the prosecution of manufacturing industry. This forced system is, therefore, doubly injurious to Sweden; first, by lessening the foreign demand for her peculiar products, and secondly, by diverting capital and industry into the least productive channels, forcing the inhabitants to pay an artificially enhanced price for some highly necessary articles, and encouraging smuggling. But, pernicious as the system is, so great a proportion of the scanty capital of Sweden is now embarked under its agis, that the return to a better order of things will be a work of much difficulty. It need not surprise us to learn that the imposition in this country of oppressive discriminating duties on timber from the north of Europe had a material influence in stimulating the Swedes to endeavour to dispense with foreign, that is, with British, manufactured articles!

GRACE, DAYS OF. See EXCHANGE.

GRAPES (Ger. *Trauben*; Fr. *Raisins*; It. *Grappoli*, *Grappi*; Sp. *Uvas*, *Racimos*; Lat. *Uvæ*), a well known fruit, produced from the vine. France, Spain, Portugal, and Italy, as well as some parts of Germany and Hungary, produce grapes which yield wines of various qualities and flavour, many of them excellent. We import green grapes from Malaga and some other parts of Spain; they are brought packed in jars, and secured from damage by means of saw-dust, plentifully strewed between the layers of fruit. The grapes grown in Great Britain in the open air are much smaller, and by no means so luscious, as those of foreign countries; but those raised in hot-houses are quite equal, if not superior, to the former. Grapes are imported not only in their natural state, but dried and preserved, in which latter state they are denominated **RAISINS**; which see.

GRINDSTONES, flat circular stones of different diameters and thickness, mounted on spindles or axles, and made to revolve with different degrees of velocity, employed to polish steel articles, to give an edge to cutting instruments, &c. Grindstones not in constant use are commonly turned by winch handles; but at Sheffield and other places, where polished articles and cutlery are extensively manufactured, large numbers of grindstones, being mounted in buildings appropriated to that purpose, called grind or blade mills, are turned by straps, acting on their axles, the moving power being either water or steam. The stone best suited to form grindstones is what is called a sharp-grit; it being chosen finer or coarser grained according to the purposes for which they are destined. The principal grindstone quarry in England is at Gateshead Fell, in the county of Durham; where they are produced in vast numbers, not only for home use, but for exportation to all parts of the world. But those principally in use at Sheffield are mostly quarried at Wickersley, in Yorkshire.

They are classed in eight different sizes, called *foots*, according to their dimensions, as in the following Table:—

Denominations.	Diameter.	Thickness.	No. in a Chaldron.	Denominations.	Diameter.	Thickness.	No. in a Chaldron.
	<i>Inches.</i>	<i>Inches.</i>			<i>Inches.</i>	<i>Inches.</i>	
1 Foot	10	2	36	5 Foot	35	5	5
2 Foot	14	2½	27	6 Foot	42	6	3
3 Foot	20	4	18	7 Foot	50	6	1½
4 Foot	28	4	9	8 Foot	56	8	1

A grindstone foot is 8 inches: the size is found by adding the diameter and thickness together. Thus, a stone 56 inches diameter by 8 thick, making together 64 inches, is an 8-foot stone, of 8 inches each foot.

Besides the above sizes, grindstones are made, when ordered, of any intermediate dimensions: many are made much larger than any of the above sizes; some as large as 76 inches diameter, and 14 or 15 inches thick, which are a great weight, a cubic foot weighing 1 cwt. 1 qr. 14 lbs. — (*Rees's Cyclopædia*; *Baileys's Survey of Durham*, p. 43.)

Grinding is an unhealthy and dangerous employment. For some purposes, the stones are made to revolve with an extreme degree of velocity; which makes them occasionally fly in pieces. But the greatest annoyance to which the grinder is exposed, is from his inhaling the minute particles of stone, and of iron and steel, that are always flying about, particularly in the process termed dry grinding. Contrivances have been suggested for obviating this serious inconvenience; but whether it be owing to their unsuitableness, or to the carelessness of the workmen, none of them has succeeded in practice. — (*Treatise on Iron and Steel*, *Lardner's Cyclopædia*, p. 293.)

GUAJACUM, OR LIGNUM VITÆ (Fr. *Gayac*, *Bois saint*; Ger. *Pockhalm*; It. *Guajaco*; Lat. *Guaiacum*, *Lignum vitæ*; Sp. *Guagaco*), the wood of a tree, a native of Jamaica, Hayti, and the warmer parts of America. It is a dark-looking evergreen, growing to from 40 to 50 feet in height, and from 14 to 18 inches in diameter. The bark is hard, smooth, and brittle; the wood is externally yellowish, and internally of a blackish brown colour. *Lignum vitæ* is the weightiest timber with which we are acquainted, its specific gravity being 1.333. It is exceedingly hard, and difficult to work. It can hardly be split, but breaks into pieces like a stone, or crystallised metal. It is full of a resinous juice (*guaiac*), which prevents oil or water from working into it, and renders it proof against decay. Its weight and hardness make it the very best timber for stampers and mallets; and it is admirably adapted for the sheaves or pulleys of blocks, and for friction rollers or castors. It is extensively used by tumers.

The *guaiac*, or gum, spontaneously exudes from the tree, and concretes in very pure tears. It is imported in casks or mats; the former containing from 1 to 4 cwt., the latter generally less than 1 cwt. each. Its colour differs considerably, being partly brownish partly reddish, and partly greenish; and it always becomes green when 1 ft exposed to

the light in the open air. It has a certain degree of transparency, and breaks with a vitreous fracture. When pounded, it emits a pleasant balsamic smell, but has scarcely any taste, although when swallowed it excites a burning sensation in the throat. When heated, it melts, diffusing, at the same time, a pretty strong fragrant odour. Its specific gravity is 1.229. — (See *Veget. Sub., Lib. of Entert. Knowledge; Thomson's Chemistry, &c.*)

GUERNSEY. For the peculiar regulations to be observed in trading with Guernsey, Jersey, &c., see **IMPORTATION AND EXPORTATION.**

GUMS, RESINS, GUM-RESINS. In commerce, the term gum is not only applied to gums properly so called, but also to resins and gum-resins. But though these substances have many properties in common, they are yet sufficiently distinct.

1. *Gum* is a thick transparent fluid that issues spontaneously from certain species of plants, particularly such as produce stone fruit, as plum and cherry trees. It is very adhesive, and gradually hardens by exposure to the atmosphere. It is usually obtained in small pieces, like tears, moderately hard and somewhat brittle while cold; so that it can be reduced by pounding to a fine powder. When pure, it is colourless: but it has commonly a yellowish tinge; it is not destitute of lustre; it has no smell; its taste is insipid; its specific gravity varies from 1.3161 to 1.4317; it readily dissolves in water, but is insoluble in alcohol. Gum is extensively used in the arts, particularly in calico printing, to give consistence to the colours, and to hinder them from spreading. It is also used in painting, in the manufacture of ink, in medicine, &c.

The only important gums, in a commercial point of view, are *gum Arabic* and *gum Senegal*.

1. *Gum Arabic* (Fr. *Gomme Arabique*; It. *Gomma Arabica*; Ger. *Arabische gummi*; Arab. *Tollh*), the produce of the *Acacia vera*, a tree growing in Arabia, and in many parts of Africa. The gum exudes naturally from the trunk and branches, and hardens by exposure to the air. "The more sickly the tree appears, the more gum it yields; and the hotter the weather, the more prolific it is. A wet winter and a cool or mild summer are unfavourable to gum." — (*Jackson's Morocco*, p. 84.) It is in irregularly shaped pieces, hard, brittle, and semi-transparent. When pure it is almost colourless, or of a pale yellowish hue; being insipid, inodorous, and dissolving completely in the mouth. Specific gravity 1.31 to 1.43. It is often mixed with gum Senegal. East India gum Arabic is, though a useful, a spurious article, not being the produce of the *acacia vera*, but of other species of plants. The best gum is either imported direct from Alexandria, Smyrna, Tripoli, Mogadore, Tangiers, &c., or at second hand from them through Gibraltar, Malta, and the Italian ports. The price depends principally on its whiteness and solubility, increasing and diminishing, according as the article has more or less of these qualities. — (*Thomson's Dispensatory*, and *private information*.)

At an average of the 3 years ending with 1831, the gum Arabic entered for consumption amounted to 13,574 cwt. a year. Previously to last year (1832), the duty on gum Arabic from a British possession was 6s. a cwt., and from other parts 12s.; but the duty on it and all other gums is now fixed at 6s. a cwt. without regard to origin. Of 7,784 cwt. of gum Arabic imported in 1830, Tripoli, Barbary, and Morocco furnished 2,063; Egypt, 579; Gibraltar, 1,587; Italy, 1,007; Malta, 367; the East Indies, 1,962, &c. The reduction of the duty on foreign gum will most probably occasion an increase of the imports from the Mediterranean and Mogadore. The price of gum Arabic in bond in the London market was, in December, 1833, — East India, from 34s. to 65s. per cwt.; Turkey, from 100s. to 211s. per do.; and Barbary, from 50s. to 100s. per do.

2. *Gum Senegal*, principally brought from the island of that name on the coast of Africa, is obtained from various trees, but chiefly from two: one called *Vereck*, which yields a white gum; the other called *Nebuel*, which yields a red gum; varieties of the *acacia gummifera*. Gum Arabic is very often mixed with gum Senegal. The latter is nearly as pure as the former, but it is usually in larger masses, of a darker colour, and more clammy and tenacious. It is the sort of gum principally employed by calico printers. It was worth, in December, 1833, duty (6s.) paid, from 75s. to 78s. a cwt. — (*Thomson's Chemistry, Thomson's Dispensatory, Ainslie's Materia Indica, &c.*)

II. *Resins*, for the most part, exude spontaneously from trees, though they are often obtained by artificial wounds, and are not uncommonly, at first, combined with volatile oil, from which they are separated by distillation. They are solid substances, naturally brittle; have a certain degree of transparency, and a colour most commonly inclining to yellow. Their taste is more or less acrid, and not unlike that of volatile oils; but they have no smell, unless they happen to contain some foreign body. They are all heavier than water, their specific gravity varying from 1.0182 to 1.1862. They differ from gums in being insoluble in water, whether cold or hot; while they are, with a few exceptions, soluble in alcohol, especially when assisted by heat. When heated, they melt; and if the heat be increased, they take fire, burning with a strong yellow flame, and emitting a vast quantity of smoke. Common *rosin* furnishes a very perfect example of a resin, and it is from this substance that the whole genus have derived their name. Rosin is, indeed, frequently denominated resin. The principal resins are *Animi*, *Elemi*, *Copal*, *Lac*, *Labdanum*, *Mastic*, *Rosin*, *Sandarach*, *Tacamahac*, &c.; which see, under their respective names. — (*Thomson's Chemistry*.)

III. *Gum-resins*, a class of vegetable substances consisting of gum and resin. They differ from resins in this—that they never exude spontaneously from the plant, being obtained either by bruising the parts containing them, and expressing the juice, which is always in a state of emulsion, generally white, but sometimes of a different colour, or by making incisions in the plant, from which the juice flows. The juice, being exposed to the action of the sun, is condensed and inspissated, till it forms the gum-resin of commerce. Gum-resins are usually opaque, or, at least, their transparency is inferior to that of resins. They are always solid, and most commonly brittle, and have, sometimes, a fatty appearance. When heated, they do not melt as resins do; neither are they so combustible. Heat, however, commonly softens them, and causes them to swell. They burn with a flame. They have almost always a strong smell, which, in several instances, is alliaceous. Their taste, also, is often acrid, and always much stronger than that of resins. They are usually heavier than resins. They are partially soluble in water, but the solution is always opaque, and usually milky. Alcohol partially dissolves them, the solution being transparent.

The most common gum-resins are *Aloes*, *Ammonia*, *Euphorbium*, *Galbanum*, *Gamboge*, *Myrrh*, *Olibanum*, *Sagapenum*, *Scammony*, &c.; which see, under their respective names. —(*London's Ency. of Agricult.*; *Thomson's Chemistry*.)

GUNPOWDER (Ger. *Pulver*, *Schiesspulver*; Du. *Buskruid*; Da. *Krudt*, *Pulver*; Sw. *Krut*; Fr. *Poudre*; It. *Polvere*; Sp. and Port. *Polvera*; Rus. *Poroch*; Pol. *Proch*; Lat. *Puleis pyrius*). This well known inflammable powder is composed of nitre, sulphur, and charcoal, reduced to powder, and mixed intimately with each other. The proportion of the ingredients varies very considerably; but good gunpowder may be composed of the following proportions; viz. 76 parts of nitre, 15 of charcoal, and 9 of sulphur. These ingredients are first reduced to a fine powder separately, then mixed intimately, and formed into a thick paste with water. After this has dried a little, it is placed upon a kind of sieve full of holes, through which it is forced. By this process it is divided into grains, the size of which depends upon the size of the holes through which they have been squeezed. The powder, when dry, is put into barrels, which are made to turn round on their axis. By this motion the grains of gunpowder rub against each other, their asperities are worn off, and their surfaces are made smooth. The powder is then said to be glazed. —(*Thomson's Chemistry*.)

Dr. Thomson, whose learning is equal to his science, has the following remarks with respect to the introduction of gunpowder into warlike operations:—"The discoverer of this compound, and the person who first thought of applying it to the purposes of war, are unknown. It is certain, however, that it was used in the fourteenth century. From certain archives quoted by Wiegleb, it appears that cannons were employed in Germany before the year 1372. No traces of it can be found in any European author previously to the thirteenth century; but it seems to have been known to the Chinese long before that period. There is reason to believe that cannons were used in the battle of Cressy, which was fought in 1346. They seem even to have been used three years earlier, at the siege of Algesiras; but before this time they must have been known in Germany, as there is a piece of ordnance at Amberg, on which is inscribed the year 1303. Roger Bacon, who died in 1292, knew the properties of gunpowder; but it does not follow that he was acquainted with its application to fire-arms." —(*Thomson's Chemistry*.) For further particulars as to the introduction of cannon, see that article.

The manufacture and sale of gunpowder is regulated by several statutes. By the 12 Geo. 3. c. 61. it is enacted, that no person shall use mills or other engines for making gunpowder, or manufacture the same in any way, except in mills and other places which were *actually in existence* at the time of passing the act, or which, if erected afterwards, have been sanctioned by a licence, under pain of forfeiting the gunpowder, and 2s. a pound. It is further enacted, that no mill worked by a pestle, and usually termed a pestle mill, shall be used in making gunpowder, under the above-mentioned penalty; and that no more than 40 lbs. of gunpowder, or materials to be made into gunpowder, shall be made at any one time under a single pair of mill-stones, on pain of forfeiting all above 40 lbs., and 2s. for every pound; nor shall more than 40 cwt. be dried in any one stove or place at any one time, under forfeiture of all above that quantity, and 2s. for every pound thereof. The powder mills erected at Battle, Crowhurst, Saddlescombe, and Brede, in Sussex, previously to 1772, are exempted from the above regulations so far as relates to the making of fine fowling powder.

No dealer is to keep more than 200 lbs. of powder, nor any person not a dealer, more than 50 lbs., in the cities of London or Westminster, or within 3 miles thereof, or within any other city, borough, or market town, or 1 mile thereof, or within 2 miles of the king's palaces or magazines, or $\frac{1}{4}$ a mile of any parish church, on pain of forfeiture, and 2s. per lb.; except in licensed mills, or to the amount of 200 lbs. for the use of collieries, within 200 yards of them.

Not more than 25 barrels are to be carried by any land carriage, nor more than 200 barrels by water, unless going by sea or coastwise, each barrel not to contain more than 100 lbs.

All vessels, except his Majesty's, coming into the Thames, are to put on shore, at or below Blackwall, all the gunpowder they have on board exceeding 25 lbs. Vessels outward bound are not to receive on board more than 25 lbs. of gunpowder previously to their arrival at Blackwall. The Trinity House have authority to appoint searchers to inspect ships, and search for gunpowder. All the gunpowder found above 25 lbs., and the barrels containing it, and 2s. for every lb. above that quantity, are forfeited. Any person obstructing an officer searching for concealed gunpowder is liable to a penalty of 10l. The places of deposit for gunpowder are regulated by the 54 Geo. 3. c. 159.

The exportation of gunpowder may be prohibited by order in council. Its importation is prohibited on pain of forfeiture, except by licence from his Majesty; such licence to be granted for furnishing his Majesty's stores only. —(6 Geo. 4. c. 107.)

The act 1 Will 4. c. 44. prohibits the manufacture and keeping of gunpowder in Ireland by any person who has not obtained a licence from the Lord Lieutenant; such licences may be suspended on notice from the chief secretary, and any one selling gunpowder during the suspension of such licence shall forfeit 500*l.* Gunpowder makers under this act are to return monthly accounts of their stock, &c. to the chief secretary. This act, which contains a variety of restrictive clauses, was limited to one year's duration, but has been prolonged.

GUNNY (Hind. *Tūt*; Ben. *Gūni*), a strong coarse sackcloth manufactured in Bengal for making into bags, sacks, and packing generally, answering at once the two purposes for which canvass and *bast* are used in Europe. The material from which this article is manufactured, is the fibre of two plants of the genus *Corchorus*; viz. *Corchorus olitorius*, and *Corchorus capsularis* (Bengali, *pat*); both, but particularly the first, extensively cultivated throughout Lower Bengal. Besides a large domestic consumption of gunny, the whole rice, paddy, wheat, pulses, sugar, and saltpetre of the country, as well as the pepper, coffee, and other foreign produce exported from Calcutta, are packed in bags or sacks made of this article. There is also a considerable exportation of manufactured bags, each commonly capable of containing two maunds, or about 160 lbs. weight, to Prince of Wales Island, Malacca, Singapore, Java, and Bombay. In 1828–29, the number exported from Calcutta was 2,205,206, of the value of 166,109 sicca rupees, or about 16,000*l.* sterling, showing the price of each sack to be less than 2*d.* — (*Wallich*; *Roxburgh*; *Bell's Review of the External Commerce of Bengal*.)

GYPSUM, OR **SULPHATE OF LIME**, is found in various parts of the Continent, and in Derbyshire and Nottinghamshire. When reduced to a powder, and formed into a paste with water, it is termed *plaster of Paris*, and is much used for forming casts, &c. It is also used for laying floors; and has been advantageously employed as a manure.

H.

HAIR, HUMAN (Ger. *Haare*, *Menschen-haar*; Du. *Hair*; Fr. *Cheveux*; It. *Capelli umani*; Sp. *Cabellos*; Lat. *Capilli*). "Human hair makes a very considerable article in commerce, especially since the mode of perruques has obtained. Hair of the growth of the northern countries, as England, &c., is valued much beyond that of the more southern ones, as Italy, Spain, the southern parts of France, &c. Good hair is well fed, and neither too coarse nor too slender; the bigness rendering it less susceptible of the artificial curl, and disposing it rather to frizzle; and the smallness making its curl of too short duration. Its length should be about 25 inches; the more it falls short of this, the less value it bears." — (*Ency. Brit.*)

HAIR OF BEASTS (Ger. *Haare*, *Hu Haare*; Du. *Hair*; Fr. *Poil*; It. and Sp. *Pelo*; Lat. *Pelles*). The hair of horses is extensively used in the manufacture of chairs, sofas, saddles, &c.; while the hair or wool of beavers, hares, rabbits, &c. is much employed in the manufacture of hats, &c.

HAIR-POWDER (Ger. *Puder*; Fr. *Poudre à poudrer*; It. *Polvere di cipri*; Sp. *Polveros de peluca*), is used as an ornament for the hair, and generally made from starch pulverised, and sometimes perfumed. A tax of 1*l.* 3*s.* 6*d.* a year is laid upon all persons who wear hair-powder. Different statutes prohibit the mixing of hair-powder with starch or alabaster. And hair-powder makers are prohibited having alabaster in their custody.

HALIFAX, the capital of Nova Scotia, on the south-east coast of that province, lat. 44° 36' N., lon. 63° 28' W. It is situated on a peninsula on the west side of Chebucto Bay, and has one of the finest harbours in America. Population, exclusive of the military, about 18,000. The town is irregularly built, and most of the houses are of wood. The government-house is one of the most splendid edifices in North America. Halifax was founded in 1749.

Port. — The best mark in sailing for Halifax is Sambro light-house, on a small island off the cape of the same name, on the west side of the entrance to the harbour, in lat. 44° 30', lon. 63° 32'. The light, which is fixed, is 210 feet above the level of the sea; and a detachment of artillery, with two 24-pounders, is upon duty at the light-house, firing at regular intervals during the continuance of the dense fogs with which this part of the coast is very much infested. — (*Coutier, Tables des Principales Positions Géographiques*, p. 78.) The course into the harbour for large ships, after passing Sambro light, is between the main land on the west and Macaulay's Island on the east. On a spit projecting from the latter, a light-house has recently been constructed; and when this is seen, ships may run in without fear. The harbour is defended by several pretty strong forts. Ships usually anchor abreast of the town, where the harbour is rather more than a mile in width. After gradually narrowing to about $\frac{1}{4}$ of that width, it suddenly expands into a noble sheet of water, called Bedford Basin, completely land-locked, with deep water throughout, and capable of accommodating the whole navy of Great Britain. The harbour is accessible at all times, and is rarely impeded by ice. There is an extensive royal dock-yard at Halifax; which during war is an important naval station, being particularly well calculated for the shelter, repair, and outfit of the fleets cruising on the American coast and in the West Indies. Mr. McGregor has severely, and, we believe, justly, censured the project for the removal of the dock-yard from Halifax to Bermuda.

Trade, &c. of Halifax and Nova Scotia. — Halifax is the seat of a considerable fishery; but the British colonists seem to be, for what reason it is not easy to say, both less enterprising and less successful fishers than the New Englanders. The principal trade of the town and province is with the West Indies, Great Britain, and the United States. To the former they export dried and pickled fish, lumber, coals, grindstones,

cattle, flour, butter, cheese, oats, potatoes, &c. They export the same articles to the southern ports of the United States, and gypsum to the eastern ports of New England. To Great Britain they send timber, deals; whale, cod, and seal oil; furs, &c. The principal exports of timber are from Pictou on the St. Lawrence. The imports consist principally of colonial produce from the West Indies; all sorts of manufactured goods from Great Britain; and of flour, lumber, &c. from the United States, principally for exportation to the West Indies.

The government packets sail regularly once a month from Halifax to Falmouth; but packet ships to Liverpool have recently been established, which are, in all respects, superior to the former. There are also regular packets from Halifax to Boston, New York, and the West Indies. A steam-boat plies constantly between Halifax and the little town of Dartmouth, on the opposite side of the harbour.

In 1826 a company was formed for making a canal across the country from Halifax to the basin of Minas, which unites with the bottom of the Bay of Fundy. The navigation is formed, for the most part, by Shubenacadie lake and river. The legislature gave £5,000 to this undertaking; but it has not hitherto been completed. The excavated part of the canal is 60 feet wide at top, 56 feet at bottom, and is intended to admit vessels drawing 8 feet water. It seems very questionable whether this canal will be profitable to the shareholders; but there can be no doubt that it would, if finished, be of considerable service to the trade of Halifax.

There are 2 private banking companies at Halifax. Accounts are kept in pounds, shillings, and pence, the same as in England, and the weights and measures are also the same.

About 100 large square-rigged vessels, and about the same number of large schooners, with several smaller craft, belong to Halifax.

The total revenue of Nova Scotia for the year 1831, including balances and arrears, was \$5,018; the expenditure during the same year, exclusive of that incurred on account of the garrison, being 91,877.

We borrow from the valuable work of Mr. McGregor the following statements as to the trade of Nova Scotia in 1832:—

Produce of the Fisheries exported in the Year ending 5th of January, 1833.			
	L.	s.	d.
160,610 cwt. dry fish, at 10s. -	80,300	0	0
37,151 barrels pickled fish, at 15s. -	27,865	10	0
8,641 boxes smoked herrings, at 5s. -	1,296	5	0
704 tons oil, at 20l. -	11,080	0	0
51,918 seal skins, at 1s. 6d. -	5,895	17	0
Total	127,155	10	0
Produce of Agriculture.			
	L.	s.	d.
Barley and oats, 3,178 bushels, at 2s. -	517	16	0
Potatoes and turnips, 61,712, at 1s. 6d. -	4,853	12	0
Onion, 7 barrels, at 20s. -	7	0	0
Flax-seed, 10 bushels -	2	10	0
Floured cattle, horses, sheep, and swine, 926, value -	4,650	0	0
Butter, cheese, and lard, 85,721 lbs., value -	4,286	4	0
Cranberries, 436 gallons -	21	6	0
Apples, 260 barrels -	150	0	0
Beef and pork, 454 barrels -	1,502	0	0
Total	15,585	8	0

Produce of the Mines, exported.			
	L.	s.	d.
Coals, 12,030 chaldrons, at 25s. -	15,025	0	0
Ditto, from Cape Breton, 30,677 chaldrons -	38,341	13	0
Gypsum, 45,908 tons, at 10s. -	22,754	0	0
Ditto, from Cape Breton, 628½ tons -	518	5	0
Grindstones, 19,240, at 50s. -	9,620	0	0
Total	105,529	0	0
Produce of the Forests.			
	L.	s.	d.
Square timber, 58,191 tons, at 15s. -	29,645	5	0
Deals and inch boards, 9,584,000 -	21,280	0	0
Lathwood, 228 loads -	22	0	0
Staves, 2,714,000 -	5,569	0	0
Shingles, 5,042,000 -	2,521	10	0
Handspikes, 2,500 -	115	0	0
Oars, poles, &c., 5,891 -	45	0	0
Masts and spars, 612 -	260	0	0
Hoops, 228,150 -	114	1	5
Value of timber shipped from Cape Breton -	1,972	0	0
Total	62,447	16	3

The balance of exports consists of various articles, transhipped, principally West India produce, tea from China, &c.

Account of Vessels entered inwards in the Port of Halifax and Nova Scotia generally, in the Year ending 5th of January, 1833; and of those cleared outwards from the same.

(See *McGregor's British America*, 2d ed. vol. i. p. 481. 483 &c.; *Moorsom's Letters from Nova Scotia*, *passim*; *Papers laid before the Finance Committee*, &c.)

HAMS (Ger. *Schinken*; Du. *Hammen*; Fr. *Jambons*; It. *Prosciutti*; Sp. *Jamones*; Rus. *Olorokü*), the thighs of the hog salted and dried. York, Hauts, Wilts, and Cumberland, in England, and Dumfries and Galloway in Scotland, are the counties most famous for producing fine hams. Those of Ireland are comparatively coarse and without flavour. — (See *BACON*.) The hams of Portugal, Westphalia, and Virginia, are exquisitely flavoured, and are in high estimation. The imports of bacon and hams, prin-

especially the latter, amount to about 1,350 cwt. a year. The duty is very heavy, being no less than 28s. a cwt.

HAMBURGH, a free Hansatic city, on the north bank of the river Elbe, about 70 miles from its mouth, in lat. $53^{\circ} 32' 51''$ N., lon. $9^{\circ} 58' 37''$ E. Population, 125,000. Hamburg is the greatest commercial city of Germany, and, perhaps, of the Continent. She owes this distinction principally to her situation. The Elbe, which may be navigated by lighters as far as Prague, renders her the *entrepôt* of a vast extent of country. Advantage, too, has been taken of natural facilities that extend still further her internal navigation; a water communication having been established, by means of the Spree and of artificial cuts and sluices, between the Elbe and the Oder, and between the latter and the Vistula; so that a considerable part of the produce of Silesia destined for foreign markets, and some even of that of Poland, is conveyed to Hamburg. — (See CANALS.) There is, also, a communication by means of a canal with the Trave, and, consequently, with Lubeck and the Baltic, by which the necessity of resorting to the difficult and dangerous navigation of the Sound is obviated. Vessels drawing 14 feet water come up to the town at all times; and vessels drawing 18 feet may come safely up with the spring tides. The largest vessels sometimes load from and unload into lighters at Cuxhaven. The trade of Hamburg embraces every article that Germany either sells to or buys from foreigners. The exports principally consist of linens, grain of all sorts, wool and woollen cloths, leather, flax, glass, iron, copper, smalts, rags, staves, wooden clocks and toys, Rhenish wines, spelter, &c. Most sorts of Baltic articles, such as grain, flax, iron, pitch and tar, wax, &c., may generally be bought as cheap at Hamburg, allowing for difference of freight, as in the ports whence they were originally brought. The imports consist principally of sugar; coffee, which is the favourite article for speculative purchases; cotton wool, stuffs, and yarn; tobacco, hides, indigo, wine, brandy, rum, dye woods, tea, pepper, &c. Being brought from many different places, there is a great variety of quality in the grain found at Hamburg; but a large proportion of the wheat is inferior. Some of the barley is very good, and fit for malting. The oats are feed of various qualities. The customs revenue is found to amount, one year with another, to from 30,000*l.* to 35,000*l.* The rate may, perhaps — (see *post*), be taken, on imports and exports, at a rough average, at 5s. 3*d.* per cent., which would give, at a medium, 12,380,000*l.* a year for the value of the trade in articles subjected to duties; and adding 2,000,000*l.* for the trade in articles exempted from duties, we have 14,380,000*l.* as the total annual value of the import and export trade of the port! And, as the largest portion of this immense trade is in our hands, it will be necessary that we should be a little fuller than ordinary in our details as to this great emporium.

Money. — Accounts are kept at Hamburg in *marcs*, divided into 16 sols or schillings lubs, and the schilling into 12 pfenings lubs.

Accounts are also kept, particularly in exchanges, in pounds, schillings, and pence Flemish. The pound consisting of $2\frac{1}{2}$ crowns, $3\frac{1}{2}$ thalers, $7\frac{1}{2}$ marcs, 20 schillings Flemish, and 240 grotes Flemish.

The monies in circulation at Hamburg are divided into *banco* and *current money*. The former consists of the sums inscribed in the books of the bank opposite to the names of those who have deposited specie or bullion in the bank. *Banco* is intrinsically worth about 23 per cent. more than *currency*, but the *agio* is constantly varying. — (For an account of the Bank of Hamburg, see BANKS (FOREIGN).)

Of the coins in circulation at Hamburg, the rixdollar banco and the rixdollar current are the most common. The weight of the former is not uniform; but Dr. Kelly estimates it, at a medium, at 391.6 Eng. grains pure silver = 4s. 6*d.* The current rixdollar = 318.3 grains = 3s. 8*d.* very nearly. The Hamburg gold ducat = 9s. 4*d.*

Taking the mean value of the rixdollar banco at $54\frac{1}{2}$ *d.* sterling, it follows, that 1*l.* sterling = 13 marcs 27 schillings banco, or 1*l.* sterling = 35s. 1*d.* Flemish banco. No fixed *par* of exchange can, however, be established between London and Hamburg, on account of the fluctuation of banco. 1*l.* sterl. = 16 marcs 2 schillings Hamburg currency, or 1 marc current = 14*s.* 8*d.* sterl. — (Kelly's *Cambist*, Hamburg.)

Weights and Measures. — The commercial weights are,

2 Loths = 1 Ounce.	14 Pounds = 1 Lispound.	2½ Centners = 1 Shippound.
16 Ounces = 1 Pound.	8 Lispounds = 1 Centner.	

100 Hamburg pounds = 106.8 lbs. avoirdupois = 129.8 lbs. Troy = 48.43 kilogrammes = 98 lbs. of Amsterdam. A stone of flax is 20 lbs. A stone of wool or feathers is 10 lbs.

In estimating the carriage of goods, the shippound is reckoned at 380 lbs.

The measures for liquids are,

2 Oessels = 1 Quartier.	2 Stubgens = 1 Viertel.	<table border="0"> <tr> <td>6 Ahms or }</td> <td rowspan="3">= 1 Fuder.</td> </tr> <tr> <td>24 Ankers }</td> </tr> </table>	6 Ahms or }	= 1 Fuder.	24 Ankers }
6 Ahms or }	= 1 Fuder.				
24 Ankers }					
2 Quartiers = 1 Kanen.		4 Viertel = 1 Eimer.			
2 Kanens = 1 Stuben.	5 Eimers = 1 Ahm or 4 Ankers.				

The ahm is equal to 38½, and the fuder to 229½, English wine gallons.

A fass of wine = 4 oxhoft = 6 tierces. The oxhoft or hoghead is of various dimensions. 1 oxhoft French wine = 62 to 64 stubgens; an oxhoft of brandy = 60 stubgens. A pipe of Spanish wine = 96 to 100 stubgens. A tun of beer is 48 stubgens. A pipe of oil is 820 lbs. nett. Whale oil is sold per barrel of 6 steckan = 32 Eng. wine gallons.

The dry measures are,

4 Spints = 1 Himtem.	3 Fass = 1 Scheffel.	2 Wisps = 1 Last.
2 Himtems = 1 Fass.	10 Scheffels = 1 Wisp.	1½ Last = 1 Stock.

The last = 11.2 Winchester quarters. A keel of coals yields from 8 to 9 lasts.

The Hamburg foot = 11.289 English inches. The Rhineland foot, used by engineers and land surveyors, = 12.36 inches. The Brabant ell, most commonly used in the measurement of piece goods, = 27.585 inches.

A ton in the lading of a ship is generally reckoned at 40 cubic feet. Of things that are sold by number, a gross thousand = 1,200; a gross hundred = 120; a ring = 240; a common or small thousand = 1,000; a shock = 60; a steigs = 20; a gross = 12 dozen.

Imports. — We subjoin an account of the imports, consumption, exports, stocks, and prices, of some of the principal articles imported into Hamburg, during each of the 10 years ending with the 1st of Jan., 1833.

Exports. — We regret that no materials exist by which it is possible to give any account of the quantity and value of the different articles exported from Hamburg. — (For some particulars as to the corn trade, see CORN LAWS AND CORN TRADE.) Linens are one of the most important articles of export. They are generally sold by the piece; but there are great differences in the dimensions of pieces of different denominations. The following Table is, therefore, of importance, as it exhibits the various descriptions of linen usually met with at Hamburg, with the length and breadth of the different pieces. It also gives their cost on board in sterling, on 1st of March, 1833.

Descriptions.	Length.	Width.	Sold.	Cost on Board, in Sterling.		
	Yards.	Yards.		£ s. d.	£ s. d.	£ s. d.
Platillas royales - - -	35	1 $\frac{1}{2}$	per piece.	0 16 8	to 1 10 11	to 2 0 5

Navigation of the Elbe, Pilotage, &c. — The mouth of the Elbe is encumbered with sand banks. The channel leading to Cuxhaven is bounded on the north by the Vogel Sands and North Grounds, and on the south by the Schaarhorn Sands and Neuwerk Island. On the latter there are 2 light-houses and 2 beacons, and on the Schaarhorn is another beacon. The light-houses on Neuwerk Island are about 700 yards apart; the most southerly, which is also the most elevated, being in lat. 53° 54' 57" N., lon. 8° 29' 40" E. It is 128 feet high, being twice the height of the other. The channel is, in some places, hardly $\frac{1}{2}$ of a mile wide. The outer red buoy in the middle of the channel, at its mouth, bears from Heligoland S.E. by S., distant nearly 20 miles. But the best mark in entering the Elbe is the floating light, or signal ship, moored 2 miles N.W. by N. of the red buoy, in 11 fathoms at low water. This vessel never leaves her station, unless compelled by ice in the winter season. By night she exhibits a lantern light, 33 feet above deck, and in foggy weather rings a bell every quarter of an hour. A second signal ship is stationed $\frac{1}{2}$ miles S.E. by E. from the first, at the westernmost point of a sand bank dividing the fair way of the river. She is rigged like a galliot, to distinguish her by day from the first signal ship; and during night she exhibits two lights, one 18 feet above the other. The distance from the outer red buoy to Cuxhaven is about 16 miles; thence to Glückstadt the course is east, 28 miles; from the latter to Stade the course is south-easterly, 9 miles; and then easterly to Hamburg, 18 miles. The channel throughout is marked with black and white buoys, which are numbered and specified in the charts. The black ones are to be left, in passing up the river, on the starboard or right hand side, and the white on the larboard side.

Every vessel coming from sea into the Elbe, and drawing 4 feet water, is directed to take a pilot on board, and must pay pilotage, though she do not take one. However well the signals, lights, beacons, and buoys may be arranged, an experienced pilot is very necessary, in case of a fog in the night, or of a storm. To take in a pilot, a vessel must heave to by the pilot galliot, which lies, in good weather, near the red buoy, and in bad weather, N.N.E. from Neuwerk, and is known by having at the flagstaff an admiral's flag, and a long streamer flying at the top. If the pilot boat have no pilot on board, or if the weather be so bad that the pilot cannot leave her, she lowers her flag, and then the vessel coming in must sail, with the signal for a pilot hoisted, to Cuxhaven, and heave to there, where she is certain of getting one.

There are no docks or quays at Hamburg; and it is singular, considering the great trade of the port, that none have been constructed. Vessels moor in the river outside of piles driven into the ground a short distance from shore; and in this situation they are not exposed to any danger unless the piles give way, which rarely happens. There is a sort of inner harbour, formed by an arm of the Elbe which runs into the city, where small craft lie and discharge their cargoes. Larger vessels load and unload from their moorings, by means of lighters. These carry the goods from and to the warehouses which front the various small arms and channels of the river, and the canals carried from it into different parts of the city. The charges on account of lighterage are extremely moderate.

Port Charges.—The charges of a public nature payable by vessels entering the port of Hamburg, unloading and loading, are pilotage and lashing. The separate items of which are given in the following Table.

Pilotage and Lashing.—The Hamburg pilots, generally speaking, take charge of vessels only from the *Red Buoy* to *Freyburgh* or *Glückstadt*, the pilotage for which is regulated by law of the 18th of February, 1750, as follows:—

	For each Foot Hamburg Measure which a Vessel draws.*			
	During the Six Months ending 1st Mar. to 1st Sept.	During the remaining Six Months.	Marks Currency.	English Money.
			s. d.	s. d.
Vessels coming northwards, and colliers	2 0	3 0	2 4	3 6
All vessels, smacks, and kayen drawing more than 4 feet water, and in ballast	2 0	3 0	2 4	3 6
Vessels laden with salt or corn, whosoever they may come from	3 0	4 8	3 6	5 3
Vessels which, besides salt, corn, or ballast, have one third of the cargo consisting of piece goods	4 0	6 0	4 8	7 0
Vessels laden with herrings	2 0	3 0	2 4	3 6
All vessels laden with wine, oil, vinegar, train oil, iron, lead, packages, or bags, and all vessels coming from foreign parts, whether laden or not	4 0	6 0	4 8	7 0
All smacks going between Holland, Friesland, and Hamburg with piece goods	4 0	6 0	4 8	7 0

Half Pilotage only.—*N.B.* In case the Hamburg pilots enter a vessel only within the first buoy beyond the Rossbacken, Strangely, or Cuxhaven, half the above mentioned pilotage is paid. Also half pilotage must be paid at all events, whether the vessel has taken a pilot from the pilot galliot or not.

Pilotage earned.—The above pilotage is earned if vessels are

* Sixteen feet English are equal to 17 feet Hamburg.

Tariff.—The customs duties at Hamburg are as moderate as possible, being only $\frac{1}{2}$ per cent. *ad valorem* on exports, and $\frac{1}{2}$ per cent. on imports, but in truth they are not quite so much, being calculated in money of one value and paid in money of less value. The duty is, in fact, estimated in banco marcs, while it is paid in current marcs, which are more than 20 per cent. under the former; so that in reality the import duty is only about 2-5ths per cent. A few years ago it was $\frac{1}{2}$ per cent., but the competition of the Altona merchants, where there are no duties, obliged the authorities at Hamburg to reduce these duties to the present level. There is no inspection of goods at the Custom-house. The merchant makes oath to the nett weight of the article, and to its value at the current prices of the day, and on this the duty is assessed.

The following articles are free from both import and export duties, viz. —

1. Linen, rags, flax yarn, hemp yarn, cotton yarn, raw sheep and lamb's wool.
2. Wheat, rye, oats, barley, buckwheat, and malt.
3. Unwrought copper and brass, plates of copper, raw zinc, tinned and untinned iron plates.
4. Cash and coin, unwrought gold and silver, and scrapings of the precious metals.
5. Pamphlets and printed works.

Articles free from Import Duty.

1. Timber, staves, and fire wood brought down the Elbe or in carriages into the city, the latter with the exception of that coming from the sea.
2. Merchandise coming by post, if the goods for the same individual do not exceed the value of 50 marcs banco.

Articles free from Export Duty.

1. All articles manufactured in Hamburg, and all foreign manufactures worked up in the city.
2. Small packages of 100 lbs. weight and under, provided their value do not exceed 100 marcs banco.

N.B.—An import duty of 4 schillings current is payable upon lemons and oranges, for the whole chest to 1,000; 2 schillings current for the $\frac{1}{2}$ chest to 500; and for casks in the same proportion.

The duties are the same whether the importation be effected by Hamburg or by foreign ships. Exclusive of the above or customs duties, most articles of provision imported for the consumption of the town are subject to an excise duty.

Stade Duties.—Besides the duties levied at Hamburg, all articles passing up the Elbe to Hamburg, whether for transit or not, pay duties to Hanover at Brunshausen, near Stade. These duties are rated according to a tariff, and are computed from the ship's manifest, bills of lading, and caskets, which have all to be sent on shore for that purpose. On some articles, particularly those of British manufacture, these duties are very heavy, being frequently much larger than the Hamburg duties! They are particularly grievous, too, from heavy penalties being attached even to the slightest unintentional mistakes. It is really surprising, considering the source of this nuisance, that it should not have been abated long ago. It might, at all events, have been expected that British ships and goods would have been exempted from such a tax. We do hope that some portion of the public attention will be directed to this crying evil. With what face can we protest against the conduct of Prussia and other German states in throwing obstacles in the way of the free navigation of the Elbe, when we submit, without a murmur, to similar proceedings on the part of Hanover?—(For further particulars, see *STADE*.)

brought as far as *Freyburgh* or *Glückstadt*, and when from stress of wind or weather, which seldom happens, the Hamburg pilots take vessels to *Wittenbergh* or *Neumühlen*, they are to pay, without distinction —

To Wittenbergh	1 0	14 0
— Neumühlen	1 8	21 0

Pilotage all the Way.—For pilotage the whole way from Cuxhaven to Hamburg, there is no table of rates, for, generally speaking, the Hamburg pilots do not take vessels up beyond *Boesch*.

From Boesch to Hamburg.—Vessels are generally piloted from Boesch to Hamburg by Danish or Hanoverian pilots, to whom it is customary to pay 3 marcs.

Harbour-master's Charges.—By a Custom-house order of the 16th of December, 1816, the Hamburg harbour-master is not entitled to fees.

Lashing and Custom-house Charges.—British and other foreign vessels pay the same as Hamburg vessels. For clearing in and clearing out, no separate charges are made; visiting the port is considered as one voyage, and the charges on vessels are paid as follows:—

For vessels arrived with cargoes from the undermentioned places: viz. —

Places.	For every Commercial Last.		Sterling.
	Marcs.	L. s. d.	
The East Indies	2 0	0 3 6	
West Indies, North and South America	2 8	0 5 5	
Portugal, Spain, and the Mediterranean	2 0	0 2 4	
The rest of the European ports	1 8	0 1 9	
Holland, East Friesland, the Weser, Eyder, and Jutland	0 12	0 0 10 $\frac{1}{2}$	
For vessels under 20 commercial lasts without distinction	0 4	0 0 3 $\frac{1}{2}$	
Vessels arriving and departing in ballast, or upwards of 20 commercial lasts	0 8	0 0 7	

For all vessels laden with coals, wood, or turf, no lashing is paid, provided they do not take return cargoes.

Half Lashing.—Vessels arriving in ballast and departing with a cargo pay half the above lashing, according to their destination.

N.B.—Exclusive of the above dues, which are all remarkably moderate, vessels coming to the port of Hamburg are obliged to pay certain dues to Hanover, called *Stade* or *Brunshausen* dues. These are rated according to the number of the vessel's masts, and are over and above the *Stade* duties on the cargo. — (For the items, see *STADE*.)

* It is difficult to determine the exact ratio of a last to a ton, but it may be taken at about 3 or $\frac{2}{3}$ to 1. But in Hamburg all vessels are measured by the harbour-master; and it is upon his report that the lashing is calculated.

* It was so stated by mistake in the former edition of this work.

Transit Goods are totally exempted from duty. They are such only as arrive at Hamburg direct, and which are neither sold nor exchanged while in the city. The liberty of transit is limited to the term of 3 months from the time of receiving the transit ticket; but, upon application being made for a prolongation of the term previously to the expiration of the first 3 months, it is granted on payment of $\frac{1}{4}$ per cent. on the banco value of the goods; but under no circumstances is the term extended beyond 6 months. If the goods be not then exported, they become liable to the ordinary duties.

Warehousing System.—This has not been introduced at Hamburg; nor, from the smallness of the duties, is it necessary, though it would seem that the time during which goods are allowed to be in *transit* might be advantageously extended. The warehouse rent of a quarter of wheat may be about $\frac{1}{4}$ d. sterling per month, and of a ton of sugar, about 9d.; but there are no fixed rates.

Custom-house Regulations.—On passing Stade, the masters of vessels must send their papers, including the manifest, bills of lading, and coquets, on shore, that the amount of the Stade duties may be calculated. On the vessel's arrival at Hamburg, the broker reports her to the Custom-house, and gives his guarantee for payment of the duties; he either delivers her papers, or undertakes to deliver them as soon as they can be got from Stade, and, upon a receipt being produced for the Stade duties by the Hanoverian authorities at Hamburg, the vessel is allowed to unload. On clearing, a manifest of the outward cargo, together with the consul's certificate of the regularity of the ship's papers, must be produced at the Custom-house by the broker, who obtains in return a clearance certificate, authorising the vessel to go to sea.

Quarantine is enforced, when occasion requires, at Hamburg, and is performed near Cuxhaven.

Credit, Brokerage, &c.—Almost all goods are sold for ready money, with an allowance of 1 per cent. for discount. Sometimes, but not frequently, sales are made at 2 or 3 months' credit, and in such cases a higher price is obtained than for cash. Sometimes sugar is sold to the sugar baker at this credit.

Brokers are positively forbidden to act as merchants or factors. They are licensed by the Senate, and must conform to the established regulations.

Brokerage is paid wholly by the seller, and amounts to—

“Five sixths per cent. on cotton, cotton twist, coconuts, cochineal, copper, hides, indigo, manufactured goods, nankeens, sugar, and tea.”

“One per cent. on annatto, camphire, cinnamon, cardamoms, cassia, cloves, drugs, but not denominated, deer skins, dye woods, ginger, jalap, mace, nutmegs, pepper, pimento, potatoes, Peruvian bark, quercitron bark, rice, salt-petre, saraparilla, shellac, tamarinds, tobacco in leaves, and tobacco stems of the growth of the United States of America, whale oil, vanellios.”

“N.B.—Tobacco stems of all other origin, segars, and other manufactured tobacco, pay 2 per cent.; all other leaf and roll tobacco, $\frac{1}{2}$ per cent.”

“One and a half per cent. on wine, brandy, rum, and arrack, if sold in parcels amounting to 3,000 marcs banco and upwards.”

“Two per cent. on ditto, for sales of and under 3,000 marcs banco.”

“In auction the selling broker is entitled to $\frac{1}{2}$ per cent. and the purchasing broker to 2 per cent., without regard to the amount.”

All articles marked (*) pay the brokerage before-mentioned, if the quantity sold amounts to 600 marcs banco, or higher; for smaller lots of less than 600 marcs banco, and down to 150 marcs banco, the brokerage is paid, with the addition of one half, and under 150 marcs banco, the double is allowed. All other merchandise pays $\frac{1}{2}$ per cent. at least for sales not exceeding 150 marcs banco.

It is, however, to be observed, that all augmentations, in proportion to the amount sold, are only to be understood for sale by private contract, and not for those by auction; and even not for such private sales, where a broker has made the purchase of a larger quantity of goods above the said amount of 600 marcs banco, and has afterwards divided it into smaller lots.

Conditions of Sale.—Imports.—Coffee is sold per pound in schill. banco; discount, 1 per cent.; good weight is $\frac{3}{4}$ per cent. Tare is as follows: viz. on casks, real weight; on bags of 150 lbs. or less, 2 lbs.; above 150 lbs. and not above 180 lbs., 5 lbs.; above 180 lbs. and not exceeding 200 lbs., 4 lbs. On Mocha bales of about 300 lbs., 14 lbs.; if 600 lbs., 50 lbs. On Bourbon single bales, 2 lbs.; on double, 4 lbs.

Cotton is sold per lb. in schill. banco; discount, 1 per cent.; good weight, 1 per cent.; tare, on bales, West Indian and North American, 4 per cent.; on square bales, 6 per cent.; on Bornnilla and Surat bales, 8 per cent.; on Bourbon bales and Bornnilla serons, 6 per cent.; on Caracas and Guiana small serons, should be called bags, and not bales, in the bill of lading.

East India piece goods are sold per piece, in marcs banco; discount, 1 per cent. For saving in the Stade duty, if more than 30 pieces are in a bale, the number of pieces should not be mentioned in the bill of lading, but only the number of bales.

Flour is sold per 100 lbs. in marcs currency, uncertain agio; discount 1 per cent.; good weight, 1 per cent.; tare, 20 lbs. per barrel.

Fustic is sold per 100 lbs. in marcs currency; agio, 20 per cent.; discount, 1 per cent.; good weight, 1 per cent.; and frequently an allowance in weight is made, if the wood is not very solid.

Indigo is sold per lb. in schill. banco; discount, 1 per cent.; good weight, $\frac{3}{4}$ per cent.; tare, if in serons upwards of 120 lbs., 22 lbs.; in $\frac{1}{2}$ serons less than 120 lbs., 20 lbs.; in chests, real tare.

Logwood is sold like fustic.—N.B. To avoid a high Stade

duty, the nett weight of all dye woods should be stated in the bills of lading.

Pepper is sold per lb. in schill. banco; discount, 1 per cent.; good weight, $\frac{3}{4}$ per cent.; tare, if in single bales of 500 lbs., 5 lbs.; in double bales, 6 lbs.

Quercitron bark is sold per 100 lbs. in marcs currency; agio, 20 per cent.; discount, 2 per cent.; good weight, 1 per cent. To determine the tare, the American tare is reduced to Hamburg weight.

Rice is sold per 100 lbs. in marcs banco; discount, 1 per cent.; good weight, 1 per cent.; tare, real; and super-tare for tierces, 4 lbs.; for 3 tierces, 2 lbs.

Rum is sold per 30 quarts in rixdoll. currency, agio uncertain.

Sugar, raw and clayed, is sold per lb. in banco groats, with a rebate of 5.5 lbs. per cent.; discount, 1 per cent., and sometimes $\frac{1}{2}$ per cent.; Brazil or Havannah chest, good weight, $\frac{3}{4}$ per cent.; real tare; super-tare, 10 lbs. for Brazil, and 5 lbs. for Havannah sugar, per chest. Muscovado in casks, good weight, 1 per cent.; tare, if the casks weigh upwards of good weight, 18 per cent.; if less, 20 per cent. Clayed sugars, in bags, good weight, $\frac{3}{4}$ per cent.; tare, 16 per cent. East India sugars, for brown, 6 to 7 lbs.; for white, 4 to 5 lbs.;

Tea, per lb. in schill. currency, agio uncertain; discount, 1 per cent.; good weight, $\frac{3}{4}$ per cent. Tare of boxes, in chests of 400 lbs., 70 lbs.; of 150 to 150 lbs., 45 lbs. All black tea, 25 lbs. per green; 24 lbs. For the regulation of the Stade duty, the nett weight should likewise be mentioned in the bill of lading.

Tobacco.—Leaf tobacco is sold per lb. in schill. banco, agio uncertain; discount, $\frac{1}{2}$ per cent.; good weight, 1 per cent.; tare per cask, 50 lbs. Brazil leaf in serons; tare 5 per cent.

In rolls; canister, in baskets of about 100 lbs.; good weight, 1 lb. per basket; tare, 14 lbs. if the basket is packed up in linen, and 12 lbs. if without linen. Porto Rico rolls, good weight, 1 per cent.; no tare, as the rolls are weighed by themselves. Brazil rolls, in serons of 400 to 600 lbs., are sold per lb., in schillings banco; good weight, $\frac{3}{4}$ per cent.; tare, 5 lbs. per seron. Tobacco stems per 100 lbs., in marcs currency, agio uncertain; discount, $\frac{1}{2}$ per cent.; good weight, 1 per cent.; tare, if in casks, real weight; if packed up with cords, 2 to 4 per cent. according to the thickness of the rope. As there is a great difference in the Stade duty for the different sorts of tobacco, it is necessary that, on shipping leaf tobacco, there should be inserted in the bill of lading, Leaf Tobacco, omitting ages containing roll tobacco, only the number of packagings containing the number of rolls, and the nett weight, without mentioning the number of rolls, should appear in the bill of lading.

Glass (window) is sold per chest, in marcs currency, agio uncertain; other glass ware per piece, dozen, or hundred, in schillings or marcs currency, with uncertain agio; discount, 1 per cent.

Hares' wool is sold per 2 lbs., in marcs currency agio uncertain; discount, 1 per cent.

Hare skins (German, grey) are sold per 100 pieces, in rixdoll. Russian, grey, per 104 pieces, in rixdoll. banco. White, in marcs currency, agio uncertain; discount, 1 per cent.

Iron is sold per 100 lbs., in schill. currency, agio uncertain; discount, 1 per cent.

Copper is sold per 100 lbs. in schill. banco; discount, 1 per cent.

The exchange business done at Hamburg is very great; for besides the business of the place, most of the merchants in the inland towns have their bills negotiated there.

The usual charge for commission is, on sales 2 per cent. and 1 per cent. for *del credere*, if such guarantee be required; on purchases, 2 per cent. Under particular agreements, the rates sometimes vary considerably from the above.

Citizenship.—Foreigners cannot establish themselves as merchants, or carry on any business in their own names, at Hamburg, without becoming burghers; and to be manufacturers, they must also enter the guild or corporation peculiar to the trade they mean to follow. But to become a burgher one has only to comply with certain forms and pay certain fees, which do not, in all, exceed 10*l*. He then becomes, in the eye of the law, a Hamburg subject; and enjoys all the rights and privileges of a native.

Banking, Insurance, &c.—For an account of the Bank of Hamburg, see BANKS (FOREIGN). All sorts of insurances are effected at Hamburg. A municipal regulation compels the insurance of all houses within the city, the rate varying according to the number of fires, and the amount of loss. Marine insurance is principally effected by joint stock companies, of which there are several; their competition has reduced the premiums to the lowest level, and the business is not understood to be profitable. The high duties on policies of insurance in this country has led to the insuring of a good many English ships at Ham-

burgh. Life insurance is not prosecuted in Germany to any considerable extent; but some of the English companies have agents here, who are said not to be very scrupulous.

Bankruptcy.—Considering the vast number of merchants and tradespeople at Hamburgh, bankruptcy does not seem to be of frequent occurrence. During the 5 years ending with 1831, the number of declared bankrupts and the amount of their debts were as under:—

1829.		1830.		1831.	
Number of Bankrupts.	Amount of Debts.	Number of Bankrupts.	Amount of Debts.	Number of Bankrupts.	Amount of Debts.
69	L. 109,918	95	L. 118,251	117	L. 277,615

But this account does not include the failures settled by private compromise, and of which no public notice is taken. The increase in 1831 is owing, in a great measure, to the failure, for 111,000*l.*, of a company which had lent their money improvidently on houses, &c. Much of the business transacted at Hamburgh being on commission and for account of houses abroad, the failure of foreign merchants is a prevalent source of bankruptcy. Another source of bankruptcy is losses on goods imported or exported on speculation, and occasionally losses in the funds, in which a good deal of gambling goes on here. Expensive living is not nearly so prevalent a source of bankruptcy here as in London and other places.

The law of Hamburgh makes 3 classes of bankrupts:—the unfortunate, the careless, and the fraudulent. The first class

consists of those whose books show that misfortune alone has occasioned the bankruptcy; that the party has all along lived within his probable income, and can account to his assignees completely for all his losses. Whoever is adjudged by the court to belong to this class (which contains but few in number), is considered entirely free from his debts, and is not subject to be called upon hereafter. The second and most numerous class, contains those termed "careless" bankrupts. These are persons who have entered into speculations exceeding their means, who have gone on for a considerable time after they found their affairs in arrears, who have lived beyond their income, have not kept their books in good order, and so forth. They are liable to be confined in prison for a period of 5 or 6 months; and, provided they have not paid a dividend of 40 per cent., may be called upon for payment of their debt after 5 years from their discharge. If a claim be made by any creditor after this lapse of time, the bankrupt is obliged to pay whatever sum he is able for the benefit of his creditors. He must swear that he cannot pay any thing, or not above a certain sum, without depriving himself and his family of necessities. Every 5 years the claim may be repeated. All careless bankrupts are disabled from holding offices of honour. The third class contains the "fraudulent" bankrupts, who are liable to be imprisoned according to the extent of their frauds, for a limited period or even for life, besides being rendered incapable of holding any office whatever. Should a bankrupt abscond, he is called upon by public advertisement to appear by a certain day, in default of which he is adjudged a fraudulent bankrupt, and his name is posted up on a black board on the Exchange.

Repair of Ships, Sea Stores, &c.—Materials and labour being cheap, Hamburgh may be regarded, in so far as respects expense, as a favourable place for careening and repairing ships; but, having no docks, these operations are inconveniently performed. All articles of provision may be obtained in great abundance and at moderate prices.

An Account of the Prices of the principal Articles of Ships' Provision at Hamburgh in 1831, stated in Imperial Weights and Measures, and in Sterling Money.

	Pork.			Beef.			Butter (equal to Cork Thirds)			Ship Bread.	Seconds Flour.			Eydam Cheese.	Peas.	Jamaica Rum.	
	Per Barrel of 200 lbs. Nett.			Per Barrel of 220 lbs. Nett.			Per Cwt.			Per Bag of 112 lbs. Nett.	Per Barrel of 196 lbs. Nett.			Per lb.	Per Imperial Quarter.	Per Imperial Gallon.	
	s.	d.	s.	s.	d.	s.	s.	d.	s.	d.	s.	d.	s.	d.	s.	s.	d.

December	59	0	60	42	0	45	51	0	68	11	6	12	0	23	0	29	0

Fuel.—Coals. 19 mares current, or about 22*s.* 6*d.* per ton, British weight, in large quantities.
Do. 25 mares current, or about 27*s.* 6*d.* per ton, British weight, in small quantities, free on board.
Fresh beef, 25*s.* 6*d.* to 3*s.* per cwt.
Fresh pork, 1*s.* 2*d.* to 3*s.* 1*d.* per 14 lbs.

N.B.—The prices include the cost of the packages of all the articles, excepting cheese and peas. In September and October no pork was to be had in a wholesale way.

Freights.—The different ship agents engaged in the trade with Great Britain have published a Table of freights; but as they are, notwithstanding, materially influenced by the demand at the time, the season, &c., it seems unnecessary to insert it.

General Remarks.—The trade of Hamburgh is, in a great measure, passive; that is, it depends more on the varying wants and policy of others than on its own. There is nothing of such vital importance as the free navigation of the Elbe to the prosperity of Hamburgh, and, indeed, of all the countries through which it flows. This, too, is a matter of paramount consequence as respects our interests; for the Elbe is the grand inlet by which British manufactures find their way into some of the richest and most extensive European countries. The principle that the navigation of the Elbe, the Rhine, the Weser, &c. should be quite free along their whole course, was distinctly laid down by the Congress of Vienna in 1815. But no general tariff of duties being then established, this declaration has hitherto had no practical effect. Prussia, who is endeavouring to bolster up a system of home manufactures, has laid heavy transit duties on articles passing by the Elbe, and has prevailed on Anhalt, and some of the smaller states, to follow her example. These duties amount, on some of the coarser sorts of British woollen goods, to no less than 60 per cent. *ad valorem*, and are, even when lightest, a great obstacle to trade. It is to be hoped that a just sense of their own real interests may, at no distant period, open the eyes of the German governments to the impolicy of such proceedings. It is in an especial manner for the interest of Saxony, Austria, and England, that these duties should be abolished; and their influence in the diet, if properly exerted, might countervail that of Prussia. So long, however, as the State duties are kept up, it would be folly to imagine that much attention should be paid to our remonstrances against the Prussian duties. If we cannot prevail on Hanover to emancipate our commerce from oppressive restrictions and burdens, we need hardly expect to succeed with any other power. Were the State duties and those in the upper parts of the Elbe wholly abolished, we have little doubt that, in a dozen years, the trade of Hamburgh would be nearly doubled; an increase which, however advantageous to her, would be far more advantageous to the extensive countries of which she is the grand emporium.

In compiling this article we have made use of *Oddy's European Commerce*, pp. 412—439; *Rordansz's European Commerce*, pp. 302—320; the *Dictionnaire de Commerce (Ency. Méthodique)*, tome i. pp. 44—53; and of the *Circulars of Berenberg, Gossler and Co., Anderson, Hober, and Co.*, and other eminent merchants. We have also been much indebted to *Mr. Consul Canning's Answers to the Circular Queries*. That functionary has replied to the various questions submitted to him in a way that does equal credit to his industry and intelligence. From the circumstance of no official returns being published or obtainable at Hamburgh, the returns of imports given above must not be regarded as quite accurate, though the errors they involve cannot be material. They are principally taken from *Berenberg and Co.'s Circular*.

HANSEATIC LEAGUE, an association of the principal cities in the north of Germany, Prussia, &c., for the better carrying on of commerce, and for their mutual safety and defence. This confederacy, so celebrated in the early history of modern Europe, contributed in no ordinary degree to introduce the blessings of civilisation and good government into the North. The extension and protection of commerce was, however, its main object; and hence a short account of it may not be deemed misplaced in a work of this description.

Origin and Progress of the Hanseatic League.—Hamburgh, founded by Charlemagne in the ninth, and Lubeck, founded about the middle of the twelfth century, were the earliest members of the League. The distance between them not being very considerable, and being alike interested in the repression of those disorders to which most parts of Europe, and particularly the coast of the Baltic, were a prey in the twelfth, thirteenth, and fourteenth centuries, they early formed an intimate political union, partly in the view of maintaining a safe intercourse by land with each other, and partly for the protection of navigation from the attacks of the pirates, with which every sea was at that time infested. There is no very distinct evidence as to the period when this alliance was consummated; some ascribe its origin to the year 1169, others to the year 1200, and others to the year 1241. But the most probable opinion seems to be, that it would grow up by slow degrees, and be perfected according as the advantage derivable from it became more obvious. Such was the origin of the Hanseatic League, so called from the old Teutonic word *hansa*, signifying an association or confederacy.

Adam of Bremen, who flourished in the eleventh century, is the earliest writer who has given any information with respect to the commerce of the countries lying round the Baltic. And from the errors into which he has fallen in describing the northern and eastern shores of that sea, it is evident they had been very little frequented and not at all known in his time. But from the beginning of the twelfth century, the progress of commerce and navigation in the North was exceedingly rapid. The countries which stretch along the bottom of the Baltic, from Holstein to Russia, and which had been occupied by barbarous tribes of Slavonic origin, were then subjugated by the kings of Denmark, the dukes of Saxony, and other princes. The greater part of the inhabitants being exterminated, their place was filled by German colonists, who founded the towns of Stralsund, Rostock, Wismar, &c. Prussia and Poland were afterwards subjugated by the Christian princes and the Knights of the Teutonic Order. So that, in a comparatively short period, the foundations of civilisation and the arts were laid in countries whose barbarism had ever remained impervious to the Roman power.

The cities that were established along the coast of the Baltic, and even in the interior of the countries bordering upon it, eagerly joined the Hanseatic confederation. They were indebted to the merchants of Lubeck for supplies of the commodities produced in more civilised countries, and they looked up to them for protection against the barbarians by whom they were surrounded. The progress of the League was in consequence singularly rapid. Previously to the end of the thirteenth century, it embraced every considerable city in all those vast countries extending from Livonia to Holland, and was a match for the most powerful monarchs.

The Hanseatic confederacy was at its highest degree of power and splendour during the fourteenth and fifteenth centuries. It then comprised from 60 to 80 cities, which were distributed into 4 classes or circles. Lubeck was at the head of the first circle, and had under it Hamburgh, Bremen, Rostock, Wismar, &c. Cologne was at the head of the second circle, with 29 towns under it. Brunswick was at the head of the third circle, consisting of 13 towns. Dantzic was at the head of the fourth circle, having under it 8 towns in its vicinity, besides several that were more remote. The supreme authority of the League was vested in the deputies of the different towns assembled in congress. In it they discussed all their measures; decided upon the sum that each city should contribute to the common fund; and upon the questions that arose between the confederacy and other powers, as well as those that frequently arose between the different members of the confederacy. The place for the meeting of congress was not fixed, but it was most frequently held at Lubeck, which was considered as the capital of the League, and there its archives were kept. Sometimes, however, congresses were held at Hamburgh, Cologne, and other towns. They met once every 3 years, or oftener if occasion required. The letters of convocation specified the principal subjects which would most probably be brought under discussion. Any one might be chosen for a deputy; and the congress consisted not of merchants

only, but also of clergymen, lawyers, artists, &c. When the deliberations were concluded, the decrees were formally communicated to the magistrates of the cities at the head of each circle, by whom they were subsequently communicated to those below them; and the most vigorous measures were adopted for carrying them into effect. One of the burgomasters of Lubeck presided at the meetings of congress; and during the recess the magistrates of that city had the sole, or at all events the principal, direction of the affairs of the League.

Besides the towns already mentioned, there were others that were denominated confederated cities, or allies. The latter neither contributed to the common fund of the League, nor sent deputies to congress; even the members were not all on the same footing in respect to privileges; and the internal commotions by which it was frequently agitated, partly originating in this cause, and partly in the discordant interests and conflicting pretensions of the different cities, materially impaired the power of the confederacy. But in despite of these disadvantages, the League succeeded for a lengthened period, not only in controlling its own refractory members, but in making itself respected and dreaded by others. It produced able generals and admirals, skilful politicians, and some of the most enterprising, successful, and wealthy merchants of modern times.

As the power of the confederated cities was increased and consolidated, they became more ambitious. Instead of limiting their efforts to the mere advancement of commerce and their own protection, they endeavoured to acquire the monopoly of the trade of the North, and to exercise the same sort of dominion over the Baltic that the Venetians exercised over the Adriatic. For this purpose they succeeded in obtaining, partly in return for loans of money, and partly by force, various privileges and immunities from the northern sovereigns, which secured to them almost the whole foreign commerce of Scandinavia, Denmark, Prussia, Poland, Russia, &c. They exclusively carried on the herring fishery of the Sound, at the same time that they endeavoured to obstruct and hinder the navigation of foreign vessels in the Baltic. It should, however, be observed, that the immunities they enjoyed were mostly indispensable to the security of their commerce, in consequence of the barbarism that then prevailed; and notwithstanding their attempts at monopoly, there cannot be the shadow of a doubt that the progress of civilisation in the North was prodigiously accelerated by the influence and ascendancy of the Hanseatic cities. They repressed piracy by sea and robbery by land, which must have broken out again had their power been overthrown before civilisation was fully established; they accustomed the inhabitants to the principles, and set before them the example, of good government and subordination; they introduced amongst them conveniences and enjoyments unknown by their ancestors, or despised by them, and inspired them with a taste for literature and science; they did for the people round the Baltic, what the Phœnicians had done in remoter ages for those round the Mediterranean, and deserve, equally with them, to be placed in the first rank amongst the benefactors of mankind.

"In order," as has been justly observed, "to accomplish their purpose of rendering the Baltic a large field for the prosecution of commercial and industrious pursuits, it was necessary to instruct men, still barbarous, in the rudiments of industry, and to familiarise them in the principles of civilisation. These great principles were laid by the confederation, and at the close of the fifteenth century the Baltic and the neighbouring seas had, by its means, become frequented routes of communication between the North and the South. The people of the former were enabled to follow the progress of the latter in knowledge and industry. The forests of Sweden, Poland, &c. gave place to corn, hemp, and flax; the mines were wrought, and in return the produce and manufactures of the South were imported. Towns and villages were erected in Scandinavia, where huts only were before seen: the skins of the bear and the wolf were exchanged for woollens, linens, and silks: learning was introduced; and printing was hardly invented before it was practised in Denmark, Sweden, &c." — (*Cuttean, Tableau de la Mer Baltique*, tom. ii. p. 175.)

The kings of Denmark, Sweden, and Norway were frequently engaged in hostilities with the Hanse towns. They regarded, and, it must be admitted, not without pretty good reason, the privileges acquired by the League, in their kingdoms, as so many usurpations. But their efforts to abolish these privileges served, for more than 2 centuries, only to augment and extend them.

"On the part of the League there was union, subordination, and money; whereas the half-savage Scandinavian monarchies were full of divisions, factions, and troubles; revolution was immediately followed by revolution, and feudal anarchy was at its height. There was another circumstance, not less important, in favour of the Hanseatic cities. The popular governments established amongst them possessed the respect and confidence of the inhabitants, and were able to direct the public energies for the good of the state. The astonishing prosperity of the confederated cities was not wholly the effect of commerce. To the undisciplined armies of the princes of the North — armies composed of

vassals without attachment to their lords — the cities opposed, besides the inferior nobles, whose services they liberally rewarded, citizens accustomed to danger, and resolved to defend their liberties and property. Their military operations were combined and directed by a council composed of men of tried talents and experience, devoted to their country, responsible to their fellow citizens, and enjoying their confidence. It was chiefly, however, on their marine forces that the cities depended. They employed their ships indifferently in war or commerce, so that their naval armaments were fitted out at comparatively small expense. Exclusive, too, of these favourable circumstances, the fortifications of the principal cities were looked upon as impregnable; and as their commerce supplied them abundantly with all sorts of provisions, it need not excite our astonishment that Lubeck alone was able to carry on wars with the surrounding monarchs, and to terminate them with honour and advantage; and still less that the League should long have enjoyed a decided preponderance in the North." — (*L'Art de vérifier les Dates*, 3^{me} partie, tom. viii. p. 204.)

The extirpation of piracy was one of the objects which had originally led to the formation of the League, and which it never ceased to prosecute. Owing, however, to the barbarism then so universally prevalent, and the countenance openly given by many princes and nobles to those engaged in this infamous profession, it was not possible wholly to root it out. But the vigorous efforts of the League to abate the nuisance, though not entirely successful, served to render the navigation of the North Sea and the Baltic comparatively secure, and were of signal advantage to commerce. Nor was this the only mode in which the power of the confederacy was directly employed to promote the common interests of mankind. Their exertions to protect shipwrecked mariners from the atrocities to which they had been subject, and to procure the restitution of shipwrecked property to its legitimate owners*, though, most probably, like their exertions to repress piracy, a consequence of selfish considerations, were in no ordinary degree meritorious; and contributed not less to the advancement of civilisation than to the security of navigation.

Factories belonging to the League. — In order to facilitate and extend their commercial transactions, the League established various factories in foreign countries; the principal of which were at Novogorod in Russia, London, Bruges in the Netherlands, and Bergen in Norway.

Novogorod, situated at the confluence of the Volkof with the Imler Lake, was, for a lengthened period, the most renowned emporium in the north-eastern parts of Europe. In the beginning of the eleventh century, the inhabitants obtained considerable privileges that laid the foundation of their liberty and prosperity. Their sovereigns were at first subordinate to the grand dukes or czars of Russia; but as the city and the contiguous territory increased in population and wealth, they gradually usurped an almost absolute independency. The power of these sovereigns over their subjects seems, at the same time, to have been exceedingly limited; and, in effect, Novogorod ought rather to be considered as a republic under the jurisdiction of an elective magistrate, than as a state subject to a regular line of hereditary monarchs, possessed of extensive prerogatives. During the twelfth, thirteenth, and fourteenth centuries, Novogorod formed the grand *entrepôt* between the countries to the east of Poland and the Hanseatic cities. Its fairs were frequented by an immense concourse of people from all the surrounding countries, as well as by numbers of merchants from the Hanse towns, who engrossed the greater part of its foreign commerce, and who furnished its markets with the manufactures and products of distant countries. Novogorod is said to have contained, during its most flourishing period, towards the middle of the fifteenth century, upwards of 400,000 souls. This, however, is most probably an exaggeration. But its dominions were then very extensive; and its wealth and power seemed so great and well established, and the city itself so impregnable, as to give rise to a proverb, Who can resist the Gods and great Novogorod? *Quis contra Deos et magnam Novogordiam?* — (*Coze's Travels in the North of Europe*, vol. ii. p. 80.)

But its power and prosperity were far from being so firmly established as its eulogists, and those who had only visited its fairs, appear to have supposed. In the latter part of the fifteenth century, Ivan Vassilievitch, czar of Russia, having secured his dominions against the inroads of the Tartars, and extended his empire by the conquest of some of the neighbouring principalities, asserted his right to the principality of Novogorod, and supported his pretensions by a formidable army. Had the inhabitants been animated by the spirit of unanimity and patriotism, they might have defied his efforts; but their dissensions facilitated their conquest, and rendered them an easy prey. Having entered the city at the head of his troops, Ivan received from the citizens the charter of their

* A series of resolutions were unanimously agreed to by the merchants frequenting the port of Wisby, one of the principal emporiums of the League, in 1287, providing for the restoration of shipwrecked property to its original owners, and threatening to eject from the "*consodalitate mercatorum*," any city that did not act conformably to the regulations laid down.

liberties, which they either wanted courage or inclination to defend, and carried off an enormous bell to Moscow, that has been long regarded with a sort of superstitious veneration as the palladium of the city. But notwithstanding the despotism to which Novogorod was subject, during the reigns of Ivan and his successors, it continued for a considerable period to be the largest as well as most commercial city in the Russian empire. The famous Richard Chancellour, who passed through Novogorod in 1554, in his way from the court of the czar, says, that "next unto Moscow, the city of Novogorod is reputed the chiefest of Russia; for although it be in majestie inferior to it, yet in greatness it goeth beyond it. It is the chiefest and greatest mart town of all Muscovy; and albeit the emperor's seat is not there, but at Moscow, yet the commodiousness of the river falling into the Gulf of Finland, whereby it is well frequented by merchants, makes it more famous than Moscow itself."

But the scourge of the destroyer soon after fell on this celebrated city. Ivan IV., having discovered, in 1570, a correspondence between some of the principal citizens and the King of Poland, relative to a surrender of the city into his hands, punished them in the most inhuman manner. The slaughter by which the bloodthirsty barbarian sought to satisfy his revenge was alike extensive and indiscriminating. The crime of a few citizens was made a pretext for the massacre of 25,000 or 30,000. Novogorod never recovered from this dreadful blow. It still, however, continued to be a place of considerable trade, until the foundation of Petersburgh, which immediately became the seat of that commerce that had formerly centred at Novogorod. The degradation of this ill-fated city is now complete. It is at present an inconsiderable place, with a population of about 7,000 or 8,000; and is remarkable only for its history and antiquities.

The merchants of the Hanse towns, or Hansards, as they were then commonly termed, were established in London at a very early period, and their factory here was of considerable magnitude and importance. They enjoyed various privileges and immunities; they were permitted to govern themselves by their own laws and regulations; the custody of one of the gates of the city (Bishopsgate) was committed to their care; and the duties on various sorts of imported commodities were considerably reduced in their favour. These privileges necessarily excited the ill-will and animosity of the English merchants. The Hansards were every now and then accused of acting with bad faith; of introducing commodities as their own that were really the produce of others, in order to enable them to evade the duties with which they ought to have been charged; of capriciously extending the list of towns belonging to the association; and obstructing the commerce of the English in the Baltic. Efforts were continually making to bring these disputes to a termination; but as they really grew out of the privileges granted to and claimed by the Hansards, this was found to be impossible. The latter were exposed to many indignities; and their factory, which was situated in Thames Street, was not unfrequently attacked. The League exerted themselves vigorously in defence of their privileges; and having declared war against England, they succeeded in excluding our vessels from the Baltic, and acted with such energy, that Edward IV. was glad to come to an accommodation with them, on terms which were any thing but honourable to the English. In the treaty for this purpose, negotiated in 1474, the privileges of the merchants of the Hanse towns were renewed, and the king assigned to them, in absolute property, a large space of ground, with the buildings upon it, in Thames Street, denominated the Steel Yard, whence the Hanse merchants have been commonly denominated the Association of the Steel Yard; the property of their establishments at Boston and Lynn was also secured to them; the king engaged to allow no stranger to participate in their privileges; one of the articles bore that the Hanse merchants should be no longer subject to the judges of the English Admiralty Court, but that a particular tribunal should be formed for the easy and speedy settlement of all disputes that might arise between them and the English; and it was further agreed that the particular privileges awarded to the Hanse merchants should be published as often as the latter judged proper, in all the sea-port towns of England, and such Englishmen as infringed upon them should be punished. In return for these concessions, the English acquired the liberty of freely trading in the Baltic, and especially in the port of Dantzic and in Prussia. In 1498, all direct commerce with the Netherlands being suspended, the trade fell into the hands of the Hanse merchants, whose commerce was in consequence very greatly extended. But, according as the spirit of commercial enterprise awakened in the nation, and as the benefits resulting from the prosecution of foreign trade came to be better known, the privileges of the Hanse merchants became more and more obnoxious. They were in consequence considerably modified in the reigns of Henry VII. and Henry VIII., and were at length wholly abolished in 1597. — (*Anderson's Hist. Com. Anno 1-174, &c.*)

The different individuals belonging to the factory in London, as well as those belonging to the other factories of the League, lived together at a common table, and

were enjoined to observe the strictest celibacy. The direction of the factory in London was intrusted to an alderman, 2 assessors, and 9 councillors. The latter were sent by the cities forming the different classes into which the League was divided. The business of these functionaries was to devise means for extending and securing the privileges and commerce of the association; to watch over the operations of the merchants; and to adjust any disputes that might arise amongst the members of the confederacy, or between them and the English. The league endeavoured at all times to promote, as much as possible, the employment of their own ships. In pursuance of this object, they went so far, in 1447, as to forbid the importation of English merchandise into the confederated cities, except by their own vessels. But a regulation of this sort could not be carried into full effect; and was enforced or modified according as circumstances were favourable or adverse to the pretensions of the League. Its very existence was, however, an insult to the English nation; and the irritation produced by the occasional attempts to act upon it, contributed materially to the subversion of the privileges the Hanseatic merchants had acquired amongst us.

By means of their factory at Bergen, and of the privileges which had been either granted to or usurped by them, the League enjoyed for a lengthened period the monopoly of the commerce of Norway.

But the principal factory of the League was at Bruges in the Netherlands. Bruges became, at a very early period, one of the first commercial cities of Europe, and the centre of the most extensive trade carried on to the north of Italy. The art of navigation in the thirteenth and fourteenth centuries was so imperfect, that a voyage from Italy to the Baltic and back again could not be performed in a single season; and hence, for the sake of their mutual convenience, the Italian and Hanseatic merchants determined on establishing a magazine or store-house of their respective products in some intermediate situation. Bruges was fixed upon for this purpose; a distinction which it seems to have owed as much to the freedom enjoyed by the inhabitants, and the liberality of the government of the Low Countries, as to the convenience of its situation. In consequence of this preference, Bruges speedily rose to the very highest rank among commercial cities, and became a place of vast wealth. It was at once a staple for English wool, for the woollen and linen manufactures of the Netherlands, for the timber, hemp, and flax, pitch and tar, tallow, corn, fish, ashes, &c. of the North; and for the spices and Indian commodities, as well as their domestic manufactures imported by the Italian merchants. The fairs of Bruges were the best frequented of any in Europe. Ludovico Guicciardini mentions, in his *Description of the Low Countries*, that, in the year 1318, no fewer than 5 Venetian galleasses, vessels of very considerable burden, arrived in Bruges in order to dispose of their cargoes at the fair. The Hanseatic merchants were the principal purchasers of Indian commodities; they disposed of them in the ports of the Baltic, or carried them up the great rivers into the heart of Germany. The vivifying effects of this commerce were every where felt; the regular intercourse opened between the nations in the north and south of Europe made them sensible of their mutual wants, and gave a wonderful stimulus to the spirit of industry. This was particularly the case with regard to the Netherlands. Manufactures of wool and flax had been established in that country as early as the age of Charlemagne; and the resort of foreigners to their markets, and the great additional vent that was thus opened for their manufactures, made them be carried on with a vigour and success that had been hitherto unknown. These circumstances, combined with the free spirit of their institutions, and the moderation of the government, so greatly promoted every elegant and useful art, that the Netherlands early became the most civilised, best cultivated, richest, and most populous country of Europe.

Decline of the Hanseatic League. — From the middle of the fifteenth century, the power of the confederacy, though still very formidable, began to decline. This was not owing to any misconduct on the part of its leaders, but to the progress of that improvement it had done so much to promote. The superiority enjoyed by the League resulted as much from the anarchy, confusion, and barbarism that prevailed throughout the kingdoms of the North, as from the good government and order that distinguished the towns. But a distinction of this sort could not be permanent. The civilisation which had been at first confined to the cities, gradually spread from them, as from so many centres, over the contiguous country. Feudal anarchy was every where superseded by a system of subordination; arts and industry were diffused and cultivated; and the authority of government was at length firmly established. This change not only rendered the princes, over whom the League had so frequently triumphed, superior to it in power; but the inhabitants of the countries amongst which the confederated cities were scattered, having learned to entertain a just sense of the advantages derivable from commerce and navigation, could not brook the superiority of the association, or bear to see its members in possession of immunities of which they were deprived: and in addition to these circumstances, which must speedily have occasioned the dissolution

of the League, the interests of the different cities of which it consisted became daily more and more opposed to each other. Lubeck, Hamburg, Bremen, and the towns in their vicinity, were latterly the only ones that had any interest in its maintenance. The cities in Zealand and Holland joined it, chiefly because they would otherwise have been excluded from the commerce of the Baltic; and those of Prussia, Poland, and Russia did the same, because, had they not belonged to it, they would have been shut out from all intercourse with strangers. When, however, the Zealanders and Hollanders became sufficiently powerful at sea to be able to vindicate their right to the free navigation of the Baltic by force of arms, they immediately seceded from the League; and no sooner had the ships of the Dutch, the English, &c. begun to trade directly with the Polish and Prussian Hanse towns, than these nations also embraced the first opportunity of withdrawing from it. The fall of this great confederacy was really, therefore, a consequence of the improved state of society, and of the development of the commercial spirit in the different nations of Europe. It was most serviceable so long as those for whom its merchants acted as factors and carriers were too barbarous, too much occupied with other matters, or destitute of the necessary capital and skill, to act in these capacities for themselves. When they were in a situation to do this, the functions of the Hanseatic merchants ceased as a matter of course; their confederacy fell to pieces; and at the middle of the seventh century the cities of Lubeck, Hamburg, and Bremen were all that continued to acknowledge the authority of the League. Even to this day they preserve the shadow of its power; being acknowledged in the act for the establishment of the Germanic confederation, signed at Vienna, the 8th of June, 1815, as free Hanseatic cities. — (From an article in No. 13. of the *Foreign Quarterly Review*, contributed by the author of this work.)

HARBOUR, HAVEN, or PORT, a piece of water communicating with the sea, or with a navigable river or lake, having depth sufficient to float ships of considerable burden, where there is convenient anchorage, and where ships may lie, load, and unload, screened from the winds, and without the reach of the tide.

Qualities of a good Harbour. — There is every variety in the form and quality of harbours. They are either natural or artificial; but, however formed, a good harbour should have sufficient depth of water to admit the largest ships at all times of the tide; it should be easy of access, without having too wide an entrance; the bottom should be clean and good; and ships should be able to lie close alongside quays or piers, that the expense and inconvenience of loading and unloading by means of lighters may be avoided. Ships lying in a harbour that is land-locked, and surrounded by high grounds or buildings, are, at once, without the reach of storms, tides, and currents; and may, in most cases, be easily protected from hostile attacks. Bar harbours are those that have bars or banks at their entrances, and do not, therefore, admit of the ingress or egress of large ships except at high water. These are most commonly river harbours; the sand and mud brought down by the stream, and driven back by the waves, naturally forming a bar or bank at their mouths.

Best British Harbours. — Good harbours are of essential importance to a maritime nation; and immense sums have been expended in all countries ambitious of naval or commercial greatness in their improvement and formation. Portsmouth, Milford Haven, and the Cove of Cork are the finest harbours in the British islands, being surpassed by very few, if any, in the world. Of these, Portsmouth is entitled to the pre-eminence. This admirable harbour is about as wide at its mouth as the Thames at Westminster Bridge, expanding within into a noble basin, almost sufficient to contain the whole navy of Great Britain. Its entrance is unobstructed by any bar or shallow; and it has, throughout, water adequate to float the largest men of war at the lowest tides. The anchorage ground is excellent, and it is entirely free from sunken rocks, sand banks, or any similar obstructions. The western side of the harbour is formed by the island of Portsea; and on its south-western extremity, at the entrance to the harbour, is situated the town of Portsmouth, and its large and important suburb Portsea. Here are docks and other establishments for the building, repair, and outfit of ships of war, constructed upon a very large scale, and furnished with every convenience. The fortifications that protect this great naval *dépôt*, are superior, both as respects strength and extent, to any other in the kingdom. "Thus," to use the words of Dr. Campbell, "it appears that Portsmouth derives from nature all the prerogatives the most fertile wits and most intelligent judges could devise or desire; and that these have been well seconded by art, without consideration of expense, which, in national improvements, is little to be regarded. Add to all this the striking excellence of its situation, which is such as if Providence had expressly determined it for that use to which we see it applied, — the bridling the power of France, and, if I may so speak, the peculiar residence of Neptune." — (*Survey of Great Britain*, vol. i. p. 370.)

Portsmouth harbour has the additional and important advantage of opening into the

celebrated road of Spithead, between the Hampshire coast and the Isle of Wight, forming a safe and convenient retreat for the largest fleets.

Milford Haven deeply indents the southern part of Pembrokeshire. It is of great extent, and has many subordinate bays, creeks, and roads. The water is deep, and the anchorage ground excellent; and being completely land-locked, ships lie as safely as if they were in dock.

Cork harbour has a striking resemblance to that of Portsmouth, but is of larger extent; it has, like it, a narrow entrance, leading into a capacious basin, affording a secure asylum for any number of ships.

Plymouth, which, after Portsmouth, is the principal naval *dépôt* of England, has an admirable double harbour. The roadstead in Plymouth Sound has recently been much improved by the construction, at a vast expense, of a stupendous breakwater more than 1,700 yards in length. This artificial bulwark protects the ships lying inside from the effects of the heavy swell thrown into the Sound by southerly and south-easterly winds.

London stands at the head of the river ports of Great Britain. Considering the limited course of the Thames, there is, probably, no river that is navigable for large ships to so great a distance from sea, or whose mouth is less obstructed by banks. London is mainly indebted for the unrivalled magnitude of her commerce to her favourable situation on this noble river; which not only gives her all the advantages of an excellent port, accessible at all times to the largest ships, but renders her the emporium of the extensive, rich, and populous country comprised in the basin of the Thames.

The Mersey, now the second commercial river in the empire, is more incommoded by banks than the Thames; and is in all respects inferior, as a channel of navigation, to the latter. Still, however, it gives to Liverpool very great advantages; and the new channel that has recently been discovered in the banks promises to be of much importance in facilitating the access to and from the port. This channel will be found laid down in the map of Liverpool and its environs, attached to the article Docks in this work.

Bristol and Hull are both river ports. Owing to the extraordinary rise of the tide in the Bristol Channel, the former is accessible to the largest ships. The Humber is a good deal impeded by banks; but it also is navigable as far as Hull, by very large vessels. The Tyne admits vessels of very considerable burden as far as Newcastle, which, next to London, is the most important port, for the extent of the shipping belonging to it, of any in the empire.

The shallowness of the Clyde from Greenock up to Glasgow has been a serious drawback upon the commercial progress of the latter. Large sums have been expended in attempts to contract the course and to deepen the bed of the river; and they have been so far successful, that vessels of 150 tons burden may now, generally speaking, ascend to the city, at all times of the tide. But there seems little probability of its ever becoming suitable for the navigation of ships of pretty large burden.

Generally speaking, the harbours on the east coasts, both of Great Britain and Ireland, are, with the exception of the Thames, very inferior to those on the south and west coasts. Several harbours on the shores of Sussex, Kent, Lincoln, &c., that once admitted pretty large ships, are now completely choked up by sand. Large sums have been expended upon the ports of Yarmouth, Boston, Sunderland, Leith, Dundee, Aberdeen, &c. Dublin harbour being naturally bad, and obstructed by a bar, a new harbour has been formed, at a great expense, at Kingstown, without the bar, in deep water. There has also been a large outlay upon the harbours of Donaghadee, Portpatrick, &c.

For an account of the shipping belonging to the different ports of Great Britain and Ireland, the reader is referred to the article *SHIPS* in this work. The charges on account of Docks, Pilotage, &c. are specified under these articles.

Foreign Harbours and Ports. — The reader will find the principal foreign commercial harbours described in this work at considerable length under their respective titles. The principal French ports for the accommodation of men of war are Brest, Toulon, and Cherbourg. The latter has been very greatly improved by the construction of a gigantic breakwater, and the excavation of immense basins. Besides Cadiz, the principal ports for the Spanish navy are Ferrol and Carthagena. Cronstadt is the principal rendezvous of the Russian navy; Landskrona of that of Sweden; and the Helder of that of Holland.

Law of England as to Harbours. — The anchorage, &c. of ships was regulated by several statutes. But most of these regulations have been repealed, modified, or re-enacted, by the 54 Geo. 3. c. 149.

This act authorises the Admiralty to provide for the moorings of his Majesty's ships; and prohibits any private ship from fastening thereto. It further authorises the Admiralty to prohibit the *breaming* of any ship or vessel at any place or places on shore they may think fit; and to point out the places where private ships shall deposit the gunpowder they may have on board exceeding 5 lbs. — (5 6.) It prohibits the use of any fire on board any ship or vessel that is being breamed in any port, harbour, or haven, between the hours of 11 in the evening and 5 in the morning, from the 1st of October to the 31st of March inclusive; and between the hours of 11 in the evening and 4 in the morning, from the 1st of April to the 30th of September inclusive: and it prohibits the melting or boiling of any pitch, tar, tallow, &c. within

250 yards of any of his Majesty's ships, or of his Majesty's dock-yards. By another section, the keeping of guns shotted, and the firing of the same in any port, is prohibited under a penalty of 5s. for every gun kept shotted, and 10s. for every gun discharged. — (§ 9.) The sweeping or creeping for anchors, &c. within the distance of 150 yards of any of his Majesty's ships of war, or of his Majesty's moorings, is prohibited under a penalty of 10l. for every offence. — (§ 10.) The loading and unloading of ballast is also regulated by this statute; but for the provisions with respect to it, see BALLAST.

HARDWARE (Ger. *Kurze waaren*; Du. *Fzerkramery*; Da. *Iseukramvarer*; Sw. *Järnkram*; Fr. *Clinquallerie*, *Quincaillerie*; It. *Chincaglio*; Sp. *Quinquilleria*; Port. *Quincalharia*; Rus. *Mjelotzchnue towarii*), includes every kind of goods manufactured from metals, comprising iron, brass, steel, and copper articles of all descriptions. Birmingham and Sheffield are the principal seats of the British hardware manufactures; and from these, immense quantities of knives, razors, scissars, gilt and plated ware, fire-arms, &c. are supplied, as well for exportation to most parts of the world, as for home consumption.

The hardware manufacture is one of the most important carried on in Great Britain; and from the abundance of iron, tin, and copper ores in this country, and our inexhaustible coal mines, it is one which seems to be established on a very secure foundation. The late Mr. Stevenson, in his elaborate and excellent article on the statistics of England, in the *Edinburgh Encyclopædia*, published in 1815, estimated the value of all the articles made of iron at 10,000,000*l.*, and the persons employed in the trade at 200,000. Mr. Stevenson estimated the value of all the articles made of brass and copper at 3,000,000*l.*, and the persons employed at 50,000; and he further estimated the value of steel, plated, and hardware articles, including toys, at 4,000,000*l.*, and the persons employed at 70,000. So that, assuming these estimates to be nearly correct, the total value of the goods produced from different sorts of metals in England and Wales, in 1815, must have amounted to the sum of 17,000,000*l.*, and the persons employed to 320,000.

There is reason to believe that this estimate, in so far, at least, as respects the value of the manufacture, was at the time rather too high; but at this moment it is most probably within the mark. There has been a very extraordinary augmentation of the quantity of bar and pig iron produced within the last 15 years; and the rapid increase of Birmingham and Sheffield, as well as of the smaller seats of the hardware manufacture, shows that it has been increased in a corresponding proportion. We have been assured, by those well acquainted with most departments of the trade, that if to the iron and other hardware manufactures of England be added those of Scotland, their total aggregate value cannot now be reckoned at less than 17,500,000*l.* a year, affording *direct* employment, in the various departments of the trade, for at least 360,000 persons.

Fall of Prices. — Owing partly to the reduced cost of iron, but incomparably more to improvements in manufacturing, a very extraordinary fall has taken place in the price of most hardware articles during the last 12 or 15 years. In some articles the fall exceeds 80 per cent.; and there are few in which it does not exceed 30 per cent. In consequence, the poorest individuals are now able to supply themselves with an infinite variety of commodious and useful articles, which, half a century ago, were either wholly unknown, or were too dear to be purchased by any but the richer classes. And those who reflect on the importance of the prevalence of habits of cleanliness and neatness will readily agree with us in thinking that the substitution of the convenient and beautiful hardware and earthenware household articles, that are now every where to be met with, for the wooden and horn articles used by our ancestors, has been in no ordinary degree advantageous. But it is not in this respect only that the cheapness and improvement of hardware is essential. Many of the most powerful and indispensable tools and instruments used by the labourer come under this description; and every one is aware how important it is that they should be at once cheap and efficient.

Account of the real or declared Value of the different Articles of Hardware exported from Great Britain to Foreign Countries, during the Year ended 5th of January, 1833.

£ 1,056,583 18 0

The East Indies and China are by far the most important markets for our brass and copper manufactures. The total exports of these articles, in 1831, amounted to 803,124*l.*; of which they took 348,045*l.*, the United States 169,563*l.*, and France 91,580*l.* Of the total exports of hardware and cutlery in 1831, amounting to 1,622,429*l.*, the United States took no less than 998,469*l.*! The British possessions in North America and the West Indies were the next most important customers; but the exports to them both did not amount to 190,000*l.* The United States, and the possessions now referred to, take the greatest quantity of our iron and steel; the exports to the former, in 1831, being 248,707*l.*, and those to the latter 245,223*l.* The United States take nearly a half of our exports of plate and plated ware, &c.

HARPOONER, the man that throws the harpoon in fishing for whales. By 35 Geo. 3. c. 92. § 34., no harpooner, line manager, or boat steerer, belonging to any ship or vessel fitted out for the Greenland or Southern whale fisheries, shall be impressed from the said service; but shall be privileged from being impressed so long as he shall belong to, and be employed on board, any ship or vessel whatever in the fisheries aforesaid.

HATS (Ger. *Hüte*; Du. *Hoeden*; Fr. *Chapeaux*; It. *Cappelli*; Sp. *Sombreros*; Rus. *Schlopü*), coverings for the head in very general use in Great Britain and many other countries, and known to every body. They are made of very various forms and sorts of material. They may, however, be divided into two great classes, viz. those made of fur, wool, silk, &c., and those made of straw; the former being principally worn by men, and the latter by women.

HATS (FUR, WOOL, ETC.). — The manufacture of this description of hats, which is one of very considerable importance and value, was first noticed as belonging to England in the 14th century, in reference to the exportation of rabbit or coney skins from the Netherlands. About a century afterwards (1463), the importation of hats was prohibited. A duty of 10*s.* 6*d.* a hat was substituted for this absolute prohibition in 1816, and is still continued. The following instructive details with respect to the species of hats manufactured, their value, &c., have been obtained from the highest practical authority; and may, we believe, be safely relied on:—

1. *Stuff Hats.* — This term is applied by the trade only to the best description of hats, or to those brought to the highest perfection in London. Since the introduction of "waterproofing," it is found unnecessary to use so valuable a material as beaver in the foundation or frame-work of the best hats. Instead of it, fine seasoned backs of English coney wool, red Vigonia wool, Dutch carotied coney wool, and a small quantity of fine Saxony lamb's wool, are employed with equal advantage.

The covering, *i. e.* the "napping," of the best qualities is a mixture of *cheek* beaver, with white and brown stage beaver, or seasoned beaver, commonly called "*wooms*." Inferior stuffs are napped with mixtures of stage beaver, nutria, hares' wool, and musquash.

Of late years, hats have been much reduced in weight. This is principally owing to the new method of "waterproofing," which is effected in the bodies of the hats prior to their being napped. The elastic properties of the gums employed for this purpose, when dissolved in pure spirits of wine, give a body to the stuffs which allows a good deal of their weight to be dispensed with.

Not 20 years ago, 96 ounces of stuff were worked up into 1 dozen ordinary sized hats for gentlemen; at present, from 33 to 34 ounces only are required to complete the same quantity. It is proper to observe that the heavy duty on English spirits of wine is very injurious to the manufacture, as it causes the employment of inferior dissolvents, as naphtha and gas spirit, which injure the gums.

The manufacture of the best hats employs in London nearly 1,000 makers and finishers, besides giving employment to nearly 3,000 men in Gloucestershire and Derbyshire, in body-making and ruffing. The gross returns amount to about 640,000*l.*

2. *Plated Hats.* — Next to fine hats are those designated "plated," so called from the *plate*, or napping, being of a distinct and superior nature to the foundation or body. The latter is generally formed of Kent, Spanish, or Shropshire wool; while the former consists of a mixture of fine beaver, hares' wool, musquash, nutria, and English back wool. From the cheapness of coal and the purity of the water in Lancashire, Cheshire, and Staffordshire, the whole of the plating trade is engrossed by them. The men employed in the 3 counties, including apprentices, do not exceed 3,000. The total amount of returns amount to about 1,080,000*l.*, inclusive of bonnets, and children's fancy beaver hats.

3. *Felt Hats and Cordies* are the coarsest species, being made wholly of Kent, Shropshire, and Italian wools. Cordies are distinguished by a fine covering of camel or goat hair. A very large trade was at one time carried on in these articles; but since the introduction of caps, and the manufacture of inferior plates, the returns have sunk from 1,000,000*l.* to scarcely 150,000*l.*! Atherstone, Rudgeley, Bristol, and Newcastle-under-Lyne, are the principal places where they are manufactured.

4. *Silk Hats*, made from silk, plush, or shag, manufactured in Coventry, Banbury, and Spitalfields, form, at present, a very important branch of the hat trade. Many thousand dozen are exported to Italy, Gibraltar, the Cape, Sydney, and Van Diemen's Land. Little progress was made in this article for the first quarter of a century after its invention, in consequence of the hard appearance which the cane and willow frame-work necessarily gave the hats; but now that beaver hat bodies have been used, as well as those of lawn and muslin, this difficulty has been overcome, and silk hats have as soft an outline and as great a variety of shapes as beaver hats. London alone produces nearly 150,000 dozen silk hats annually; and the quantity manufactured in Manchester, Liverpool, Birmingham, and Glasgow, is estimated at upwards of 100,000 dozen more, making a total of above 250,000 dozen. Large quantities of the wool shells, used as the foundations or frame-work, are made in Ireland by the aid of machinery. The workmen are distinct from beaver hatters; and, owing to the competition of labourers, the trade has advanced in a greater ratio. This branch gives employment to about 3,000 men.

5. *Machinery, as applied to Hats.* — Mr. Williams, an American, introduced, a few years since, machinery for the bowing, breaking up, and felting wools for hats. The opposition of the journeyman body-makers, who refused to assist in the necessary process termed *basining*, caused it to be laid aside: it is now used only in the preparation of the shells required for silk hats, which, as already observed, are principally made in Ireland.

Mr. Edward Ollerenshaw, of Manchester, began, in 1824, the finishing of hats by the aid of machinery, but the pertinacious opposition of the men prevented his accomplishing this desirable object. Lately, Mr. Johnson of Edinburgh obtained a patent for machinery calculated to effect very important improvements in the art of ruffing or covering the bodies of hats. But we understand that the opposition of the workmen has, also, made him lay aside his invention.

G. Summary of Results.

* Including felted caps for soldiers.

* Including felted caps for soldiers.

HATS (STRAW).—It is most probable that the idea of *plaiting straws* was first suggested by the making of baskets of osiers and willow, alluded to by Virgil, in his *Pastorals*, as one of the pursuits of the agricultural population of Italy. We are ignorant of the period when the manufacture of straw plait first became of importance in that country; but it appears from Coryat's *Cruddies*, published in 1611, that "the most delicate strawen hats" were worn by both men and women in many places of Piedmont, "many of them having at least an hundred seams." It is evident, therefore, that the art of straw plaiting must have arrived at great perfection upwards of two centuries since; but it does not appear to have been followed in England for more than 60 or 70 years, as it is within the remembrance of some of the old inhabitants of the straw districts, now alive, that the wives and daughters of the farmers used to plait straw for making their own bonnets, before straw plaiting became established as a manufacture. In fact, the custom, among the women in England, of wearing bonnets at all, is comparatively modern: it is not yet 100 years since "*hoods and pinnars*" were generally worn, and it was only the ladies of quality who wore small silk hats.—(See *Malcolm's Manners and Customs*.)

British Plait.—The *straw plait district* comprises the counties of Bedford, Hertford, and Buckingham, being the most favourable for the production of the wheat straw, which is the material chiefly used in England. The manufacture is also followed in some places in Essex and Suffolk, but very partially in other counties. During the late war, the importation of straw hats from Leghorn having in a great measure ceased, an extraordinary degree of encouragement was given to our domestic manufacture, and a proportional degree of comfort was derived by the agricultural labourers in these places, by the wives and children of whom it was chiefly followed. This produced competition, and led to an improvement in the plait by *splitting* the straw, which had formerly been used entire—to a more careful selection of the straw itself—and also to improvements in finishing and bleaching. So successful was straw plaiting at this period, that it has been ascertained that women have earned as much as 12s. a week for their labour. (See *Evidence on the Poor Laws*, p. 277.) But at the conclusion of the war, Leghorn hats again came into the market; and from their superiority in fineness, colour, and durability, they speedily acquired a preference over our home manufacture, which consequently began to decline. Still the wages continued good, as the fashion of wearing Dunstable straw hats had gradually established itself over the country, which kept up the demand for them; and many individuals abandoned the working of *pillow lace* (another domestic manufacture peculiar to Bedford and Bucks, which in 1820 had fallen into decay, owing to the application of machinery), and betook themselves to straw plaiting, as a more profitable employment. With the view of improving the condition of the straw plaiters, who from their increased numbers were reduced to great distress, and enabling them to meet the foreign competition, the Society of Arts, in the years 1822 to 1827, held out premiums for the successful application of some of our native grasses or straw, other than the wheat straw in general use, and for improvements in plaiting, finishing, and bleaching. Many specimens were sent to the Society; and, amongst other candidates, Mr. Parry, of London, in 1822, received the large silver medal for an imitation and description of the mode of plaiting the Leghorn hats. Mr. Cobbett, also, who had contributed samples of plaiting, made from 15 different sorts of grass indigenous to England, received a similar reward. The publication of these contributions in the Society's Transactions was followed by the most beneficial results to the British manufacture. Our native grasses were not found to promise much success, owing to the brittleness of their stems and the unevenness of their colour; but Mr. Parry's communication was of especial importance, as the straw of Tuscany speedily became an article of import. He immediately set the example, by teaching and employing above 70 women and children to plait the straw by the Italian method; and it is peculiarly gratifying to observe, as an evidence of its success, that while the importation of Leghorn hats has, during the last few years, been on the decline, *the unmanufactured material has been progressively on the increase*. This straw, which is imported at a nominal duty of 1d. a cwt., is chiefly plaited in our straw districts; and the Tuscan plait, which pays a duty of 17s. per lb., has likewise been largely imported, and made up into bonnets in this country, of equal fineness and beauty to the genuine Leghorn hat.

There is, perhaps, no manufacture more deserving of encouragement and sympathy than that of straw plait, as it is quite independent of machinery, and is a domestic and healthful employment, affording subsistence to great numbers of the families of agricultural labourers, who without this resource would be reduced to parish relief. By the estimate of an intelligent individual, intimately acquainted with the manufacture, it is considered that every score (or 20 yards) of plait consumes a pound of straw in the state in which it is bought of the farmer; that, at an average, every plaiter makes 15 yards per diem; that in the counties of Hertford, Bedford, and Bucks, there are, at an average, 10,000 scores brought to market every day, to make which 13,500 persons (women and children) must be employed. In Essex and Suffolk, it is estimated that 2,000 scores are the daily produce, to make which about 3,000 persons are employed; and about 4,000 persons more must be employed to convert these quantities into bonnets. Including other places where the manufacture is carried on in England, there are, perhaps, in all, about 30,000 persons engaged in it. The earnings of the women and children vary from 2d. to 5s. 6d. per score, or from 1s. 6d. to 11s. per week. There are 7 descriptions of plait in general use; viz. *whole Dunstable* (the first introduced), plaited with 7 entire straws; *split straw*, introduced about 50 years since; *patent Dunstable*, or double 7, formed of 14 split straws, every 2 wetted and laid together, invented about 25 years since; *Devonshire*, formed of 7 split straws, invented about 16 years since; *Luton plait* (an imitation of whole Dunstable), formed of double 7, and coarser than patent Dunstable, invented about 10 years since; *Bedford Leghorn*, formed of 22 or double 11 straws, and plaited similarly to the Tuscan; and *Italian*, formed of 11 split straws. But there are other varieties in fancy straw plait, not generally in demand for the home trade, but chiefly required for exportation; such as the *backbone*, of 7 straws; the *lustre*, of 17 straws; the *wave*, of 22 straws; and *diamond*, of 23 straws. There were other plaits, called *rustic*, of 4 coarse straws split; and *pearl*, of 4 small straws entire; but these are now superseded. The principal markets are Luton, Dunstable, and St. Alban's, where the plait is usually brought every morning by the plaiters, and bought by the dealers.

But the advantages which followed the publication, by the Society of Arts, of the various attempts to improve the trade, were not confined to England. Messrs. J. & A. Muir, of Greenock, (who subsequently sent specimens to the Society, and received 2 different medals), were in consequence attracted to the manufacture, and in 1823 established straw plaiting, in imitation of Leghorn, in the Orkney Islands, with singular success, adopting *rye* straw, dwarfed by being grown on poor land, as the material best suited for the purpose. In the estimation of persons largely employed in the trade in London, hats manufactured in Orkney are quite equal, both in colour and quality, to those of Leghorn; indeed, some of the plait sent to the Society was so fine, as to be capable of making a hat of 80 rows in the brim, being equal to 10 or 11 rows in an inch; but we learn with regret that the prevalence of mildew in that humid climate is so insuperable to the bleaching of the straw, that it is equal to 50 per cent. on the value of the crop. To this circumstance, and to the low prices of Leghorn hats of late years, is to be ascribed the difficulty they have had, even with the protecting duty of 3*l*. 8*s*. per dozen, in withstanding the competition of the foreign manufacturer. In their letter to the Society of Arts, of the 10th of February, 1826, Messrs. Muir state, — "We had last year about 5 acres of straw, which will produce about 12,000 score of plait, — suppose on the average of 3 score to the hat, will be 4,000 hats, not more. We think them one hundredth part of the consumption of the United Kingdom. These 4,000 hats may give to the manufacturer, including his profit, 5,000*l*. For seed and straw 7 acres of land would be required, and in manufacturing 500 persons would be constantly employed all the year. We suppose the consumption of Leghorn hats to be not less than 500,000, in the United Kingdom; now, were these all made by our own industrious population, 700 acres of poor land would be required, and 50,000 persons would be employed in the manufacture." — (*Trans. of Soc. Arts.*) The plaiters in Orkney were earning, in 1827, only from 2*s*. to 2*s*. 6*d*. per week, and since that period the trade, it is understood, has declined.

Italian Plait. — In Italy, the manufacture is principally followed in the neighbourhood of Florence, Pisa, Sienna, and the Val d'Arno, in the Duchy of Tuscany; and it is also established at Venice and other places. There, as in England, it is purely a domestic manufacture, and the produce is collected by dealers who go round the country. There is no means of estimating, with any degree of accuracy, the number of individuals employed, as the government is entirely unprovided with statistical data, and is even opposed to any being collected. But supposing that England took about a third of the Italian manufacture (and it is believed that we have taken nearer a half), it would not appear that, even in the most prosperous times, more than 30,000 persons could have been engaged in it.

The description of straw used, which is cultivated solely for the purposes of the manufacture, and not for the grain, is the *tritium turgidum*, a variety of bearded wheat, which seems to differ in no respect from the spring wheat grown in the vale of Evesham and other parts of England. — (*Trans. of Soc. Arts.*) After undergoing a certain preparatory process, the upper parts of the stems (being first sorted as to colour and thickness) are formed into a plait of generally 15 straws, which is afterwards knitted together at the edges into a circular shape called a "flat," or hat. The fineness of the flats is determined by the number of rows of plait which compose them (counting from the bottom of the crown to the edge of the brim), and their relative fineness ranges from about No. 20, to 60, being the rows contained in the breadth of the brim, which is generally 8 inches. They are afterwards assorted into 1st, 2d, and 3d qualities, which are determined by the colour and texture; the most faultless being denominated the 1st, while the most defective is described as the 3d quality. These qualities are much influenced by the season of the year in which the straw is plaited. Spring is the most favourable, not only for plaiting, but for bleaching and finishing. The dust and perspiration in summer, and the benumbed fingers of the workwomen in winter, when they are compelled to keep within their smoky huts, plaiting the cold and wet straw, are equally injurious to the colour of the hats, which no bleaching can improve. The flats are afterwards made up in cases of 10 or 20 dozen, assorted in progressive numbers or qualities, and the price of the middle or average number governs the whole. The *Brozzi* make bears the highest repute, and the *Signa* is considered secondary; which names are given to the flats, from the districts where they are plaited. Florence is the principal market, and the demand is chiefly from England, France, Germany, and America; but the kinds mostly required are the lower numbers; the very finest hats, and particularly of late, being considered too expensive by the buyers.

The importation of Leghorn straw hats has very sensibly decreased of late years, owing to the change of fashion in favour of silk bonnets, and also the prevailing and increasing practice of English dealers, from the high duty on the manufactured article, importing the straw plait, and the straw itself for the purpose of being knitted, plaited, and finished in this country. This has been attended with serious consequences to the poor straw plaiters of Tuscany, many of whom have abandoned the trade and betaken themselves to other occupations, particularly to the working of red woollen caps for Greece and Turkey; immense quantities of which have been exported from Leghorn since the peace. With the view of counteracting the ruinous effects which our high duty entailed on their trade, the merchants and dealers in Tuscany, interested in the straw hat manufacture, petitioned their government, in 1830, to remonstrate with ours on the subject; but this remonstrance, if ever made, was not likely, from the condition of our own population, to be very favourably received.

The following prices of different numbers and qualities of Leghorn hats are considered such as would encourage the work-people in Tuscany to produce good work: —

	First Quality.			Second Quality.			Third Quality.		
	Tuscan.	English.		Tuscan.	English.		Tuscan.	English.	
No. 30.	11 lire	=	0 7 4	10 lire	=	0 6 8	8 lire	=	0 5 4
40.	21 —	=	0 14 0	20 —	=	0 13 4	18 —	=	0 12 0
45.	25 —	=	0 17 4	25 —	=	0 16 8	23 —	=	0 15 4

The straw for plaiting a No. 30. at 8 lire, costs 2 lire, about 1*s*. 4*d*. English; for bleaching and finishing, 1 lire = 8*d*.; the estimated loss of rows in a mass, that either go up into the crown in the process of finishing and pressing, or that must be taken from the brim to reduce it to London measure (22 inches), may be calculated at 1 lire more, or 8*d*. As it requires not less than 6 days for plaiting and knitting the hat, there therefore remains only 4 lire, or 2*s*. 8*d*. English, for a week's work! Cheap as subsistence may be on the Continent, surely this miserable pittance is not calculated to excite the envy of the poorest labourer in England. But the earnings of the straw plaiters solely depend on their abilities and industry. The straw is furnished to them to be plaited and knitted, and they are paid according to the number or fineness of the hat. Some of the *Brozzi* women have earned as much as 4 lire, or about 2*s*. 9*d*. to 3*s*. per day, when hats were at the highest, (calculating the time in which they can plait and knit a hat, at 8 days for a No. 30., and a fortnight for a No. 40.); and these chosen few still earn about 1*s*. 6*d*. per day; but taking the whole plaiters, the following, in the opinion of a house largely interested in the trade in Italy, may be considered as a fair calculation of the average wages which have been paid during the last 15 years: —

Women earned per diem, in the year 1817, 1*s*. 6*d*.; 1819-20, 8*d*.; 1823-5, 1*s*. 6*d*.; 1826-7, 6*d*.; 1828-32) 5*d*. Men, for ironing the hats, 4*s*. a day; ditto, for pressing and washing, 1*s*. 6*d*. to 2*s*.; women, for picking straw, 1*s*. to 1*s*. 3*d*.

The following statement shows the imports into England of Italian straw hats, straw plait, and unmanufactured straw, during the last 13 years :—

Years.	Hats or Bonnets of Straw.				Plaiting of Straw.				Unmanufact. Straw.	
	Imported.	Exported.	Consumption.	Nett Revenue.	Imported.	Exported.	Consumption.	Nett Revenue.	Imported.	Nett Revenue.
	No.	No.	No.	£.	Lbs.	Lbs.	Lbs.	£.	Lbs.	£.
1830	64,510	2,652	71,929	20,468	2	-	2	-	-	-

1838	384,072	8,577	271,906	77,781	5,502	285	5,100	4,355	4,199	420
1839	160,195	27,030	251,254	66,505	6,282	487	3,540	2,854	6,050	605
1830	162,660	51,152	168,525	47,760	6,183	756	7,884	6,669	18,586	1,859
1831	81,066	24,980	95,947	26,644	25,354	2,102	16,450	13,257	22,541	2,232
1832	169,153	35,271	60,850	17,280	19,109	1,605	17,911	15,174	48,954	811

The duty on hats of less than 22 inches in diameter was, during the above period, 3d. 8s. per dozen; above 22 inches, 6d. 16s.

The rate of duty, during the above period, was 17s. per lb.

The duty, from 1820 to 1825, was 20 per cent.; from 1825 to 1835, 10 per cent. It is now 16 per cent.

We are indebted for this very excellent article on straw hats to Mr. Robert Slater, of Fore Street London.

HAVANNAH, OR HAVANNA, a large and flourishing city, situated on the north coast of the noble island of Cuba, of which it is the capital, the Morro castle being, according to Humboldt, in lat. $23^{\circ} 8' 15''$ N., lon. $82^{\circ} 29' 45''$ W. The population, exclusive of troops and strangers (which may amount to 25,000), is probably not far short of 115,000. In 1817, the resident population amounted to 83,598; viz. 37,885 whites, 9,010 free coloured, 12,361 free blacks, 2,543 coloured slaves, and 21,799 black slaves. The port of Havannah is the finest in the West Indies, and one of the best in the world. The entrance is narrow, but the water is deep, without bar or obstruction of any sort, and within it expands into a magnificent bay, capable of accommodating 1,000 large ships; vessels of the greatest draught of water coming close to the quays. The city lies along the entrance to, and on the west side of, the bay. The suburb Regla is on the opposite side. The Morro and Punta castles, the former on the east, and the latter on the west, side of the entrance of the harbour, are strongly fortified, as is the entire city; the citadel is also a place of great strength; and fortifications have been erected on such of the neighbouring heights as command the city or port. The arsenal and dock-yard lie toward the western angle of the bay, to the south of the city. In the city the streets are narrow, inconvenient, and filthy; but in the suburbs, now as extensive as the city, they are wider and better laid out. Latterly, too, the police and cleanliness of all parts of the town have been materially improved. — (See *Plan of Havannah*, in the *Map of Central America and the West Indies*, in this work.)

From its position, which commands both inlets to the Gulf of Mexico, its great strength, and excellent harbour, Havannah is, in a political point of view, by far the most important maritime station in the West Indies. As a commercial city it also ranks in the first class; being, in this respect, second to none in the New World, New York only excepted. For a long period, Havannah engrossed almost the whole foreign trade of Cuba; but since the relaxation of the old colonial system, various ports, such, for instance, as Matanzas*, that were hardly known 30 years ago, have become places of great commercial importance. The rapid extension of the commerce of Havannah is, therefore, entirely to be ascribed to the freedom it now enjoys, and to the great increase of wealth and population in the city, and generally throughout the island.

The advance of Cuba, during the last half century, has been very great; though not more, perhaps, than might have been expected, from its natural advantages, at least since its ports were freely opened to foreigners, in 1809. It is at once the largest and the best situated of the West India islands. It is about 605 miles in length; but its breadth from north to south nowhere exceeds 117 miles, and is in many places much less. Its total area, exclusive of that of the numerous keys and islands attached to it, is about 31,500 square miles. The climate is, generally speaking, delightful; the refreshing sea breezes preventing the heat from ever becoming excessive, and fitting it for the growth of a vast variety of products. Hurricanes, which are so destructive in Jamaica and the Caribbee Islands, are here comparatively rare; and, when they do occur, far less violent. The soil is of very various qualities: there is a considerable extent of swampy marshes and rocks unfit for any sort of cultivation; but there is much soil that is very superior, and capable of affording the most luxuriant crops of sugar, coffee, maize, &c. The ancient policy, now fortunately abandoned, of restricting the trade of the island to 2 or 3 ports, caused all the population to congregate in their vicinity, neglecting the rest of the island, and allowing some of the finest land and best situations for planting to remain uncultivated. But since a different and more liberal policy has been followed, population has begun to extend itself over all the most fertile districts, wherever they are to be met with. The first regular census of Cuba was taken in 1775, when the whole resident population amounted to 170,370 souls. Since this period the increase has been as follows:—1791, 272,140; 1817, 551,998; and 1827, 704,867; exclusive of strangers. We subjoin a

* In 1827, Matanzas had a population of 15,000 souls. During the same year, its imports were valued at 1,387,500 dollars, and its exports at 1,717,347 dollars; and 231 vessels entered, and 251 cleared from its port. We have looked into our latest Gazetteers, but to no purpose, for any notice of this place. Those, indeed, who know that the best of these publications sets down the population of Havannah at 25,000, will probably think that this was very unnecessary labour.

Classification of the Population of Cuba according to the Censuses of 1775 and 1827.

	1775.			1827.		
	Male.	Female.	Total.	Male.	Female.	Total.
Whites -	54,555	40,861	95,416	168,653	142,398	311,051
Free mulattoes -	10,021	9,006	19,027	28,658	29,456	57,511
Free blacks -	5,559	5,629	11,588	25,904	25,079	48,980
Slaves -	28,771	15,562	44,336	183,290	103,652	286,942
Total -	99,509	71,061	170,570	493,905	300,582	794,487

We readily discover, from this Table, that, in the term of 52 years, from 1775 to 1827, the increase of the different classes of the population has been as follows:—

	From	To	Per cent.
The white male population increased	54,555	168,653,	or 209
The white female	—	40,861 142,398,	— 248

	From	To	Per cent.
The free mulatto male population	10,021	28,658,	— 180
The free mulatto female	—	9,006 29,456,	— 227
The free black male	—	5,959 25,904,	— 301
The free black female	—	5,629 25,079,	— 345
The slave (black and mulatto), male	28,771	183,290,	— 537
The slave (black and mulatto), female	15,562	103,652,	— 556

A very large part of the rapid increase of the black population is to be ascribed to the continuance of the slave trade; which, unfortunately for the real interests of the island, has been prosecuted of late years to an extent, and with a vigour, unknown at any former period. From 1811 to 1825, there were imported into Cuba 185,000 African slaves; of which number 116,000 are said to have been entered at the Havannah Custom-house, between 1811 and 1820! Since 1825, the imports of slaves are understood to have increased; and were believed, indeed, to be about as great in 1832 as ever, notwithstanding the trade was to have entirely ceased in 1820.— (*Report of 1832 on West India Colonies, Minutes of Evidence, p. 64.*) It is, besides, supposed that the slaves were under-rated in the census of 1827; so that, perhaps, the entire population of the island is, at present, little, if at all, under 900,000. The planters of Cuba derive considerable assistance from free labourers, mostly of an Indian mixed breed, who work for moderate wages. They are not much employed in the fields, but in other branches of labour; and particularly in bringing the sugar from the interior to the shipping ports.

The articles principally exported from Cuba are, sugar of the finest quality, coffee, tobacco, bees' wax, honey, molasses, &c. Of these, the first is decidedly the most important. The following statements show the astonishing increase that has taken place in the exportation of this staple article:—

Account of the Exportation of Sugar from Havannah, from 1760 to 1833.

	Bares, at 100 lbs.	Lbs.
From 1760 to 1767	15,000	5,900,000
1768 — 1790	68,150	27,260,000
1790 — 1800	110,091	41,036,400
1800 — 1810	177,998	71,199,200
1810 — 1820	207,096	83,978,100
1820 — 1825	250,381	100,153,600
In 1826	271,013½	108,405,500
1827	261,351½	105,981,800
1828	268,586	107,154,400
1829	260,857	101,512,800
1830	292,732	117,092,800
1831	276,350	110,552,000
1832	297,557	119,022,800
1833	281,925	113,970,000

But Havannah having ceased to be the only port for the exportation of sugar, as it was in former times, we must advert to the trade of the other ports, to obtain a correct account of the whole exports of sugar. The following are the Custom-house returns for 1827:—

Exports of sugar from Havannah	99,554,137 lbs.
— Santiago	6,432,673
— Nuevitas	37,275
— Matanzas	30,361,844*
— Trinidad	10,361,537
— Holguin	351,150
— Jagua	12,500
— Manzanilla	120,800
Total	119,973,106 lbs.

But as the Custom-house reports are founded upon the assumption that a box of sugar weighs but 15 arrobas (37½ lbs.), while its true weight is, after deducting the tare, at least 16 arrobas (100 lbs.), they add to their amount one sixteenth (it should be one fifteenth), viz. —

Making a total of	156,158,924 lbs.
-------------------	------------------

This is, however, only the Custom-house report. A great deal of sugar has been smuggled out of the country. The exports from Santiago in 1827, as given above, are certainly much under their real amount; for at that period, and for 3 or 4 years after, the customs officers connived with the planters to defraud the revenue, and carried their depredations to such an extent, that the duties became nominal merely, and the official returns are in no degree to be depended upon. Subsequently, however, these officers were dismissed; and there is reason to think that the returns have since been more accurate. But smuggling is still extensively practised, particularly from the unlicensed ports.

It appears from the subjoined account (No. III.), that there has been, since 1827, a great increase in the exports of sugar, the quantity shipped from the various licensed ports of the island having amounted, in 1833, to 7,624,553 arrobas, or 190,613,825 lbs. But to this we may safely add at least one fourth part for shipments from the unlicensed ports, and what was otherwise sent out of the country without any official notice; so that the entire export of sugar from Cuba, at present, cannot be less than 250,000,000 lbs. or rather more than 110,000 tons!

Next to sugar, coffee is the most valuable production of Cuba. Its cultivation has increased with unprecedented rapidity. In 1800, there were but 80 plantations in the island; in 1817, there were 779; and in 1827, there were no fewer than 2,067, of at least 40,000 trees each! In 1804, the exportation from Havannah was 1,250,000 lbs.; in 1809, it amounted to 8,000,000 lbs.; from 1815 to 1820, it averaged annually 18,186,200 lbs.; and, in 1827, it amounted to 35,837,175 lbs.! The exports from the other ports have increased with equal rapidity. They amounted, in 1827, to 14,202,406 lbs.; making the total exportation for that year 50,039,581 lbs. The low prices seem to have checked the growth, or, at all events, to have diminished the exports of coffee from Cuba in 1828, 1829, and 1830; but since the last mentioned year, they have more than recovered their old level. The total exports in 1833 amounted, according to the Custom-house returns, to 2,566,359 arrobas, or 64,259,975 lbs.; but, as in the case of sugar, considerable additions must be made to this quantity to get the true export. In the Custom-house estimates, coffee bags are supposed uniformly to weigh 150 lbs., though it is well known that they frequently exceed that limit. The exports in 1833 were distributed as follows: viz. from the Havannah, 47,333,100 lbs.; Matanzas, 6,423,075 lbs.; all other ports, 10,503,800 lbs.

Tobacco differs much in quality; but the cigars of Cuba are esteemed the finest in the world.— (See Tobacco.) Formerly, the culture and sale of this important plant were monopolised by Government; but since 1821 this monopoly has been wholly relinquished †, there being no longer any restrictions either on the growth or sale of the article. The cultivator pays a duty, which, however, is to a great extent evaded, of 1 per cent. *ad valorem* upon his crop. In consequence of the freedom thus given to the business, the culture and exportation of tobacco are both rapidly extending; so much so, that the exports of cigars, which amounted in 1826 to only 197,194 arrobas, had increased to 617,713 arrobas in 1833!

Of 95,768 hds. of molasses exported in 1833, 46,632 were from Havannah, and 31,620 from Matanzas. Wax and honey of excellent quality are largely produced in Cuba, and form considerable articles of trade.

* The exports from Matanzas in 1833 were 57,745,400 lbs.

† In the former edition of this work, the tobacco monopoly was inadvertently represented as still subsisting.

The principal imports consist of corn and grain of all sorts, chiefly from the United States and Spain; cotton, hardware, and earthenware goods, from England; linens from Hamburgh, Bremen, the Netherlands, Ireland, &c.; silver and gold from Mexico and South America; indigo and cochineal from ditto; wines, spirits, liqueurs, fruits, &c., from France and Spain; lumber, dried fish, and salt provisions, from the United States, Newfoundland, &c.; with every article, in short, that an opulent community, in a tropical climate, without manufactures, requires.

I. An Account of the Value of the Trade between Cuba and other Countries in 1833, as ascertained by the Customs' Returns.

Countries.	Imports.	Exports.	Countries.	Imports.	Exports.
	<i>L.</i>	<i>L.</i>		<i>L.</i>	<i>L.</i>
Spain	835,193	565,317	Netherlands	44,117	55,681
South America	285,688	4,099	Portugal	9,401	4,548
The Hanse Towns	196,325	313,556	Russia	10,971	207,335
United States	329,181	913,951	Sweden and Denmark	7,138	15,867
Great Britain	338,577	189,787	Turkey	-	13,833
France	195,527	110,691	Foreign produce in ships	-	-
Italy	10,755	47,640	of Cuba	99,495	265,425

But a considerable portion of the imports, especially of those from Spain, are not intended for consumption in Cuba, but are sent there merely *en entrepôt*, or till it be found convenient to ship them for other markets.

II. Classified Account of the Articles of all Sorts, and their Value, imported into Cuba in 1831, 1832, and 1833.

Articles.	1831.	1832.	1833.
	<i>L.</i>	<i>L.</i>	<i>L.</i>
Liquids, viz. — Wines, spirits, beer, oil, &c.	265,552	276,562	329,202

Duties.—A customs duty is charged on most articles exported and imported. In 1828, the duties on imports produced 4,191,195 dollars, being equal to an *ad valorem* duty of 18½ per cent. on the imports of that year. The duties on exports during the same year produced 1,114,641 dollars, equal to an *ad valorem* duty of 18½ per cent. on their amount. According to the tariff, the duties on most imported articles are fixed at either 24 or 50 per cent. *ad valorem*; but all Spanish products imported from the peninsula in Spanish bottoms (except flour, which pays 1½ dollar per barrel, pay only 64 per cent. duty; and when imported in foreign bottoms, they pay 12 per cent. less than the duties on corresponding foreign articles). These products make about a third part of the imports. Until lately, the export duty on sugar was much complained of, being so high as 2½ dollars a box; but in the course of 1853 it was reduced to little more than 1 dollar, — a reduction which has been of material consequence to the planters. Merchandise that has once paid the duties on importation, pays nothing on exportation.

Custom-house Regulations.—Every master of a vessel is bound to have, on his arrival, ready for delivery to the boarding officers of the revenue, two manifests, containing a detailed statement of his cargo; and, in the act of handing them over, is to write thereon the hour when he so delivers them, taking care that they be countersigned by the boarding officers. Within 12 hours from that time he may make any alteration he pleases in the said manifests, or deliver in new ones corrected. After the expiration of these 12 hours, no alteration will be permitted. Goods not manifested will be confiscated without remedy; and, if their value should not exceed 1,000 dollars, masters of vessels will be liable to pay a penalty of double the amount of such non-manifested goods; if they do exceed that sum, and belong to the master, or come consigned to him, his vessel, freight, and other emoluments, will be forfeited to the revenue. Goods over-manifested will pay duties as if they were on board. Goods not manifested, but claimed in time by a consignee, will be delivered up to the latter; but the master, in this case, will be subject to a fine equal in amount to that of such goods. Gold and silver, not manifested by either captain or consignee, are liable to a duty of 4 per cent. Goods falling short of the quantity manifested, when landed, and not being included in any invoice of a consignee, will render the master liable to a penalty of 200 dollars for each package so falling short. Every consignee is obliged to present his invoice or note of goods, within 48 hours after the arrival of a vessel; if not, such goods are liable to 2 per cent. extra duty. The same is the case, if such note do not contain a statement of the number of pieces, contents, quantity, weight, and measure. All goods

imported in vessels exceeding 80 tons burthen, except perishable provisions, bulky articles, and liquors, may be put in deposit for an indefinite term, paying 1 per cent. inward and 1 per cent. outward duty on the value, each year. When entered for home consumption, they are liable to the corresponding duty. If sold in deposit, the exporter pays the outward duty.

Tonnage Duties.—Spanish vessels, 5 reals per ton. Other nations, 20 reals per ton: in case of arrival and departure in ballast, none; arriving in distress, 4 reals per ton, but full duties if the cargo be landed or taken in.

Wharf Duties.—Spanish vessels, 6 reals per day. Other nations, 19 reals per day for each 100 tons of their register measurement.

Monies.—One dollar = 8 reals plate = 20 reals vellon. One doubloon = 17 dollars. The merchants reckon 411 dollars = 1000, or 1 dollar = 41.6d. very nearly. There is an export duty of 1 per cent. on gold, and 2 per cent. on silver.

Weights and Measures.—One quintal = 100 lbs., or 4 arrobas of 25 lbs.; 100 lbs. Spanish = 101½ lbs. English, or 46 kilogrammes. 108 varas = 100 yards, 140 varas = 100 French ell; or aunes; 81 varas = 100 Brabant ell; 108 varas = 160 Hamburg ell. 1 fanega = 3 bushels nearly, or 100 lbs. Spanish. An arroba of wine or spirits = 4½ English wine gallons nearly.

The Spanish authorities disgraced themselves by the countenance which they gave to piratical banditti that infested many of the ports of Cuba during the late contest between Spain and her revolted colonies, and, on pretence of cruising against the Mexicans and Columbians, committed all sorts of enormities. The commerce of the United States suffered so much from their attacks, that they were obliged to send a considerable squadron to attack the banditti in their strongholds, and to obtain that redress they had in vain sought from the government of the island; but we are not sure that the nuisance is as yet entirely abated.

In compiling this article, we have consulted Humboldt's standard work, the *Essai Politique sur l'Isle de Cuba*, Paris, 1826; and the Supplement *Tableau Statistique* thereto, Paris, 1831; the excellent abstract of the *Cuadro Estadístico de Cuba*, published at Havannah in 1829, in the *American Quarterly Review* for June 1830; the *Bulletin des Sciences Géographiques*, tom. xxii. p. 353; Poinsett's *Notes on Mexico*, pp. 279–298. (Eng. ed.); *Papiers published by Board of Trade*, part iii. pp. 648–652; and private communications from intelligent British merchants established at Havannah.

HAVRE, or HAVRE DE GRACE, a commercial and strongly fortified sea-port town of France, on the English channel, near the mouth of the Seine, on its northern bank, in lat. 49° 29' 14" N., lon. 0° 6' 38" E. Population 24,000.

Harbour.—The harbour of Havre consists of 2 basins, inclosed within the walls of the town, affording accommodation for about 450 ships. Cape de la Heve, forming the northern extremity of the Seine, lies N. N. W. from Havre, distant about 2½ miles. It is elevated 390 feet above the level of the sea, and is surmounted by 2 light-houses 50 feet high. These, which are 32½ feet apart, exhibit powerful fixed lights. There is also a brilliant harbour-light at the entrance to the port, on the extremity of the western jetty. Havre has 2 roadsteads. The great or outer road is about a league from the port, and rather more than ½ league W. S. W. from Cape de la Heve; the little or inner road is about ¼ league from the port, and about ¼ of a mile S. E. from Cape de la Heve. They are separated by the sand bank called Leclat; between which and the bank called *Les Hauts de la Rade* is the west passage to the

port. The Hoc, or southern passage, lies between the last mentioned bank and that of Antier. In the great road there is from 6 to 7½ fathoms water at ebb; and in the little, from 3 to 3½. Large ships always lie in the former. The rise of the tide is from 2½ to 27 feet; and by taking advantage of it, the largest class of merchantmen enter the port. The water in the harbour does not begin perceptibly to subside till about 3 hours after high water, — a peculiarity ascribed to the current down the Seine, across the entrance to the harbour, being sufficiently powerful to dam up for a while the water in the latter. Large fleets, taking advantage of this circumstance, are able to leave the port in a single tide, and get to sea, even though the wind should be unfavourable. — (See *Plan of Havre*, published by Mr. Laurie; *Annuaire du Commerce Maritime* for 1833, p. 211; *Coulier sur les Phares*, p. 59, &c.)

Trade, &c.—Havre being, in fact, the principal sea-port of Paris, most of the colonial and other foreign products destined for the consumption of that city are imported into it. It has also a considerable trade of its own. The principal articles of export are silk and woollen stuffs, lace, gloves, trinkets, perfumery, Burgundy, Champagne, and other wines, brandy, books, &c. Besides colonial products and spices, the imports principally consist of cotton, indigo, tobacco, hides, dye woods, iron, tin, dried fish, &c. Grain and flour are sometimes imported and sometimes exported.

Monies, Weights, and Measures same as those of the rest of France. — (See BORDEAUX, and WEIGHTS AND MEASURES.)

It is estimated that the entire value of the different articles imported into Havre, in 1829, amounted to 250,000,000 francs, or about 10,000,000 sterling. Of this sum, the cotton imported was estimated at 26,000,000 fr.; the sugars of the French colonies at 44,000,000 fr., and those of foreign countries at 8,000,000 fr.; coffee 14,000,000 fr.; indigo 2,000,000 fr.; tobacco 4,000,000 fr., &c. The customs duties at Havre during the same year amounted to 25,876,533 fr., being nearly 11 per cent. upon the estimated value of the imports. There entered the port, in the same year, 1,481 French and other ships, coming from foreign countries and the colonies of France, and 2,995 coasting vessels, including those navigating the river: 62 ships entered *en relache* and in ballast. — (*Bulletin des Sciences Géographiques*, tom. xvi. p. 350. and tom. xxiii. p. 570.)

Arrivals.—In 1833, there entered the port, 41 ships from Martinique, 78 from Guadaloupe, 213 from the United States, 30 from Brazil, 1 from Peru and Chili, 23 from Hayti, 6 from Mexico, 11 from Monte Video and Buenos Ayres, 2 from Colombia, 10 from the Havannah and St. Iago, 1 from St. Thomas, 2 from Cayenne, 3 from Senegal, 4 from the Isle de Bourbon and the Mauritius, 6 from the East Indies, 2 from China, and 11 from the whale fishery; in all, 447. — (*Annuaire du Commerce Maritime*, tom. ii. p. 345.)

The total arrivals at Havre in 1833 were —

	Ships.	Tonnage.	Crews.
French ships from foreign countries	250	44,551	2,535
French colonies	130	32,721	1,643
coasters	2,521	159,435	9,328
from the cod and whale fishery	11	4,910	424
Foreign vessels	495	125,029	
Totals	3,410	566,717	

In respect to the imports of cotton, Havre is to the other French ports, what Liverpool is to the other ports of England. We subjoin an

Account of the Imports of Cotton into France in 1833 and 1834, with the Stocks on Hand, &c., specifying in detail the Imports and Stocks of Havre and Marseilles.

										30,000

According to the American official accounts, there were shipped for France, during the year ended 30th of September, 1833, 76,832,149 lbs. of cotton, valued at \$845,359 dollars. The exports to England during the same year were 238,241,746 lbs., valued at 26,254,970 dollars! — (*Papers laid before Congress, 22d of April, 1834.*)

For the quantities of sugar and coffee imported into Havre in the years 1829, 1830, 1831, and 1832, see *post*. We avail ourselves of this opportunity to lay before our readers the following official statements as to the

FOREIGN TRADE AND NAVIGATION OF FRANCE FOR 1833.

Summary Statement of the Commerce of France, during the Year 1833.

Note. — *General commerce*, as applied to imports, means all articles imported by sea or land, without inquiring whether they are intended to be consumed, re-exported, or warehoused. *Special commerce*, as applied to imports, means such imported articles as have been admitted for home consumption, under payment of the customs duties.

The same distinction obtains in relation to exports. *General commerce*, in this case, means all exported articles, without regard to their origin; while *special commerce* means such only as are produced by the soil or manufactures of France.

IV. — Account of the Quantities of the different Sorts of Cotton, Sugar, and Coffee, imported into Havre, in each of the Four Years ending with 1852, and of the Stocks on Hand on the 31st of December each Year.

Prices of Commodities Duty paid and in Bond, Taxes, Commercial Allowances, &c. — These important particulars may be learned by the inspection of the subjoined Price Current for the last week of December, 1833. The duties on the articles mentioned are also given; but it is most probable that some of these will be speedily varied. But the other particulars embodied in it will always render it an important document.

Havre Price Current, 31st of December, 1833.

vessels, 3 fr. 85 ct. — (See exceptions at Note A.)
Allowance: 1 to 2 per cent.

Explanatory Remarks.

The above duties include the surtax of 10 per cent.: the
Custom-house admits the real tare whenever the importer
desires it.

NOTE A. — The treaties of reciprocity entered into with the

countries hereafter mentioned, introduce the following de-
rations from the above rates of duty.

United States. — The produce of the United States, except
that of the fisheries, direct from the United States in United
States vessels, pays the same duty as if imported by French
vessels from the United States.

Brazil and Mexico. — The produce of the Brazil and
Mexico, imported direct in national vessels, enjoys also the
above privilege.

England. — The produce of Africa, Asia, or America, im-
ported from any country whatever in British vessels, or from
any port of the British dominions in Europe, either by French
or foreign vessels, can only be admitted in bond for re-export-
ation.

The same regulation is applicable to all European produce
(except that of Great Britain and its possessions in Europe),
when imported by British vessels from other ports than those of
Great Britain or its possessions in Europe.

The weight of 50 kil. is equal to 110½ lbs. English, or 100 lbs.
English are equal to 45 35/100 kil.; and the cwt. equal to 50
70/100 kil.

Credit. — 4½ months, except on coffee, cocoa, pimento, pep-
per, quicksilver, and clayed sugar, which are sold at 3½
months, and wheat at 2½ months.

(For Table II, see next page.)

Trade between France and England. — Nothing can more strikingly illustrate the miserable effects of commercial restrictions, than the present state of the trade between Great Britain and France. Here we have two countries of vast wealth and population, near neighbours, and each possessing many important articles that the other wants, and yet the intercourse between them is inconsiderable. At a distant period this was not the case. Previously to the accession of William III., the import of wine only from France amounted to about 13,500 tuns a year, our imports of brandy and other articles being proportionally large. But Louis XIV. having espoused the cause of the exiled family of Stuart, the British government, not recollecting that the blow they aimed at the French would also smite their own subjects, imposed, in 1693, a *discriminating* duty of 8*l.* a tun on French wine, and in 1697 raised it to no less than 33*l.* a tun! It is probable that this excess of duty would have been repealed as soon as the peculiar circumstances in which it originated had disappeared, had not the stipulations in the famous commercial treaty with Portugal, negotiated by Mr. Methuen, in 1703, given it permanence. But, according to this treaty, we bound ourselves for the future to charge *one third* higher duties on the wines of France imported into England, than on those of Portugal; the Portuguese, by way of compensation, binding themselves to admit our

woolens into their markets in preference to those of other countries, at a fixed and invariable rate of duty.

Though very generally regarded, at the time, as the highest effort of diplomatic skill and address, the Methuen treaty was, undoubtedly, founded on the narrowest and most contracted views of national interest; and has, in consequence, proved, in no common degree, injurious to both parties, but especially to England. By binding ourselves to receive Portuguese wines for *two thirds* of the duty payable on those of France, we, in effect, gave the Portuguese growers a monopoly of the British market; at the same time that we excluded one of the principal equivalents the French had to offer for our commodities, and provoked them to retaliate. This, indeed, was no difficult task. — Unhappily, they were but too ready to embark in that course of vindictive policy of which we set them the example; so that prohibitions on the one side being immediately followed by counter-prohibitions on the other, the trade between the two countries was nearly annihilated! But the indirect were still more injurious than the direct consequences of this wretched policy. It inspired both parties with feelings of jealousy and dislike, and kept them in the frowning attitude of mutual defiance. Each envied the other's prosperity; and being disposed to take fire at even fancied encroachments, the most frivolous pretexts were sufficient to engage them in contests that have filled the whole world with bloodshed and confusion. But had things been left to their natural course, — had an unfettered commercial intercourse been allowed to grow up between the two countries, — the one would have formed so near, so vast, and so profitable a market for the produce of the other, that they could not have remained long at war without occasioning the most extensively ruinous distress, — distress which no government would be willing to inflict on its subjects, and to which, though the government were willing, it is most probable no people would be disposed to submit. A free trade between England and France would give these two great nations *one common interest*. It would occasion not only a vast increase of the industry, and of the comforts and enjoyments, of the

people of both countries, but would be the best attainable security against future hostilities. "We know," said Mr. Villiers, in his very able and instructive speech (15th of June, 1830), "that British enterprise will fetch the extremest points on earth in the business of exchange; but here are the shores of France nearer to England than those of Ireland itself—nay, Bordeaux is commercially nearer to London than it is to Paris; and, but for the lamentable perversion of the gifts and dispositions of nature, and of the ingenuity of man—the highways of commerce between these countries—the seas which surround Great Britain and Ireland, and wash the shores of France, should literally swarm with vessels, engaged, not only in the interchange of material products, but in diffusing knowledge and stimulating improvement; in creating every where new neighbourhoods; in consolidating international dependence; in short, in drawing daily more close the bonds of international peace and confidence, and thus advancing, while they also served to confirm and secure, the peace, the civilisation, and the happiness of Europe."*

The commercial treaty which Mr. Pitt negotiated with France in 1786, was the first attempt to introduce a better system into the trade between the two countries; and it is one of the few treaties of this description that have been bottomed on fair and liberal principles. But the Revolution in France, and the lengthened and bloody wars by which it was followed, totally suppressed that mutually beneficial intercourse which had begun to grow up under Mr. Pitt's treaty; and when peace was again restored, in 1815, the French government unwisely resolved to continue the system of Napoleon, and to exclude most sorts of foreign products for which a substitute could be found at home! But the wide-spread distress that has resulted from this absurd policy, and the more general diffusion of sounder notions as to the real sources of public wealth, will, it may be confidently predicted, at no distant period, induce the government of France to adopt a less illiberal and irrational system.—(See BORDEAUX.) The equalisation of the wine duties in this country will accelerate this desirable result. It shows the French that we are no longer influenced by the prejudices in which the discriminating system originated; and that we are ready to deal with them on the same fair and equal terms as with any one else. In this respect the measure is entitled to the highest praise; and we have no doubt that it will be the harbinger of others of the same kind—of a reduction of the exorbitant duties on brandy, for example—both here and in France. The statesman who shall succeed in abolishing the restraints on the commerce of the two countries, will render the most essential service to them both; and not to them only, but to all the world, the furthest parts of which have been harassed by their wars. It admits of demonstration, that, under a free system, the trade with France would be incomparably more important and valuable than that with Russia, the United States, or any other country. And we trust, should another edition of this work be called for, that we shall have to congratulate the public on the opening of this "broad and deep" channel of employment.

The following Tables, prepared expressly for this work, give a pretty complete view of the trade with France. Brandy, madder, silk manufactures, flax, wine, gloves, &c. are the principal articles of import; for the raw and thrown silk comes, as already mentioned, almost wholly from Italy. Brass and copper manufactures are by far the most important of all the articles we send to France, at least through the regular channels. It will, probably, surprise some of our readers to learn that, in 1832, the real or declared value of the silk goods manufactured in this country and exported to France amounted to no less than 75,187*l*.! This is an instructive commentary on the sinister auguries of those who predicted the ruin of our manufacture by French competition, in consequence of the subversion of the old monopoly system in 1825. The most important of the other articles of export are cottons, woollens, sheep's wool, hardware and cutlery, horses, tin, &c.

A glance at the first of the following Tables will sufficiently explain the real causes of the depressed state of the French trade. The duty of 22*s. 6d.* a gallon on brandy is, probably, about the *ne plus ultra* of fiscal rapacity. The duties on wine, verdigris, gloves, &c. are all very much beyond the mark. Till they be adequately reduced, the trade with France can never be any thing but inconsiderable, compared, at least, with what it ought to be.

* We regret to have to add, that this was one of the last public appearances made by Mr. Villiers. He died in December, 1832, at the early age of 31. His death was a national loss that will not easily be repaired. Few have ever entered upon public life with better dispositions, more enlarged and comprehensive views, or a more sincere desire to promote the happiness of their species.

It would seem, from the subjoined account, as if the imports into Great Britain from France very much exceeded the exports, the official value of which amount to only 848,270*l.* a year. But though the fact were so, it would not, as some appear to suppose, afford the shadow of a foundation for the statements of those who contend that the trade with France is a losing one. A man carries nothing but money to the baker's shop, or the butcher's; and yet it is not said that he is injured by dealing with them, or that he should become baker or butcher for himself. We buy certain articles from France, because we find we can procure them from her on more reasonable terms than

from any other country; for, were it otherwise, does any one suppose we should send a single ship to her ports? Whether we carry on our intercourse with the French by sending them returns in bullion or ordinary products, is of no consequence whatever. We may be assured that bullion is not sent to another country, unless it be more valuable there than here; that is, unless its exportation be for *our* advantage. — (See *BALANCE OF TRADE*.) In point of fact, however, we very rarely send any bullion to France; and the proof of this is, that, since the peace, the exchange with Paris has been oftener in our favour than against us. When the bills drawn by the French on us exceed those we draw on them, the balance is usually paid by bills on Holland and Hamburg, where there is, at all times, an excess of British produce. It is idle, therefore, to attempt to revive the ridiculous cry as to the disadvantageousness of the French trade, because the imports from France exceed the exports! The imports into all commercial countries uniformly exceed the exports; and the fact brought forward as a ground of complaint against the French trade, is the strongest recommendation in its favour. Perhaps, however, it may be consolatory to those who are so alarmed at the excess of imports from France, to be told that it is to a great extent apparent only. As already observed, large quantities of silk and other produce from Italy come to us through France, and are reckoned among the imports from that country, when they are in reality imports from Italy. Taking this circumstance into account, it will be found that the discrepancy between the exports to and imports from France is immaterial.

Account of the Amount in Official and Real Value of all British Exports to France, in each Year since 1814; distinguishing those of British from Colonial Produce; also, an Abstract of the Amount in Official Value of all Imports from France in each Year, as far as the same can be made up during that Time.

HAWKERS AND PEDLARS. It is not very easy to distinguish between hawkers and pedlars. Both are a sort of itinerant retail dealers, who carry about their wares from place to place; but the former are supposed to carry on business on a larger scale than the latter. They are subject to the same regulations.

Regulations as to Hawkers and Pedlars. — The legislature has always looked with suspicion upon itinerant dealers; and has attempted, by obliging them to take out licences, and placing them under a sort of *surveillance*, to lessen their numbers, and to hinder them from engaging in dishonest practices. But the resident dealer has so many advantages on his side, that these precautions seem to be in a great measure superfluous. It should also be recollected, that before shops were generally established in villages and remote districts, hawkers and pedlars rendered material services to country people; and even now the competition which they excite is certainly advantageous.

By the 50 Geo. 3. c. 41., hawkers and pedlars are to pay an annual licence duty of 4*l.*; and if they travel with a horse, ass, or other beast, bearing burden, they are subject to an additional duty of 4*l.* for each beast so employed. The granting of licences, and management of the duties, are, by a late act, placed under the control of the commissioners of stamps.

Hawkers and pedlars, unless householders or residents in the place, are not allowed to sell by auction to the highest bidder: penalty 50*l.* — half to the informer, the other half to the king. But nothing in the act extends to hinder any person from selling, or exposing to sale, any sort of goods, in any public market or fair; or to hinder a hawker or pedlar from selling in a hired room, where he is not a resident, provided such sale is not by auction.

Every hawker, before he is licensed, must produce a certificate of good character and reputation, signed by the clergyman and two reputable inhabitants of the place where he usually resides.

Every hawker must have inscribed, in Roman capitals, on the most conspicuous part of every pack, box, trunk, case, cart, or other vehicle, in which he shall carry his wares, and on every room and shop in which he shall trade, and likewise on every hand-bill which he shall distribute, the words "LICENSED HAWKER." Penalty, in default, 10*l.* Unlicensed persons wrongfully using this designation forfeit 10*l.*

Hawkers dealing in smuggled goods, or in goods fraudulently or dishonestly procured, are punishable by forfeiture of licence, and incapacity to obtain one in future, besides being liable to all the other penalties, forfeitures, &c. applicable to such illegal dealing.

By stat. 6 Geo. 4. c. 80. it is enacted, that any person or persons hawking, selling, or exposing to sale, any spirits on the streets, highways, &c., or in any boat or other vessel on the water, or in any place other than those allowed in this act, shall forfeit such spirits and 100*l.* for every such offence. Any person may detain a hawker of spirits, and give notice to a peace officer to carry the offender before a justice.

Hawkers trading without licence are liable to a penalty of 10*l.* So also, if they refuse to show their licence on the demand of any person to whom they offer goods for sale, or on the demand of any justice, mayor, constable, or other peace officer, or any officer of the customs or excise. By 5 Geo. 4. c. 83., hawkers trading without a licence are punishable as vagrants.

To forge or counterfeit a hawker's licence incurs a penalty of 300*l.* To lend or hire a hawker's licence subjects lender and borrower to 40*l.* each, and the licence becomes forfeited. But the servant of a licensed hawker may travel with the licence of his master.

Hawkers trading without a licence are liable to be seized and detained by any person who may give notice to a constable, in order to their being carried before a justice of peace. Constables refusing to assist in the execution of the act are liable to a penalty of 10*l.*

Nothing in the act extends to prohibit persons from selling fish, fruit, or victuals; nor to hinder the maker of any home manufacture from exposing his goods to sale in any market or fair, in every city, borough, town corporate, and market town: nor any tinker, cooper, glazier, plumber, harness-mender, or other person, from going about and carrying the materials necessary to their business.

A single act of selling, as a parcel of handkerchiefs to a particular person, is not sufficient to constitute a hawker within the meaning of the statutes. — (*Rez v. Little*, B. 613.)

By the 52 Geo. 3. c. 108., no person, being a trader in any goods, wares, or manufactures of Great Britain, and selling the same by *wholesale*, shall be deemed a hawker; and all such persons, or their agents, selling by *wholesale* only, shall go from house to house, to any of their customers who sell again by *wholesale* or retail, without being subject to any of the penalties contained in any act touching hawkers, pedlars, and petty chapmen.

No person committed under these acts for non-payment of penalties can be detained in custody for a longer period than 3 months.

Hawkers exposing their goods to sale in a market town, must do it in the market-place.

Persons hawking tea without a licence are liable to a penalty, under 50 Geo. 3. c. 41.; and even though they had a licence, they would be liable to a penalty for selling tea in an unentered place. — (*Chitty's edit. of Burn's Justice*, vol. ii. p. 1113.)

Any person duly licensed to trade as a hawker and pedlar may set up any lawful trade in any place where he is resident, though he have not served any apprenticeship to the same, and, if prosecuted, may plead the general issue, and have double costs. — (*See Chitty's edit. of Burn's Justice*, vol. ii. pp. 1102—1124.)

The hawkers' and pedlars' duty produced in 1833, 28,542*l.* gross revenue; the charges of collection are very heavy, amounting to between 5,000*l.* and 6,000*l.* Whatever, therefore, may be the other advantages of this tax, it cannot, certainly, be said to be very productive.

HAY (Ger. *Hew*; Du. *Hori*; Fr. *Foin*; It. *Fieno*; Sp. *Heno*; Lat. *Fœnum*), any kind of grass, cut and dried for the food of cattle. The business of hay-making is said to be better understood in Middlesex than in any other part of the kingdom. The great object is to preserve the green colour of the grass as much as possible, and to have it juicy, fresh, and free from all sort of mustiness.

The sale of hay within the bills of mortality, and 30 miles of the cities of London and Westminster, is regulated by the act 36 Geo. 3. c. 88. It enacts, that all hay shall be sold by the load of 36 trusses, each truss weighing 56 lbs., except new hay, which is to weigh 60 lbs. till the 4th of September, and afterwards 56 lbs. only; so that till the 4th of September a load of hay weighs exactly a ton, but thereafter only 18 cwt. The clerk of the market is bound to keep a regular book for the inspection of the public, specifying the names of the seller, the buyer, the salesman, and the price of each load. Salesmen and factors are prohibited from dealing on their own account.

There are three public markets in the metropolis for the sale of hay and straw; Whitechapel, Smithfield, and the Haymarket. An act (11 Geo. 4. c. 14.) has been obtained, for the removal of the market from the Haymarket to the vicinity of the Regent's Park: but the removal has not yet taken place.

Straw is sold by the load of 36 trusses, of 36 lbs. each, making in all 11 cwt. 64 lbs.

It is affirmed, we know not with what foundation, that considerable frauds are perpetrated in the sale of hay and straw.

HEMP (Ger. *Hanf*; Du. *Hennip*, *Kennip*; Da. *Hamp*; Sw. *Hampa*; Fr. *Chanvre*; It. *Cannape*; Sp. *Canamo*; Rus. *Konapli*, *Konopel*; Pol. *Konope*) a valuable plant (the *Cannabis sativa* of Linnaeus), supposed to be a native of India, but long since naturalised and extensively cultivated in Italy, and many countries of Europe, particularly Russia and Poland, where it forms an article of primary commercial importance. It is also cultivated in different parts of America, though not in such quantities as to supersede its importation. It is stronger and coarser in the fibre than flax; but its uses, culture, and management, are pretty much the same. When grown for seed, it is a very exhausting crop; but when pulled green, it is considered as a cleaner of the ground. In this country its cultivation is not deemed profitable; so that, notwithstanding the encouragement it has received from government, and the excellent quality of English hemp, it is but little grown, except in some few districts of Suffolk and Lincolnshire. The quantity raised in Ireland is also inconsiderable. — (*London's Encyc. of Agricult.*)

Exceedingly good *huckaback* is made from hemp, for towels and common tablecloths. Low-priced hempen cloths are a general wear for husbandmen, servants, and labouring manufacturers; the better sorts for working farmers and tradesmen in the country; and the finer ones, $\frac{3}{4}$ wide, are preferred by some gentlemen for strength and warmth. They possess this advantage over Irish and other linens, — that their colour improves in wearing, while that of linen deteriorates. But the great consumption of hemp is in the manufacture of sailcloth and cordage, for which purposes it is peculiarly fitted by the strength of its fibre. English hemp, when properly prepared, is said to be stronger than that of every other country, Russia not excepted; and would, therefore, make the best cordage. It is, however, but little used in that way, or in the making of sailcloth; being principally made into cloth for the uses already stated.

Hemp has been cultivated in Bengal from the remotest antiquity, but not, as in Europe, for the purpose of being manufactured into cloth and cordage. In the Hindoo economy it serves as a substitute for malt;

a favourite intoxicating liquor, called *banga*, being produced from it! This, also, is the use to which it is applied in Egypt. — (*Milburn's Orient. Commerce, &c.*)

The price of hemp fluctuated very much during the war. In consequence of difficulties in the way of its importation, it stood at a very high level from 1808 to 1814. This was the principal circumstance that originally brought iron cables into use; and the extent to which they are now introduced, has contributed materially to diminish the consumption and importation of hemp. — (*Tooke on High and Low Prices*, 2d ed. p. 345.)

Of 530,820 cwt. of undressed hemp imported in 1831, 506,803 were brought from Russia, 9,472 from the East Indies, 7,405 from Italy, 2,262 from the Philippine Islands, 2,248 from the United States, and some small quantities from a few other places. The duty on hemp was reduced, in 1832, from 4s. 8d. to 1d. per cwt.; a reduction which, considering the importance of cordage, and other articles made of hemp, cannot fail to be of very great advantage.

We borrow the following particulars with respect to the hemp trade of Petersburg, from the work of Mr. Borrisow on the commerce of that city:—

Hemp forms a very important article of export from Petersburg, and deserves particular notice. It is assorted, according to its quality, into *clean hemp*, or *firsts*; *out-shot hemp*, or *seconds*; *half-clean hemp*, or *thirds*; and *hemp codilla*.

Of the first 3 sorts, there are annually exported about 2,000,000 poods, the greatest part in English and American bottoms. It is brought to Petersburg, from the interior beyond Moscow, by water; and its quality depends very much on the country in which it is produced. That brought from Karatshev is the best; next to this, that produced in Belev; hemp from Gshatsk is considered inferior to the latter.

As soon as the hemp is brought down in the spring, or in the course of the summer, it is selected and made up in bundles; both operations being performed by sworn selectors (*brackers*) and binders appointed by government for this purpose; and it is a well known fact, that this is done with great impartiality and exactness.

A bundle of clean hemp weighs from 55 to 65 poods; ditto out-shot, 48 to 55 ditto; ditto half-clean, 40 to 45 ditto.—(1 pood = 36 lbs. avoirdupois.)

Binding of hemp is paid for at the rate of 2 roubles 50 copecks for *clean*, 2 roubles for *out-shot*, and 1 rouble 60 copecks for *half-clean*, per bundle; one half is paid by the seller, and the other half by the purchaser, and is charged accordingly by their agents.

The expense of selecting hemp is 50 copecks per bercovitz (or 10 poods), and is the same for every sort. To every bundle of assorted hemp is attached a ticket with the names of the selector, binder, and owner, and the date and year. Every bundle has also affixed to it a piece of lead, stamped on one side with the name of the selector, and on the other with the sort of hemp and the time when it was selected. The external marks of good hemp are, its being of an equal green colour and free from spills; but its good quality is proved by the strength of the fibre, which should be fine, thin, and long. The first sort should be quite clean and free from spills; the *out-shot* is less so; and the *half-clean* contains a still greater portion of spills, and is moreover of mixed qualities and colours.

As a perfect knowledge of the qualities of hemp and flax can only be acquired by experience and attention, agents usually employ men constantly occupied in this business; by which means they are sure of getting goods of the best quality, and have the best chance of giving satisfaction to their principals; because, although the hemp is selected by sworn selectors, yet, owing to the quantity of business and the speed with which it must be executed, &c., there are often great differences in the same sorts. The charges are in this way somewhat increased; but this is trifling in comparison of the advantage gained. The part separated, or picked out in cleaning hemp, is called *hemp codilla*; it is generally made up in small bundles of 1 pood, which are again, when shipped, bound together in large bundles, each consisting of about 30 small ones.

Particular care must be taken to ship hemp and flax in fine dry weather; if it get wet, it heats and is totally spoiled. For this reason every vessel taking in hemp or flax is furnished with mats to prevent its getting damp. Hemp, being light and bulky, is, when stowed, forced into the hold by means of winches, which renders the operation of loading rather slow.

It may be taken as a general rule, that the prices of hemp are highest in the months of May, June, July, and the early part of August, the demand for this article being then greatest, and the exportation to North America being principally effected at this season. Again, the prices of hemp are lowest in the month of September; the reason of which is, that the less opulent hemp-merchants return at the end of this month to their own country, in order to make new purchases for the ensuing year; and rather than be detained, sell the remainder of their stock some roubles below the market price. This causes a general decline; although an unusual demand for the article happening at the same time, or political events or rumours, occasionally produce a contrary effect. Two large warehouses, called *ambars*, are built in Petersburg for the special purpose of housing hemp, where the greatest order is observed.

Account of the Total Export of Hemp from Petersburg during the last Eight Years, specifying the Quantities exported in British, American, and other Foreign Ships.

Years.	In British Ships.				American.	Other Foreign Ships.				Grand Total.
	Clean.	Out-shot.	Half-clean.	Total in British Ships.	Total.	Clean.	Out-shot.	Half-clean.	Total in Foreign Ships.

Sixty poods of hemp and 40 poods of codilla make a last at Petersburg; 63 poods make an English ton. — (pp. 47—52.)

Riga hemp fetches a higher price than that of Petersburg. It is divided into 3 sorts: viz. rein, rhine, or clean, out-shot, and pass hemp. The following are the prices of hemp, duty paid, as quoted in the London markets, December, 1833:—

	£	s.	d.	£	s.	d.	
Hemp, East India, <i>d. p.</i>	-	-	-	0	0	0	per ton.
Petersburgh, clean	-	-	-	25	10	0	—
out-shot	-	-	-	24	0	0	—
half-clean	-	-	-	21	0	0	—
Riga rhine	-	-	-	29	0	0	—

We subjoin a statement of the various charges on the exportation of hemp from Petersburg, and on its importation into this country.

Clean Hemp. — 1 bundle = 63 poods = 1 ton.	
Duty, 3 rou. 60 cop. per bercovitz	Rou. cop. 22 68
Additional duty, 10 per cent.	2 27
Quarantine duty, 1 per cent.	0 22
	R. 25 17
Custom-house charges, 4 per cent.	1 1
Receiving, weighing, and shipping, $5\frac{1}{2}$ rou. per bundle	5 75
Bracking, 50 cop. per bercovitz	3 15
Binding, 40 cop. per ditto	2 52
Lighterage and attendance to Cronstadt, 8 rou. per bundle	8 0
Rebinding, $2\frac{1}{2}$ rou. per bundle, $\frac{1}{2}$ charged	1 12
Brokerage, 60 cop. per ton	0 60
	R. 45 32

Brokerage, $\frac{1}{2}$ per cent.
Commission and extra charges, 3 per cent.
Stamps on drafts, $\frac{1}{2}$ per cent. } $\frac{1}{2}$ per cent.
Brokerage, $\frac{1}{4}$ per cent.

Charges of importation per ton, taking the price at 40l. per ton.	
Insurance, say 1l., and policy	L. s. d. 0 10 6
Freight, 52s. 6d. per ton	2 12 6
Customs and Russia dues	4 15 8
Landing charges	0 10 0
Sound dues	0 5 0
Discount, $5\frac{1}{2}$ per cent.	1 10 0
Brokerage	0 4 0

Per ton, L. 10 5 8

In the above calculation, no allowance is made for damage; which, if care be taken to select a good vessel and an early season, does not amount to much. The estimates are nearly the lowest rates of charge. The insurance, indeed, is sometimes as low as 12s. 6d. per cent., and policy. That, however, is only in the very earliest part of the season; it rises to 5l. per cent. in the autumn.

Out-shot Hemp. — 1 bundle = 63 poods = 1 ton.	
Fixed charges	Rou. cop. 46 11
Other charges same.	
Half-clean Hemp. — $1\frac{1}{2}$ bundle = 63 poods = 1 ton.	
Fixed charges	Rou. cop. 48 71
Other charges same.	

Hemp the produce or manufacture of Europe may not be imported into the United Kingdom for home consumption, except in British ships, or in ships of the country of which it is the produce, or from which it is imported, under penalty of forfeiting the same and 100l. by the master of the ship. — (3 & 4 Will. 4. c. 54. § 2. and 22.)

HEMP (MANILLA), commonly called Manilla white rope. Mr. Crawford gives the following account of this article: — "Of the wild banana, one kind (*Musa textilis*) grows in vast abundance in some of the most northerly of the spice islands. In the great island of Mindanao, in the Philippines, it fills extensive forests. From the fibrous bark or epidermis is manufactured a kind of cloth, in frequent use among the natives. It also affords the material of the most valuable cordage which the indigenous products of the Archipelago yield. This is known to our traders and navigators under the name of Manilla rope, and is equally applicable to cables, and to standing or running rigging." — (*Hist. of Archipelago*, vol. i. p. 412.)

HEMP (INDIAN), or SUNN. This consists of the fibre of the *crotonaria juncea*, a totally different plant from the *cannabis sativa*, which, as already stated, is never used by the Hindoos for cloth or cordage. Sunn is grown in various places of Hindostan. The strongest, whitest, and most durable species is produced at Comercolly. During those periods of the late war when the intercourse with the Baltic was interrupted, and hemp bore an enormous price, large quantities of sunn were imported; but the fibre being comparatively weak, the article was not found to answer, and the importation has since been discontinued. — (*Milburn's Orient. Commerce*; private information.)

HEMP-SEED (Fr. *Chenevis*, *Chenevi*; Ger. *Hanfsaat*; It. *Cannapuccia*; Lat. *Semen cannabinum*; Rus. *Konopljanoe Semja*), the seed of hemp. The best hemp-seed is that which is brightest, and will not break when rubbed. It is used either as seed, or for crushing for oil, or as food for fowls. Being loaded with a duty of 2l. per quarter, it is but little imported into this country.

HERRINGS, AND HERRING FISHERY. The herring (*Clupea harengus* of Linnaeus) is a fish too well known to require any description. It is every where in high esteem, both when fresh and when salted.

"Herrings are found from the highest northern latitudes yet known, as low as the northern coasts of France. They are met with in vast shoals on the coast of America as low as Carolina. In Chesapeake Bay is an annual inundation of those fish, which cover the shore in such quantities as to become a nuisance. We find them again in the seas of Kamtschatka; and probably they reach Japan. The great winter rendezvous of the herring is within the Arctic circle: there they continue for many months, in order to recruit themselves after the fatigue of spawning; the seas within that space swarming with insect food in a far greater degree than those of our warmer latitudes. This mighty army begins to put itself in motion in spring. They begin to appear off the Shetland Isles in April and May. These are only the forerunners of the grand shoal, which comes in June; and their appearance is marked by certain signs, such as the numbers of birds, like gannets and others, which follow to prey on them: but when the main body approaches, its breadth and depth is such as to alter the appearance of the very ocean. It is divided into distinct columns of 5 or 6 miles in length, and 3 or 4 in breadth; and they drive the water before them, with a kind of rippling. Sometimes they sink for the space of 10 or 15 minutes, and then rise again to the surface; and in fine weather reflect a variety of splendid colours, like a field of the most precious gems.

"The first check this army meets in its march southward, is from the Shetland Isles, which divide it into two parts: one wing takes to the east, the other to the western shores of Great Britain, and fill every bay and creek with their numbers: the former proceed towards Yarmouth, the great and ancient mart of herrings; they then pass through the British Channel, and after that in a manner disappear. Those which take towards the west, after offering themselves to the Hebrides, where the great stationary fishery is, proceed to the north of Ireland, where they meet with a second interruption, and are obliged to make a second division: the one takes to the western side, and is scarcely perceived, being soon lost in the immensity of the Atlantic; but the other, that passes into the Irish Sea, rejoices and feeds the inhabitants of most of the coasts that border on it. These brigades, as we may call them, which are thus separated from the greater

columns, are often capricious in their motions, and do not show an invariable attachment to their haunts.

"This instinct of migration was given to the herrings, that they might deposit their spawn in warmer seas, that would mature and vivify it more assuredly than those of the frozen zone. It is not from defect of food that they set themselves in motion; for they come to us full of fat, and on their return are almost universally observed to be lean and miserable. What their food is near the pole, we are not yet informed; but in our seas they feed much on the *oniscus marinus*, a crustaceous insect, and sometimes on their own fry.

"They are full of roe in the end of June, and continue in perfection till the beginning of winter, when they deposit their spawn. The young herrings begin to approach the shores in July and August, and are then from $\frac{1}{2}$ an inch to 2 inches long. Though we have no particular authority for it, yet, as very few young herrings are found in our seas during winter, it seems most certain that they must return to their parental haunts beneath the ice. Some of the old herrings continue on our coast the whole year."—(*Pennant's British Zoology*.)

The herring was unknown to the ancients, being rarely, if ever, found within the Mediterranean. The Dutch are said to have engaged in the fishery in 1164. The invention of pickling or salting herrings is ascribed to one Beukels, or Beukelson, of Biervliet, near Sluys, who died in 1397. The emperor Charles V. visited his grave, and ordered a magnificent tomb to be erected to his memory. Since this early period, the Dutch have uniformly maintained their ascendancy in the herring fishery; but, owing to the Reformation, and the relaxed observance of Lent in Catholic countries, the demand for herrings upon the Continent is now far less than in the fourteenth and fifteenth centuries.

Importance of the Herring Fishery. Progress of it in Great Britain.—There is, perhaps, no branch of industry, the importance of which has been so much over-rated as that of the herring fishery. For more than 2 centuries, company after company has been formed for its prosecution, fishing villages have been built, piers constructed, Boards and regulations established, and vast sums expended in bounties, and yet the fishery remains in a very feeble and unhealthy state. The false estimates that have been long current with respect to the extent and value of the Dutch herring fishery, contributed more, perhaps, than any thing else, to the formation of exaggerated notions of the importance of this business. That the Hollanders prosecuted it to a greater extent, and with far greater success, than any other people, is, indeed, most true. There is not, however, the shadow of a ground for believing that they ever employed, as has often been stated, about 450,000 individuals in the fishery and the employments immediately subservient to it. We question whether they ever employed so many as 50,000. At the time when the Dutch carried on the fishery to the greatest extent, the entire population of the Seven United Provinces did not certainly exceed 2,400,000; and deducting a half for women, and from a half to two thirds of the remaining 1,200,000 for boys and old men, it would follow, according to the statement in question, that every able-bodied man in Holland must have been engaged in the herring fishery! It is astonishing how such ridiculously exaggerated accounts ever obtained any circulation; and still more so, that they should have been referred to and quoted, without, apparently, any doubt being ever entertained of their authenticity, down to our own times! * Had they been sifted ever so little, their falsehood would have been obvious; and we should have saved many hundreds of thousands of pounds that have been thrown away in attempting to rival that which never existed.

It would be impossible, within the limits to which this article must be confined, to give any detailed account of the various attempts that have been made at different periods to encourage and bolster up the herring fishery. In 1749, in pursuance of a recommendation in his Majesty's speech at the opening of parliament, and of a report of a committee of the House of Commons, 500,000*l.* was subscribed for carrying on the fisheries, under a corporation called "The Society of the Free British Fishery." The Prince of Wales was chosen governor of the Society, which was patronised by men of the first rank and fortune in the state. But this Society did not trust entirely to its own efforts for success. The duties were remitted upon the salt used in the fisheries; and besides this reasonable encouragement, a high tonnage bounty was granted upon every buss fitted out for the deep sea fishery. In consequence, many vessels were sent out, as Dr. Smith has truly stated, not to catch herrings, but to catch the bounty; and to such an extent was this abuse carried, that in 1759, when the tonnage bounty was 50*s.*, the almost incredible sum of 159*l.* 7*s.* 6*d.* was paid as bounty upon every barrel of merchantable herrings that was produced!—(*Wealth of Nations*, vol. iii. p. 386. *McCulloch's* ed.) But, notwithstanding this encouragement, such was the waste and mismanagement of the Company's affairs, that it was speedily destroyed. Dr. Smith says, that in 1794 hardly a vestige remained of its having ever been in existence.

But, notwithstanding this ill success, a new company was formed, for nearly the same objects, in 1786, of which George III. was patron. It has had nearly the same fate. "For a season or two, busses were fitted out by the society; but if every herring caught had carried a ducat in its mouth, the expense of its capture would scarcely have been repaid. The bubble ended by the society for fishing in the deep sea becoming a kind of building society, for purchasing ground in situations where cures and prices as find it convenient to settle, and selling or letting it in small lots to them, at such advance of price as yields something better than fishing profits."—(See an excellent article on the *Herring Fishery* in the 11th Number of the *Quarterly Journal of Agriculture*.)

In 1808, a fresh attempt was made for the improvement and extension of the fishery. The act 48 Geo. 3. established a distinct set of commissioners for the superintendence of all matters connected with the fishery, and authorised them to appoint a sufficient number of fishery officers, to be stationed at the different ports, whose duty is to see that the various regulations with respect to the gutting, packing, &c. of the herrings, and the branding of the barrels, are duly carried into effect. In 1809, a bounty of 3*l.* per ton was granted on all vessels employed in the deep sea herring fishery, of above 60 tons burden, but payable only on 100 tons; and in 1820, a bounty of 20*s.* per ton, which, under certain specified circumstances, might be increased to 50*s.*, was granted on all vessels of from 15 to 60 tons, fitted out for the shore herring fishery; and, exclusively of these bounties on the tonnage, a bounty of 2*s.* a barrel was allowed on all herrings cured gutted during the 6 years ending the 5th of April, 1815, and a bounty of 2*s.* 8*d.* a barrel

* They seem to have been first set forth in a treatise ascribed to Sir Walter Raleigh; and, what is very singular, they were admitted by De Witt into his excellent work, the *True Interest of Holland*. They have been implicitly adopted by Mr. Barrow, in the article *Fisheries* in the *Supplement to the Encyclopædia Britannica*.

on their exportation, whether cured gutted or ungutted. During the 11 years ending the 5th of April, 1826, the bounty on herrings cured gutted was 4s. a barrel.

It is stated in the article already referred to, that the cost of a barrel of cured herrings is about 16s. the half going to the fisherman for the green fish, the other half to the curer for barrel, salt, and labour. The bounty of 4s. a barrel was, therefore, equal to *half* the value of the herrings as sold by the fisherman, and to *one fourth* of their value as sold by the curer! In consequence of this forced system, the fishery was rapidly increased. The following statement, extracted from the *Report of the Commissioners of the Fishery Board*, dated 1st of October, 1830, shows the progress it has made since 1809:—

Abstract of the Total Quantity of White Herrings cured, branded for Bounty, and exported, in so far as the same have been brought under the Cognisance of the Officers of the Fishery, from the 1st of June, 1809, when the System hitherto in force for the Encouragement of the British Herring Fishery took place, to the 5th of April, 1830; distinguishing each Year, and the Herrings cured Gutted, from those cured Ungutted.—(*Parl. Paper*, No. 51. Sess. 1830; and *Papers published by the Board of Trade*, Part I.)

Periods.	Total Quantity of Herrings cured.			Total Quantity of Herrings branded for Bounty.	Total Quantity of Herrings exported.

1830	280,963½	48,623½	329,587½	218,418½	177,776	3,878½	181,654½
1831	571,096	68,274	639,370	237,085	260,976	3,927	264,903

On looking at this Table, it is seen that the fishery made no progress under the new system till 1815, when the bounty was raised to 4s. This is a sufficient proof of the factitious and unnatural state of the business. Its extension, under the circumstances in question, instead of affording any proof of its being in a really flourishing condition, was distinctly the reverse. Individuals without capital, but who obtained loans sufficient to enable them to acquire boats, barrels, salt, &c. on the credit of the bounty, entered in vast numbers into the trade. The market was most commonly glutted with fish; and yet the temptation held out by the bounty caused it to be still further overloaded. Great injury was consequently done to those fish curers who possessed capital; and even the *fishermen* were injured by the system. "Most of the boats employed in the fishery never touch the water but during 6 weeks, from the middle or end of July to the middle of September. They are owned and sailed, not by regular fishermen following that vocation only, but by tradesmen, small farmers, farm-servants, and other landmen, who may have sufficient skill to manage a boat at that season, but who do not follow the sea except for the 6 weeks of the herring fishery, when they go upon a kind of gambling speculation, of earning a twelvemonth's income by 6 weeks' work."—(*Quarterly Journal*, No. 11. p. 653.)

It has been often said, in vindication of the bounty system, that by extending the fishery it extended an important nursery for seamen; but the preceding statement shows that such has not been its effect. On the contrary, it has tended to depress the condition of the genuine fisherman, by bringing a host of interlopers into the field; and it has also been prejudicial to the little farmers and tradesmen, by withdrawing their attention from their peculiar business, that they may embark in what has hitherto been little less than a sort of lottery adventure.

These consequences, and the increasing amount of the sum paid for bounties, at length induced the government to adopt a different system; and by an act passed in 1825, the bounty of 2s. 8d. on exported herrings was made to cease in 1826, and 1s. was annually deducted from the bounty of 4s. a barrel paid on gutted herrings, till it ceased in 1830. Time has not yet been afforded to learn the full effect of this measure. We, however, have not the slightest doubt that it will be most advantageous. The foregoing Table shows, that though the quantity of herrings taken and exported in 1829 and 1830 fell off, there was a material increase in 1831. This is the more encouraging, as there can be little doubt that the supply will henceforth be proportioned to the real demand; while the genuine fishermen, and those curers who have capital of their own, will no longer be injured by the competition of landmen, and of persons trading on capital furnished by government.

The repeal of the salt laws, and of the duty on salt, which preceded the repeal of the bounty, must be of signal service to the fishery. It is true that salt used in the fisheries was exempted from the duty; but, in order to prevent the revenue from being defrauded, so many regulations were enacted, and the difficulties and penalties to which the fishermen were in consequence subjected were so very great, that some of them chose rather to pay the duty upon the salt they made use of, than to undertake compliance with the regulations.

It is much to be regretted, that when government repealed the bounty, it did not also abolish the "Fishery Board," and the officers and regulations it had appointed and enacted. So long as the bounty existed, it was quite proper that those who claimed it should be subjected to such regulations as government chose to enforce; but now that it has been repealed, we see no reason whatever why the fishery should not be made perfectly free, and every one allowed to prepare his herrings as he thinks best. It is said, indeed, that were there no inspection of the fish, frauds of all sorts would be practised: that the barrels would be ill made, and of a deficient size; that the fish would not be properly packed; that the bottom and middle of the barrels would be filled with bad ones, and a few good ones only placed at the top; that there would not be a sufficiency of pickle, &c. But it is obvious that the reasons alleged in vindication of the official inspection kept up in the herring fishery, might be alleged in vindication of a similar inspection in almost every other branch of industry. It is, in point of fact, utterly useless. It is an attempt, on the part of government, to do that for their subjects, which they can do far better for them-

selves. Supposing the official inspection were put an end to, the merchants and others who buy herrings of the curers would themselves inspect the barrels; and while any attempt at fraud by the curers would thus be effectually obviated, they would be left at liberty to prepare their herrings in any way that they pleased, without being compelled, as at present, to follow only one system, or to prepare fish in the same way for the tables of the poor as for those of the rich. So far, indeed, is it from being true that the inspection system tends to put down trickery, that there is much reason to think that its effect is directly the reverse. The *surveillance* exercised by the officers is any thing but strict; and the official brand is often affixed to barrels which, were it not for the undeserved confidence that is too frequently placed in it by the unwary, would lie on the curer's hands. It is rather a security against the detection of fraud, than against its existence.

The grand object of the herring fishery "Board" has been to enforce such a system of curing as would bring British herrings to a level with those of the Dutch. In this, however, they have completely failed; Dutch herrings generally fetching double, and sometimes even three times the price of British herrings in every market of Europe. Neither is this to be wondered at. The consumers of Dutch herrings are the inhabitants of the Netherlands and of the German towns, who use them rather as a luxury than as an article of food, and who do not grudge the price that is necessary to have them in the finest order. The consumers of British herrings, on the other hand, are the negroes of the West Indies, and the poor of Ireland and Scotland. Cheapness is the prime requisite in the estimation of such persons; and nothing can be more entirely absurd, than that a public Board should endeavour to force the fish curers to adopt such a system in the preparation of herrings as must infallibly raise their price beyond the means of those by whom they are bought. Why should not the taste of the consumers be consulted as much in this as in any thing else? It would not be more ridiculous to attempt to have all cheese made of the same richness and flavour as Stilton, than it is to attempt to bring up all herrings to the standard of the Dutch.

We do, therefore, hope that a speedy end may be put to this system; and that our legislators and patriots will cease to torment themselves with schemes for the improvement of the fisheries. The very best thing they can do for them is to let them alone. It is not a business that requires any sort of adventitious encouragement. Every obstacle to the easy introduction of fish into London and other places ought certainly to be removed; but all direct interferences with the fishery are sure to be in the last degree pernicious.

Of the 181,654 barrels of herrings exported from Great Britain in the year ending the 5th of April, 1830, 89,680 went to Ireland, 67,672 to places out of Europe (chiefly the West Indies), and 24,362 to places in Europe other than Ireland.

HIDES (Ger. *Häute*; Du. *Huiden*; Fr. *Peaux*; It. *Cuaja*; Sp. *Pellejos*, *Picles*; Rus. *Koshi*), signify, generally, the skins of beasts; but the term is more particularly applied to those of large cattle, such as bullocks, cows, horses, &c. Hides are raw or green; that is, in the state in which they are taken off the carcass, or dressed with salt, alum, and saltpetre, to prevent them from putrefying; or they are cured or tanned. The hides of South America are in the highest repute, and vast quantities of them are annually imported into Great Britain. Large quantities are also imported from various parts of the Continent; and from Morocco, the Cape of Good Hope, &c.

An Account of the Weight of the Hides imported into the United Kingdom in each of the Seven Years ending with 1832, and the Revenue annually derived from the same; specifying the Countries whence the Hides were imported, with the Quantities brought from each.

His Majesty is authorised to prohibit, by proclamation or order in council published in the *London Gazette*, the importation of any hides or skins, horns or hoofs, or any other part of any cattle or beast, in order to prevent any contagious distemper from being brought into the kingdom. — (3 & 4 Will. 4. c. 52 § 58.)

Hides and skins paying duty by weight, may be delivered from the bonded warehouses, on the parties entering an average weight, due care being taken that the lockers actually retally and reweigh the hides and skins on delivery; and in the case of delivery for exportation, to express in cart notes the exact number delivered from the warehouse, in order to enable the export officer on the quay to check the quantity; and the merchant is to indorse on the cocket and bill the total number and weight shipped, before the vessel is suffered to clear. — (*Customs Order*, 4th Dec. 1824.)

HOGSHEAD, a measure of capacity, containing $52\frac{1}{2}$ Imperial gallons. A hogshead is equal to $\frac{1}{2}$ a pipe. — (See **WEIGHTS AND MEASURES**.)

HOLIDAYS, are understood to be those days, exclusive of Sundays, on which no regular public business is transacted at particular public offices. They are either fixed or variable. They are not the same for all public offices. Those kept at the Bank of England have recently been reduced a full half.

The *variable holidays* are, Ash Wednesday, Good Friday, Easter Monday and Tuesday, Holy Thursday, Whit Monday and Tuesday.

It is enacted by stat. 6 Geo. 4. c. 106. § 13., that no holidays shall be kept by the customs except Christmas-day and Good Friday, the King's birthday, and such days as may be appointed by proclamation for the purpose of a general fast.

The 7 & 8 Geo. 4. c. 53. § 16. enacts that no holidays shall be kept at the Excise, except Christmas-day and Good Friday, the birthdays of his Majesty and the Prince of Wales, the anniversaries of the Restoration of Charles II., and of his Majesty's coronation, and such days as may be appointed by proclamation for the celebration of a general fast, or such days as may be appointed as holidays by any warrant issued for that purpose by the Lords of the Treasury.

HONEY (Du. *Honig*, *Honing*; Fr. *Miel*; Ger. *Honig*; It. *Miele*; Lat. *Mel*; Rus. *Mel*; Sp. *Miel*), a vegetable juice collected by bees. "Its flavour varies according to the nature of the flowers from which it is collected. Thus, the honeys of Minorca, Narbonne, and England, are known by their flavours; and the honey prepared in different parts even of the same country differs. It is separated from the comb by dripping, and by expression: the first method affords the purest sort; the second separates a less pure honey; and a still inferior kind is obtained by heating the comb before it is pressed. When obtained from young hives, which have not swarmed, it is denominated *virgin honey*. It is sometimes adulterated with flour, which is detected by mixing it with tepid water: the honey dissolves, while the flour remains nearly unaltered." — (*Thomson's Dispensatory*.)

By stat. 23 Eliz. c. 8. § 4., all vessels of honey are to be marked with the initial letters of the name of the owner, on pain of forfeiting 6s. 8d.; and contain, the barrel 32 gallons, the kilderkin 16 gallons, and the firkin 8 gallons, or forfeit 5s. for every gallon wanting; and if any honey sold, be corrupted with any deceitful mixture, the seller shall forfeit the honey. &c.

HOPS (Ger. *Hopfen*; Du. *Hoppe*; Fr. *Houblon*; It. *Luppoli*, *Bruscandoli*; Sp. *Oblon*; Rus. *Chmel*; Lat. *Humulus Lupulus*). The hop is a perennial rooted plant, of which there are several varieties. It has an annual twining stem, which when supported on poles, or trees, will reach the height of from 12 to 20 feet or more. It is a native of Britain, and most parts of Europe. When the hop was first used for preserving and improving beer, or cultivated for that purpose, is not known — (see *ALE*); but its culture was introduced into this country from Flanders in the reign of Henry VIII. Hops are first mentioned in the Statute Book in 1552, in an act 5 & 6 Edward 6. c. 5.; and it would appear from an act passed in 1603 (1 Jac. 1. c. 18.), that hops were at that time extensively cultivated in England. Walter Blithe, in his *Improver Improved*, published in 1649 (3d ed. 1653, p. 240.), has a chapter upon improvement by plantations of hops, in which there is this striking passage. He observes that “hops were then grown to be a national commodity: but that it was not many years since the famous city of London petitioned the parliament of England against two nuisances; and these were, Newcastle coals, in regard to their stench, &c., and hops, in regard they would *spoil the taste of drink*, and endanger the people: and had the parliament been no wiser than they, we had been in a measure pined, and in a great measure starved; which is just answerable to the principles of those men who cry down all devices, or ingenious discoveries, as projects, and thereby stifle and choke improvement.”

After the hops have been picked and dried, the brightest and finest are put into pockets or fine bagging, and the brown into coarse or heavy bagging. The former are chiefly used in the brewing of fine ales, and the latter by the porter brewers. A pocket of hops, if they be good in quality, well cured, and tight trodden, will weigh about $1\frac{1}{2}$ cwt.; and a bag of hops will, under the same conditions, weigh about $2\frac{1}{2}$ cwt. If the weight of either exceeds or falls much short of this medium, there is reason to suspect that the hops are of an inferior quality, or have been badly manufactured. The brighter the colour of hops, the greater is the estimation in which they are held. Farnham hops are reckoned best. The expense of forming hop plantations is very great, amounting in some instances to from 70*l.* to 100*l.* an acre; and the produce is very uncertain, the crop being frequently insufficient to defray the expenses of cultivation.

The hop growers are placed under the *surveillance* of the excise, a duty of 2*d.* per lb. being laid on all hops produced in this country. A hop planter is obliged to give notice to the excise, on or before the 1st of August each year, of the number of acres he has in cultivation; the situation and number of his oasts or kilns for drying; the place or places of bagging, which, with the storerooms or warerooms in which the packages are intended to be lodged, are entered by the officer. No hops can be removed from the rooms thus entered, before they have been weighed and marked by a revenue officer; who marks, or ought to mark, its weight, and the name and residence of the grower, upon each bag, pocket, or package. Counterfeiting the officer's mark is prohibited under a penalty of 100*l.*, and defacing it under a penalty of 20*l.* A planter or grower knowingly putting hops of different qualities or values into the same bag or package, forfeits 20*l.* And any person mixing with hops any drug, or other thing, to change or alter the colour or scent, shall forfeit 5*l.* a cwt. on all the hops so changed or altered. The malicious cutting or destroying of hop plantations may be punished by transportation beyond seas for life, or any term not less than 7 years, or by imprisonment and hard labour in a common gaol, for any term not exceeding 7 years. — (*Londons Encyc. of Agriculture*; *Stevensons Surrey*; *Burns Justice*, &c.)

The duty on hops of the growth of Great Britain produced, in 1832, 241,77*l.*; of which sum the Rochester district paid 75,861*l.* 10*s.* 10*d.*, the Sussex 86,406*l.* 13*s.* 8*d.*, and the Canterbury 48,689*l.* 18*s.* 2*d.* The number of acres occupied by hop plantations in that year were 47,101; of which there were in the Rochester district 12,330, in Sussex 8,514, in Hereford 11,939, and in Canterbury 7,802. During the same year there were 703,153 lbs. of British hops exported. Of foreign hops 11,167 lbs. were imported, and 50,113 lbs. exported. — (*Parl. Paper*, Nos. 96. 196. and 217. Sess. 1833.)

Hops exported from Great Britain are, on being again imported, to be treated as foreign, whether originally so or not.

HORN (Du. *Hoorn*; Fr. *Corne*; Ger. *Horn*; Lat. *Cornu*), a substance too well known to require any description. Horns are of very considerable importance in the arts, being applied to a great variety of useful purposes. They are very extensively used in the manufacture of handles for knives, and in that of spoons, combs, lanterns, snuff-horns, &c. When divided into thin plates, horns are tolerably transparent, and were formerly used instead of glass in windows. Glue is sometimes made out of the refuse of horn. We annually import considerable quantities. At an average of 1831 and 1832, the entries of foreign horn for home consumption amounted to 15,766 cwt.

HORSE (Ger. *Pferd*; Du. *Paard*; Da. *Hest*; Sw. *Häst*; Fr. *Cheval*; It. *Cavallo*; Sp. *Caballo*; Rus. *Loschal*; Pol. *Kon*; Lat. *Equus*; Gr. *ἵππος*), a domestic quadruped of the highest utility, being by far the most valuable acquisition made by man among the lower animals.

There is a great variety of horses in Britain. The frequent introduction of foreign breeds, and their judicious mixture, having greatly improved the native stocks. Our race horses are the fleetest in the world; our carriage and cavalry horses are amongst the handsomest and most active of those employed for these purposes; and our heavy draught horses are the most powerful, beautiful, and docile of any of the large breeds.

Number and Value of Horses in Great Britain. — The number of horses used in Great Britain for different purposes is very great, although less so, perhaps, than has been generally supposed. Mr. Middleton (*Survey of Middlesex*, 2d ed. p. 639.) estimated the total number of horses in England and Wales, employed in husbandry, at 1,200,000, and those employed for other purposes at 600,000. Dr. Colquhoun, contrary to his usual practice, reduces this estimate to 1,500,000 for Great Britain; and in this instance we are inclined to think his guess is pretty near the mark. The subjoined official statements give the numbers of the various descriptions of horses in England and Wales, which

paid duty in 1814, when those used in husbandry were taxed; and the numbers, when summed up, amount to 1,204,307. But this account does not include stage coach, mail coach, and hackney coach horses, nor does it include those used in posting. Poor persons keeping only one horse were also exempted from the duty; as were all horses employed in the regular regiments of cavalry and artillery, and in the volunteer cavalry. In Mr. Middleton's estimate, already referred to, he calculated the number of post chaise, mail, stage, and hackney coach horses, at 100,000; and from the inquiries we have made, we are satisfied that if we estimate the number of such horses in Great Britain, at this moment, at 125,000, we shall be decidedly beyond the mark.

On the whole, therefore, it may be fairly estimated that there are in Great Britain from 1,400,000 to 1,500,000 horses employed for various purposes of pleasure and utility. They may, probably, be worth at an average from 12*l.* to 15*l.*, making their total value from 18,000,000*l.* to 22,500,000*l.* sterling, exclusive of the young horses.

The duties begin to be charged as soon as horses are used for drawing or riding, and not previously.

An Account of the Number of Horses charged with Duty in the Years ending the 5th of April, 1815, 1826, and 1833, the Rates of Duty, and the Produce of the Duties.

Exemptions.— Besides the above account of the horses charged with duty, we have been favoured, by the Stamp Office, with an account of the numbers exempted from duty in 1832. This account is not, however, to be relied on; inasmuch as very many of those whose horses are not liable to the duties never think of making any returns. By not attending to this circumstance, we inadvertently, in the former edition of this work, under-rated the number of horses engaged in certain departments of industry.

Influence of Railroads on Horses.— The statements now made, show the dependence that ought to be placed on the estimates occasionally put forth by some of the promoters of railroads and steam carriages. These gentlemen are pleased to tell us, that, by superseding the employment of horses in public conveyances, and in the regular carriage of goods, the adoption of their projects will enable 1,000,000 horses to be dispensed with; and that, as each horse consumes as much food as 8 men, it will at once provide subsistence for 8,000,000 human beings! To dwell upon the absurdity of such a statement would be worse than useless; nor should we have thought of noticing it, but that it has found its way into a report of a committee of the House of Commons. It is sufficient to observe, that though *all* the stage and mail coaches, and *all* the public wagons, vans, &c. employed in the empire, were superseded by steam carriages, 100,000 horses would not certainly be rendered superfluous. The notion that 1 horse consumes as much as 8 men, at least if we suppose the men to be reasonably well fed, is too ridiculous to deserve notice.

The rates of duty payable at present (1834) on horses, are the same as those specified in the above Table for 1825 and 1832. A horse *bona fide* kept and usually employed for the purpose of husbandry, on a farm of less value than 200*l.* a year, though occasionally used as a riding horse, is exempt from the duty. And husbandry horses, whatever may be the value of the farms on which they are kept, may be rode, free of duty, to and from any place to which a burden shall have been carried or brought back; to procure

medical assistance, and to or from markets, places of public worship, elections of members of parliament, courts of justice, or meetings of commissioners of taxes.

Brood mares, while kept for the sole purpose of breeding, are exempted from all duty.

Horses may be let or lent for agricultural purposes, without any increase of duty.

Mules employed in carrying ore and coal are exempted from any duty. — (See the Statutes in *Chitty's edition of Burn's Justice*, vol. v. tit. *Assessed Taxes*.)

The facility with which horses may be stolen has led to the enactment of several regulations with respect to their sale, &c. The property of a horse cannot be conveyed away without the express consent of the owner. Hence, a *bona fide* purchaser gains no property in a horse that has been stolen, unless it be bought in a fair, or an open market. It is directed that the keeper of every fair or market shall appoint a certain open place for the sale of horses, and one or more persons to take toll there, and keep the place from 10 in the forenoon till sunset. The owner's property in the horse stolen is not altered by sale in a legal fair, unless it be openly ridden, led, walked, or kept standing for one hour at least, and has been registered, for which the buyer is to pay 1*d*. Sellers of horses in fairs or markets must be known to the toll-takers, or to some other creditable person known to them, who declares his knowledge of them, and enters the same in a book kept by the toll-taker for the purpose. Without these formalities, the sale is void. The owner of a horse stolen may, notwithstanding its legal sale, redeem it on payment or tender of the price any time within 6 months of the time of the theft. — (*Burn's Justice of the Peace*, *Chitty's ed.* vol. iii. p. 264.)

In order to obviate the facility afforded by means of slaughtering houses for the disposal of stolen horses, it was enacted in 1786 (26 Geo. 3. c. 71.), that all persons keeping places for slaughtering horses, geldings, sheep, hogs, or other cattle not killed for butcher's meat, shall obtain a licence from the quarter sessions, first producing from the minister and churchwardens, or from the minister and 2 substantial householders, a certificate of their fitness to be intrusted with the management and carrying on of such business. Persons slaughtering horses or cattle without licence are guilty of felony, and may be whipped and imprisoned, or transported. Persons licensed, are bound to affix over the door or gate of the place where their business is carried on, in legible characters, the words "*Licensed for slaughtering Horses, pursuant to an Act passed in the 26th Year of his Majesty King Geo. III.*" The parishioners entitled to meet in vestry are authorised to choose annually, or oftener, inspectors, whose duty it is to take an account and description, &c. of every living horse, &c. that may be brought to such slaughtering houses to be killed, and of every dead horse that may be brought to be flayed. Persons bringing cattle are to be asked an account of themselves, and if it be not deemed satisfactory, they may be carried before a justice. This act does not extend to curriers, fellmongers, tanners, or persons killing aged or distempered cattle, for the purpose of using or curing their hides in their respective businesses; but these, or any other persons, who shall knowingly or wilfully kill any sound or useful horse, &c., shall for every such offence forfeit not more than 2*0*l.**, and not less than 1*0*l.**

The stealing of horses and other cattle is a capital crime, punishable by death. The maliciously wounding, maiming, killing, &c. of horses and other cattle, is to be punished, at the discretion of the court, by transportation beyond seas for life, for any term not less than 7 years, or by imprisonment for any term not exceeding 4 years; and if a male, he may be once, twice, or thrice publicly or privately whipped, should the court so direct. — (7 & 8 Geo. 4. c. 29. § 25; 7 & 8 Geo. 4. c. 30. § 16.)

French Trade in Horses. — The horses of France are not, speaking generally, nearly so handsome, fleet, or powerful, as those of England. Latterly, however, the French have been making great efforts to improve the breed of horses, and have, in this view, been making large importations from England and other countries. At an average of the 5 years ending with 1827, the excess of horses imported into France, above those exported, amounted to about 13,000 a year. — (*Bulletin des Sciences Géographiques*, tom. xix. p. 5.) The imports from England have, in some late years, amounted to nearly 2,000 horses.

HORSE DEALERS, persons whose business it is to buy and sell horses.

Every person carrying on the business of a horse dealer is required to keep a book, in which he shall enter an account of the number of the horses kept by him for sale and for use, specifying the duties to which the same are respectively liable; this book is to be open, at all reasonable times, to the inspection of the officers; and a true copy of the same is to be delivered quarterly to the assessor or assessors of the parish in which the party resides. Penalty for non-compliance, 5*0*l.** — (43 Geo. 3. c. 161.) Horse dealers are assessed, if they carry on their business in the metropolis, 25*l.*; and if elsewhere, 12*l.* 10*s*.

Account specifying the Number of Horse Dealers in Great Britain, in 1831; distinguishing between those in the Metropolis and the Country; with the Rates of Duty on each Class, and the Produce of the Duties. — (*Papers published by the Board of Trade*, vol. ii. p. 45.)

HUNDRED WEIGHT, a weight of 112 lbs. avoirdupois, generally written cwt.

I. AND J.

JALAP, or **JALOP** (Ger. *Jalapp*; Fr. *Jalap*; It. *Sciarappa*; Sp. *Jalapa*), the root of a sort of convolvulus, so named from Xalapa, in Mexico, whence we chiefly import it. The root, when brought to this country, is in thin transverse slices, solid, hard, weighty, of a blackish colour on the outside, and internally of a dark grey, with black circular striæ. The hardest and darkest coloured is the best; that which is light, spongy, and pale coloured, should be rejected. The odour of jalap, especially when in powder, is very characteristic. Its taste is exceedingly nauseous, accompanied by a sweetish bitterness. — (*Lewis's Mat. Med.*; *Brand's Pharmacy*.) The entries of jalap for home consumption amounted, at an average of 1831 and 1832, to 47,816 lbs. a year.

JAMAICA PEPPER. See **PIMENTO**.

JAPANNED WARES (Ger. *Japanische ware*; Du. *Japansch lakwerk*; Fr. *Marchandises de Japon*), articles of every description, such as tea-trays, clock-dials, candlesticks, snuff-boxes, &c. covered with coats of japan, whether plain, or embellished with painting or gilding. Birmingham is the grand staple of this manufacture, which is there carried on to a great extent. Pontypool, in Monmouthshire, was formerly famous for jappanning; but it is at present continued there on a very small scale only. It is prosecuted with spirit and success at Bilston and Wolverhampton.

JASPER (Ger. *Jaspiss*; Du. *Jaspis*; Fr. *Jaspe*; It. *Diaspro*; Sp. *Jaspe*; Rus. *Jaschna*). This stone is an ingredient in the composition of many mountains. It occurs usually in large amorphous masses, sometimes in round or angular pieces; its fracture is conchoidal; specific gravity from 2 to 2·7. Its colours are various: when heated it does not deccrepite: it is usually divided into 4 species, denominated Egyptian jasper, striped jasper, porcelain jasper, and common jasper. It is sometimes employed by jewellers in the formation of seals.

JERSEY. See GUERNSEY.

JET, OR PITCH COAL (Du. *Git*, *Zwarte barnsteen*; Fr. *Jais*, *Jayet*; Ger. *Gagat*; It. *Gagata*, *Lustrino*; Lat. *Gagrus*, *Gagates*), of a black velvet colour, occurs massive, in plates; sometimes in the shape of branches of trees, but without a regular woody texture. Internal lustre shining, resinous, soft; rather brittle; easily frangible; specific gravity 1·3. It is used for fuel, and for making vessels and snuff-boxes. In Prussia it is called black amber, and is cut into rosaries and necklaces. It is distinguished by its brilliancy, and conchoidal fracture. — (*Thomson's Chemistry*.)

JETSAM. See FLOTSAM.

IMPORTATION AND EXPORTATION, the bringing of commodities from and sending them to other countries. A very large portion of the revenue of Great Britain being derived from customs duties, or from duties on commodities imported from abroad; and drawbacks being given on many, and bounties on a few articles exported; the business of importation and exportation is subjected to various regulations, which must be carefully observed by those who would avoid incurring penalties, and subjecting their property to confiscation. The regulations referred to, have been embodied in the act 3 & 4 Will. 4. c. 52., which is subjoined.

GENERAL REGULATIONS.

No Goods to be landed nor Bulk broken before Report and Entry. — No goods shall be unladen from any ship arriving from parts beyond the seas at any port or place in the United Kingdom or in the Isle of Man, nor shall bulk be broken after the arrival of such ship within 4 leagues of the coasts thereof, before due report of such ship and due entry of such goods shall have been made, and warrant granted, in manner herein-after directed; and no goods shall be so unladen except at such times and places, and in such manner, and by such persons, and under the care of such officers, as is and are herein-after directed; and all goods not duly reported, or which shall be unladen contrary hereto, shall be forfeited; and if bulk be broken contrary hereto, the master of such ship shall forfeit the sum of 100*l*.; and if, after the arrival of any ship within 4 leagues of the coast of the United Kingdom or of the Isle of Man, any alteration be made in the stowage of the cargo of such ship, so as to facilitate the unloading of any part of such cargo, or if any part be staved, destroyed, or thrown overboard, or any package be opened, such ship shall be deemed to have broken bulk; provided always, that the several articles herein-after enumerated may be landed in the United Kingdom without report, entry, or warrant; (that is to say,) diamonds and bullion, fresh fish of British taking, and imported in British ships, turbot and lobsters fresh, however taken or imported. — § 2.

MANIFEST.

All British Ships, and all Ships with Tobacco, to have Manifests. — No goods shall be imported into the United Kingdom, or into the Isle of Man, from parts beyond the seas, in any British ship, nor any tobacco in any ship, unless the master shall have on board a manifest of such goods or of such tobacco, made out, dated, and signed by him at the place or respective places where the same or the different parts of the same was or were taken on board, and authenticated in the manner herein-after provided; and every such manifest shall set forth the name and the tonnage of the ship, the name of the master and of the place to which the ship belongs, and of the place or places where the goods were taken on board respectively, and of the place or places for which they are destined respectively, and shall contain a particular account and description of all the packages on board, with the marks and numbers thereon, and the sorts of goods and different kinds of each sort contained therein, to the best of the master's knowledge, and of the particulars of such goods as are stowed loose, and the names of the respective shippers and consignees, as far as the same can be known to the master; and to such particular account shall be subjoined a general account or recapitulation of the total number of the packages of each sort, describing the same by their usual names, or by such descriptions as the same can best be known by, and the different goods therein, and also the total quantities of the different goods stowed loose; provided always, that every manifest for tobacco shall be a separate manifest distinct from any manifest for any other goods, and shall, without fail, contain the particular weight of tobacco in each hogshead, cask, chest, or case, with the tare of the same; and if such tobacco be the produce of the dominions of the Grand Seigneur, then the number of the parcels or bundles within any such hogshead, cask, chest, or case shall be stated in such manifest. — § 3.

To be produced to Officers in Colonies, &c. — Before any ship shall be cleared out or depart from any place in any of the British possessions abroad, or from any place in China, with any goods for the United Kingdom or for the Isle of Man, the master of such ship shall produce the manifest to the collector or comptroller of the customs, or other proper officer, who shall certify upon the same the date of the production thereof to him: provided always, that in all places within the territorial possessions of the East India Company the servant of the said Company by whom the last dispatches of such ship shall be delivered shall be the proper officer to authenticate the manifest as aforesaid; and in all places in China the chief supercargo of the said Company shall be the proper officer for such purpose. — § 4.

To be produced to Consuls. — Before the departure of any ship from any place beyond the seas not under the British dominions, where any tobacco has been taken on board such ship for the United Kingdom or for the Isle of Man, the master of such ship shall produce the manifest of such tobacco to the British

consul or other chief British officer, if there be any such resident at or near such place; and such consul or other officer shall certify upon the same the date of the production thereof to him. — § 5.

*If manifest, Master to forfeit 100*l*.* — If any goods be imported into the United Kingdom or into the Isle of Man, in any British ship, or any tobacco in any ship, without such manifest, or if any goods contained in such manifest be not on board, the master of such ship shall forfeit the sum of 100*l*. — § 6.

Manifest to be produced within 4 Leagues. — The master of every ship required to have a manifest on board shall produce such manifest to any officer of the customs who shall come on board his ship after her arrival within 4 leagues of the coast of the United Kingdom or of the coast of the Isle of Man, and who shall demand the same, for his inspection; and such master shall also deliver to any such officer who shall be the first to demand it, a true copy of such manifest signed by the master; and shall also deliver another copy to any other officer of the customs who shall be the first to demand the same within the limits of the port to which such ship is bound; and thereupon such officers respectively shall notify on such manifest and on such copies the date of the production of such manifest and of the receipt of such copies, and shall transmit such copies to the collector and comptroller of the port to which such vessel is first bound, and shall return such manifest to the master; and if such master shall not in any case produce such manifest, or deliver such copy, he shall forfeit the sum of 100*l*. — § 7.

REPORT.

Master, within 24 Hours, and before breaking Bulk, shall report. — The master of every ship arriving from parts beyond the seas at any port in the United Kingdom or in the Isle of Man, whether laden or in ballast, shall, within 24 hours after such arrival, and before bulk be broken, make due report of such ship, and shall make and subscribe a declaration to the truth of the same, before the collector or comptroller of such port; and such report shall contain an account of the particular marks, numbers, and contents of all the different packages or parcels of the goods on board such ship, and the particulars of such goods as are stowed loose, to the best of his knowledge, and of the place or places where such goods were respectively taken on board, and of the burden of such ship, and of the country where such ship was built, or, if British, of the port of registry, and of the country of the people to whom such ship belongs, and of the name and country of the person who was master during the voyage, and of the number of the people by whom such ship was navigated, stating how many are subjects of the country to which such ship belongs, and how many are of some other country; and in such report it shall be further declared, whether and in what cases such ship has broken bulk in the course of her voyage, and what part of the cargo, if any, is intended for importation at such port, and what part, if any, is intended for importation at another port in the United Kingdom, or at another port in the Isle of Man respectively, and what part, if any, is prohibited to be imported, except to be warehoused for exportation only, and what part, if any, is intended for exportation in such ship to parts beyond the seas, and what surplus stores or stock remain on board such ship, and, if a British ship; what foreign-made sails or cordage, not being standing or running rigging, are in use on board such ship; and the master of any ship, who shall fail to make such report, or who shall make a false report, shall forfeit the sum of 100*l*. — § 8.

Masters of Vessels coming from Africa to report how many Natives they have on board. — The master of every vessel coming from the coast of Africa, and having taken on board at any place in Africa any person or persons being or appearing to be natives of Africa, shall, in addition to all other matters, state, in the report of his vessel, how many such persons have been taken on board by him in Africa; and any such master failing herein shall forfeit the sum of 100*l*; provided also, that the master or owner or owners of such vessel, or some or one of them, at the time of making such report, be required to enter into bond to his Majesty in the sum of 100*l*, conditioned to keep harmless any parish, or any extra-parochial or other place maintaining its own poor, against any expense which such parish or other place may be put to in supporting any such person during their stay in the United Kingdom; and any such master, owner or owners refusing or neglecting to enter into such bond shall forfeit the sum of 200*l*. — § 9.

Packages reported "Contents unknown," may be opened and examined. — If the contents of any package so intended as aforesaid for exportation in the same ship to parts beyond the seas shall be reported by the master as being unknown to him, it shall be lawful for the officers of the customs to open and examine such package on board, or to bring the same to the king's warehouse for that purpose; and if there be found in such package any goods which may not be entered for home use, such goods shall be forfeited; or if the goods be such as may be entered for home use, the same shall be chargeable with the duties of importation; unless in either case the commissioners of his Majesty's customs, in consideration of the sort or quality of such goods, or the small rate of duty payable thereon, shall see fit to deliver the same for exportation. — § 10.

Master to deliver Manifest, &c. — The master of every ship shall, at the time of making such report, deliver to the collector or comptroller the manifest of the cargo of such ship, where a manifest is required, and, if required by the collector or comptroller, shall produce to him any bill or bills of lading, or a true copy thereof, for any and every part of the cargo laden on board; and shall answer all such questions relating to the ship and cargo, and crew and voyage, as shall be put to him by such collector or comptroller; and in case of failure or refusal to produce such manifest, or to answer such questions, or to answer them truly, or to produce such bill of lading or copy, or if such manifest, or bill of lading, or copy, shall be false, or if any bill of lading be uttered by any master, and the goods expressed therein shall not have been *bona fide* shipped on board such ship, or if any bill of lading uttered or produced by any master shall not have been signed by him, or any such copy shall not have been received or made by him previously to his leaving the place where the goods expressed in such bill of lading or copy were shipped, then and in every such case such master shall forfeit the sum of 100*l*. — § 11.

Part of Cargo reported for another Port. — If any part of the cargo of any ship for which a manifest is required be reported for importation at some other port in the United Kingdom, or at some other port in the Isle of Man, the collector and comptroller of the port at which some part of the cargo has been delivered shall notify such delivery on the manifest, and return the same to the master of such ship. — § 12.

Ship to come quickly to Place of unloading, &c. — Every ship shall come as quickly up to the proper place of mooring or unloading as the nature of the port will admit, and without touching at any other place; and in proceeding to such place shall bring to at stations appointed by the commissioners of customs for the boarding of ships by the officers of the customs; and after arrival at such place of mooring or unloading such ship shall not remove from such place except directly to some other proper place, and with the knowledge of the proper officer of the customs, on penalty of 100*l*, to be paid by the master of such ship: provided always, that it shall be lawful for the commissioners of customs to appoint places to be the proper places for the mooring or unloading of ships importing tobacco, and where such ships only shall be moored or unladen; and in case the place so appointed for the unloading of such ships shall not be within some dock surrounded with walls, if any such ship after having been discharged shall remain at such place, or if any ship not importing tobacco shall be moored at such place, the master shall in either case forfeit and pay the sum of 20*l*. — § 13.

Officers to board Ships. — It shall be lawful for the proper officers of the customs to board any ship arriving at any port in the United Kingdom or in the Isle of Man, and freely to stay on board until all the goods laden therein shall have been duly delivered from the same; and such officers shall have free access to every part of the ship, with power to fasten down hatchways, and to mark any goods before landing, and to tack up, seal, mark, or otherwise secure any goods on board such ship; and if any place, or any box or chest, be locked, and the key be withheld, such officers, if they be of a degree superior to

tidemen or watermen, may open any such place, box, or chest in the best manner in their power; and if they be tidemen or watermen, or only of that degree, they shall send for their superior officer, who may open or cause to be opened any such place, box, or chest in the best manner in his power; and if any goods be found concealed on board any such ship, they shall be forfeited; and if the officers shall place any lock, mark, or seal upon any goods on board, and such lock, mark, or seal be wilfully opened, altered, or broken before due delivery of such goods, or if any of such goods be secretly conveyed away, or if the hatchways, after having been fastened down by the officer, be opened, the master of such ship shall forfeit the sum of 100*l.* — § 14.

*National Ships, British or Foreign, having Goods on board, Person in charge to deliver an Account, or forfeit 100*l.** — If any ship (having commission from his Majesty, or from any foreign prince or state) arriving as aforesaid at any port in the United Kingdom or in the Isle of Man shall have on board any goods laden in parts beyond the seas, the captain, master, purser, or other person having the charge of such ship or of such goods for that voyage shall, before any part of such goods be taken out of such ship, or when called upon so to do by any officer of the customs, deliver an account in writing under his hand, to the best of his knowledge, of the quality and quantity of every package or parcel of such goods, and of the marks and numbers thereon, and of the names of the respective shippers and consignees of the same, and shall make and subscribe a declaration at the foot of such account, declaring to the truth thereof, and shall also truly answer to the collector or comptroller such questions concerning such goods as shall be required of him; and on failure thereof such captain, master, purser, or other person shall forfeit the sum of 100*l.*; and all such ships shall be liable to such searches as merchant ships are liable to; and the officers of the customs may freely enter and go on board all such ships, and bring from thence on shore into the king's warehouse any goods found on board any such ship as aforesaid; subject nevertheless to such regulations in respect of ships of war belonging to his Majesty as shall from time to time be directed in that respect by the commissioners of his Majesty's treasury of the United Kingdom of Great Britain and Ireland. — § 15.

Master to deliver List of Crew of Ships from West Indies. — The master of every British ship arriving at any port in the United Kingdom, on her return from any British possessions in the West Indies, shall, within 10 days of such arrival, deliver to the collector or comptroller a list, containing the names and descriptions of the crew which was on board at the time of clearing from the United Kingdom, and of the crew on board at the time of arrival in any of the said possessions, and of every seaman who has deserted or died during the voyage, and also the amount of wages due at the time of his death to each seaman so dying, and shall make and subscribe a declaration at the foot of such list, declaring to the truth thereof; and every master omitting so to do shall forfeit the sum of 50*l.*; and such list shall be kept by the collector for the inspection of all persons interested therein. — § 16.

ENTRY.

After 14 Days, Officer may land Goods not entered, &c. — Every importer of any goods shall, within 14 days after the arrival of the ship importing the same, make perfect entry inwards of such goods, or entry by bill of sight, in manner herein-after provided, and shall within such time land the same; and in default of such entry and landing it shall be lawful for the officers of the customs to convey such goods to the king's warehouse; and whenever the cargo of any ship shall have been discharged, with the exception only of a small quantity of goods, it shall be lawful for the officers of the customs to convey such remaining goods, and at any time to convey any small packages or parcels of goods, to the king's warehouse, although such 14 days shall not have expired, there to be kept waiting the due entry thereof during the remainder of such 14 days; and if the duties due upon any goods so conveyed to the king's warehouse shall not be paid within 3 months after such 14 days shall have expired, together with all charges of removal and warehouse rent, the same shall be sold, and the produce thereof shall be applied, first to the payment of freight and charges, next of duties, and the overplus, if any, shall be paid to the proprietor of the goods. — § 17.

Bill of Entry to be delivered. — The person entering any goods inwards (whether for payment of duty, or to be warehoused upon the first perfect entry thereof, or for payment of duty upon the taking out of the warehouse, or whether such goods be free of duty,) shall deliver to the collector or comptroller a bill of the entry of such goods, fairly written in words at length, expressing the name of the ship, and of the master of the ship in which the goods were imported, and of the place from whence they were brought, and the description and situation of the warehouse, if they are to be warehoused, and the name of the person in whose name the goods are to be entered, and the quantity and description of the goods, and the number and denomination or description of the respective packages containing the goods, and in the margin of such bill shall delineate the respective marks and numbers of such packages, and shall pay down any duties which may be payable upon the goods mentioned in such entry; and such person shall also deliver at the same time 2 or more duplicates, as the case may require, of such bill, in which all sums and numbers may be expressed in figures, and the particulars to be contained in such bill shall be written and arranged in such form and manner, and the number of such duplicates shall be such as the collector and comptroller shall require; and such bill being duly signed by the collector and comptroller, and transmitted to the landing waiter, shall be the warrant to him for the landing or delivering of such goods. — § 18.

Unauthorised Persons not permitted to make Entries. — Every person who shall make or cause to be made any such entry inwards of any goods, not being duly authorised thereto by the proprietor or consignee of such goods, shall for every such offence forfeit the sum of 100*l.*; provided always, that no such penalty shall extend or be deemed to extend to any person acting under the directions of the several dock companies or other corporate bodies authorised by law to pass entries. — § 19.

Not valid unless agreeing with Manifest, Report, and other Documents. — No entry nor any warrant for the landing of any goods, or for the taking of any goods out of any warehouse, shall be deemed valid, unless the particulars of the goods and packages in such entry shall correspond with the particulars of the goods and packages, purporting to be the same, in the report of the ship, and in the manifest, where a manifest is required, and in the certificate or other document, where any is required, by which the importation or entry of such goods is authorised, nor unless the goods shall have been properly described in such entry by the denominations and with the characters and circumstances according to which such goods are charged with duty or may be imported, either to be used in the United Kingdom, or to be warehoused for exportation only; and any goods taken or delivered out of any ship, or out of any warehouse, or for the delivery of which, or for any order for the delivery of which, from any warehouse, demand shall have been made, not having been duly entered, shall be forfeited. — § 20.

Goods by Number, Measure, or Weight, &c. — If the goods in such entry be charged to pay duty according to the number, measure, or weight thereof, such number, measure, or weight shall be stated in the entry; and if the goods in such entry be charged to pay duty according to the value thereof, such value shall be stated in the entry, and shall be affirmed by the declaration of the importer or his known agent, written upon the entry, and attested by his signature; and if the goods in such entry be chargeable at the option of the officers of customs, either according to the number, measure, or weight thereof, or according to the value thereof, then as well such number, measure, or weight, as also such value, shall be in like manner stated in the entry, and attested; and if any person make such declaration, not being the importer or proprietor of such goods, nor his agent duly authorised by him, such person shall forfeit the sum of 100*l.*; and such declaration shall be made in manner and form following, and shall be binding upon the person by or in behalf of whom the same shall be made; (that is to say,)

"I A. B. of [place of abode] do hereby declare, that I am [the importer, or authorised by the importer] of the goods contained in this entry, and that I enter the same [stating which, if part only] at the sum of _____ Witness my hand the _____ day of _____ "A. B." — § 21.

Goods undervalued, Officers may detain. — If upon examination it shall appear to the officers of the customs that such goods are not valued according to the true value thereof, it shall be lawful for such officers to detain and secure such goods, and (within 5 days from the landing thereof if it be in the ports of London, Leith, or Dublin, or within 7 days if in any other port in the United Kingdom, or if in any of the Isle of Man,) to take such goods for the use of the Crown; and if a different rate of duty shall be charged upon any goods according as the value of the same shall be described in the entry to be above or to be below any particular price or sum, and such goods shall be valued in the entry so as to be liable to the lower rate of duty, and it shall appear to the officers of the customs that such goods, by reason of their real value, are properly liable to the higher rate of duty, it shall be lawful for such officers in like manner to take such goods for the use of the Crown; and the commissioners of his Majesty's customs shall thereupon in any of such cases cause the amount of such valuation, together with an addition of 10 per cent. thereon, and also the duties paid upon such entry, to be paid to the importer or proprietor of such goods in full satisfaction for the same, and shall dispose of such goods for the benefit of the Crown; and if the produce of such sale shall exceed the sums so paid and all charges incurred by the Crown, one and moiety of the overplus shall be given to the officer or officers who had detained and taken the goods; and the money retained for the benefit of the Crown shall be paid into the hands of the collector of the customs, with the knowledge of the comptroller, and carried to account as duties of customs. — § 22.

East India Company to sell Goods. — The value of goods imported by the East India Company shall be ascertained by the gross price at which the same shall have been sold by auction at the public sales of the said Company; and that the said Company shall fairly and openly expose to sale and cause to be sold all such goods so charged to pay duty according to the value thereof by way of public auction in the city of London, within 3 years from the importation thereof, and shall give due notice at the Custom-house in London to the officers appointed to attend such sales of the time and place thereof. — § 23.

Bill of Sight if Goods be not known. — If the importer of any goods, or his agent after full conference with him, shall declare before the collector or comptroller that he cannot for want of full information make a full or perfect entry of such goods, and shall make and subscribe a declaration to the truth thereof, it shall be lawful for the collector and comptroller to receive an entry by bill of sight for the packages or parcels of such goods by the best description which can be given, and to grant a warrant thereupon, in order that the same may be provisionally landed, and may be seen and examined by such importer, in presence of the proper officers; and within 3 days after any goods shall have been so landed, the importer shall make a full or perfect entry thereof, and shall either pay down all duties which shall be due and payable upon such goods, or shall duly warehouse the same, according to the purport of the full or perfect entry or entries so made for such goods, or for the several parts or sorts thereof: provided always, that if, when full or perfect entry be at any time made for any goods provisionally landed as aforesaid by bill of sight, such entry shall not be made in manner herein-before required for the due landing of goods, such goods shall be deemed to be goods landed without due entry thereof, and shall be subject to the like forfeiture accordingly: provided also, that if any sum of money shall have been deposited upon any entry by bill of sight, on account of the duties which may be found to be payable on the goods intended therein, it shall be lawful for the officers of the customs to deliver, in virtue of the warrant for landing the same, any quantity of goods the duty on which shall not exceed the sum so deposited. — § 24.

Goods to be taken to King's Warehouse. — In default of perfect entry within such 3 days, such goods shall be taken to the king's warehouse by the officers of the customs; and if the importer shall not, within 1 month after such landing, make perfect entry or entries of such goods, and pay the duties thereon, or on such parts as can be entered for home use, together with charges of removal and of warehouse rent, such goods shall be sold for payment of such duties (or for exportation, if they be such as cannot be entered for home use, or shall not be worth the duties and charges,) and for the payment of such charges; and the overplus, if any, shall be paid to the importer or proprietor thereof. — § 25.

East India Company may enter by Bill of Sight. — It shall be lawful for the East India Company, without making the proof herein-before required, to enter by bill of sight, to be landed and secured in such manner as the commissioners of his Majesty's customs shall require, any goods imported by them, and also any goods imported by any other person from places within the limits of the charter of the said Company, with the consent of such person, upon condition to cause perfect entry to be made of such goods within 3 months from the date of the importation thereof, either to warehouse the same or to pay the duties thereon within the times and in the manner herein-after mentioned; that is to say, if such goods be charged to pay duty according to the value, then to pay such duty within 4 months from the sale of the goods; and if such goods be charged to pay duty according to the number, measure, or weight thereof, then to pay one moiety of such duties within 6 calendar months from the time of the importation of such goods, and the other moiety within 12 calendar months from such time; and such goods shall be secured in such places and in such manner as the commissioners of his Majesty's customs shall require, until the same shall have been duly entered, and the duties thereon shall have been duly paid, or until the same shall have been duly exported: provided also, that it shall be lawful for any other person who shall have imported any goods from places within the said limits into the port of London in like manner to enter such goods by bill of sight in his own name, upon giving sufficient security by bond, to the satisfaction of the commissioners of his Majesty's customs, with the like conditions as are required of the said Company for making perfect entries, and for the securing and the paying of duties, provided such goods be entered by such bill of sight to be warehoused in some warehouse under the superintendence of the said Company, and in which goods imported by the said Company may be secured in manner herein-before mentioned. — § 26.

In default of Payment of Duties, Goods to be sold. — In default of perfect entry within 3 months as aforesaid, or of due entry and payment of duty within the times and in the manner herein-before respectively required, it shall be lawful for the commissioners of his Majesty's customs to cause any such goods in respect of which such default shall have been made to be sold for the payment of such duties, (or for exportation, if they be such as cannot be entered for home use,) and for the payment of all charges incurred by the Crown in respect of such goods; and the overplus, if any, shall be paid to the proprietor thereof. — § 27.

Goods landed by Bill of Sight fraudulently concealed, forfeited. — Where any package or parcel shall have been landed by bill of sight, and any goods or other things shall be found in such package or parcel concealed in any way, or packed with intent to deceive the officers of his Majesty's customs, as well all such goods and other things as the package or parcel in which they are found, and all other things contained in such package or parcel, shall be forfeited. — § 28.

East India Company to pay Duties to Receiver-general. — The East India Company shall pay into the hands of the receiver-general of the customs every sum of money due from the said Company on account of the duties of customs at the respective times when the same shall become due; and the said receiver-general shall give to the said Company a receipt for the monies so paid, on the account of the collector of the customs, which receipt, when delivered to such collector, shall be received by him as cash. — § 29.

Goods damaged on Voyage. — Any goods which are rated to pay duty according to the number, measure, or weight thereof (except certain goods herein-after mentioned) shall receive damage during the voyage, an abatement of such duties shall be allowed in proportion to the damage so received; provided

proof be made to the satisfaction of the commissioners of his Majesty's customs, or of any officers of customs acting therein under their directions, that such damage was received after the goods were shipped abroad in the ship importing the same, and before they were landed in the United Kingdom; and provided claim to such abatement of duties be made at the time of the first examination of such goods. — § 30.

Officers to examine Damage, and state Proportion, or choose two Merchants. — The officers of the customs shall thereupon examine such goods with reference to such damage, and may state the proportion of damage which, in their opinion, such goods have so received, and may make a proportionate abatement of duties; but if the officers of customs be incompetent to estimate such damage, or if the importer be not satisfied with the abatement made by them, the collector and comptroller shall choose two indifferent merchants experienced in the nature and value of such goods, who shall examine the same, and shall make and subscribe a declaration, stating in what proportion, according to their judgment, such goods are lessened in their value by reason of such damage, and thereupon the officers of customs may make an abatement of the duties according to the proportion of damage so declared by such merchants. — § 31.

No Abatement for certain Goods. — No abatement of duties shall be made on account of any damage received by any of the sorts of goods herein-after enumerated; (that is to say,) cocoa, coffee, oranges, pepper, currants, raisins, figs, tobacco, lemons, and wine. — § 32.

Returned Goods. — It shall be lawful to re-import into the United Kingdom from any place, in a ship of any country, any goods (except as herein-after excepted) which shall have been legally exported from the United Kingdom, and to enter the same by bill of store, referring to the entry outwards, and exportation thereof, provided the property in such goods continue in the person by whom or on whose account the same have been exported, and that such re-importation take place within 6 years from the date of the exportation; and if the goods so returned be foreign goods, which had before been legally imported into the United Kingdom, the same duties shall be payable thereon as would, at the time of such re-importation, be payable on the like goods under the same circumstances of importation as those under which such goods had been originally imported, or such goods may be warehoused as the like goods might be warehoused upon a first importation thereof: provided always, that the several sorts of goods enumerated or described in the Table following shall not be re-imported into the United Kingdom for home use upon the ground that the same had been legally exported from thence, but that the same shall be deemed to be foreign goods, whether originally such or not, and shall also be deemed to be imported for the first time into the United Kingdom; (that is to say,)

A Table of Goods exported which may not be re-imported for Home Use.

Corn, grain, meal, flour, and malt, hops, tobacco, tea.
Goods for which any bounty or any drawback of excise had been received on exportation, unless by special permission of the commissioners of his Majesty's customs, and on repayment of such bounty or such drawback.

All goods for which bill of store cannot be issued in manner herein-after directed, except small remnants of British goods by special permission of the commissioners of his Majesty's customs, upon proof to their satisfaction that the same are British, and had not been sold. — Sect. 33.

Bill of Store, by whom may be taken out. — The person in whose name any goods so re-imported were entered for exportation shall deliver to the searcher at the port of exportation an exact account, signed by him, of the particulars of such goods, referring to the entry and clearance outwards and to the return inwards of the same, with the marks and numbers of the packages, both inwards and outwards; and thereupon the searcher, finding that such goods had been legally exported, shall grant a bill of store for the same; and if the person in whose name such goods were entered for exportation was not the proprietor thereof, but his agent, he shall declare upon oath on such bill of store the name of the person by whom he was employed as such agent; and if the person to whom such returned goods are consigned shall not be such proprietor and exporter, he shall make and subscribe a declaration on such bill of store of the name of the person for whose use such goods have been consigned to him; and the real proprietor, ascertained to be such, shall make and subscribe a declaration upon such bill of store, to the identity of the goods so exported and so returned, and that he was at the time of exportation and of re-importation the proprietor of such goods, and that the same had not during such time been sold or disposed of to any other person; and such declaration shall be made before the collectors or comptrollers at the ports of exportation and of importation respectively; and thereupon the collector and comptroller shall admit such goods to entry by bill of store, and grant their warrant accordingly. — § 34.

Surplus Stores subject as Goods. — The surplus stores of every ship arriving from parts beyond the seas, in the United Kingdom or in the Isle of Man, shall be subject to the same duties, and the same prohibitions, restrictions, and regulations, as the like sorts of goods shall be subject to when imported by way of merchandise; but if it shall appear to the collector and comptroller that the quantity or description of such stores is not excessive or unsuitable, under all the circumstances of the voyage, it shall be lawful for them to permit such surplus stores to be entered for the private use of the master, purser, or owner of such ship, or of any passenger of such ship to whom any such surplus stores may belong, on payment of the proper duties, or to be warehoused for the future use of such ship, although the same could not be legally imported by way of merchandise. — § 35.

Goods from Plantations, &c. — No goods shall be entered as being of or from any British possession in America (if any benefit attach to such distinction) unless the master of the ship importing the same shall have delivered to the collector or comptroller a certificate, under the hand of the proper officer of the place where such goods were taken on board, of the due clearance of such ship from thence, containing an account of such goods. — § 36.

Certificate of Growth of Sugar, Coffee, Cocoa, Spirits, from Plantations. — Before any sugar, coffee, cocoa, or spirits shall be entered as being of the produce of some British possession in America, or the Island of Mauritius, the master of the ship importing the same shall deliver to the collector or comptroller a certificate, under the hand of the proper officer of the place where such goods were taken on board, testifying that proof had been made in manner required by law that such goods are of the produce of some British possession in America, or of the Island of Mauritius, stating the name of the place where such goods were produced, and the quantity and quality of the goods, and the number and denomination of the packages containing the same, and the name of the ship in which they are laden, and of the master thereof; and such master shall also make and subscribe a declaration before the collector or comptroller, that such certificate was received by him at the place where such goods were taken on board, and that the goods so imported are the same as are mentioned therein. — § 37.

Certificate of Sugar from Limits of Charter. — Before any sugar shall be entered as being the produce of any British possession within the limits of the East India Company's charter, the master of the ship importing the same shall deliver to the collector or comptroller a certificate under the hand and seal of the proper officer at the place where such sugar was taken on board, testifying that oath had been made before him, by the shipper of such sugar, that the same was really and bona fide the produce of such British possession; and such master shall also make and subscribe a declaration before the collector or comptroller, that such certificate was received by him at the place where such sugar was taken on board, and that the sugar so imported is the same as is mentioned therein. — § 38.

Certificate of Wine, Produce of Cape of Good Hope. — Before any wine shall be entered as being the produce of the Cape of Good Hope, the master of the ship importing the same shall deliver to the collector or comptroller a certificate under the hand of the proper officer of the Cape of Good Hope testifying that proof had been made, in manner required by law, that such wine is of the produce of the Cape of Good Hope or the dependencies thereof, stating the quantity and sort of such wine, and the number and denomination of the packages containing the same; and such master shall also make and subscribe a declar-

ation before the collector or comptroller, that such certificate was received by him at the Cape of Good Hope, and that the wine so imported is the same as is mentioned therein. — § 39.

Goods of Guernsey, Jersey, &c. — It shall be lawful to import into the United Kingdom any goods of the produce or manufacture of the islands of Guernsey, Jersey, Alderney, Sark, or Man, from the said islands respectively, without payment of any duty except in the cases hereinafter mentioned; and such goods shall not be deemed to be included in any charge of duties imposed by any act hereafter to be made on the importation of goods generally from parts beyond the seas: provided always, that such goods may nevertheless be charged with any proportion of such duties as shall fairly counteravail any duties of excise, or any coast duty, payable on the like goods the produce of the part of the United Kingdom into which they shall be imported: provided also, that such exemption from duty shall not extend to any manufactures of the said islands made from materials the produce of any foreign country, except manufactures of linen and cotton made in and imported from the Isle of Man. — § 40.

Master to deliver Certificate of Produce, and declare to Certificate. — Before any goods shall be entered as being the produce of the said islands (if any benefit attach to such distinction), the master of the ship or vessel importing the same shall deliver to the collector or comptroller a certificate from the governor, lieutenant-governor, or commander-in-chief of the island from whence such goods were imported, that proof had been made, in manner required by law, that such goods were of the produce of such island, stating the quantity and quality of the goods, and the number and denomination of the packages containing the same; and such master shall also make and subscribe a declaration before the collector or comptroller, that such certificate was received by him at the place where such goods were taken on board, and that the goods so imported are the same as are mentioned therein. — § 41.

Treasury may permit Produce of colonial Fisheries to be imported from Guernsey, &c. — It shall be lawful for the Lords Commissioners of his Majesty's Treasury, when and so long as they shall see fit, to permit any goods the produce of the British possessions or fisheries in North America, which shall have been legally imported into the islands of Guernsey or Jersey direct from such possessions, to be imported into the United Kingdom for home use direct from those islands, under such regulations as the said commissioners shall direct, any thing in the law of navigation to the contrary notwithstanding. — § 42.

Vessels with Stone from Guernsey, &c. not to be piloted. — No vessel arriving on the coast of England from Guernsey, Jersey, Alderney, Sark, or Man, wholly laden with stone the production thereof, shall be liable to be conducted or piloted by pilots appointed and licensed by the corporation of the Trinity House of Deptford Strand, any law, custom, or usage to the contrary notwithstanding. — § 43.

Fish, British taking and curing, and Lobsters and Turbots, free of Duty on Importation. — Fresh fish of every kind of British taking, and imported in British ships, and fresh lobsters and turbot, however taken or in whatever ship imported, and cured fish of every kind, of British taking and curing, imported in British ships, shall be imported free of all duties, and shall not be deemed to be included in any charge of duty imposed by any act hereafter to be made on the importation of goods generally: provided always, that before any cured fish shall be entered free of duty, as being of such taking and curing, the master of the ship importing the same shall make and subscribe a declaration before the collector or comptroller, that such fish was actually caught and taken in British ships, and cured by the crews of such ships, or by his Majesty's subjects. — § 44.

Certificate of Blubber, Train Oil, &c. British colonial taking. — Before any blubber, train oil, spermaceti oil, head matter, or whale fins, shall be entered as being the produce of fish or creatures living in the sea taken and caught wholly by his Majesty's subjects usually residing in some part of his Majesty's dominions, and imported from some British possession, the master of the ship importing the same shall deliver to the collector or comptroller a certificate under the hand of the proper officer of such British possession where such goods were taken on board, (or if no such officer be residing there, then a certificate under the hands of two principal inhabitants at the place of shipment,) notifying that oath had been made before him or them, by the shipper of such goods, that the same were the produce of fish or creatures living in the sea taken wholly by British vessels owned and navigated according to law; and such master shall also make and subscribe a declaration before the collector or comptroller, that such certificate was received by him at the place where such goods were taken on board, and that the goods so imported are the same as mentioned therein; and the importer of such goods shall also make and subscribe a declaration before the collector or comptroller, at the time of entry, that to the best of his knowledge and belief the same were the produce of fish or creatures living in the sea taken wholly by British vessels in manner aforesaid. — § 45.

Before entry of Blubber, &c. of British fishing, Master and Importer to make Declaration of the same. — Before any blubber, train oil, spermaceti oil, head matter, or whale fins, imported direct from the fishery, shall be entered as being the produce of fish or creatures living in the sea taken and caught wholly by the crews of ships cleared out from the United Kingdom, or from one of the islands of Guernsey, Jersey, Alderney, Sark, or Man, the master of the ship importing such goods shall make and subscribe a declaration, and the importer of such goods (to the best of his knowledge and belief) shall make and subscribe a declaration, that the same are the produce of fish or creatures living in the sea taken and caught wholly by the crew of such ship, or by the crew of some other ship (naming the ship cleared out from the United Kingdom, or from one of the islands of Guernsey, Jersey, Alderney, Sark, or Man (stating which)). — § 46.

Blubber from Greenland may be boiled, and entered as Oil imported, and be exported as such. — It shall be lawful upon the return of any ship from the Greenland seas or Davis's Straits to the United Kingdom with any blubber, being the produce of whales or other creatures living in the sea, for the importers thereof to cause the same to be boiled into oil at the port of importation, under the care and inspection of the proper officers of the customs; and the oil so produced shall be admitted to entry, and the duties be paid thereon, as if imported in that state, and such oil shall not afterwards, if the same come to be exported, be subject to duty of exportation as a manufacture of the United Kingdom. — § 47.

Importation direct. — No goods shall be deemed to be imported from any particular place unless they be imported direct from such place, and shall have been taken on board the importing ship, either as the first shipment of such goods, or after the same shall have been actually landed at such place. — § 48.

Salvor may sell Goods sufficient to defray Salvage. — It shall be lawful for the owner or salvor of any property liable to the payment of duty saved from sea, and in respect of which any sum shall have been awarded under any law at the time in force, or in respect of which any sum shall have been paid or agreed to be paid by the owner thereof or his agent, to the salvors, to defray the salvage of the same, to sell so much of the property so saved as will be sufficient to defray the salvage so awarded, or such other sum so paid or agreed to be paid; and upon the production of an award made in execution of any such law to the commissioners of customs, or upon proof to the satisfaction of the said commissioners that such sum of money has been paid, or has been agreed to be paid, the said commissioners are hereby empowered and required to allow the sale of such property aforesaid, free from the payment of all duties, to the amount of such sum so awarded, paid, or agreed to be paid, or to the amount of such other sum as to the said commissioners shall seem just and reasonable: provided always, that if such owner or salvor shall be dissatisfied with any determination of the said commissioners as to the amount of such property to be sold duty free, it shall be lawful for such owner or salvor to refer any such determination of the said commissioners to the judgment and revision of the High Court of Admiralty; and in that case such sale shall be suspended until the decision of such court shall have been had thereon. — § 49.

Foreign Goods derelict, &c. to be subject to same Duties as on Importation. — All foreign goods, derelict, jetsam, flotsam, and wreck, brought or coming into the United Kingdom or into the Isle of Man, shall at all times be subject to the same duties as goods of the like kind imported into the United Kingdom respectively are subject to: provided always, that if, for ascertaining the proper amount of duty so payable, any question shall arise as to the origin of any such goods, the same shall be deemed to be of the growth,

produce, or manufacture of such country or place as the commissioners of customs shall upon investigation by them determine: provided also, that if any such goods be of such sorts as are entitled to allowance for damage, such allowance shall be made under such regulations and conditions as the said commissioners shall from time to time direct: provided also, that all such goods as cannot be sold for the amount of duty due thereon shall be delivered over to the lord of the manor or other person entitled to receive the same, and shall be deemed to be unenumerated goods, and shall be liable to and be charged with duty accordingly. — § 50.

*Persons having such Goods in Possession, without Notice, liable to a Penalty of 100*l.** — If any person shall have possession of any such goods, either on land or within any port in the United Kingdom, and shall not give notice thereof to the proper officer of the customs within 24 hours after such possession, or shall not on demand pay the duties due thereon, or deliver the same into the custody of the proper officer of the customs, such person shall forfeit the sum of 100*l.*; and if any person shall remove or alter in quantity or quality any such goods, or shall open or alter any package containing any such goods, or shall cause any such act to be done, or assist therein, before such goods shall be deposited in a warehouse in the custody of the officers of the customs, every such person shall forfeit the sum of 100*l.*; and in default of the payment of the duties on such goods within 18 months from the time when the same were so deposited, the same may be sold in like manner and for the like purposes as goods imported may in such default be sold: provided always, that any lord of the manor having by law just claim to such goods, or if there be no such lord of the manor, then the person having possession of the same, shall be at liberty to retain the same in his own custody, giving bond, with 2 sufficient sureties, to be approved by the proper officer of the customs, in treble the value of such goods, for the payment of the duties thereon at the end of 1 year and 1 day, or to deliver such goods to the proper officer of the customs in the same state and condition as the same were in at the time of taking possession thereof. — § 51.

Goods under Excise Permit Regulations. — No goods which are subject to any regulations of excise shall be taken or delivered out of the charge of the officers of customs, (although the same may have been duly entered with them, and the full duties due thereon may have been paid,) until such goods shall also have been duly entered with the officers of excise, and permit granted by them for delivery of the same, nor unless such permit shall correspond in all particulars with the warrant of the officers of the customs: provided always, that such entry shall not be received by the officers of the excise, nor such permit granted by them, until a certificate shall have been produced to them of the particulars of the goods, and of the warrant for the same, under the hand of the officers of the customs who shall have the charge of the goods: provided also, that if upon any occasion it shall appear necessary, it shall be lawful for the proper officers of excise to attend the delivery of such goods by the officers of the customs, and to require that such goods shall be delivered only in their presence; and it shall be lawful for such officers of excise to count, measure, gauge, or weigh any such goods, and fully to examine the same, and to proceed in all respects relating to such goods in such manner as they shall be authorised or required by any act for the time being in force relating to the excise. — § 52.

Commissioners of Customs may direct certain Goods to be stamped. — The commissioners of customs are hereby authorised, after any goods have been entered at the Custom-house, and before the same shall be discharged by the officers, and delivered into the custody of the importer or his agent, to mark or stamp such goods in such manner and form as they may deem fit and proper for the security of the revenue, and by such officer as they shall direct and appoint for that purpose. — § 53.

Orders for stamping Goods to be published. — Every order made by the said commissioners of his Majesty's customs in respect of marking or stamping any goods shall be published in the *London Gazette* and *Dublin Gazette*. — § 54.

*Penalty 200*l.* on forging such Stamps.* — If any person or persons shall at any time forge or counterfeit any mark or stamp to resemble any mark or stamp which shall be provided and used for the purposes of this act, or shall forge or counterfeit the impression of any such mark or stamp, or shall sell or expose to sale, or have in his, her, or their custody or possession, any goods with a counterfeit mark or stamp, knowing the same to be counterfeit, or shall use or affix any such mark or stamp to any other goods required to be stamped as aforesaid other than that to which the same was originally affixed, all and every such offender or offenders, and his, her, or their aiders, abettors, and assistants, shall for every such offence forfeit and pay the sum of 200*l.* — § 55.

Times and Places for landing Goods. — No goods whatever (except diamonds, bullion, fresh fish of British taking and imported in British ships, and turbot and lobsters,) shall be unshipped from any ship arriving from parts beyond the seas, or landed or put on shore, but only on days not being Sundays or holidays, and in the day-time, (that is to say,) from the first day of September until the last day of March between sun-rising and sun-setting, and from the last day of March to the first day of September between the hours of 7 o'clock in the morning and 4 o'clock in the afternoon; nor shall any goods, except as aforesaid, be so unshipped or landed unless in the presence or with the authority of the proper officer of the customs; and such goods, except as aforesaid, shall be landed at one of the legal quays appointed by his Majesty for the landing of goods, or at some wharf, quay, or place appointed by the commissioners of the customs for the landing of goods by sufferance; and no goods, except as aforesaid, after having been unshipped shall be transhipped, or after having been put into any boat or craft to be landed shall be removed into any other boat or craft previously to their being duly landed, without the permission or authority of the proper officer of the customs. — § 56.

Goods to be unshipped, &c. at the Expense of Importer. — The unshipping, carrying, and landing of all goods, and the bringing of the same to the proper place after landing, for examination or for weighing, and the putting of the same into the scales, and the taking of the same out of and from the scales after weighing, shall be performed by or at the expense of the importer. — § 57.

Prohibitions and Restrictions absolute or modified. — The several sorts of goods enumerated or described in the Table following, denominated "A Table of Prohibitions and Restrictions inwards," shall either be absolutely prohibited to be imported into the United Kingdom, or shall be imported only under the restrictions mentioned in such Table, according as the several sorts of such goods are respectively set forth therein; (that is to say,)

A TABLE OF PROHIBITIONS AND RESTRICTIONS INWARDS.

A List of Goods absolutely prohibited to be imported.

Arms, ammunition, and utensils of war, by way of merchandise, except by licence from his Majesty, for furnishing his Majesty's public stores only.

Beer, fresh or corned or slightly salted.

Books; viz. first composed or written or printed in the United Kingdom, and printed or reprinted in any other country, imported for sale, except books not reprinted in the United Kingdom with 20 years; or being parts of collections, the greater parts of which had been composed or written abroad.

Cattle, great.

Clock and watches of any metal, impressed with any mark or stamp appearing to be or to represent any legal British assay mark or stamp, or purporting by any mark or appearance to be of the manufacture of the United Kingdom, or not having the name and place of abode of some foreign maker abroad visible on the frame and also on the face, or not being in a complete state, with all the parts properly fixed in the case.

Coin; viz. false money, or counterfeit sterling.

silver, of the realm, or any money purporting to be such, not being of the established standard in weight or fineness.

Fish of foreign taking or curing, or in foreign vessels; except turbot and lobsters, stock-fish, live eels, anchovies, sturgeon, botargo, and caviare.

Gunpowder; except by licence from his Majesty, such licence to be granted for the furnishing his Majesty's stores only.

Lamb, mutton, pork (fresh or corned or slightly salted), sheep.

Snuff-work.

Spirits from the Isle of Man.

Swine.

Tobacco stalks stripped from the leaf, whether manufactured or not.

Tobacco stalk flour.

List of Goods subject to certain Restrictions on Importation.

China, goods from, unless by the East India Company, and into the port of London, during the continuance of their exclusive privileges of trade.

East India; goods of places within the limits of the East India Company's charter, unless into such ports as shall be approved of by the Lords of the Treasury, and declared by order in council to be it and proper for such importation.

Gloves of leather, unless in ships of 70 tons or upwards, and in packages containing 100 dozen pairs of such gloves.

Hides, skins, horns, or hoofs, or any other part of cattle or beast, his Majesty may by order in council prohibit, in order to prevent any contagious distemper.

Parts of articles; viz. any distinct or separate part of any article not accompanied by the other part or all the other parts of such article, so as to be complete and perfect, if such article be subject to duty according to the value thereof.

Silk; manufactures of silk, being the manufactures of Europe, unless into the port of London, or into the port of Dublin direct from Bordeaux, or into the port of Dover direct from Calais, and unless in a ship or vessel of 70 tons or upwards, or into the port of Dover in a vessel of the burden of 60 tons at least, with licence of the commissioners of the customs.

Spirits, not being perfumed or medicinal spirits; viz. all spirits, unless in ships of 70 tons or upwards.

Rum of and from the British plantations, if in casks, unless in casks containing not less than 20 gallons, all other spirits, if in casks, unless in casks containing not less than 40 gallons.

Tea; unless from the place of its growth, and by the East India Company, and into the port of London, during the continuance of their exclusive privileges of trade.

Tobacco and snuff; viz. unless in a ship of the burden of 120 tons or upwards.

tobacco of and imported from the state of Colombia, and made up in rolls, unless in packages containing at least 320 lbs. weight of such rolls.

Tobacco and snuff—*continued.*

Negars, unless in packages containing 100 lbs. weight of segars.

All other tobacco and snuff, unless in hogsheads, casks, chests, or cases, each of which shall contain of nett tobacco or snuff at least 100 lbs. weight if from the East Indies, or 450 lbs. weight if from any other place, and not packed in bags or packages within any such hogshead, cask, chest, or case, nor separated nor divided in any manner whatever, except tobacco of the dominions of the Turkish empire, which may be packed in inward bags or packages, or separated or divided in any manner within the outward package, provided such outward package be a hogshead, cask, chest, or case, and contain 450 lbs. nett at least.

and unless the particular weight of tobacco or snuff in each hogshead, cask, chest, or case, with the tare of the same, be marked thereon.

and unless into the ports of London, Liverpool, Bristol, Lancaster, Cowes, Falmouth, Whitehaven, Hull, Port Glasgow, Greenock, Leith, Newcastle-upon-Tyne, Plymouth, Belfast, Cork, Droghda, Dublin, Galway, Limerick, Londonderry, Newry, Sligo, Waterford, and Wexford.

or into some port or ports which may hereafter be appointed for such purpose by the Lords Commissioners of his Majesty's Treasury; such appointments in Great Britain being published in the *London Gazette*, and such appointments in Ireland being published in the *Dublin Gazette*.

but any ship wholly laden with tobacco may come into the ports of Cowes or Falmouth to wait for orders, and there remain 14 days, provided due report of such ship be made by the master with the collector or comptroller of such port.

And all goods from the Isle of Man, except such as be of the growth, produce, or manufacture thereof.

Forfeiture.—And if any goods shall be imported into the United Kingdom contrary to any of the prohibitions or restrictions mentioned in such Table in respect of such goods, the same shall be forfeited.—§ 58.

But Goods may be warehoused for Exportation only, although prohibited.—Any goods, of whatsoever sort, may be imported into the United Kingdom to be warehoused under the regulations of any act in force for the time being for the warehousing of goods, without payment of duty at the time of the first entry thereof, or notwithstanding that such goods may be prohibited to be imported into the United Kingdom to be used therein, except the several sorts of goods enumerated or described in manner following; (that is to say,) goods prohibited on account of the package in which they are contained, or the tonnage of the ship in which they are laden; tea and goods from China in other than British ships, or by other persons than the East India Company during the continuance of their exclusive privileges of trade; gunpowder, arms, ammunition, or utensils of war; dried or salted fish, not being stock-fish; infected hides, skins, horns, hoofs, or any other part of any cattle or beast; counterfeit coin or tokens; books first composed or written or printed and published in the United Kingdom, and reprinted in any other country or place; copies of prints first engraved, etched, drawn, or designed in the United Kingdom; copies of casts of sculptures or models first made in the United Kingdom; clocks or watches, being such as are prohibited to be imported for home use.—§ 59.

Goods to be entered to be warehoused for Exportation only.—If by reason of the sort of any goods, or of the place from whence, or the country, or navigation of the ship in which any goods have been imported, they be such or be so imported as that they may not be used in the United Kingdom, they shall not be entered except to be warehoused, and it shall be declared upon the entry of such goods that they are entered to be warehoused for exportation only.—§ 60.

ENTRY OUTWARDS.

Goods not to be shipped till Entry of Ship and Entry of Goods, and Cocket granted; nor till cleared.—No goods shall be shipped, or waterborne to be shipped, on board any ship in any port or place in the United Kingdom or in the Isle of Man, to be carried to parts beyond the seas, before due entry outwards of such ship and due entry of such goods shall have been made, and cocket granted, nor before such goods shall have been duly cleared for shipment in manner herein-after directed; and no stores shall be shipped for the use of any such ship bound to parts beyond the seas, nor shall any goods be deemed or admitted to be such stores, except such as shall be borne upon the virtualling bill duly granted for such ship; and no goods shall be so shipped, or waterborne to be so shipped, except at such times and places, and in such manner, and by such persons, and under the care of such officers, as is and are herein-after directed; and all goods and stores which shall be shipped, or be waterborne to be shipped contrary hereto shall be forfeited.—§ 61.

Ships to be cleared, or Master to forfeit 100*l*.—No ship on board of which any goods or stores shall have been shipped in any port in the United Kingdom or in the Isle of Man, for parts beyond the seas, shall depart from such port until such ship shall have been duly cleared outwards for her intended voyage, in manner herein-after directed, under forfeiture of the sum of 100*l*. by the master of such ship.—§ 62.

Virtualling Bill for Stores.—The master of every ship which is to depart from any port in the United Kingdom or in the Isle of Man, for parts beyond the seas, shall, upon due application made by him, receive from the searcher a virtualling bill for the shipment of such stores as he shall require, and as shall be allowed by the collector and comptroller, for the use of such ship, according to the voyage upon which she is about to depart; and no articles taken on board any ship shall be deemed to be stores except such as shall be borne upon the virtualling bill for the same.—§ 63.

Master to deliver Certificate of Clearance of last Voyage, and to make Entry Outwards.—The master of every ship in which any goods are to be exported from the United Kingdom or from the Isle of Man to parts beyond the seas shall, before any goods be taken on board, deliver to the collector or comptroller a certificate from the proper officer of the clearance inwards or coastwise of such ship of her last voyage, specifying what goods, if any, have been reported inwards for exportation, and shall also deliver to the collector or comptroller an account, signed by the master or his agent, of the entry outwards of such ship for her intended voyage, setting forth the name and tonnage of the ship, the name of the place to which she belongs if a British ship, or of the country if a foreign ship, the name of the master, and the name or names of the place or places for which she is bound, if any goods are to be shipped for the same, and the name of the place in such port at which she is to take in her lading for such voyage; and if such ship shall have commenced her lading at some other port, the master shall state the name of any port at which any goods have been laden, and shall produce a certificate from the searcher that the cockets for such goods have been delivered to him; and the particulars of such account shall be written and arranged in such form and manner as the collector and comptroller shall require; and such account shall be the entry outwards of such ship, and shall be entered in a book to be kept by the collector, for the information of

all parties interested; and if any goods be taken on board any ship before she shall have been entered outwards, the master shall forfeit the sum of 100*l.*: provided always, that where it shall become necessary to lade any heavy goods on board any ship before the whole of the inward cargo is discharged, it shall be lawful for the collector and comptroller to issue a stiffening order for that purpose, previous to the entry outwards of the ship. — § 64.

Bill of the Entry to be delivered. — The person entering outwards any goods to be exported to parts beyond the seas, from any port in the United Kingdom or in the Isle of Man, shall deliver to the collector or comptroller a bill of the entry thereof, fairly written in words at length, expressing the name of the ship and of the master, and of the place to which the goods are to be exported, and of the person in whose name the goods are to be entered, and the quantities and proper denominations or descriptions of the several sorts of goods, and shall pay down any duties which may be due upon the exportation of any such goods; and such person shall also deliver at the same time 1 or more duplicates of such bill, in which all sums and numbers may be expressed in figures; and the particulars to be contained in such bill shall be written and arranged in the form and manner, and the number of duplicates shall be such as the collector and comptroller shall require; and thereupon the collector and comptroller shall cause a cocket to be written for such goods, making it known that such goods have been so entered; and every cocket shall be signed by such collector and comptroller, and be delivered to the person who shall have made such entry, and such person shall keep and be responsible for the proper use of the same. — § 65.

Goods for Drawback or Bounty. — If any drawback or bounty be allowable upon the exportation of any such goods, or any duty be payable thereon, or any exemption from duty claimed, or if any such goods be exportable only according to some particular rule or regulation, or under some restriction or condition, or for some particular purpose or destination, such goods shall be entered and cleared for shipment by such denominations or descriptions as are used, mentioned, or referred to in the granting of such drawback or bounty, or in the levying of such duty, or granting such exemption, or in the directing of such rules, regulations, restrictions, conditions, purpose, or destination; and if the goods in such entry are charged to pay duty according to the value thereof, such value shall be stated in the entry, and shall be affirmed by the declaration of the exporter or his known agent, to be made upon the entry, and attested by his signature; and if any person shall make such declaration, not being the exporter of such goods, nor his agent duly authorised by him, such person shall forfeit the sum of 100*l.*; and such declaration shall be made in manner and form following, and shall be binding upon the person making the same; (that is to say),

“I, A. B. of [place of abode] do hereby declare, that I am the exporter of the goods mentioned in this entry, [or, that I am duly authorised by him,] and I do enter the same at the value of _____
Witness my hand the _____ day of _____ A. B.” — § 66.

Goods undervalued detained. — If upon examination it shall appear to the officers of the customs that such goods are not valued according to the true value thereof, the same may be detained, and (within 2 days) taken and disposed of for the benefit of the Crown, in like manner as is herein-before provided in respect of goods imported, except that no sum in addition to the amount of the valuation and the duties paid shall be paid to the exporter or proprietor of the goods. — § 67.

For Drawback, or from Warehouse, or Duties to be first paid. — The person intending to enter outwards any foreign goods for drawback, at any other port than that at which the duties inwards on such goods had been paid, shall first deliver to the collector or comptroller of the port where the duties on such goods were paid, 2 or more bills, as the case may require, of the particulars of the importation of such goods, and of the entry outwards intended to be made; and thereupon such collector and comptroller, finding such bills to agree with the entry inwards, shall write off such goods from the same, and shall issue a certificate of such entry, with such particulars thereof as shall be necessary for the computation of the drawback allowable on such goods, and setting forth in such certificate the destination of the goods, and the person in whose name they are to be entered for exportation, and also the name of such other port; and such certificate, together with 2 or more bills of the same, as the case may require, in which all sums and numbers may be expressed in figures, being delivered to the collector or comptroller of the port from which the goods are to be exported, shall be the entry outwards of such goods; and such collector and comptroller shall thereupon cause a cocket to be written and delivered for such goods, in manner herein-before directed. — § 68.

Coals Export Bond to Isle of Man and British Possessions. — No cocket shall be granted for the exportation of any coals to the Isle of Man, or to any British possession, until the exporter thereof shall have given security by bond in a penal sum of 40*s.* the chaldron, with condition that the same shall be landed at the place for which they shall be exported, or otherwise accounted for to the satisfaction of the commissioners of the customs; and also with condition to produce (within such time as the said commissioners shall require, to be expressed in such bond,) a certificate of the landing of such coals at such place, under the hand of the collector or comptroller or other proper officer at such place: provided always, that the bond so to be given in respect of coals shall not be liable to any duty of stamps. — § 69.

CLEARANCE OF GOODS.

Packages to be indorsed on Cocket. — Before any part of the goods for which any cocket shall have been granted shall be shipped or waterborne to be shipped, the same shall be duly cleared for shipment with the searcher; and before any goods be cleared for shipment, the particulars of the goods for each clearance shall be indorsed on such cocket, together with the number and denomination or description of the respective packages containing the same; and in the margin of each such indorsement shall be delineated the respective marks and numbers of such packages; and to each such indorsement shall be subjoined, in words at length, an account of the total quantities of each sort of goods intended in such indorsement, and the total number of each sort of package in which such goods are contained, distinguishing such goods, if any, as are to be cleared for any bounty or drawback of excise or customs, and also such goods, if any, as are subject to any duty on exportation, or entitled to any exemption from such duty, and also such goods, if any, as can only be exported by virtue of some particular order or authority, or under some particular restriction or condition, or for some particular purpose or destination; and all goods shipped or waterborne to be shipped, not being duly cleared as aforesaid, shall be forfeited. — § 70.

Cocket indorsed, &c. — The person clearing such goods for shipment shall upon each occasion produce the cocket so indorsed to the searcher, and shall also deliver a shipping bill or copy of such indorsement, referring by names and date to the cocket upon which such indorsement is made, and shall obtain the order of the searcher for the shipment of such goods; and the particulars to be contained in such indorsement and in such shipping bill shall be written and arranged in such form and manner as the collector and comptroller shall require. — § 71.

Coals brought coastwise may be exported without landing. — If any coals shall have been brought coastwise from one port of the United Kingdom to another, and the master shall be minded to proceed with such coals, or any part of them, to parts beyond the seas, it shall be lawful for such master to enter such ship and such coals outwards for the intended voyage, without first landing the coals intended for exportation, provided the officers of the customs shall be satisfied that the quantity of coals left on board does not exceed the quantity so entered outwards. — § 72.

Account of Value to be delivered to the Searcher. — Upon the clearance for shipment of any goods, the produce or manufacture of the United Kingdom, not liable to any export duty, an account, containing an accurate specification of the quantity, quality, and value of such goods, together with a declaration to the truth of the same, signed by the exporter or his known agent, shall be delivered to the searcher by the

person clearing such goods; and if such declaration be false, the person signing the same shall forfeit the sum of 20*l.*; and it shall be lawful for the searcher to call for the invoice, bills of parcels, and such other documents relating to the goods, as he may think necessary for ascertaining the true value of the same: provided always, that if such exporter or agent shall make and subscribe a declaration before the collector or comptroller, that the value of the goods cannot be ascertained in time for the shipment of the same, and such declaration shall be delivered to the searcher, at the time of clearance, a further time of 3 months shall be allowed for the delivery of such separate shipping bill, on failure whereof such exporter or agent shall forfeit the sum of 20*l.* — § 73.

Goods for Excise Drawback. — No drawback of excise shall be allowed upon any goods so cleared, unless the person intending to claim such drawback shall have given due notice to the officer of excise, in form and manner required by any law in force relating to the excise, and shall have obtained, and have produced to the searcher, at the time of clearing such goods, a proper document, under the hand of the officer of excise, containing the necessary description of the goods for which such drawback is to be claimed; and if the goods to be cleared and shipped under the care of the searchers shall, upon examination, be found to correspond in all respects with the particulars of the goods contained in such document, and such goods shall be duly shipped and exported, the searcher shall, if required, certify such shipment upon such document, and shall transmit the same to the officer of excise. — § 74.

Officer of Excise may attend Examination. — It shall be lawful for the officer of excise, if he see fit, to attend and assist at such examination, and to mark or seal the packages, and to keep joint charge of the same, together with the searcher, until the same shall have been finally delivered by him into the sole charge of the searcher, to be shipped and exported under his care. — § 75.

Goods for Duty, Bounty, or Drawback, &c. brought for Shipment. — If any goods which are subject to any duty or restriction, in respect of exportation, or if any goods, which are to be shipped for any drawback or bounty, shall be brought to any quay, wharf, or other place, to be shipped for exportation, and such goods shall not agree with the indorsement on the cocket, or with the shipping bill, the same shall be forfeited; and if any goods prohibited to be exported be found in any package brought as aforesaid, such package and every thing contained therein shall be forfeited. — § 76.

Searcher may open any Package; but if correct, must re-pack. — It shall be lawful for the searcher to open all packages, and fully to examine all goods shipped or brought for shipment at any place in the United Kingdom or in the Isle of Man; and if the goods so examined shall be found to correspond in all respects with the cocket and clearance purporting to be for the same, such goods shall be re-packed at the charge of such searcher, who may be allowed such charge by the commissioners of the customs, if they shall see fit so to do. — § 77.

CLEARANCE OF SHIP.

Content to be delivered to Searcher, &c. — Before any ship shall be cleared outwards at any port in the United Kingdom or in the Isle of Man, for parts beyond the seas, with any goods shipped on board the same in such port, the master shall deliver a content of such ship to the searcher, setting forth the name and tonnage of such ship, and the place or places of her destination, and the name of the master, and also an account of the goods shipped on board, and of the packages containing such goods, and of the marks and numbers upon such packages, and a like account of the goods on board, if any, which had been reported inwards for exportation in such ship, so far as any of such particulars can be known by him; and also, before the clearance of such ship, the cockets, with the indorsements and clearances thereon for the goods shipped, shall be finally delivered by the respective shippers of such goods to the searcher, who shall file the same together, and shall attach with a seal a label to the file, showing the number of cockets contained in the file, and shall compare the particulars of the goods in the cockets with the particulars of the goods in such content, and shall attest the correctness thereof by his signature on the label, and on the content; and the master of the ship shall make and sign a declaration before the collector or comptroller to the truth of such content, and shall also answer to the collector or comptroller such questions concerning the ship, the cargo, and the intended voyage, as shall be demanded of him; and thereupon the collector or comptroller shall clear such ship for her intended voyage, and shall notify such clearance, and the date thereof, upon the content, and upon the label to the file of cockets, and upon the victualling bill, and also in the book of ships' entries outwards, for the information of all parties interested, and shall transmit the content, and the cockets, and the victualling bill to the searcher; and the particulars to be contained in such content shall be written and arranged in such form and manner as the collector and comptroller shall require. — § 78.

File of Cockets, &c. delivered to Master. — The file of cockets and the victualling bill shall thereupon be delivered by the searcher to the master of such ship, at such station within the port and in such manner as shall be appointed by the commissioners of his Majesty's customs for that purpose; and such file of cockets and victualling bill, so delivered, shall be kept by the master of such ship as the authority for departing from the port with the several parcels and packages of goods and of stores on board, so far as they shall agree with the particulars in the indorsements on such cockets or with such victualling bill. — § 79.

In Ballast. — If any ship is to depart in ballast from the United Kingdom or from the Isle of Man for parts beyond the seas, having no goods on board except the stores of such ship borne upon the victualling bill, or any goods reported inwards for exportation in such ship, the master of such ship shall, before her departure, answer to the collector or comptroller such questions touching her departure and destination as shall be demanded of him; and thereupon the collector or comptroller shall clear such ship in ballast, and shall notify such clearance and the date thereof on the victualling bill, and also in the book of ships' entries outwards, for the information of all parties interested; and such victualling bill shall be kept by the master of such ship as the clearance of the same. — § 80.

Part of former Cargo reported for Exportation. — If there be on board any ship any goods of the inward cargo which were reported for exportation in the same, the master shall, before clearance outwards of such ship from any port in the United Kingdom or in the Isle of Man, deliver to the searcher a copy of the report inwards of such goods, certified by the collector and comptroller; and such copy, being found to correspond with the goods so remaining on board, shall be the authority to the searcher to pass such ship with such goods on board; and being signed by the searcher, and filed with the cockets, shall be the clearance of the ship for those goods. — § 81.

If any Passengers, Master may enter Baggage in his Name. — If any passengers are to depart in any ship from the United Kingdom or from the Isle of Man for parts beyond the seas, it shall be lawful for the master of such ship to pass an entry and to receive a cocket in his name for the necessary personal baggage of all such passengers, and duly to clear such baggage for shipment in their behalf, stating in such clearances the particulars of the packages and the names of the respective passengers; and if such ship is to take no other goods than the necessary personal baggage of passengers actually going the voyage, it shall be lawful for such master to enter such ship outwards in ballast for passengers only; and if no other goods than such baggage duly entered and cleared be taken on board such ship, the same shall be deemed to be a ship in ballast, notwithstanding such baggage, and shall be described in the clearance, on the content, and on the label to the cocket or cockets, and on the victualling bill, and in the book of ships' entries, as a ship cleared in ballast, except as to the necessary personal baggage of passengers going the voyage. — § 82.

Master may enter Goods for private Use of Self and Crew. — If the master and crew of any foreign ship which is to depart in ballast from the United Kingdom for parts beyond the seas, shall be desirous to take on board chalk rubbish by way of ballast, or to take with them for their private use any small quantities of goods of British manufacture, it shall be lawful for such master, without entering such ship outwards, to pass

an entry in his name, and receive a cockpit free of any export duty for all such goods, under the general denomination of British manufactures not prohibited to be exported, being for the use and privilege of the master and crew, and not being of greater value than in the proportion of 20*l*. for the master, and 10*l*. for the mate, and 5*l*. for each of the crew, and stating that the ship is in ballast; and the master shall duly clear such goods for shipment in behalf of himself and crew, stating in such clearances the particulars of the goods and packages, and the names of the crew who shall jointly or severally take any of such goods under this privilege; and such ship shall be deemed to be a ship in ballast, and be cleared as such, and without a content, notwithstanding such goods or such cockpit or cockets; and such clearance shall be notified by the collector, or comptroller on the label to the cockpit or cockets, and on the victualling bill, and in the book of ships' entries, as a clearance in ballast, except as to the privilege of the master and crew. — § 83.

Officers may board any Ship after Clearance. — It shall be lawful for the officers of the customs to go on board any ship after clearance outwards, within the limits of any port in the United Kingdom or in the Isle of Man, or within 4 leagues of the coast thereof, and to demand the file of cockets and the victualling bill, and if there be any goods or stores on board not contained in the indorsements on the cockets, nor in the victualling bill, such goods or stores shall be forfeited; and if any goods contained in such indorsements be not on board, the master shall forfeit the sum of 20*l*. for every package or parcel of goods contained in such indorsements and not on board; and if any cockpit be at any time falsified, the person who shall have falsified the same, or who shall have wilfully used the same, shall forfeit the sum of 100*l*. — § 84.

Ships to bring to at Stations. — Every ship departing from any port in the United Kingdom or in the Isle of Man shall bring to at such stations within the port as shall be appointed by the commissioners of his Majesty's customs for the landing of officers from such ships, or for further examination previous to such departure. — § 85.

DEBENTURE GOODS.

Entry in Name of real Owner. — No drawback or bounty shall be allowed upon the exportation from the United Kingdom of any goods, unless such goods shall have been entered in the name of the person who was the real owner thereof at the time of entry and shipping, or of the person who had actually purchased and shipped the same, in his own name and at his own liability and risk, on commission, according to the practice of merchants, and who was and shall have continued to be entitled in his own right to such drawback or bounty, except in the cases hereinafter provided for. — § 86.

Declaration to Exportation, and to Property, and to Right to Drawback or Bounty. — Such owner or commission merchant shall make and subscribe a declaration upon the debenture that the goods mentioned therein have been actually exported, and have not been reloaded, and are not intended to be reloaded in any part of the United Kingdom, nor in the Isle of Man (unless entered for the Isle of Man), nor in the islands of Faro or Ferro, and that he was the real owner thereof at the time of entry and shipping, or that he had purchased and shipped the said goods in his own name and at his own liability and risk, on commission, as the case may be, and that he was and continued to be entitled to the drawback or bounty thereon in his own right: provided always, that if such owner or merchant shall not have purchased the right to such drawback or bounty, he shall declare under his hand upon the entry and upon the debenture the person who is entitled thereto, and the name of such person shall be stated in the cockpit and in the debenture; and the receipt of such person on the debenture shall be the discharge for such drawback or bounty. — § 87.

Agent may pass Entry, and receive Drawback, and make the Declaration, &c. — If such owner or merchant shall be resident in some part of the United Kingdom, being more than 20 miles from the custom-house of the port of shipment, he may appoint any person to be his agent to make and pass his entry, and to clear and ship his goods, and to receive for him the drawback or bounty payable on his debenture, if payable to him, provided the name of such agent and the residence of such owner or merchant be subjoined to the name of such owner or merchant in the entry and in the cockpit for such goods; and such agent, being duly informed, shall make declaration upon the entry, if any be necessary, and also upon the debenture, in behalf of such owner or merchant, to the effect before required of such owner or merchant, and shall answer such questions touching his knowledge of the exportation of such goods and the property therein, and of the right to the drawback or bounty, as shall be demanded of him by the collector or comptroller; and if any such goods be exported by any corporation or company trading by a joint stock, it shall be lawful for them to appoint any person to be their agent for the like purposes and with the like powers to act in their behalf. — § 88.

Property of Persons abroad. — If any goods which are to be exported for drawback be the property of any person residing abroad, having been consigned by the owner thereof to some person as his agent residing in the United Kingdom, to be exported through the same to parts beyond the seas, by such agent, upon account of such owner, it shall be lawful for such person being the consignee by whom and in whose name the duties inwards on such goods had been paid, or his legal representative, in like manner, as agent for such owner, to enter, clear, and ship such goods for him, and upon like conditions to receive for him the drawback payable thereon. — § 89.

Shipment within 3 Years, and Payment within 2 Years. — No drawback shall be allowed upon the exportation of any goods unless such goods be shipped within 3 years after the payment of the duties inwards thereon, and no debenture for any drawback or bounty allowed upon the exportation of any goods shall be paid after the expiration of 2 years from the date of the shipment of such goods, and no drawback shall be allowed upon any goods which by reason of damage or decay shall have become of less value for home use than the amount of such drawback; and all goods so damaged which shall be cleared for any drawback shall be forfeited, and the person who caused such goods to be so cleared shall forfeit the sum of 200*l*. or treble the amount of the drawback in such case, at the election of the commissioners of the customs. — § 90.

Issuing and passing Debenture. — For the purpose of computing and paying any drawback or bounty payable upon any goods duly entered, shipped, and exported, a debenture shall, in due time after such entry, be prepared by the collector and comptroller, certifying in the first instance the entry outwards of such goods; and so soon as the same shall have been duly exported, and a notice containing the particulars of the goods shall have been delivered by the exporter to the searcher, the shipment and exportation thereof shall be certified to the collector and comptroller, upon such debenture, by the searcher, and the debenture shall thereupon be computed and passed with all convenient despatch, and be delivered to the person entitled to receive the same. — § 91.

Certificate of landing in Isle of Man. — No drawback or bounty shall be allowed for any goods exported from the United Kingdom to the Isle of Man, until a certificate shall be produced from the collector and comptroller of the customs of the Isle of Man of the due landing of such goods. — § 92.

Press-packing, and Declaration of Packer. — No drawback or bounty shall be allowed for any goods exported from the United Kingdom in bales cleared as being press-packed, unless the quantities and qualities of the goods in each of such bales shall be verified by the master packer thereof, or, in case of unavoidable absence, by the foreman of such packer, having knowledge of the contents of the bales, by declaration made and subscribed upon the cockpit before the collector or comptroller; or if such packer reside more than 10 miles from the port, then by declaration made and subscribed upon an account of such goods, before a magistrate or justice of the peace for the county or place where such packer shall reside; and if such bales be not cleared as being press-packed, then the searcher, having opened any such bale, shall not be required to repack the same at his charge. — § 93.

Licensed Lightermen, &c. — No goods cleared for drawback or bounty, or from the warehouse, shall be per-carried waterborne, to be put on board any ship for exportation from the United Kingdom, by any commissioner, unless such persons shall be authorised for that purpose by licence under the hands of the commissioners, and before granting such licence, it shall be lawful for the said commissioners to require such security by bond for the faithful and incorrupt conduct of such person as they shall deem necessary; and after granting such licence it shall be lawful for the said commissioners to revoke the same, if the person to whom the same shall have been granted shall be convicted of any offence against the laws relating to the customs or excise: provided always, that all such licences which shall be in force at the time of the commencement of this act shall continue in force as if the same had been afterwards granted under the authority of this act. — 4 94.

[illegible]

Drawback of Duties on Wine allowed for Officers in the Navy.—Drawback of the whole of the duties of customs shall be allowed for wine intended for the consumption of officers of his Majesty's navy, on board such of his Majesty's ships in actual service as they shall serve in, not exceeding the quantities of wine, in any 1 year, for the use of such officers, herein-after respectively mentioned; (that is to say),

PROHIBITIONS OUTWARDS.

Prohibitions and Restrictions absolute or modified.—The several sorts of goods enumerated or described in the Table following (denominated "A Table of Prohibitions and Restrictions Outwards") shall be either absolutely prohibited to be exported from the United Kingdom, or shall be exported only under the restrictions mentioned in such Table, according as the several sorts of such goods are respectively set forth therein; (that is to say,)

A TABLE OF PROHIBITIONS AND RESTRICTIONS OUTWARDS.

Clocks and watches; viz. any outward or inward box, case, or dial plate, of any metal, without the movement in, or with every such box, case, or dial plate, made up fit for use, with the clock or watchmaker's name engraven thereon.

Lace; viz. any metal inferior to silver which shall be spun, mixed, wrought, or set upon silk, or which shall be gilt, or drawn into wire, or flatted into plate, and spun or woven, or wrought into or upon, or mixed with lace, fringe, cord, embroidery, tambour work, or buttons, made in the gold or silver lace manufactory, or set upon silk, or made into bullion spangles, or pearl or any other materials made in the gold or silver lace manufactory, or which shall imitate or be meant to imitate such lace, fringe, cord, embroidery, tambour work, or buttons; nor shall any person export any copper, brass, or other metal which shall be silvered or drawn into wire, or flatted into plate, or made into bullion spangles, or pearl or any other materials used in the gold or silver lace manufactory, or in imitation of such lace, fringe, cord, embroidery, tambour work, or buttons, or of any of the materials used in making the same, and which shall hold more or bear a greater proportion than 5 penny-weights of fine silver to the pound avoirdupois of such copper, brass, or other metals.

any metal inferior to silver, whether gilt, silvered, stained, or coloured, or otherwise, which shall be worked up or mixed with gold or silver in any manufactory of lace, fringe, cord, embroidery, tambour work, or buttons.

Tools and utensils; viz. any machine, engine, tool, press, paper, utensil, or instrument used in or proper for the preparing, working, pressing, or finishing of this Kingdom, or any other goods wherein wool, cotton, linen, or silk is used, or any part of such machines, engines, tools, presses, paper, utensils, or instruments, or any model or plan thereof, or any part thereof; except wool cards or stock cards not worth above 1s. 6d. per pair, and spinners' cards not worth above 1s. 6d. per pair, used in the woollen manufactures.

blocks, plates, engines, tools, or utensils commonly used in

or proper for the preparing, working up, or finishing of the calico, cotton, muslin, or linen printing manufactures, or any part of such blocks, plates, engines, tools, or utensils.

rollers, either plain, grooved, or of any other form or denomination, of cast iron, wrought iron, or steel, for the rolling of iron or any sort of metals, and frames, beds, pillars, screws, pinions, and each and every implement, tool or utensil thereunto belonging; rollers, slitters, frames, beds, pillars, and screws for slitting mills; presses of all sorts, in iron and steel, or other metals, which are used with a screw exceeding 1½ inch in diameter, or any parts of these several articles, or any model of the before-mentioned utensils, or any part thereof; all sorts of utensils, engines, or machines used in the casting or boring of cannon or any sort of artillery, or in any parts thereof; or any models of tools, utensils, engines, or machine used in such casting or boring, or any parts thereof; hand stamps, dog-head stamps, pulley stamps, hammers, and anvils for stamps; presses of all sorts called cutting-out presses; beds or punches to be used therewith, either in parts or pieces, or fitted together; scouring or shading engines; presses for horn buttons; dies for horn buttons; rolled metal, with silver thereon; parts of buttons not fitted up into buttons, or in an unfinished state; engines for chasing, stocks for casting buckles, buttons, and rings; die-sinking tools of all sorts; engines for making button-shanks; laps of all sorts; tools for pinching of glass; engines for covering of whips; bars of metal covered with gold or silver, and burnishing stones, commonly called blood-stones, either in the rough state or finished for use; wire moulds for making paper; wheels of metal, stone, or wood, for cutting, roughing, smoothing, polishing, or engraving glass; pincells, pincers, sheers, and pipes used in blowing glass; potters' wheels and lathe, for plain, round, and engine turning; tools used by saddlers, harness-makers, and bridle-makers; viz. gudge strainers, side strainers, point strainers, cruet rings, screw creepers, wheel irons, seat irons, pricking irons, holstering irons, clams, and head knives; frames for making wearing apparel.

A List of Goods which may be prohibited to be exported by Proclamation or Order in Council.

Arms, ammunition, and gunpowder.

Ashes, pot and pearl.

Mineral stores and naval stores, and any articles (except copper) which His Majesty shall judge capable of being con-

verted into or made useful in increasing the quantity of military or naval stores.

Provisions, or any sort of victual which may be used as food by man.

And if any goods shall be exported, or be warehoused to be exported, from the United Kingdom, contrary to any of the prohibitions or restrictions mentioned in such table in respect of such goods, the same shall be forfeited. — § 104.

The sections from 105. to 118., both inclusive, relate to the COASTING TRADE, and are given under that head.

CONSTRUCTION IN GENERAL.

Terms used in Acts.—Whenever the several terms or expressions following shall occur in this act, or in any other act relating to the customs, or to trade and navigation, the same shall be construed respectively in the manner herein-after directed; (that is to say,) the term "ship" shall be construed to mean ship or vessel generally, unless such term shall be used to distinguish a ship from sloops, brigantines, and other classes of vessels; and the term "master" of any ship shall be construed to mean the person having or taking the charge or command of such ship; the term "owners" and the term "owner" of any ship shall be construed alike to mean 1 owner, if there be only 1, and any or all the owners if there be more than 1; the term "mate" of any ship shall be construed to mean the person next in command of such ship to the master thereof; the term "seaman" shall be construed to mean alie seaman, mariner, sailor, or landsman, being one of the crew of any ship; the term "British possession" shall be construed to mean colony, plantation, island, territory, or settlement belonging to his Majesty; the term "his Majesty" shall be construed to mean his Majesty, his heirs, and successors; the term "East India Company" shall be construed to mean the United Company of Merchants of England trading to the East Indies; the term "limits of the East India Company's charter" shall be construed to mean all places and seas eastward of the Cape of Good Hope to the Straits of Magellan; the term "collector and comptroller" shall be construed to mean the collector and comptroller of the customs of the port intended in the sentence; whenever mention is made of any public officer, the officer mentioned shall be deemed to be such officer for the time being; the term "warehouse" shall be construed to mean any place, whether house, shed, yard, timber pond, or other place in which goods entered to be warehoused upon importation may be lodged, kept, and secured without payment of duty, or although prohibited to be used in the United Kingdom; the term "king's warehouse" shall be construed to mean any place provided by the Crown for lodging goods therein for security of the customs. — § 119.

Malta in Europe.—The island of Malta and its dependencies shall be deemed to be in Europe. — § 120.

GENERAL REGULATIONS.

Weights, Measures, Currency, and Management.—All duties, bounties, and drawbacks of customs shall be paid and received in every part of the United Kingdom and of the Isle of Man in British currency, and according to Imperial weights and measures; and in all cases where such duties, bounties, and drawbacks are imposed and allowed according to any specific quantity, or any specific value, the same shall be deemed to apply in the same proportion to any greater or less quantity or value; and all such duties, bounties, and drawbacks shall be under the management of the commissioners of the customs. — § 121.

Collector to take Bonds in respect of Goods relating to the Customs.—All bonds relating to the customs required to be given in respect of goods or ships shall be taken by the collector and comptroller for the use of his Majesty; and after the expiration of 3 years from the date thereof, or from the time, if any, limited therein for the performance of the condition thereof, every such bond upon which no prosecution or suit shall have been commenced shall be void, and may be cancelled and destroyed. — § 122.

Mode of ascertaining Strength of Foreign Spirits.—The mode of ascertaining the strengths and quantities of foreign spirits imported into the United Kingdom should at all times be exactly similar to the mode in practice for ascertaining the strengths and quantities of spirits made within the United Kingdom; be it therefore enacted, that the same instruments, and the same Tables and scales of graduation, and the

same rules and methods, as the officers of the excise shall lay any law in force for the time being directed to use, adopt, and employ in trying and ascertaining the strengths and quantities of spirits made within the United Kingdom, for the purpose of computing and collecting the duties of excise payable thereon, shall be used, adopted, and employed by the officers of the customs in trying and ascertaining the strengths and quantities of spirits imported into the United Kingdom, for the purpose of computing and collecting the duties of customs payable thereon. — § 123.

Officers of Customs to take Sample of Goods. — It shall be lawful for the officers of the customs to take such samples of any goods as shall be necessary for ascertaining the amount of any duties payable on the same; and all such samples shall be disposed of and accounted for in such manner as the commissioners of his Majesty's customs shall direct. — § 124.

Time of an Importation and of an Exportation defined. — If, upon the first levying or repealing of any duty, or upon the first granting or repealing of any drawback or bounty, or upon the first permitting or prohibiting of any importation or exportation, whether inwards, outwards, or coastwise, in the United Kingdom or in the Isle of Man, it shall become necessary to determine the precise time at which an importation or exportation of any goods made and completed shall be deemed to have had effect, such time, in respect of importation, shall be deemed to be the time at which the ship importing such goods had actually come within the limits of the port at which such ship shall in due course be reported, and such goods be discharged; and such time, in respect of exportation, shall be deemed to be the time at which the goods had been shipped on board the ship in which they had been exported; and if such question shall arise upon the arrival or departure of any ship, in respect of any charge or allowance upon such ship, exclusive of any cargo, the time of such arrival shall be deemed to be the time at which the report of such ship shall have been or ought to have been made; and the time of such departure shall be deemed to be the time of the last clearance of such ship with the collector and comptroller for the voyage upon which she had departed. — § 125.

Return of Duty overpaid. — Although any duty of customs shall have been overpaid, or although, after any duty of customs shall have been charged and paid, it shall appear or be judicially established that the same had been charged under an erroneous construction of the law, it shall not be lawful to return any such overcharge after the expiration of 3 years from the date of such payment. — § 126.

Tonnage or Burden of Ships declared. — The tonnage or burden of every British ship within the meaning of this act shall be the tonnage set forth in the certificate of registry of such ship, and the tonnage or burden of every other ship shall, for the purposes of this act, be ascertained in the same manner as the tonnage of British ships is ascertained. — § 127.

Officers may refuse Master of British Ship, unless Indorsed on Register. — It shall be lawful for the officers of customs at any port under British dominion where there shall be a collector and comptroller of the customs to refuse to admit any person to do any act at such port as master of any British ship, unless his name shall be inserted in or have been indorsed upon the certificate of registry of such ship as being the master thereof, or until his name shall have been so indorsed by such collector and comptroller. — § 128.

Falsifying Documents. — If any person shall counterfeit or falsify, or wilfully use when counterfeited or falsified, any entry, warrant, cocket, or transire, or other document for the unlading, lading, entering, reporting, or clearing of any ship or vessel, or for the landing or shipping of any goods, stores, baggage, or article whatever, or shall by any false statement procure any writing or document to be made for any of such purposes, every person so offending shall for every such offence forfeit the sum of 20*l.*; provided always, that this penalty shall not attach to any particular offence for which any other penalty shall be expressly imposed by any law in force for the time being. — § 129.

Authority of an Agent may be required. — Whenever any person shall make any application to any officer of the customs to transact any business on behalf of any other person, it shall be lawful for such officer to require of the person so applying to produce a written authority from the person on whose behalf such application shall be made, and in default of the production of such authority, to refuse to transact such business. — § 130.

Persons falsifying Declaration liable to Penalty. — If any declaration required to be made by this act or by any other act relating to the customs (except declarations to the value of goods) be untrue in any particular, or if any person required by this act or by any other act relating to the customs to answer questions put to him by the officers of the customs, touching certain matters, shall not truly answer such questions, the person making such declaration or answering such questions shall, over and above any other penalty to which he may become subject, forfeit the sum of 10*l.* — § 131.

Seizures. — All goods, and all ships, vessels, and boats, which by this act or any act at any time in force relating to the customs shall be declared to be forfeited, shall and may be seized by any officer of the customs; and such forfeiture of any ship, vessel, or boat shall be deemed to include the guns, tackle, apparel, and furniture of the same; and such forfeiture of any goods shall be deemed to include the proper package in which the same are contained. — § 132.

Restoration of seized Goods, Ships, &c. — In case any goods, ships, vessels, or boats shall be seized as forfeited, or detained as under-valued, by virtue of any act of parliament relating to the customs, it shall be lawful for the commissioners of his Majesty's customs to order the same to be restored in such manner and on such terms and conditions as they shall think fit to direct; and if the proprietor of the same shall accept the terms and conditions prescribed by the said commissioners, he shall not have or maintain any action for recompence or damage on account of such seizure or detention; and the person making such seizure shall not proceed in any manner for condemnation. — § 133.

Remission of Forfeitures, &c. — If any ship shall have become liable to forfeiture on account of any goods laden therein, or unladen therefrom, or if the master of any ship shall have become liable to any penalty on account of any goods laden in such ship or unladen therefrom, and such goods shall be small in quantity or of trifling value, and it shall be made appear to the satisfaction of the commissioners of his Majesty's customs that such goods had been laden or unladen contrary to the intention of the owners of such ship, or without the privity of the master thereof, as the case may be, it shall be lawful for the said commissioners to remit such forfeiture, and also to remit or mitigate such penalty, as they shall see reason to acquit such master of all blame in respect of such offence, or more or less to attribute the commission of such offence to neglect of duty on his part as master of such ship; and every forfeiture and every penalty, or part thereof, so remitted, shall be null and void, and no suit or action shall be brought or maintained by any person whatever on account thereof. — § 134.

Ships not bringing to at Stations, Masters to forfeit. — If any ship coming up or departing out of any port in the United Kingdom or in the Isle of Man, shall not bring to at the proper stations in such port appointed by the commissioners of his Majesty's customs for the loading or landing of officers of the customs, the master of such ship shall for every such offence forfeit the sum of 10*l.* — § 135.

Officers may be stationed in Ships in the Limits of any Port. — It shall be lawful for the commissioners of his Majesty's customs, and for the collector and comptroller of any port under their directions, to station officers on board any ship while within the limits of any port in the United Kingdom or in the Isle of Man; and the master of every ship on board of which any officer is so stationed shall provide every such officer sufficient room under the deck, in some part of the fore-castle or stowage, for his bed or hammock, and in case of neglect or refusal so to do shall forfeit the sum of 10*l.* — § 136.

Power to charge Rent in King's Warehouse. — Whenever any goods shall be taken to and secured in any of the king's warehouses in the United Kingdom or in the Isle of Man, for security of the duties thereon, or to prevent the same from coming into home use, it shall and may be lawful for the commissioners of his Majesty's customs to charge and demand and receive warehouse rent for such goods for all such time as the same shall remain in such warehouse, at the same rate as may be payable for the like

goods when warehoused in any warehouse in which such goods may be warehoused without payment of duty: provided always, that it shall be lawful for the Lords Commissioners of his Majesty's Treasury, or the commissioners of his Majesty's customs, by warrant or order under their hands respectively, from time to time to fix the amount of rent which shall be payable for any goods secured in any of the king's warehouses as aforesaid. — § 137.

Power to sell Goods not cleared from King's Warehouse. — In case such goods shall not be duly cleared from the king's warehouse within 3 calendar months, (or sooner, if they be of a perishable nature,) it shall be lawful for the commissioners of his Majesty's customs to cause such goods to be publicly sold by auction, for home use or for exportation, as the case may be; and the produce of such sale shall be applied towards the payment of the duties, if sold for home use, and of the warehouse rent and all other charges; and the overplus (if any) shall be paid to the person authorised to receive the same: provided always, that it shall be lawful for the said commissioners to cause any of such goods to be destroyed as cannot be sold for a sum sufficient to pay such duties and charges, if sold for home use, or sufficient to pay such charges, if sold for exportation: provided also, that if such goods shall have been landed by the officers of the customs, and the freight of the same shall not have been paid, the produce of such sale shall be first applied to the payment of such freight. — § 138.

Power for his Majesty to appoint Ports and legal Quays. — It shall be lawful for his Majesty, by his commission out of the Court of Exchequer, from time to time to appoint any port, haven, or creek in the United Kingdom, or in the Isle of Man, and to set out the limits thereof, and to appoint the proper places within the same to be legal quays for the lading and unlading of goods, and to declare that any place which had been set out as a legal quay by such authority shall be no longer a legal quay, and to appoint any new place within any port to be a legal quay for the lading and unlading of goods: provided always, that all ports, havens, and creeks, and the respective limits thereof, and all legal quays, appointed and set out and existing as such at the commencement of this act under any law till then in force, shall continue to be such ports, havens, creeks, limits, and legal quays respectively as if the same had been appointed and set out under the authority of this act. — § 139.

Averment of Offence. — In any information or other proceeding for any offence against any act made or to be made relating to the customs, the averment that such offence was committed within the limits of any port shall be sufficient, without proof of such limits, unless the contrary be proved. — § 140.

Commissioners may appoint Suffrance Wharfs. — It shall be lawful for the commissioners of his Majesty's customs from time to time, by any order under their hands, to appoint places to be suffrance wharfs, for the lading and unlading of goods by suffrance, to be duly issued by them, or by the proper officers under their directions, in such manner and in such cases as they shall see fit. — § 141.

No Ships engaged in the Carriage of Letters to import or export Goods. — No ship or boat appointed and employed ordinarily for the carriage of letters shall import or export any goods without permission of the commissioners of his Majesty's customs, under the penalty of the forfeiture of 100*l.*, to be paid by the master of such ship or boat. — § 142.

No Person deemed an Apprentice until Indenture enrolled with Collector. — No person shall be deemed to be an apprentice for the purposes of an act passed in the 4th year of the reign of his late Majesty, intituled "An Act (4 Geo. 4. c. 25) for regulating the Number of Apprentices to be taken on board British Merchant Vessels, and for preventing Desertion of Seamen," unless the indenture of such apprentice shall have been enrolled with the collector and comptroller of the port from which any such apprentice shall first go to sea after the date of such indenture, or in default of such enrolment, until the same shall have been enrolled at some port from which the ship in which such apprentice shall afterwards go to sea shall be cleared. — § 143.

Licensed Agents. — It shall not be lawful for any person to act as an agent for transacting any business at the Custom-house in the port of London which shall relate to the entry or clearance of any ship, or of any goods, or of any baggage, unless authorised so to do by licence of the commissioners of his Majesty's customs, who are hereby empowered to require bond to be given by every person to whom such licence shall be granted, with 1 sufficient surety, in the sum of 1,000*l.*, for the faithful and incorrupt conduct of such person and of his clerks acting for him: provided always, that such bond shall not be required of any person who shall be one of the sworn brokers of the city of London; and if any person shall act as such agent, not being so licensed, or if any person shall be in partnership in such agency with any person not so licensed, such person shall, in either case, for every such offence forfeit the sum of 100*l.* — § 144.

Treasury may revoke Licence. — It shall be lawful for the said commissioners of his Majesty's treasury, by any order under their hands, to revoke any such licence; and after a copy of such order shall have been delivered to such person or to his clerk, or left at his usual place of abode or business, such licence shall be void. — § 145.

Not to extend to Clerks or Servants of Individuals, nor to Clerks in Long Room. — Nothing herein contained shall extend to prevent the clerk or servant of any person, or of any persons in co-partnership, from transacting any business at the Custom-house on account of such person or persons, without such licence; provided such clerk or servant shall not transact any such business as clerk, servant, or agent to any other person. — § 146.

Agent may appoint Clerks to act for him only. — It shall be lawful for any such agent or agents in co-partnership to appoint any person without licence to be his or their clerk in transacting such agency: provided always, that no person shall be admitted to be such clerk to more than 1 agent or co-partnership of agents, nor until his name and residence, and the date of his appointment, shall have been indorsed on the licence of every such agent, and signed by him, and witnessed by the signature of the collector and comptroller of the customs, unless such person shall have been appointed with consent of the commissioners of his Majesty's customs before the commencement of this act. — § 147.

Treasury may extend Regulations to other Ports. — It shall be lawful for the said commissioners of his Majesty's treasury, by their warrant, to be published in the *London or Dublin Gazette*, to extend the regulations herein-before made relating to agents in the port of London to agents at any other port in Great Britain, or at any port in Ireland. — § 148.

IMPORTS AND EXPORTS, the articles imported into and exported from a country.

We have explained in another article (*BALANCE OF TRADE*), the mode in which the value of the imports and exports is officially determined by the Custom-house, and have shown the fallacy of the common notions as to the advantage of the exports exceeding the imports. The scale of prices according to which the official value of the imports and exports is determined having been fixed so far back as 1698, the account is of no use as showing their true value; but it is of material importance as showing the fluctuations in their quantity. We were anxious, had the means existed, to have given accounts of the various articles imported and exported at different periods during the last century, that the comparative increase or diminution of the trade in each might have been exhibited in one general view. Unluckily, however, no means exist for completing such an account. The Tables published by Sir Charles Whitworth, Mr. Macpherson, and others, specify only the aggregate value of the imports from and exports to particular countries, without specifying the articles or their value of which such imports and

exports consisted. And on applying at the Custom-house, we found that the fire in 1814 had destroyed the records; so that there were no means of compiling any complete account of the value of the articles imported or exported previously to that period. We, therefore, have been obliged to confine ourselves, except as respects the period since 1815, to an attempt to exhibit the amount of the trade with each country for such periods as seemed best calculated to show its real progress. Those selected for this purpose, in the first of the following Tables, are periods of peace; for, during war, the commerce with particular countries is liable to be extended or depressed so far beyond its natural limits, as to afford no means of judging of its ordinary amount. The averages given in the Table (with the exception of 1802), are sufficiently extensive to neutralise the influence of such extraordinary circumstances (whether arising from bad harvests, the repeal or imposition of duties, or any other cause,) as might materially affect an average for 2 or 3 years only; and as they extend from 1698 to 1822, they afford a very complete view of the progress of the foreign trade of Great Britain. This Table was compiled from official documents by the indefatigable Mr. Cesar Moreau, and may be safely relied on. The Tables which follow, and which show the amount and value of the trade of the empire at the present time, are all official, or compiled from official sources.

During the first half of last century, and previously, woollen goods formed the principal article of native produce exported from Great Britain; and next to it were hardware and cutlery, leather manufactures, linen, tin and lead, copper and brass manufactures, coal, earthenware, provisions, slops, &c. Corn formed a considerable article in the list of exports down to 1770; since which period the balance of the corn trade has been, with a few exceptions, very decidedly on the side of importation. Cotton did not begin to be of any importance as an article of export till after 1770; but since then the extension and improvement of the cotton manufacture has been so astonishingly great, that the exports of cotton stuffs and yarn amount, at this moment, to about a *half* of the entire exports of British produce and manufactures!—(See *ante*, p. 445.) The export of woollen goods has been comparatively stationary.

The principal articles of import during the last half century have consisted of sugar, tea, corn, timber and naval stores, cotton wool, sheep's wool, woods and drugs for dyeing, wine and spirits, tobacco, silk, tallow, hides and skins, coffee, spices, bullion, &c. Of the colonial and other foreign products imported into England, considerable quantities have always been re-exported.

TRADE OF GREAT BRITAIN.

I. Account of the *Official* Value of the Import and Export Trade of Great Britain with all Parts of the World, at an Annual Medium of the undermentioned Periods; specifying the separate Amount of the Trade with each Country for such Periods.
